"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 5TH, 1902.

SUMMARY OF NEWS.

THE Free Church Assembly of Scotland has decided not to prosecute Dr. Adam Smith for heresy.

THE half-yearly general meeting of the Yokohama Electric Light Company will take place on July 19th when a dividend of 14 per cent. will be declared.

SPECIAL prayers for King Edward's recovery were offered in Christ Church, Yokohama, on Sunday. The preacher at Morning Prayer was the Rev. Arthur Lloyd.

MR. JOHN BARRETT, Commissioner-General of the Louisiana Purchase Exposition, left Nagasaki for Shanghai on June 29th by the Toyo Kisen Kaisha's steamer *America Maru*.

THERE is a scheme on foot in Yamada, Ise province, to build an electric railway between Yamada and Futami. Mr. Akura Kihachi is said to be interested in the project.

NEGOTIATIONS are in progress between the Tokyo and the Shinagawa Electric Light Companies with a view to amalgamation. It is gen-

rally believed that the negotiations will be successful.

FIRE broke out in Aiwoicho Sanchome, Yokohama, about 1.30 on Saturday afternoon. The flames were soon extinguished, with the loss of one house, several others being damaged.

A YACHT for the use of the Crown Prince is now in course of construction at the Mitsu Bishi Shipbuilding Yard, Nagasaki, and will be completed in a month or so. Mr. Ando Juhei, of Nagoya, has been ordered to decorate the interior of the vessel.

THE vernacular press says that passenger fares on express trains between Shimbashi and Kobe will be increased shortly, and an official notice to this effect is to be issued in a few days. The Railway authorities contemplate issuing a new kind of ticket for this service only.

NUIBE KANEJIRO, of Hiroshima Prefecture, and two others, who attempted to stow away on board the Toyo Kisen Kaisha steamer *Nippon Maru* were arrested by the Yokohama Water Police on June 28th, when the steamer was about to leave Yokohama for San Francisco.

THE death is announced of the father of Dr. Kitazato Shibasaburo, the well-known bacteriologist, the sad event taking place on June 28th at the residence of his son in Shiba, Tokyo. The funeral service will take place at the Aoyama cemetery on July 2nd at 1 p.m.

LIEUT-COLONEL FRANCIS LEAN, R.M.L.I., died on 10th June, aged 70. Lieut.-Colonel Lean saw much active service with the Baltic expeditions in 1854-55. He was also with the Royal Marine battalion sent out for service in Japan in 1864-66, and originated and for 22 years edited *Lean's Royal Navy List*.

WHEN Mr. Kruger was informed by cable that the treaty of peace had been formally signed, he exclaimed "My God! Impossible!" and relapsed into a gloomy silence. The leading organs of the German press commend Great Britain "for building a golden bridge for a vanquished enemy to traverse."

HASEGAWA YASABURO, chief of the Kozu village office, Kanagawa Prefecture, and several others were taken into custody on June 27th at the Odawara Police Station charged with having embezzled official money. The accused will be brought to the Yokohama Chiho Saibansho for trial in a day or two.

WE understand that the police in Yokohama have, so to speak, raided the nickel-in-the-slot machines which have for many months been a feature of nearly all the foreign hotels. That is to say they have notified the hotels that such machines must be stopped, and abolished and they have been accordingly.

ON the morning of June 26th the corpse of a man, apparently a workman, about 26 years of age, was found hanging from a tree in the grounds of the French Consulate, near the Yato Bridge, Yokohama. As the body was not identified it was handed over to the City Authorities for temporary interment. There seems no doubt that the man committed suicide.

THE members of the Board of Directors of the Yokohama Sanshi (Silk) Bank have sent in their re-

signation jointly on the ground that there is no hope of adjusting the bank's finances successfully. In consequence a conference was held a few days ago, at which were present Mr. Watanabe Fuku-saburo and several others. It was resolved not to accept the resignation of the Directors.

THE corpse of a man, about 28 years old, was found floating on June 28th near the pier at Takigashira, in the immediate neighbourhood of Yokohama. Medical examination at the Infectious Diseases Hospital in Horinouchi, Yokohama, revealed that the man was thrown into the water the previous night, for his hands were tied with a handkerchief. The Police are searching for the murderers.

SINCE the Keihin (Tokyo-Yokohama) Electric Railway Company's line was prolonged from Omori to Anamori via Kabata some time ago there has been considerable ill-feeling on the part of *jirikisha* coolies in Kabata and the vicinity, the coolies objecting to the extension of the line. As the result of repeated negotiations the Company is reported to have agreed to give *yen* 400 in cash to 250 coolies, thus putting an end to the trouble.

CONCERNING the report that a certain foreign firm of Kobe has opened negotiations with the Third Bank for the purpose of purchasing *yen* 3,500,000 worth of the Osaka Harbour Construction bonds the *Jiji* says that the matter has ended in failure on account of the foreign firm having withdrawn from the negotiations. The foreign firm's attitude was apparently due, it is believed, to King Edward's illness.

A COLLISION occurred at Shanghai on June 21st between the Yusei Kaisha's steamer *Iyo Maru* and the steamer *Suian* about 1,000 tons, of the Hamburg-American Steamship Company, with the result that both were damaged, though not extensively. According to the crew of the *Iyo Maru*, which arrived at Kobe on June 26th, it appears that vessel, while anchoring at Shanghai, was run into by the German steamer, which came down the Yangtse.

THE pictorial post cards issued in commemoration of the 25th anniversary of Japan's adhesion to the International Postal Union are steadily rising in price. Those bearing the post mark of "Jubile de L'entree dans L'Union Postale Universelle, Tokyo, 1877-1902," stamped at the Imperial Hotel on the occasion of the celebration held on June 21st, are wanted at three *yen* per card, while those bearing the mark of ordinary post offices, are quoted at the rate of three *yen* per set of six different cards.

MEMBERS of the crew of the O.S.K.'s steamer *Ise Maru*, which arrived at Kobe on June 30th from Vladivostock, report that the business depression at Vladivostock has reached an indescribable point. In consequence, the steamer returned to Kobe without any cargo, except 2,700 bags of rice and some other goods taken on board at Gensan. At the latter port, many cases of dysentery were reported and the epidemic was spreading fast. There is unfortunately no infectious diseases hospital in Gensan at present.

ATTENTION is again directed to the case of nine persons in Osaka who in November last were prosecuted in the Kyoto Chiho Saibansho on a charge of having forged a number of the Kyushu Railway Company's shares. It is now reported that as the result of the preliminary examinations the Local Court on June 27th committed Nagakawa Kichibei, Imai Kyukichi, Fukuoka Tsunejiro and three others for public trial, while the remaining three were acquitted owing to lack of evidence.

CHINESE NEWS.

Monday, June 30.

The following imperial decree recently issued in Peking disposes finally of the question whether Princes Tuan, Chuang and the rest were really implicated in the Boxer rebellion:—

We have received a memorial from the Imperial Clan Court asking whether the lineal heirs of the late Prince Chuang and other princes should be permitted to succeed to their fathers' titles. Now, in former times and under less serious circumstances previous Emperors of this dynasty have been known to have allowed the sons of cashiered princes and nobles to succeed to the rank and titles forfeited by their parents; but in the present instance, Tsai Yi, Prince Tuan, 2nd Order; Pu Ching, Prince Yi, 1st Order; Tsai Hsun, Prince Chuang, 1st Order; and Princes Tsai Lien and Tsai Ying, both of the 3rd Order, forfeited their respective ranks and titles on account of having endangered the safety of the Empire by their criminal encouragement of, and connection with, ruffians and desperadoes. Their crimes were, therefore, of too grave and serious a nature to allow their immediate descendants and lineal heirs to succeed to their cashiered parents' hereditary titles, etc., and we, therefore, cannot grant the memorial of the said Imperial Clan Court. We, however, hereby command the said court to select from the members of the Imperial Clan nearest to the throne for a special audience before us when we will then decide as to who shall be selected to succeed to the titles of the cashiered princes herein before mentioned. As for the cashiered Duke Tsai Lan, 3rd Order, who had forfeited his title on the same grounds, as the above title was granted to him as a promotion from his original rank of an Imperial noble, ninth in lineal descent to the throne, as this title naturally ceases with his heir, there will be no necessity for selecting any one to succeed him.

It is stated, by the *Asahi's* Peking correspondent, that General Tung is at the head of only 1,500 men in Kansu and that his potentialities have gradually declined to a vanishing quantity. Rumours recently circulated as to his rebellious intentions and his formidable strength are attributed by this correspondent to mere ignorance. We trust that the tale is true.

Wednesday, July 2.

When the council for discussing the question of restoring Tientsin met in Peking on the 28th of June, an unexpected element was introduced into the discussion by the Russian Representative, who announced that his Government did not see any occasion to appoint a successor to Major-General Wogack on the board of civil government. This statement seems to have taken the other Representatives completely by surprise as it amounted to Russia's withdrawal from the concert of Powers so far as the Tientsin question was concerned. The *Jiji Shimpō's* Peking correspondent, by whom the intelligence is sent, interprets it as an evidence that Russia is pursuing in this instance also her habitual policy of stepping out of the arena when she has nothing to gain by obduracy, and when she sees an opportunity of exalting her own magnanimity at the expense of her some-time associates. It must be confessed that the act appears to warrant such a construction. But as for the Tientsin question, it is becoming quite a burlesque. Russia may very well have grown disgusted with it, and may have resolved that the wisest course is to have nothing more to say to it. The incident illustrates the terrible difficulties that have to be encountered by foreign diplomats in Peking. A leader of overwhelming predominance is badly wanting. It is related in the *Shêng Wu-ki* that when, during China's first war with an European Power, the Ghoorkas made secret proposals to attack the British on the flank, Peking replied that "the Heavenly Dynasty never concerned itself with the mutual tilt-

ings of savages." The Heavenly Dynasty is probably of a very different mind now.

The Chinese students in Tokyo, to the number of over three hundred, held a meeting in the Kinki-kan, Tokyo, on the 29th ultimo. According to the Japanese press, they all wore foreign costume, some being "away up" in the matter of the "hai-kara," and it would have been difficult for any casual observer to detect that the assembly did not consist of Japanese youths. Two or three girl students were among the number. They, of course, were conspicuous by their "golden lily feet." The speeches were delivered in the Japanese language—somewhat halting in character, but eked out by ample gesticulation. As for the themes of discourse, they seem to have been of a censorious character. The defects of the educational system of China were denounced, as were also the faults of certain officials, and it was insisted that there could be no real progress in China so long as government and people are separated by a wide gulf.

All this is very interesting. But is it wise? Would it not be more prudent for these students to talk in private if talk they must?

A telegram to the *Jiji Shimpō* from Peking, dated June 30th, says that although only 7 days remain of the first period fixed for the partial evacuation of Manchuria by Russia, no signs are apparent of any preparations for moving her troops. It is therefore conjectured that she intends to regard as unfulfilled the conditions preliminary to evacuation so long as the problems of the Peking-Shanhaikwan Railway and the Tientsin civil government are not settled. Such is our contemporary's intelligence. Of course if Russia wants to find excuses for not evacuating Manchuria, she will have no difficulty in finding them, and equally of course many onlookers will suspect her of seeking excuses. But conjectures are dangerous in such matters. It is wiser to reserve judgement until we have something more substantial to guide us than hypotheses and forecasts.

A new trouble is reported to have arisen in connexion with this weary problem. China is said to have been discovered playing a facing-both-ways game. She promised England that the director of the line should be a British subject and that its extensions should be built by herself. But, at the same time, she secretly promised Russia that the director should never be an Englishman, and that if extensions were built, recourse should be had to Russian capital. We do not believe it. China often finds herself caught between the devil and the deep blue sea, and has to make a cruel wriggle to get out of the tight place, but she has too much sense to try the game of throwing palpable dust into the eyes of both parties.

It appears that the project of abolishing *likin* and increasing the duties on imports has not yet been abandoned. Sir James Mackay and the other members of the Tariff Committee have proceeded to Nanking for the purpose of consulting Viceroy Liu Kun-yi. Should their interview with him give any hope of ultimate success, they will continue their journey in order to visit Viceroy Chang Chih-tung at Wuchang. Mr. Archibald Little, of "Up-the-Yangtse-Gorges" fame, has addressed to the *North-China Daily News* some strong letters, urging that the proposed replacement of *likin* by customs dues is the only wise

policy in the interests of trade. But of what use is it that England alone should make this agreement? Will other Powers consent?

The *Kozan Tanken-tai* (mine-exploration party) is a band of mining experts despatched by enterprising Japanese and Chinese subjects who have combined for the purpose of exploiting China's mineral resources. The principal promoter in Japan is Mr. Tokura, who is said to have put up two million *yen* with the object of developing a coal mine in the Middle Kingdom. We read in the *Jiji Shimpō's* telegrams that this *Kozan Tanken-tai* having concluded its investigations in Chili, has now left that province. But of course nothing is said as to the result of the investigations.

Thursday, July 3.

An imperial decree has been issued in Peking calling upon Viceroys and Governors to avoid distressing the people by ill-considered taxation on account of the Indemnity. These officials are urged to devise wise and tactful means of raising the required money. One is inclined to query the value of such edicts. If Peking would indicate some form of tax easily collected and not falling with oppressive weight on the lower orders, the situation might look brighter. But exhortations to be statesmanlike do not make statesmen. After all, we can not reflect upon China's condition without amazement. There are differences of opinion about her population, but it can scarcely be doubted that the eighteen provinces have an aggregate of 380 million souls. What is a payment of 20 million taels annually to such a multitude? It represents only some 5 cents per head. That there should be any serious difficulty in collecting such a pittance seems incredible.

The trouble continues about the conversion of the Indemnity into gold. China's sources of revenue are silver, and the burden laid upon her by the Powers, being gold, grows constantly with the appreciation of the latter metal. The Protocol signed in Peking requires her to pay in gold, the exchange being calculated at the rate of the day. She therefore knew what she was undertaking. But she did not know and could scarcely foresee the heavy fall that has taken place in the gold-price of silver. Were she allowed to collect the customs dues in gold—and really it is difficult to see any valid argument against her doing so—the situation would be considerably eased. Meanwhile it is stated that the Representative of one of the great Powers in Peking has suggested, by way of remedy, some lengthening of the period for paying the installment. What would be gained by that, we wonder. The greater part of the amount that China has to pay now consists of interest. Something like 18 million taels annually goes to that account. Obviously the payment of interest can not be deferred, and if the payment of the principal be put off, then the interest increases correspondingly. Such a programme seems quite impractical. The only effective remedy in the way of remission would be to reduce the rate of interest, a course which would not obtain the consent of Powers that have already dealt with the asset.

It was stated in telegrams from Peking published by Tokyo journals on the 1st inst., that the period for the withdrawal of the first portion of the Russian forces from Manchuria would expire in a week, but that no signs of preparation for withdrawal were yet

apparent. There seems to be some misunderstanding. The Manchurian Convention was signed by Lessar, Ching and Wang Wen-shao on the 8th of April, and it provided that the troops in the south-west portion of the province of Mukden should be withdrawn as far as the Liao River, "in the course of six months after the signature of this convention." The six months will therefore expire on the 6th of October, which is still three months distant. Apparently the correspondents who telegraphed this item laboured under the impression that the Convention spoke of three months, not six.

China has applied to Japan for a teacher of international law. The Minister of State for Education offered the post to Professor Matsuoka, and subsequently to Professor Nakamura, but both declined. Attempts are now being made to induce Professor Takahashi to go.

THE CHOLERA.

Friday, June 27.

Reports from Saga says that the cholera shows signs of spreading, but no particulars are given. In Nagasaki the authorities are evidently taking very resolute measures. It has been decided to inoculate a hundred thousand persons as a preventive step, and six physicians are expected to perform the work in 8 or 9 days. That would mean the inoculation of nearly two thousand persons daily by one physician, a scarcely credible feat. What this inoculation means we are not in a position to state clearly. There can be no mistake about the translation—*kessei scsshu* are the original terms,—and rumour attributes the precaution to investigations made by Mr. Kitasato. A strange piece of news is that the malady has attacked cats. Over thirty of these animals have died in a suburb (Higashi Matsura-gori) of Nagasaki. Perhaps a holocaust of cats may be necessary, which would be a calamity in the eyes of many people. Another measure adopted by the Nagasaki Prefectural Authorities is to throw kerosene into the canals so as to prevent people from drinking the water.

Saturday, June 28.

Three cases of cholera have occurred in the Shiba district of Tokyo. Two are said to have been sporadic, but of the three cases two ended fatally. The police have decided to adopt the most stringent measures of disinfection. There has also been a patient in the Kanda district, who died shortly after being attacked.

In Saga there are apprehensions that the disease has again broken out. It seemed to have disappeared, but on the 27th there were three fresh cases, one of them fatal. Altogether the number of cases in Saga from the commencement of the epidemic on the 2nd of June up to the 27th was 47, of which 26 ended fatally. In Nagasaki there have been three cases and two deaths, and in Formosa eleven cases and five deaths.

The *Fujiyama Maru*, of the Mitsui Bussan Kaisha, which entered Kuchinotsu on the afternoon of the 26th, had a Japanese stoker suffering from cholera. He died in port.

A telegram to the *Fiji Shimpō* from Nagasaki says that a man who has just returned from Newchwang reports about ten cases daily at that place. He adds that the Russian authorities adopt very severe measures in dealing with patients, and that much alarm has been caused among the Chinese, some two thousand of whom have moved

elsewhere. We should imagine that the cholera itself is much more likely to have been the cause of this exit than any steps taken by the authorities.

Sunday, June 29.

The cholera shows signs of spreading in Tokyo. Cases have occurred in Hirakawa-cho and Shinjuku. Moreover, the Atago-shita (Shiba) patients reported in our last issue proved to be suffering from a malignant form of the disease. An alarm was caused on the 28th instant in the Yushima Preparatory School during commencement exercises. Four girls fell, one after another, and were violently sick. The *Chino* writes of this incident as though the malady were cholera, but the *Fiji* says that the cause of the trouble was noxious atmosphere, and that the children all recovered. The total number of cases in Tokyo up to the present has been seven, of which four ended fatally.

Reports from Amoy and Hankow show that the disease is raging there. It seems to be particularly virulent at Hankow: two foreigners and one Japanese have died. From Tientsin the news is that the malady appears to be losing its force within the city and spreading in the suburbs. The statistics from Tientsin are so confused, however, that little idea can be definitely formed of the progress of the disease.

There have been two fresh cases of cholera in the Atago-shita district of Tokyo, and one new case in the Shinjuku district.

Wednesday, July 2.

There have been two cases of cholera in the Kyobashi district. Their origin is curious. The two patients are husband and wife. Their daughter had been living in the house of a married couple in the Atago-shita district who were recently seized with the malady and carried off to hospital. It thus became necessary for the girl's parents to take her home, and her presence in their house made them so fearful of catching the disease that they finally did catch it though the girl escaped.

A case is reported in the Honjo district also.

The two Shinjuku patients have both died, and a *post-mortem* examination showed that they had genuine cholera.

A telegram from the Governor of Saga says that there have been 8 new cases in Ogi-gori, but the *Fiji's* correspondent, telegraphing from the same place a day later, puts the number at 16.

A sailor on board the *Fujiyama Maru*, lying in Nagasaki, was attacked on the 28th of June; two others were seized on the 30th.

Thursday, July 3.

A child of eight—whose seizure by cholera was reported in our last—died on the 30th ultimo. It appears that she had indulged in eating a quantity of plums. There have been two fresh cases of the disease in the same district—Honjo, Tokyo,—and much alarm is said to be felt. The authorities are taking vigorous sanitary measures.

Eight new cases are reported among the crew of the *Fujiyama Maru* lying in Nagasaki. One of them terminated fatally. The *Yavata Maru*, which has just entered that port from Australia, had a doubtful case on board and is under observation.

We have received in advance from the publishers, a very excellent and clear flashlight photograph of the eleventh annual dinner of the Japan Society held in London, which is to be presented with the first number of a new journal entitled *The Anglo-Japanese Gazette*.

MR. WU.

Mr. Wu has reached Tokyo, and is temporarily lodging in Hirakawa-cho, Kojimachi, at the Mitsubashi Inn. He expects to spend some months in the capital and talks of renting a house. Interviewed by a representative of the *Fiji Shimpō*, Mr. Wu says that he conceived the project of visiting Japan many months ago, and that he had been much urged to do so, especially by Yung Lu and Prince Shu. He is accompanied by a cousin of Yung Lu. His original purpose had been to spend a short time in Japan, but he is now convinced that a stay of several months will be necessary. It appears that Mr. Wu's aim is, not specially to improve the system of education for the literati class, but to bring the advantages of instruction within reach of all classes. He has been much struck by the Japanese method of providing virtually free instruction for the poor, and it is said that the arrangements and structure of the common school at Mikage in Settsu impressed him particularly. The Mikage people spent three hundred thousand *yen* on their school. An extensive programme of inspection is laid out for Mr. Wu during his sojourn in Japan. Mr. Wu has had a varied career. He attained the rank of governor, and would doubtless have risen to very high official position had he not preferred to devote himself to education. Before starting his celebrated school in Paoting he was asked to become president of the Peking College, but he declined to accept the post as he saw no prospect of carrying out the reforms upon which he had set his heart.

Mr. Wu, when passing through Kyoto a few days ago, delivered a lecture at the Kyoto University. He seems to have spoken very plainly. During the *Sui* and *Tang* dynasties, he said, China stood several steps higher than the rest of the world in literature and general civilization, and Japanese students came to drink at her Castilian fountains. But now she has grown old in such matters. Her bulk and her vast population remain, but she is full of emptiness. Japan on the contrary is small and her people do not number many millions, but she and they are full of vigour and progressive impulses. Unfortunately the two countries recently fell out, but that was only a temporary affair. Their differences have now been forgotten, and the time has come when China looks earnestly to her neighbour for close and friendly union. Japan is advancing so rapidly along the paths of progress that she seems likely to distance her teachers, and Mr. Wu said that he looked to learn much on this tour of inspection. He himself, he added, was old and no longer capable of great efforts, but happily he was accompanied by Mr. Shao Yung, to whom he looked for material assistance. He hoped to take back to his country many useful patterns from Japan, though whether they would be adopted in China he did not venture to affirm.

THE MARTINIQUE SUBSCRIPTIONS.

We are asked to publish the following:—"The subscriptions for the victims of the Martinique disaster produced in Tokyo and Yokohama nearly eight thousand *yen*. The Minister of France begs the Lady Patronesses who lent him such precious assistance, and all the subscribers, to receive the expression of his lively and sincere gratitude."

THE "TOA DOBUN-KAI."

Major Nezu, of the *Toa Dobunkai*, who has just returned from China, says to a representative of the *Nippon* that southern China is far more progressive than northern and that even in southern China the districts governed by Viceroy Chang Chih-tung are pre-eminently advanced. The Viceroy, it appears, has decided to re-organize the principal educational institutions on the basis of an university and middle schools, and further to establish a foreign languages school where Occidental Science will be taught as well as European languages, and where Japanese instructors will be employed. As to military science, there is an officers' college where German teachers are engaged, and there is a staff officers' college resembling the Japanese *Shikwan Gakko*, where four Japanese are employed on the faculty, namely, Captains Ohara, Hirao, Kojima and Mizuma. Attached to the latter institution is a model battalion, resembling the Japanese *Kyodo-dan*. In many other respects the school is up to the highest modern standards. Major Nezu seems to have formed a very flattering opinion of the methods pursued at this school. He thinks that after a few years its influence will be widely perceptible in the Chinese Army. As for equipment, he declares that nothing is left to be desired, the men being armed with the latest pattern of five-shot repeating rifle. The Viceroy has over five thousand troops that have been trained by German and Japanese officers. The Major has also some words of praise for the Hanyang arsenal, which now turns out 12,000 stand of small arms and 70 guns annually, and which could produce very much more in an emergency.

Major Nezu further says that nothing struck him more forcibly on his recent visit to South China than the changed attitude of the people towards military affairs. It used to be the habit to despise soldiers, but now a totally different mood begins to show itself. Drill is taught in the schools, the students wear a kind of uniform, and to produce a brave heart is considered one of the first aims of the educator. Major Nezu justly describes this as a very marked alteration. If the Chinese begin to be a warlike nation, Far Eastern politics will require to be handled according to a new formula.

Major Nezu further says that the English and Japanese languages have now become a part of the common-school curricula in Hupch and Nanking. The new educational institutions created recently by imperial edict were after the model of Viceroy Yuan's Shantung college, where English, French, German and Russian were taught, but no Japanese. A new departure has been made in the south, however, and English and Japanese are almost the only languages studied there. In Wu-chang there are eleven private schools, all flourishing. It is notable that they have reading rooms where newspapers are perused. The Major speaks also of Nanking, where private effort seems to be very successful in this field. The system of elementary and middle schools is about to be adopted, and there are teachers' schools, science schools and so on. The chief science school has sent 13 students to be instructed in Japan. A German subject keeps a military school, where, however, Major Nezu expects that Japanese models will soon be followed, though he does not say why. There is also a *Rempei Gakko* (military training school) where the teachers are all

Chinese but the methods Japanese; and there is a naval school where one American is employed.

Viceroy Liu and Chang, says the Major, work hand in hand. They compare notes about educational affairs, and they even take care to use the same readers in the schools under their jurisdiction.

Great success has attended the new silver coinage system in Nanking, Wuchang, Szechuan, Canton and Fuhkien. The quantity of coins struck in Nanking alone is 170,000 *yen* worth daily. The charge made for coinage is $\frac{2}{1000}$.

KOREA.

It is stated by Korean officials that the reported killing of three Japanese at Yong-an, in Chollado, had no connexion with the riot that occurred there. The riot itself proved to be an affair of very small importance. Quiet was restored immediately after the flight of the official whose exorbitant collection of taxes had caused the trouble. With regard to the Japanese, the story is that they were fishermen who had committed some robbery in the neighbourhood of Jol-san, and on being apprehended by the people of the district, two of the men committed suicide and the third was sent adrift in a boat with the corpses. In a few days the boat came ashore again at Jol-san, now containing three corpses. That is the very remarkable tale told by the local officials. It sounds too clumsy to have been deliberately invented. Of course some Japanese police have been sent to investigate.

The Koreans must be exceedingly resourceless people. Again and again the public has been startled by news that Koreans are prowling about Japan with imperial commissions to assassinate some of the refugees. But in no single instance has any one of these gentlemen accomplished his purpose. The most they ever achieved was to inveigle Kim Ok-kiun out of this country and then to murder him in a Shanghai hostelry. Apparently they could do nothing decisive in Japan. Tokyo journals now relate that one of these would-be assassins, Kin Chai-sok, who is described as having held the post of privy councillor in Söul, has just been deported from Japan. It seems that his special aim was to make away with Pak Yong-hyo (Boku Yeiko), and that, having found that feat impossible, he next turned his attention to the son of Kim Ok-kiun. Here, too, the police were too much for him. Finding, probably, that his proceedings had lost the lurid interest they once possessed for his paymasters in Söul, he recently addressed to the Korean Emperor a memorial disclosing the fact that Baron Komura and Pak Yong-hyo had entered into a plot to convert Korea into a republic with Pak for president. Under these urgent circumstances, it was evident, he contended, that ten thousand *yen* did not constitute a sufficient reward for taking the life of one of the arch-conspirators, and really the amount should be increased to twenty thousand. The document became known, and Kin Chai-sok has been courteously requested to leave Japan. He is probably a poor, harmless creature, but he can scarcely expect the public to have a higher opinion of him than he has of himself.

The *Svet* has a leading article, the gist of which is published in a telegram to the *Fiji Shimpö*. It is contended by the Russian journal that Russia's position in the Far

East is not at all satisfactory. Port Arthur is declared to be an inferior naval station capable of being easily blockaded and, moreover, practically useless in winter. The same is true of Vladivostock, and the consequence is that in winter Russian vessels have to avail themselves of the shelter of Nagasaki or some other Japanese harbour. Evidently in the event of war Japan would block both Port Arthur and Vladivostock, and to be properly prepared against obvious contingencies Russia ought to take possession of Masampo.

Such is the argument attributed to the *Svet*. It is an old argument, but perhaps none the less potent for that, since, on the *delenda-est-carthago* principle, a dictum need only be repeated often and it is sure to obtain public approval. We should hope, however, that there is still a long interval between the suggestion of the *Svet* and its practical adoption by the Russian Government, for assuredly the occupation of Masampo could not be endured by Japan, and any attempt to carry out such a project would mean war.

THE TOKYO GAS COMPANY.

It is openly stated that the arrangements now effected for the employment of foreign capital in the Osaka and Tokyo Gas companies is chiefly owing to the representation made by Baron Shibusawa in New York. The Tokyo Company has a paid-up capital of 4,200,000 *yen* in 84,000 shares of 50 *yen* each, which shares are now selling at between 70 and 80 *yen*. The arrangement effected with American capitalists is to double the number of shares, the Americans buying the whole of the increased stock at 80 *yen* per share, and thus bringing to the Company's coffers a fund of 6,720,000 *yen*. Of that sum the portion representing the premium on the shares, namely, 2,520,000 *yen*, will be set aside as a reserve and the remainder will be devoted to extending the Company's works. The *Shogyo Shimpö*, commenting on this arrangement, says that the Osaka Gas Company—which has effected a similar compact—was the first to accomplish the introduction of foreign capital in the true sense of the word. Messrs. Murai Brothers' method amounts to nothing more than a partnership, and the Tokyo Electric Tram company has merely obtained rails and plant on a system of deferred payments. But the Osaka and Tokyo Gas Companies have accomplished the thing in a genuine manner. Our contemporary takes the trouble to address some reassuring words to timid folks among its nationals, who apprehend that foreigners, having acquired one half of the shares of a great Japanese Company, will use their power to the injury of the Japanese. What the *Shogyo* writes for the purpose of dispelling such a silly apprehension is well enough in its way, but our contemporary might have added that foreigners do not invest their money in a Japanese enterprise for the purpose of ruining it. If they bring their capital to this country it is with the object of obtaining substantial profits, and that can not be effected without conferring the same benefit upon the Japanese shareholders. There is not and there can not be anything selfish in the business. The only thing that surprises us is the prosperity of the Gas Company. We should not have thought that gas and electricity could both find such a profitable field in the capital.

MR. OZAKI YUKIO ON THE ELECTIONS.

Talking of the coming elections, Mr. Ozaki Yukio does not think that any great importance need be attached to them, or that, whatever their result, much change will take place in the world of politics. We do not clearly follow the reasoning upon which that view is based. Mr. Ozaki's estimate of political parties in Japan is that they are associations bound together not by principles but by sentiment. He declares that the members of a party are animated by a spirit something like that of the forty-seven *Ronin*. They think that all must live or die together, whatever be the platform on which they stand. But why, under such circumstances, should the numerical strength of a party be a matter of indifference, as we understand Mr. Ozaki to say that it is? If a party holds together so tenaciously, it becomes a political weapon formidable in direct proportion to its strength, and should the next elections result in a marked change of numerical distribution, equally marked consequences ought to follow. Mr. Ozaki appears to meet that difficulty by arguing that since principles have so little value with party politicians, the situation in the Diet is always controllable by means at the disposal of the Government. But, on the other hand, it may justly be contended that the larger a party the more difficult must its control be found by the Ministry. We must note, too, that our own observation of Japanese politics does not bear out Mr. Ozaki's dictum. We have not seen any evidences of the life-and-death solidarity that he ascribes to political parties in Japan. On the contrary, they seem to us to be influenced by centrifugal forces almost equally with centripetal, and to be perpetually liable to disintegrations on a large or small scale.

THE "TAIHEI YOGAKAI."

The *Taihei Yogakai* (Pacific Foreign Picture Society) have issued a catalogue showing the pictures exhibited by them last spring. These catalogues are not without interest as indicating the class of subjects selected by the painters. But they tell only of the composition of the picture represented and convey no information as to quality. In the case of portraits or *genre* pictures one can of course learn a great deal from collotype reproductions, but where there is question of landscapes, sea-scapes, interiors and so forth, these miniature copies are very misleading. Our readers are probably aware that the *Taihei Yogakai* is the successor of the *Meiji Bijutsukai*. We are not familiar with the reasons for the reconstruction, nor can we perceive that its artistic results have been striking. The cultivation of Western pictorial art in Japan is carried on under immense difficulties, which, as they have often been detailed in these columns, need not be repeated here. Probably the Japanese will ultimately make a success. The foreign public has learned that they generally do make a success, of greater or less degree, in everything to which they put their hand. Still we are bound to say that the number of meritorious oil and water colours, after the Occidental school, produced in Japan to-day, is smaller, so far as general knowledge goes, than it was five years ago. How that decadence is to be interpreted it would be rash to prophesy. Perhaps we are passing through a period of merely temporary depression and discouragement. At all events the issue of this catalogue reminds

us of the existence of the *Yoga-kai*, a collection which certainly needs renewing if it rests solely on the pictures displayed at Uyeno last spring.

REPORTED ARREST OF MR. ROSENTHAL.

The *Hochi Shimbun* announces the arrest in New York of Mr. Rosenthal, head of the firm of Messrs. Rosenthal and Fried, in connexion with customs frauds. Our contemporary alleges that the frauds were discovered owing to a dispute between Mr. Rosenthal and some of his business associates, and that they may be followed by apprehensions in Yokohama also. The story is given in outline only.

Since the above was published in Tokyo the Yokohama representatives of the firm have been applied to by us, and they state that so far as their knowledge goes there is absolutely no foundation for the report.

The *Shogyo Shimpō* alleges that there can now be no doubt about the arrest of Mr. Rosenthal in New York on a charge of fraud in connection with the import of *habutaye* into the United States. The fact of the arrest has been communicated to Japan several times within the past few days.

Concerning *habutaye* the *Shogyo* says that very stringent methods have been adopted in Fukui, the principal place of production, to check abuses, such as the loading of the material with water and starch, and the putting up of short lengths. A severe system of inspection was suddenly applied, and everything defective received no mercy at the hands of the inspectors. But the Tokyo journal alleges that these efforts can never be more than partially successful so long as the foreign exporters in Yokohama connive at frauds and make profit out of them. The Yokohama exporter is generally only a commission agent who cares little if anything about the development of Japan's manufacturing enterprise and thinks only, or mainly, of his own profit. Therefore his coöperation can not be confidently counted on, greatly as it is to be desired, so says the *Shogyo*.

From the issue of the *New York Herald* of June 10th, we find that Abraham S. Rosenthal and Martin L. Cohn "comprising the silk importing firm of A. S. Rosenthal & Co.," were arrested in New York. Three complaints were made against them and when taken before Commissioner Shields they were held in \$30,000 bail each.

One of the three complaints accuses the firm of having on July 16th of last year made an entry of silk and cotton goods on a fraudulent and false invoice, dated at Yokohama, on June 26th previous, covering fifteen cases of the goods. This invoice gave the weight of the goods as 3,139 pounds, when the actual weight was 3,716 pounds. Another importation was also from Yokohama on July 30th, when thirty-four cases of silk goods were invoiced as weighing 3,552 pounds though the real weight is said to have been 4,528 pounds. The third complaint deals with an importation of three cases of goods from the firm of G. Goudchaud & Co., of Lyons, France, on July 13th, 1901, which were said to weigh 380 pounds when it should have been 448 pounds.

The attorney of the accused, in answer to the complaints, said:—

"We deny the charges and ask for a hearing. There is nothing in the charges."

According to the *N.Y. Herald* the members of the firm, when attention was first called to under statements in the weight of shipments said it must have been the mistake of the Japanese shippers, and they couldn't account for it.

Lord Kitchener's departure from South Africa was foreshadowed in a telegram from London on June 2nd which said:—Lieut.-General the Hon. N. G. Lytton recently visited Pretoria, meeting Lord Milner and Lord Kitchener. This points to his officiating for the latter shortly.

UPPER AND LOWER.

The *Fiji Shimpō* writes vehemently against the preservation of feudal-time linguistic distinctions between the upper and the lower orders in Japan. Things have changed little in this respect, our contemporary affirms. The people still speak of the nation as *kami seiju no daijin yori shimo jinmin ni itaru made*, and when the Government sells any of its properties it calls the transaction *urisage* or *haraisage*, the suffix *sage* indicating transfer from above downwards, while an official purchase becomes *kaiage*, as though the article in question ascended into some elevated atmosphere. Then when civilians send in a memorial they say *negaitatematsuru* (humbly beg) whereas the officials that reject it say *kyakka* (sent down) in the same way that to be under the jurisdiction of an office is called *kanka*. All these things offend the *Fiji Shimpō's* sense of propriety, and it goes so far as to opine that no parallel is to be found elsewhere. But that is perhaps saying too much. Does not our contemporary recall the celebrated contest at Canton in the year 1835, when Lord Napier's attempts to transmit his despatches to the Governor without adding the superscription *ping* provoked so much trouble? A Chinese literatus has still to follow that form. Even in England, too, a petitioner to the throne or to the powers that be adopts a very humble tone and observes certain canons of language that suggest a great gulf between the writer and the addressee. Such terms as *urisage* and *kaiage* do not strike us as particularly objectionable; they embody information which could not otherwise be conveyed without a paraphrase. As for *kyakka* and *kanka*, the former appears to convey nothing more than the English "sent down" and the latter recalls our own expression "under the jurisdiction." The question is where natural subordination ends and unnatural social distinctions commence. But we are entirely at one with the spirit of our contemporary's article. Only we should adduce examples of a more obviously objectionable nature were the task imposed on us.

A DUAL CORRESPONDENT.

During the suit for libel brought against Mr. T. C. Cowen by Mr. H. D. O'Shea in Shanghai, the following occurred in Mr. Cowen's cross-examination:—

Did the *Express* commend your action as correspondent, or criticise it, or express any opinion about it at all?—They kept on sending me instructions from time to time up to September.

Did they send saying that they expected to have their news as early at least as any other paper?—I received a telegram to that effect in three different forms. The date of the telegram was the 3rd July. It read "Cowen care of O'Shea. Expect to be informed ahead *Daily News* important movement Allies' advance."

Were you acting as correspondent of the *Daily News*?—I was acting as correspondent for the *Daily News*, and I was acting for the *Express*, supplying the *Express* with information through a deputy. I might explain a little further. The *Express* found fault with the arrangements my brother had made, but I knew nothing more about it and had nothing more to do with it.

It is not often that opportunities occur for getting off such magnificent practical jokes as Mr. Cowen played on the *Daily Express*. While that journal was wiring that it expected to get intelligence from him ahead of the *Daily News*, he was actually serving as correspondent of the latter journal. His telegrams for the *Express* were sent through a deputy and his telegrams to the *News* went direct. It was like the "Marchioness" playing cribbage left hand against right.

THE EFFECTS OF THE KING'S ILLNESS.

Tokyo newspapers speak of the great loss that has been caused directly and indirectly by the sudden illness of King Edward. They are disposed to dwell upon the direct losses, and to endorse and amplify remarks made on this subject by local Yokohama journals. But this direct loss is not so real, perhaps, as some writers suggest. Tradespeople who make arrangements for a great festivity in the hope of recouping themselves out of the expenditure of the masses, may be said to suffer loss in one sense by such a postponement. But the masses gain, for they keep their money in their pockets. The net result of the thing is that instead of carrying a great number of costly preparations to completion and instead of the public having a holiday and pouring out its money lavishly, the preparations are abandoned and the public, losing its holiday, saves its money. Much will have to be done twice over—at least we earnestly hope that it will—but if that means a great additional expenditure of material, it means also the enriching of many producers and artisans. When the items of the account are carefully considered it is found that "direct loss" is somewhat of a misnomer in such cases.

Here in Yokohama, for example, we shall all have to put our hands once more into our pockets, for of course a great part of the money hitherto subscribed had been expended before the news of His Majesty's illness arrived. But our money will simply go into other hands. There will be no ultimate loss. The one irreparable loss would be His Majesty's death, and so long as that is averted there will be little to complain of. A few days must settle the question of life or death. So long as the period of suspense lasts there will be a season of business depression due to uncertainty and to the sense of calamity that all great disturbances of programme entail. But when it is known, as we all hope it will soon be known, that the King is to be spared, the sun will shine out more brightly than ever. We may add that the opinion of some of the most eminent medical experts in Tokyo is decidedly sanguine.

BLACKMAILING.

Three more of the blackmailers have been duly committed for trial. They are Shimizu Yasutaro, an editor of the *Yamato Shimbun*, Tsuda Tsunesaburo, an author, and Doi Teiya, a member of the staff of the *Ijyu Tsushin* (Liberal News Agency). Against these gentlemen the charge of blackmailing is supplemented by other counts such as forgery and theft of seals. We need scarcely say that the *Yorozu Choho* figures in the transaction, though in this instance it was merely used as an instrument of intimidation on account of its writings in the past and the possibilities of its writings in the future. As to the proceedings of the blackmailers, there is nothing specially novel to relate. Their victims were Mr. Ohashi Sahei, of the Haku-bunkan, who ought to have known better, and Mr. Murata Sakichi, a tobacconist. The plan pursued in the case of the former was to have a spicy composition prepared by the author, Tsuda, and to submit it for the victim's inspection preparatory to publication. There are some curious details as to cut-and-come-again manoeuvres of the fraternity of robbers but they scarcely deserve reproduction. With regard to the tobacconist, things were easier, for he had already been reduced to a state of nervous prostration by libels

in the *Yorozu Choho*, and it was only necessary to threaten him with a repetition of the torture from another direction. He put up his money freely to buy immunity. The public should be sincerely grateful to the police for their vigorous action in these matters. There is now talk of a crusade against the *scheister* class of lawyer. That class will be harder to tackle, we fear, but all the best wishes of order-loving folk will be with the police in their endeavours.

CHINESE SUPERSTITIONS.

It has often been said that the attack made by Chinese mobs on foreign missionaries suspected of kidnapping children or of murdering them for medicinal purposes, are really exhibitions of anti-foreign feeling and do not owe their origin to any genuine belief in the outrages which avowedly inspire them. By way of commentary on that assertion the following is interesting:—

According to a Nanch'ang, capital of Kiangsi, despatch, the inhabitants of Pinghsianghsien, and other districts bordering on the Hunan frontiers, are at present in a very excited state owing to the sudden influx into that district recently of a number of kidnappers, alleged to be natives of Kueichau and Szechuan provinces. These kidnappers, are charged with having abducted from Pinghsianghsien alone no less than fourteen boys, between the ages of six and twelve, before one of these men was caught plying at the nefarious trade. It appeared that while certain persons who had mysteriously lost their children were abroad trying to get a clue of the kidnappers, one of the latter boldly entered, on the evening of the 26th of May last, a house situated inside the Great Western-gate of Pinghsiang city, which somehow he had learned contained only a single woman and her young child. The ruffian made a grab at the child, stuffed a cotton gag into its mouth with lightning rapidity and, before its astonished mother could call out for help, was making his way out of the house and across the street. At last the woman found her voice and rushing out called out at the top of her voice "Kidnappers! Kidnappers! Stop them! Stop them!"

Just at that moment a couple of those people who were searching for their lost children passed by and already had their suspicions aroused at the mysterious movements of the kidnapper who had the child in his arms, with its head pressed close to his breast, to prevent people from recognising it. As soon as they heard the cry of "Kidnappers" they made at once for the man, who finding himself pursued threw the child down into a nearby gutter, outside the city gates, where it was afterwards rescued by its mother. The kidnapper darted for the railway track hoping to escape in the darkness, but fortunately some soldiers posted along the railway to guard the newly constructed line saw the chase coming towards them, and ran forward to meet the kidnapper, who literally fell plump into their arms. The exasperated pursuers, who now numbered quite a mob, at once fell upon the ruffian and killed him on the spot, too angry to think at the moment that it would have been better to have given him his life for the time being in order to find out from him who were his accomplices, etc. The next day the district magistrate of Pinghsiang issued a proclamation offering large rewards for the capture of kidnappers, and on the 28th of that month (May) another kidnapper was arrested who confessed that their society numbered eighty-seven men, natives of various provinces, and that their headquarters were at Hsinhua, Hunan province. At that place they were divided into several parties, and ordered by their leaders to visit the adjoining provinces of Hupeh, Kiangsi, Anhui, etc., his party, numbering fourteen men, being detailed to kidnap children in Kiangsi province. Their object of kidnapping children was to procure their eyeballs, livers and hearts—the same old story—for medicinal purposes. This kidnapper was summarily executed. Shortly afterwards the people in the villages captured seven more kidnappers, who were also summarily beaten to death by them without referring to the city authorities. Finally, from the district of Lilinghsien, Hunan, which is near the Kiangsi border, it is alleged that within the month of May alone no less than sixty-four children of both sexes were kidnapped, leaving no traces behind of their whereabouts.

If the Chinese believe that their own nationals use the eyeballs, livers and hearts of children for medicinal purposes, there is no reason why they should not believe it about foreigners also.

PRINCE VLADIMIR.

Prince Vladimir arrived in Tokyo on the forenoon of the 2nd inst. The accounts published by vernacular journals as to the arrangements for his entertainment in Tokyo are so contradictory that we fail to extract the truth from them. It would seem, at any rate, that His Highness was to dine at the Palace on Wednesday evening.

The Russian battleship *Sevastopol* having on board the Prince arrived in Yokohama about 10 a.m. steaming inside the harbour and making fast to a buoy near the entrance. As she came slowly in from the Lightship towards the lines of warships in the naval anchorage she was saluted by and saluted the various flags, that is to say the Japanese, German, Austrian and Italian.

The distinguished visitor and his suite immediately landed in an official launch and was received by Major-General Prince Kanin and by the Russian Minister, the Governor of Kanagawa Prefecture and other military and civil officials. After a short rest at the Imperial Pavilion, the party left at 10.50 and drove to the Yokohama Station where there were drawn up the band and over three hundred bluejackets from the Japanese battleship *Hatsuse*. The band played the Russian and Japanese national anthems and amid shouts of "banzai" the two Princes and their suites entered a special train and left for Tokyo at a little past 11 a.m.

NOTES ON CURRENT EVENTS.

The two Field-Marschals seem to have been exchanging compliments. Count von Waldersee is reported to have told Lord Roberts that the humane conduct of the British troops in South Africa and their great bravery are deserving of all praise. We hope that this may prove a true report, for such a statement coming from one of the principal officers of the German Army would go far to allay the bitterness caused by the compliments of a very different nature that the German press paid to Great Britain and her soldiers during the war, and the next best thing to the successful conclusion of the South-African campaign would be the restoration of friendly feeling between Germany and England. Lord Roberts is said to have replied in terms eulogistic of the Germany Army.

The Bank of Japan has reduced its rate of interest by 2 *rin* daily, so that its charge upon over-drafts of current accounts is now 2.5 *sen* daily, or at the rate of 9.125 yearly, still a tolerably high figure, it must be confessed. It is generally anticipated in financial quarters that a declining rate of interest will be a feature of the money market in the immediate future.

News reached Yokohama from Hongkong on Friday that the King has made Sir Thomas Jackson a Baronet. The honour is well-deserved and hosts of friends in the Far East, from Singapore to Yokohama will join us in congratulating the recipient of the Royal favour.

The "At Home" given by the Captain and Officers of H.M.S. *Cressy* at Yokohama on Friday afternoon was largely attended, and a most enjoyable time was spent on the magnificent vessel under very pleasant surroundings, though rain fell before the close.

The Shanghai community, while postponing all its projected celebrations, took a step that will be much commended; a religious service

was held in the Cathedral to pray for His Majesty's recovery. So, at least, we gather from telegrams to the *Fiji Shimpō*.

Before leaving Saseho H.B.M.S. *Pique* was visited by 80 girl students from the *Shiritsu Jogakko* of that place. Photographs were taken and the gallant tars seem to have entertained the young ladies in worthy style.

The news of King Edward's illness does not appear to have reached Yamagata Prefecture in time to stop the celebrations. At the Normal School and elsewhere there were rejoicings on an extended scale.

The eldest son of Prince Iwakura was married on the 28th instant to Lady Sakura, daughter of Marquis Saigo. The wedding took place at Prince Iwakura's residence in Kasumigaseki. It will be remembered that Marquis Saigo's eldest son was recently married to the daughter of Prince Iwakura. Thus the two families are now doubly united.

The Sobu Railway—Fukagawa (Tokyo) to Narita—holds its half-yearly meeting at the close of July and is expected to declare a dividend of 9 per cent. The *Shogyo Shimpō* says that this Company is beginning to attract the attention of foreign capitalists. Mr. Keswick, of Messrs. Jardine Matheson and Company, has purchased 400 shares and is said to be recommending the investment to others. The shares have a face value of 50 *yen* and are now selling at 54.

The latest apprehensions on charges of misappropriating public funds have taken place in Kozu, where the district headman and five others have been arrested for dishonesty in connection with the erection of a contagious diseases hospital and the execution of sanitary precautions. The sum involved is 1,500 *yen*. Up to date the places where officials have been charged with the crime of embezzlement (*kanshu*) are Hiroshima, Okayama, Kozu, Nagoya, Shizuoka, Kofu, Tokyo, Yamanashi, Saitama, Gumma, and Sendai—a formidable list.

The *Wakanoura Maru* has been very unfortunate lately. Her collision with the *Eclipse* is of recent date, and now she has met with a similar accident in the Kashima-oki, off Ibaraki. At 9 p.m. on the 26th instant she cut down a fishing boat manned by 17 hands. One of the fishermen received rather serious injuries. It appears that the fishing boat had no light displayed, the weather being too boisterous to admit of that precaution.

A telegram from New York says that the House of Representatives has voted for the purchase of the Panama Canal, the numbers being 252 for and 8 against. Such an overwhelming majority is significant. Considering the immense sums already spent upon the Canal, it is a matter for rejoicing that the work should be finally carried through.

The man-of-war carrying Prince Vladimir will enter Yokohama on the morning of the 2nd. The Prince is expected to land immediately, and after a short rest at the Goyo-tei will proceed to Tokyo by special train at about 10.40 a.m. His Highness will take up his quarters at the Detached Palace in Shiba.

The ceremony of naming the second son of the Prince Imperial took place on the 1st instant. His Imperial Highness is called Atsu-no-miya Yasuhito.

It appears that the public was mistaken in giving the name of *Nichi-Ro Shinko-kai* to

the new association that has grown out of the stem of the National Union. Its proper name is *Nichi-Ro Kyokai* (Russo-Japanese Society), which has less significance than the former title. The Society is not yet actually organized. Its projectors held a meeting in Tokyo on the 30th of June, and laid down the principal basis of their organization, namely, to promote social intercourse, trade, industry and fishing enterprise between Russia and Japan. The inaugural meeting of the society will soon be held. From the rules enacted on the 30th, we observe that the society intends to seek men of note for president and vice-president; that it will have a principal manager and three managers, all honorary officers, serving for one year; that these managers may be Russians or Japanese; and that each member will have to pay a yearly subscription of 5 *yen*.

The *Fiji Shimpō* publishes a letter from the present Lord Kimberley thanking that journal for its appreciative notice of his father. Our readers doubtless remember the *Fiji*'s article on the subject. We now learn that the Tokyo paper forwarded a copy of its issue containing the article, together with a covering letter to Lord Kimberley's son and successor, and that the latter replied expressing great satisfaction that his father's interest in Japan had been recognised in this country, and complimenting the *Fiji* on the accuracy of the portrait published by it.

The Hiroshima Court-martial, empanelled to try charges of embezzlement against officers of the Land Transport Corps, has finished its sittings. Captain Shimizu has been condemned to 2½ years' major imprisonment; Captain Shiobara to 6 years' imprisonment with hard labour; Paymaster Takasaki to 6 years; Captain Isobe—for robbery—to 2½ years; Captain Kawakami to 2½ years, and Accountant Maieno to 3 years.

The *Fiji Shimpō*'s European telegrams contain an item that Baron Riethoven, Consul for Turkey in Geneva, has been driven from that city. The relations between Turkey and Switzerland do not greatly concern the world, but such an incident as the expulsion of a Consul from the scene of his duly accredited duties is strange enough to be specially noted.

There is a telegram that the *Shinonome* has been floated and that she was expected to enter Saseho on the 1st instant, but the *Fiji Shimpō* says that no such intelligence has been officially received.

NIPPON RACE CLUB.

A batch of country-bred horses, kindly offered the members of the Nippon Race Club by the Imperial Japanese Government, arrived in Yokohama on Tuesday and were drawn for in the afternoon. There were twelve subscribers, but only ten horses were obtainable. The draw resulted as follows:—

No. 1Mr. Mori.
" 2" Mogi.
" 3" Mottet.
" 4" Robison.
" 5" Blad.
" 6" Davis.
" 7" Kawakita.
" 8" Wada.
" 9Messrs. Weale and Crowe.
" 10Mr. Hiranuma.

Messrs. Bugbird and Kummel each drew a blank. Immediately after the draw, says the *Gazette*, Mr. Kummel bought the horse drawn by Mr. Robison.

THE EXPLOSION ON THE CRUISER "KAICHI."

With reference to the explosion on board the Chinese cruiser *Kaichi* at Hsiakuan, Nanking, on the 21st June, which resulted in the total wreck of the vessel, the *N.-C. Daily News* has received the following particulars from Captain Minning, of the steamer *Meishun*:—

"On the 21st inst. as the steamer *Meishun* was approaching Nanking, we saw at a distance of seven miles ahead a huge cloud of smoke rising near Nanking, and shortly afterwards a loud noise like the firing off of a big gun was heard. When we came to Nanking, we found that an explosion had occurred on board the Chinese cruiser *Kaichi*. The vessel was a total wreck and all the crew were lost. She had sunk stem (? stern) first, with only the bowsprit and the ram showing above water, and in this position she was kept by her cables. The American gunboat *Helena* had all her boats out, but there was little or nothing saved. Half-an-hour later we passed through a dense cloud of gunpowder smoke, as we were going down river. The floating wreckage consisted of very small pieces of wood and some burned clothing. The *Kaichi* is a sister ship of the *Nanshan*, and there were about 250 men on board." The Chinese cruiser *Kaichi* had a tonnage of 2,110, measuring 260 feet in length, 36 feet in beam and 20 in depth, with engines of 1,600 horse-power. She was built in 1882. Her armament consisted of two 8.2-in., six 5.9-in., and a number of smaller guns. Her speed was 14.5 knots.

MR. WILLIAM LIDDERDALE.

The Rt. Hon. William Lidderdale, whose death is reported, was a member of the Privy Council, had been a director of the Bank of England since 1870; was Deputy-Governor in 1887; Governor in 1889-92; and was a Commissioner of the Patriotic Fund since 1893. He was born at St. Petersburg on July 16, 1832, and educated at a private school in Cheshire. He entered commercial life in the office of Heath & Co., Russia merchants, in Liverpool, and afterwards became Cashier to Messrs. Rathbone Brothers & Co., in the same city, representing that firm in New York from 1857 to 1863, and becoming a partner in 1864, when he opened their London house. In 1870 he was elected a Director of the Bank of England. In November, 1890, Mr. Lidderdale, then Governor of the Bank, saved the City "from what would otherwise have undoubtedly been the greatest financial panic this generation has seen," by his wise, firm, and rapid measures during the Baring crisis. In these measures he was materially assisted by Mr. Powell, the Deputy-Governor, and by Lord Rothschild and a few other leaders of finance, but it was chiefly owing to his initiative that the Baring difficulty was smoothly tided over. In the Vagliano case he also did good service to the banking interest at large, having afforded important assistance to Sir Richard Webster in his arguments before the House of Lords. Mr. Lidderdale, after the Baring crisis was over, was continued in office as Governor of the Bank of England a year longer than is customary. In 1868 he married Mary, elder daughter of Wadsworth D. Busk, Esq., formerly of St. Petersburg.

YACHTING.

Seven 21-raters started on Saturday afternoon in a very light south breeze to sail over the Lightship-Widow Buoy Course, but the wind dropped too much to carry them over the course in the required time and the race was postponed.

Three 12-raters had a race in the harbour over the usual course and were able to finish, *Thelma* at 4 o'clock, *Madeleine* at 4.15.10, and *Dora* at 4.21.05.

M. PABLOV AND JAPAN.

THE *Jimmin* and the *Niroku* publish remarks said to have been addressed by M. PABLOV to a member of the *Chosen Kyo-kai* on the 22nd of June in Söul. Probably our readers are perplexed by the numerous associations that they hear of now-a-days. They may be conveniently reminded, therefore, that the *Chosen Kyokai* is a recently organized society having for its object the promotion of Japanese industry and trade in Korea. It proposes to investigate all matters in Korea calculated to assist enterprising Japanese who take that country as their field of operations, and it will even render substantial aid to them under certain circumstances. Shortly after this association was organized it acquired disagreeable notoriety owing to the removal of YU KIL-SUN to the Ogasawara Islands, on account of his connexion with the Society. That, too, requires a word of explanation. YU was formerly Minister of Home Affairs in Korea. He had to fly from Söul in the sequel of a supposed political plot. At that time there existed an association called the *Chosen Dokuritsu Kyokai* (Korean Independence Society), consisting of Japanese and Korean subjects. It was regarded with much suspicion by the Korean Authorities and finally it had to break up its organization. When the *Chosen Kyokai* was recently formed, several of the men formerly prominent in the ranks of the *Chosen Dokuritsu Kyokai* joined the new association, and some of the Korean refugees in Japan, notably Mr. YU KIL-SUN, seem to have conceived the idea of utilizing the *Chosen Kyokai* for political ends. Hence YU's removal to the Bonins, where he will be out of range of mischief. Of course the *Chosen Kyokai*, having Baron SHIBUSAWA among its chief promoters, can not for an instant be regarded as a political society. It was to a member of this *Chosen Kyokai* that Mr. PABLOV addressed himself—if the *Jimmin* and the *Niroku* be credible—and he took for his theme the organization of another society called the *Nichi-Ro Shinko-kai* (Society for promoting relations between Japan and Russia). This *Nichi-Ro Shinko-kai* took the public somewhat by surprise. Its promoters consisted largely of men who had previously figured in the ranks of the *Kokumin Kyo-kai* (National Union). Everybody is familiar with the *Kokumin Kyo-kai*. Under the presidency of Prince KONOYE, it figured for a long time as the chief exponent of anti-Russian feeling in Japan. But when Russia signed the Manchurian Convention pledging herself definitely to evacuate the "Three Eastern Provinces" and thus burying the great bone of immediate contention in the Far East, the National Union found that its *raison d'être* had disappeared. Thereupon it dissolved; a step sufficiently intelligible. But suddenly there sprung from its ashes the *Nichi-Ro Shinko-kai*. The public had a tolerably clear idea of the National Union's object, and could

understand its dissolution when the Manchurian question passed out of the field of practical politics. But that this essentially anti-Russian association should give birth at its death to an apparently essentially pro-Russian society like the *Nichi-Ro Shinko-kai*—that naturally perplexed onlookers. However, the source of the bewilderment lies mainly in a misconception of the new Society's aims. The *Shinko-kai* is rather practical than political. To show that it is in no sense an intriguing association, we need only mention the names of its principal promoters, Baron KANEKO, Viscount YENOMOTO, Mr. TSUZUKI KEIROKU and Mr. HAYASHIDA. The members of the Society see broadly that in developing Siberia and her East-Asian possessions generally, Russia will need much aid from Japan in the matter of men and materials, and they see also that these possessions offer a promising field for Japanese emigration. They are aware, doubtless, that by promoting the supply of such things and assisting emigration for such a purpose, they ultimately contribute to improve the relations between Japan and Russia, and to establish between them links in a chain of friendship. But that result, though not their prime purpose, encourages rather than deters them, so that, in a certain sense, they may be justly called a pro-Russian association.

It is this association that Mr. PABLOV is reported to have applauded. He shares with all intelligent and liberal Russians the view that Japan stands to gain rather than to lose by the development of Russian material interests in central and eastern Asia, so long as that development is deprived of aggressive features. He thinks that the Söul-Fusan Railway, which the Japanese are so earnestly bent upon constructing, will be only a fractional affair until it is extended, first from Söul to Wiju and then from Wiju to a junction with the Russian Trans-Asian system. He sees that when that is accomplished, a new and vast market will be opened for Japanese goods and that Russian products also will find a fresh outlet. He sees that during the process of Russia's development in these regions, she must rely on Japan for much assistance in labour and materials, which will prove of no small gain to this country. He sees that at Dalny and Port Arthur Russia is spending great sums of money, a considerable part of which comes into Japanese pockets. And he therefore sees that the formation of the *Nichi-Ro Shinko-Kai*, and the vigorous prosecution of its purposes, are in intelligent accord with the most desirable trend of events—desirable from the point of view of Russian and Japanese interests and from the point of view of Eastern peace. Whether Mr. PABLOV made these comments, we can not say. But we find it very likely. At any rate, the words put into his mouth by our Tokyo contemporaries, represent the situation accurately.

THE BOOKSHELF.

"Calendar of the Kyoto University."

THE Calendar of the Kyoto University, just published, shows the state of that institution in September, 1901, that is to say, nearly a year ago. Calendars are always and necessarily belated, but it may be said for the Kyoto Faculty that they have been at least as expeditious as any of their colleagues elsewhere. Three colleges in the University are now in working order, namely, those of Law, of Medicine and of Science and Engineering, and it is noticeable that whereas the College of Law has only 159 students and that of Medicine only 71, the College of Science and Engineering has 213. It is to be inferred, we hope, that students recognise the over-stocking of the medical and legal professions, as well as the country's urgent need of scientific experts. The University Hall, where graduates of any of the Colleges pursue special studies, is also duly organized and has 27 students. The total number of students at the institution is 464, and there have been 81 graduates, a considerable number seeing that the college was only founded in 1897. There are 99 professors, assistant professors and lecturers—a very full faculty in proportion to the number of students—and apparently only one foreigner is employed, Mr. Oscar Goeriz, of Stuttgart, who is in the College of Science and Engineering. The Calendar contains an accurate history of the University since its establishment on June 18th, 1897, and gives also all the Ordinances and Regulations connected with it. We may notice, in parenthesis, that among the Regulations relating to Punishments there is one which sounds peculiar:—"When a student who, by reason of misconduct or idleness, is considered as likely to cause disturbance in the keeping of order at the University, or as likely to commit such bad conduct as to impair the morals of other students, he shall be punished by the President through a decision of the Committee for Punishment." We do not remember any precedent for that kind of prospective penalizing.

The Coronation Nonsense Book: by the Poet and Painter of "Clara in Blunderland," London, William Heinemann.

CRITICISM of this book is, of course, partially disarmed by the frank manner in which its nonsensical character is avowed on the title-page. But to appeal effectually to the reading public "nonsense" must be at least clever, and we are afraid that not a few people will question the wisdom of sending forth this volume. The work of the poet has consisted in making "limericks," and the artist's business has been to illustrate them. For instance the line from a daily paper: "It becomes more and more evident that Lord Salisbury will retire after the Coronation," calls forth the following:—

"Uncle Sarum said," Office is heavy.
"I'm weary of Council and Levee,
"But don't trouble, Dear Land
"You are safe, for I'll hand
"The whole bag-o'-tricks to my nevvv."

In the picture a fat conjurer representing Lord Salisbury hands a large black bag to a very lanky gentleman in tights, who has the chief features of Mr. Balfour. Another quotation from a daily paper: "There is no truth whatever in the statement that when interviewed by a contemporary, as to how he appreciated the honour of laying foundation stones and opening bazaars, Lord Roberts replied, 'I, too, know the

sorrows of a King';" evokes the following, which is perhaps the best of the book:

"There was an old Soldier called Bobs,
"Who fell among nobles and nobs.
"He remarked, I'll restore,
"The Department of War,
"But they set him to stonemason's jobs."

The illustration shows "Bobs" extending a trowel in his left hand as some persons might flourish a sword, striking the attitude which is popularly believed to be peculiar to leaders of forlorn hopes, and surrounded by camera fiends, while in the distance a foundation stone awaits the laying. Of both rhymes and drawings it may be said that some are good and others are very middling, but that in all cases the caricatures are striking. The signature to the drawings, it is needless to say, is "S.R."—well-known to many in Japan.

Agricultural and Commercial Statistics. Department of Agriculture and Commerce, Tokyo, Maruzen Kabushiki Kaisha.

THIS book of over eighty pages is an abstract of the statistics of the Imperial Japanese Department of State for Agriculture and Commerce for the year 1900, compiled by the Statistics Section of the Department. Formosa, we note, is not included. In all cases comparative figures are given for ten and in some cases thirteen previous years. First there is a department of Agriculture, in which come tables showing the area under cultivation, the amount of crop per *tan*, and the exports and imports of rice, and figures as to barley, wheat and other grains and seeds, the mulberry tree, the tea plant, cocoons, silk, tea, sugar, lacquer, animals for breeding, cattle, horses, and animals killed for food. Then under Commerce there are voluminous tables showing market prices and index figures back to 1887; and also tables as to all kinds of companies giving their numbers, capital subscribed and paid-up, and reserves. Similarly under Industries are given statistics as to cotton-spinning and other enterprises and undertakings, which we need not particularise; under Fisheries are tables relating to that subject, so as to Forests and Mines. As an official work the book ought to be highly valuable to business men for purposes of reference. We suspect a misprint or two. For example if the prices of tea in 1887 and 1900 were respectively *yen* 62.09 and *yen* 36.36 it is not clearly intelligible to the ordinary vision how, as here represented, the respective index figures for tea prices in those years can be 100 and 139.

A VANISHING BIRD.

If the North German farmer looks with equanimity upon the gradual disappearance of the stork, the Northern tourist in quaint and picturesque will hear of the vanishing of the long-legged, red-beaked bird with unmixed regret. And what will the children say, to whom Hans Andersen has told stories of the stork so wonderful that the bird seems part and parcel of Fairyland? But the facts are that within the last half-century the number of storks in Sleswick-Holstein has steadily decreased. Villages which used to be the home of over sixty families of storks, and where sometimes six stork nests could be counted on the roofs of one farmer's buildings, hardly show a single nest now. Yet the arrival of the stork was always hailed with delight by the natives, and it was counted as much a sign of good luck if a stork built on a roof as in other parts of Germany it is to have a swallow build under the eaves.

As a reason for the decrease in the number of storks it is pointed out that these birds increase but slowly, that jealousy, envy, and pugnacity lead them to fearful battles, in which not infrequently

the parent birds are killed, while the unfledged nestlings perish in consequence from starvation. A number of storks also die on their long journeys to and from the East in spring and autumn. Finally, if the storks themselves were asked why they are leaving their roof-trees in the North, they would probably explain that they, together with many other things of a bygone age, are being improved away. The marsh and bog lands of the days that are no more, and in which frogs and other dainties were plentiful, have been drained, cultivated beyond the ken of storks, and pasture lands and fields of waving corn, attractive as they may be from the mere human point of view, have no charm for the stork. Hence this desertion of the regions which have been the summer quarters of the stork from time immemorial.

SHANGHAI AND KING EDWARD.

A brief but impressive intercessory service on behalf of King Edward VII. was held in the Cathedral, Shanghai, on June 26th. The congregation was not a very large one, being principally composed of marines and sailors from the British warships in harbour, remarks the *N.-C. Daily News*. Several officers of the 10th Jats Regiment were present, and many members of the Municipal Council. Business duties interfered with the presence of many people who would otherwise have been present. The service commenced with an organ voluntary by Mr. F. L. Crompton, "O Rest in the Lord" (Mendelssohn), and then the choir and congregation sang the grand old hymn commencing "God moves in a mysterious way," which formed a most fitting prelude to the hopeful and inspiring address which followed from Bishop Moule who, in the course of his remarks, spoke of the helplessness of all human knowledge, human wit, human skill, and human philosophy in the face of Divine will. When all our wisdom and resources were exhausted we had to seek aid and comfort from above. Let us all pray for the life of the King, so that he might live to rule over an England which would set an example not in selfishness but in justice and in mercy. Then came the hymn "Through all the changing scenes of life," and the Rev. H. C. Hodges afterwards read the Litany. The singing of the National Anthem fittingly brought the service to a conclusion, the last verse being:—

"In love and grief to day
We bow our heads and pray,
God save the King.
Guide him in happiness,
Guard him in storm and stress,
Then in Thy kingdom bless
And crown our King."

As the congregation departed, Mr. Crompton played with soulful effect the "Andante Tranquillo," by Smart.

The Acting Consul-General, Mr. R. W. Mansfield, despatched the following cable to His Royal Highness the Prince of Wales at 6.15 p.m. on the 25th ult.:—

"His Royal Highness the Prince of Wales, London.

"The British Community of Shanghai desire me to express their deep sorrow at the illness of His Majesty the King.

"Consul-General."

The following reply, dated same day, 3.40 p.m., was received:—

"Consul-General, Shanghai.
"Sincere thanks.

GEORGE."

The Jewish community of Shanghai, as soon as the news of the illness of the King was made known, arranged a special intercessory which took place in the Wuchang Road Synagogue on the 26th June.

The C. P. R. Co., issue a folder announcing that, commencing on June 15th, the transcontinental service will up to Oct. 10th be augmented by a tri-weekly service both east and west, to be known as the Imperial Limited Express. The booklet is beautifully illustrated by views, chiefly of the matchless scenery, and there is a capital map showing the road and its connections from tide water to tide water.

THE AGE OF FISHES.

At a recent meeting of the Royal Society in England, Mr. J. Stuart Thomson made public by exhibits a discovery of very great consequence to the fish supply of the world. He has ascertained that, as in the case of the bark of some trees, the ages of many fish furnished with scales can be determined by the markings of this protective armour. The scales show, when closely examined, a series of parallel eccentric lines which indicate successive increments of growth, and a trustworthy record is thus automatically kept of physical development. But that would still leave the age question largely conjectural, did not Mr. Thomson add a supplementary discovery which removes all difficulty. He finds that the lines of growth are more widely separated during the warm season than during the cold season, and by taking the two together each year's record is completed, and it becomes practicable to determine at any time the number of years the subject under examination has lived. It would be difficult to over-estimate the value of this scientific discovery to the fishing industries, both riparian and maritime. For the future there should not be much difficulty in judging the period required for young fry to reach maturity. Up to the present, size has been the only criterion, and that, at best, is no better than a rule of thumb method. But we may safely anticipate that the lead thus given by Mr. Thomson will be followed by fresh additions to our knowledge of fish.

LAW CASES.

MASUJIMA v. HEIM AND KAUFNER.

In the Yokohama Ku Saibansho on Saturday morning, before Judge Tanuma, the hearing was resumed of the suit brought by Mr. R. Masujima, barrister-at-law, No. 14, Yokohama, against Messrs. O. W. Heim and J. Kaufner, claiming *yen* 13.50. Mr. Hioki appeared for plaintiff and Mr. Naito for defendants.

Counsel for plaintiff, repeating his former statement, said that three sixteen-candle electric lights in a room at No. 14, which was rented to the defendants in November last year, were changed into twenty-four-candle power by defendants without the consent of plaintiff. In consequence, plaintiff had to pay to the Yokohama Electric Light Company an additional expense of *yen* 13.50 during three months and a half.

Counsel for defendants urged that his clients changed the candle power after obtaining the consent of the plaintiff's representative, with whom the defendants made an arrangement as to the rent of the room. It was then arranged to call as a witness an official of the Yokohama Union Electric Light Company at the next hearing and the proceedings were adjourned until July 9th at 9 a.m.

PIGOTT v. HIOKI.

In the Yokohama Chiho Saibansho on Wednesday afternoon, before Judge Kano, the hearing was resumed of the suit, adjourned from June 17th, brought by Mr. H. C. Pigott, against Mr. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., Yokohama, claiming the recovery of certain articles said to have been stored on the premises of the bankrupt firm and unlawfully attached by the Administrator as part of the estate.

Plaintiff was represented by Mr. Tsuruta and defendant appeared in person.

Mr. Yoshimura Keizaburo, a bailiff belonging to this Yokohama Chiho Saibansho, was examined, as arranged at the previous sitting. Replying to the Judge's questions, witness said that with regard to this bankruptcy he, together with Judge Yamaguchi, visited the premises in April this year and affixed a seal on articles then stored in the firm's rooms. The position of the articles remained unchanged since they were sealed except some 29 or 30 pieces of earthenware.

The defendant asked plaintiff's Counsel whether either the whole of the articles or a portion of them were insured.

Counsel for plaintiff replied that the whole were insured when purchased by plaintiff, who then rented them to a certain foreigner.

The defendant urged that as the articles were kept on the premises of the bankrupt firm, when it was declared bankrupt in April, they were all attached and sold under his direction and he insisted that he could not recognize any hiring of the articles in question by the plaintiff to a certain foreigner. He further said that according to Mr. John Hall, who undertook the sale of the articles, their value was estimated at *yen* 1,480, whereas plaintiff declared that he purchased them for *yen* 690 only. As a matter of course, the articles could not be purchased at such a low price. It was plain that plaintiff did not purchase the goods from a certain foreigner, for the plaintiff took no delivery of the articles in due course of time.

Judgment was reserved until July 7th at 9 a.m.

MENDELSON v. TANAKA.

In the Yokohama Chiho Saibansho on Wednesday afternoon before Judge Kano, the hearing was resumed of the suit brought by Messrs. Mendelson Bros., Yokohama, against Mr. Tanaka Nijuro, of Tokyo, asking that the latter should take delivery of 100 tons of manure imported on defendant's order.

Mr. Sato appeared for plaintiff and Mr. Ishiyama for defendant.

Counsel for defendant, by referring to statements of Mr. Keswick and other witnesses, said that commission was generally included in the price of articles when fixing up contracts and that from the evidence given by Japanese witnesses it was quite clear that as the goods did not arrive before the autumn they were entirely useless.

Counsel for plaintiff contended that the contract between the parties only referred to the date of forwarding the manure from Boston and therefore his client had no responsibility as to the arrival of the goods at Yokohama. After a good deal of argument between Counsel, who repeated their former statements, the Court announced that judgment would be given on July 7th at 10 a.m.

G. H. WHYMARY v. HARA KURAJIRO.

The lease case recently decided against Mr. Whymark, who sought to secure registration of a right of superficies over lots of ground in Sakaye Machi, was reopened in the Kobe Chiho Saibansho on June 30th. Mr. Whymark formerly brought into court several parties who had trafficked in the proprietary right over the lots but failed to secure recognition of his rights against any one of them. He now brings suit against one of them individually. Plaintiff in his petition (we quote the *Kobe Herald*) applies for the registration of a right of superficies over 373 *tsubo* 9 *go* 8 *seki* of ground at No. 11, Sakaye-machi, Ichome, Kobe. He stated that the late M. Voysey leased the lots in dispute permanently from Hoshino Kuma in 1884 at a ground rent of *yen* 75 per year and built business premises and godowns thereon. Plaintiff inherited the properties, viz. perpetual lease and buildings some years ago at the death of Voysey. The right of perpetual lease was registered at the British Consulate at the time it was secured and it was also entered in the public books of Hiogo Kencho.

The ground in dispute was registered in February, 1900, at the instance of Hoshino Kuma to confirm her ownership and the said perpetual lease ought to have been registered at the same time according to Art. 5, 2nd Clause of No. 329 Imperial Ordinance in 1899. The latter step was, however, omitted and the right of superficies was not registered. Defendant is the present owner of the lots in dispute and plaintiff had asked him to register the right of superficies or perpetual lease but to no effect.

Defendant stated in his defence that plaintiff is not heir of the late M. Voysey, but is only his Executor. Defendant says he cannot therefore admit that plaintiff is entitled to inherit all the rights of the late Voysey. Even if plaintiff was entitled to enter into such rights, he, defendant, could not recognise a perpetual lease in the ground lots in dispute. If there was registration at the British Consulate it can not be admitted to be a commercial registration, sufficient to take effect against all other parties. Even if the superficies and registration were completed correctly the registration in dispute was not legally executed and plaintiff could not claim to exercise the said right claimed against a third party. If there was any such right in existence when Hoshino Kuma registered her ownership on the 27th February, 1900, it would have been registered at that time. Defendant on 16th May, 1901, brought the lots in dispute

from Fukami Shunichi, but even then there was no such registration of a perpetual lease. Plaintiff might claim the exercise of such right while Hoshino was in possession of the lots, but he could not do so against defendant. Further, if plaintiff was entitled to claim the said right he had forfeited the right as he failed to pay the rent payable on 3rd November, 1900, and on 3rd November, 1901, as stipulated in Exhibit A No. 1. After some discussion the case was adjourned to October.

Geo. H. Perry, who was prosecuted for embezzlement of money belonging to the Vacuum Oil Co. in the Kobe Chiho Saibansho some days ago was found guilty on June 30th and sentenced to major imprisonment for two months and to pay a fine of *yen* 4 with police supervision for six months on his release.

NEWS OF THE WEEK.

A report from Fukushima says that a man named Terashima and two others of that town was arrested on June 30th on a charge of fabricating an imitation of Yebisu beer.

Mr. Reginald Tower, H.B.M. Minister to Bangkok, is reported to be seriously ill with typhoid, says a Singapore paper. It seems that he was going home on holiday and was to have gone to Singapore by the steamer *Deli*, but his condition was so serious that the trip had to be postponed.

It is reported that Baron and Baroness Shibusawa arrived at London on June 25th and that they will leave London early in June for the continent owing to the postponement of the Coronation. Major-General Fukushima, who also arrived at London on the day previous to that fixed for the Coronation, is reported to be in Paris.

As usual every year, the Nippon Railway Company will run excursion trains, between Ueno and Nikko on July 14th, 15th, 16th, 20th and 27th, leaving Ueno at 6.25 a.m. for Nikko and starting from Nikko at 6 p.m. for Tokyo. Return tickets for this special service are issued at half ordinary prices and are available for a week from the day of issue.

Twelve students of the Kwansai Middle School, in Okayama, left Yokohama for the United States by the steamer *Iyo Maru*, of the N.Y.K., on July 1st. Their object is to see the chief sights in the States and to acquire some knowledge of the cities and towns there and they will return home in the autumn. Last summer a number of students of this institution crossed to Korea for a similar purpose.

Mr. J. Carey Hall, British Consul, says the *Kobe Herald*, has called at the Kobe Chamber of Commerce and the Kobe City Office and tendered the thanks of the Coronation Committee for the Japanese contributions in connection with the proposed festivities and also for the expressions of sympathy elicited by the postponement, and the illness of His Majesty King Edward.

According to estimates of the Department of Agriculture and Commerce, the yield of cocoons this year is abundant and the quality excellent as compared with last year. The official estimates put the crop at 1,736,783 *koku*, showing an increase of 58,835 *koku* as against last year. This bright prospect is apparently due to the favourable weather that has prevailed since about the middle of May.

The half-yearly general meeting of the Japan Sugar Refining Company, the only establishment of the kind in Tokyo, took place at its premises on June 28th. According to the report presented by the Board of Directors it is stated that the establishment incurred a loss of *yen* 233,617 the first half of the current year, owing chiefly to a fall in the price of sugar at home and abroad. No dividend was therefore declared.

Judgment was given in the Yokohama Chiho Saibansho on June 29th in the case of Omi Danzo, (an employe of Mr. Wilson, No. 210, Yamashita-cho, Yokohama), who was prosecuted on a charge of having failed to report the finding of a gold

horse-shoe scarf pin. The accused was sentenced to 20 days' major imprisonment. It appears that on June 7th, when the off-day horse races took place at Negishi, Mr. Horikoshi Ayajiro, while on the race course, lost the pin which was picked up by the prisoner.

Hasegawa Yazaburo, chief of the Koze village office, near Odawara, and three others, who were arrested by the Odawara Police a few days ago on a charge of forgery, were taken to the Yokohama Chiho Saibansho on June 30th and after the usual brief examination were all conveyed to the Negishi prison, pending their trial. It is stated that nine other persons were also taken under arrest to the Odawara Police Station, the same day in connexion with the affair.

A Japanese spaniel perished in a short railway journey from New York. Was he "perishable goods"? asks an exchange. If so, the carrying company was responsible. The company said that, though he had perished, he was not perishable, being no vegetable. The owner got a verdict for £50. The company appealed to the Supreme Court of the State, and lost. An array of counsel pleaded for right to appeal to the Appellate Division of the Court, and won. The dog is still dead; it is the case that is imperishable.

In connection with the Fifth Domestic Exhibition, the Osaka Shosen Kaisha has decided to lower the scale of freight by 30 per cent. for the transportation of exhibits to Osaka from various places in Japan, Korea and Formosa, and to allow a reduction of 20 per cent. to exhibitors and other persons directly concerned in the Exhibition. The new rates will be enforced from November 1st this year and remain until September 30th, 1903. The Nanao and Kiwa Railway Companies have likewise agreed to reduce freight rates by 20 per cent. from November 1st until September 30th, 1903, for the conveyance of exhibits as well as persons directly connected with the Exhibition. It is further stated that the two railway companies will make a reduction of ten per cent. to visitors during the exhibition.

CHINA NOTES.

The locomobile has made its appearance in Tientsin.

The Hon. C. S. Sharp has been elected Chairman of the Hongkong Chamber of Commerce.

There were 10 new plague cases reported in Hongkong up to noon on June 24th—all Chinese and eight dead.

A sword of honour has been presented by the members of the Tientsin Volunteer Corps to Lieut. Jas. Watts, C. M. G., in remembrance of his gallant ride to Taku on June 19th, 1900.

Captain de Richelieu has sent in his resignation from the Siamese Navy, and will leave in September. He was offered the post of Harbour Master at Bangkok, but declined. He has had a long period of service in the Siamese Navy.

The Committee of the Hongkong Chamber of Commerce has written to the local manager of the Eastern Extension Telegraph Co. urging a reduction in cable rates between Europe and the Far East. The letter has been sent to the Directors of the Company.

The bodies of five men belonging to Troop M, 6th U.S. Cavalry, who were captured by Filipinos, have been found at Tereso in Province Rizal, Luzon. The bodies were horribly mutilated. The troopers were captured while visiting the cemetery at an old camping ground on Decoration Day.

The new Attorney-General of Hongkong, Hon. Sir Henry Spencer Berkeley, K.C., arrived in the Colony on June 24th by the *Yawata Maru*, and was to assume his new office on the 25th. He travelled from Fiji to Hongkong via New Zealand. Sir Henry has been Chief Justice

of Fiji since 1889, and for the four years preceding he filled the position of Attorney-General there; previous to that he was Solicitor-General of the Leeward Islands from 1878.

It is interesting, said the *Peking and Tientsin Times* on June 21st, to chronicle the fact that the American schooner *Manila*, Captain Street, on her way from Port Gamble to Taku with a cargo of lumber for Messrs. W. Forbes and Co. of Tientsin passed through a very large quantity of floating pumice stone in Lat 26 12 N. and Long 138 38 E. The crew picked up quite a quantity of the stone. In view of recent history, the origin of this pumice would be most interesting knowledge. Was it submarine or aerial (hurled through the air from some volcanic focus)? The locality of the find is 580 miles south of Yokohama and about 180 miles east of the Bonin Group, on the parallel of the Great Loo Choo. Sulphur Island in the Volcano Group is only about 150 miles distant.

THE KOBE REGATTA.

The interport events at the Kobe Regatta, which we briefly reported on Monday, are described in detail by the *Kobe Herald*, from which we take the following:—

INTERPORT FOURS.—1¼ Mile.

1.—KOBE.		lbs.
Bow. J. E. Paton	137	
2 D. Weed	140	
3 C. Mancini	154	
Str. W. M. Squire	148	
Cox. A. J. Chalfant	115	
2.—SHANGHAI.		
Bow. J. A. T. Thomas	160	
2 J. T. Disselduff	178	
3 W. O. Kochler	175	
Str. B. T. Byrne	173	
Cox. P. L. Byrne	167	
3.—YOKOHAMA.		
Bow. M. F. Stephens	150	
2 C. H. Moss	145	
3 J. Helm	152	
Str. W. Goddard	128	
Cox. J. Abbey	112	

The three crews as they left for the starting buoy for this the most important of the events of the day received an encouraging cheer. It was close upon 3 o'clock before the crews were in position to go—the sea smooth as glass and the rain fortunately still holding off. Kobe had the inside station, Yokohama the middle and Shanghai outside. There was nothing to choose between the stations to-day. A good start was got. Shanghai put all their pith into the race at the first stroke and Kobe did the same thing. Yokohama in the middle started easier. With half a length lead got by the opening spurt Shanghai settled down and Kobe also went easier. Meantime Yokohama had lost a length to both the other boats but they rowed easy and complacently. Kobe on the inside course now appeared to go ahead, rowing a stroke of 32. Shanghai rowed a slightly faster stroke and Yokohama slightly faster than either of the others. With half the course covered Kobe were away ahead—at least a length and a half it seemed from the starter's launch.

The Shanghai cox's steering was rather irresponsible and their bow man seemed to be feeling the strain. Nearing the beginning of the last quarter Kobe were away ahead two or three lengths, going with confidence. Shanghai had spent themselves in the first quarter mile and now it was a fight between Yokohama and Shanghai for second place. Yokohama brought the snout of their boat up and shut out the light. They were able to reduce the difference to three-quarters of a length before the gun was fired. Meantime Kobe had won gloriously by four or five lengths, the result exciting the keenest enthusiasm. Shanghai lost many points on inferior steering. All three crews were much cheered at the close, the Kobe men being carried in shoulder high. Time 9.08.

INTERPORT PAIRS.—One Mile.

1.—KOBE.		lbs.
Bow. J. Cartwright	160	
Str. W. M. Squire	148	
Cox. H. E. Green	135	
2.—SHANGHAI.		
Bow. W. O. Kochler	175	
Str. E. T. Byrne	173	
Cox. P. L. Byrne	167	
3.—YOKOHAMA.		
Bow. C. H. Moss	140	
Str. J. Helm	160	
Cox. J. Abbey	112	

Yokohama scratched in this race. The Kobe pair rowed next the shore and came away at the start. Shanghai rowed the faster stroke but Squire and Cartwright kept ahead. Shanghai rowed 32 and Kobe 29. With half a mile still to go the Shanghai bow seemed to be going heavily and the boat stopped, when it appeared that the bow stretcher had given out. The stoppage lost the race to Shanghai, of course. The accident was exceedingly regrettable as Kochler and Byrne had plenty of go in them and would have made the race an excellent finish. As it was Squire and Cartwright rowed home at their ease.

INTERPORT DOUBLL SCULLS.—One Mile.

1.—SHANGHAI.		lbs.
Bow. W. O. Kochler	175	
Str. E. T. Byrne	173	
2.—YOKOHAMA.		
Bow. C. H. Moss	140	
Str. J. Helm	160	
KOBE.		
Bow. D. Weed	140	
Str. W. M. Squire	148	

Shanghai and Yokohama raced this event, Kobe having lost in the heat against Shanghai last night. The race was rowed under the best conditions. Not a breath of wind had risen all the afternoon, and the overcast sky kept the air fairly cool. A very good start was got. Shanghai, putting pressure on the race at the very start, went ahead half a length at no great distance from the starting buoy. This lead they maintained all along without much challenge from the Yokohama pair, who, however, rowed at a steady well sustained stroke. At the finish there was the usual spurt but the Shanghai pair were equal to all calls on them and won by a length and a quarter.—Time, 7.45.

Turning to the land sports, we find that in Lawn Tennis, N. B. Ramsay, of Shanghai, beat H. C. B. Hancock of Kobe. At Lawn Bowls, Byrne and Disselduff, of Shanghai, beat John Hall and J. W. Birchenall. Nothing is said as to ping-pong!

During the afternoon a pretty Maypole dance, which was to have been one of the features of the Coronation celebration, was given by a number of little girls under the principal direction of Mrs. Hall and Mrs. Goddard.

The dinner and dance in the evening were a great success. Mr. F. J. Hall, Captain of the Y.A.R.C., responded most felicitously for Yokohama.

LITERARY GOSSIP.

At a recent meeting of the Westminster City Council a committee's recommendation of "Regni Jurisque Sedes" (Seat of Law and Government), as the city motto, was rejected as being bad Latin. Canon Vere's offer of "Custodi Civitatem Domine" (Keep the City, O God) was accepted.

The second number of the *Maritime World*, published monthly at San Francisco, has reached us. It is a very careful collection of news from all quarters of the world that is of interest to shipping people. Not the least valuable of its features is a department containing in a summarized form the most important judicial decisions on marine subjects.

Mr. John Morley, who is now engaged in reading the final proofs of his *Life of Gladstone*, has, it is said, arranged the letters of the great Liberal statesman in different sections of the biography: that is, the correspondence that has been deemed worthy of embodiment in the Life appears under the respective headings of political, ecclesiastical, theological, and literary. Mr. Morley's *magnum opus* will almost certainly be published in the autumn of this year.

"The ladies of the Divorce Court love perfumes." Mr. Justice Barnes is reported by Mrs. Alec Tweedie, the well-known writer, to have uttered these words in explanation of the fact that he was suffering one evening from a headache. "It has been a hot and trying day for me," continued the learned judge, "for each of the witnesses, who are placed in the box quite close to the judge, has come into court and waved about a dainty handkerchief saturated with scent. I have inhaled patchouli, white rose, heliotrope, and half a dozen other perfumes since breakfast, and, unfortunately, the more emotional ladies become the more they wave these pretty

scraps of scented cambric, and apply them to their eyes."

It may be stated, in connexion with the announcement of a new edition, in thirty volumes, of Ruskin's works, to be printed at the Ballantyne Press, Edinburgh, from the same fount of type as has been used in the Edinburgh edition of the Waverley Novels, that for the past fourteen years all the new editions of Ruskin's books have been produced at the press with which the name of Sir Walter Scott is indelibly associated. Ruskin was, by the way, an advocate of simplicity in printing. He paid great attention to the type and margins of all his books, kept a sharp eye as to uniformity in "spacing," and would on no account permit of interference with his own punctuation. Ruskin had a decided objection to divided words ending a page—a common feature in the Edinburgh Stevenson—and this objection of his has been respected in all the new editions of his works.

Very interesting light was thrown upon the history of the old Pilgrims' Way leading from Surrey to Canterbury, by Professor Boyd Dawkins at the Archaeological Institute. It is a common belief that this path was worn by Pilgrims on their way to the shrine of Thomas à Beckett. This belief, however, has been proved to be quite fallacious, and it obtained its name merely because it was adopted by Pilgrims as an easy route for horses. About two miles from Canterbury the track passes through an earthwork. Gravel pits were opened there, and an examination of them discovered a number of objects, principally of iron; and fragments of pottery corresponding with those found in the prehistoric settlements of the Iron Age in various parts of England. The Pilgrims' Way probably, therefore, existed in the Iron Age, and was one of an ancient system of track ways.

The Hound of the Baskervilles is thus advertised by its New York publishers, Messrs. Maclure, Phillips, & Co.:—

Observe the Messenger Boy, how he Runs.

Is not this Unusual?

It is Positively Abnormal.

And its Cause?

He Goes on a Hurry Call for a Man—

To Fetch a Doctor?

—to Fetch a Book.

What Book?

The Hound of the Baskervilles.

How Surprised and Gratified the Man will be to Get his Book so Soon.

He will Not.

Why so?

The Messenger Boy has Heard of that Book.

Well?

He will Dip into It.

Yes?

And See the Name of Sherlock Holmes.

And then?

He will Seat him on a Mossy Curb. And he will Read. And Read. And Read.

But the Man. What of Him?

He will Tear his Hair and Cuss.

Is that All?

No. Presently he will Rake up Another \$1.25 and will Hustle to the Bookstore himself.

Wise Man!

Happy Messenger Boy!

In November last the publishers of *Good Words* announced that they would give £75 in cash prizes for the best three Coronation odes submitted to them before a given date. All the odes which can be accepted under the rules of the competition are now in hand. The count shows that the number of individual competitions received is 1,047. Hardly any part of the British Empire, even down to the smallest island in the most remote seas, is unrepresented. Dividing them by continents, including in each case the adjacent islands, the distribution is as follows:—Europe, 650; Asia, 40; Africa, 17; America, 156; Australasia, 182.

There are some curiosities in this list. What is it in the atmosphere of the Leeward Isles that has produced twenty-four poets, while the Windward Isles can only boast two? Why should Victoria send fifty-nine compositions, New South Wales only twenty, South Australia fourteen, Queensland five, and West Australia two? The Australian Commonwealth as a whole furnishes

just an even 100 competitors, thereby leading Canada's total of ninety-one by nine points, and still leading by one point if Newfoundland be added to the Dominion proper. South Africa is too much concerned with other matters to give the time to writing odes even to the King, and in the seventeen odes received the nearest point to the fighting line represented is De Aar.

Literary critics are praising Mr. Bliss Carman for his witty line:—"What care I who keeps the ferry, whether Charon or Cunard?"

The *Athenæum* is sorry to hear that Mrs. Townsend (Frances Hodgson Burnett) has not only derived little benefit from her American visit, but has broken down so completely as to be obliged to enter a sanatorium.

The Paris *Temps* states that M. Pierre Delcourt has, as a gift, added to the Archives of the Seine his collection of about 5,000 invitations to public ceremonies and fêtes of which Paris has been the scene during the last 30 years.

There are families in which literary and other talent is hereditary, as, for instance, the families of Coleridge and Wordsworth; but, as a rule, the sons of poets are dull dogs. We have in mind (says the *Lancet*) three insane descendants of famous poets. It is possible that the children of poets are bored in early years by their surroundings and the mental attitude of their parents, and make haste to become prosaic.

Dr. Pulvermacher, of Berlin, has discovered that 597 forenames sufficed for distinguishing the 41,000 children of Berlin born in 1889. Agreeably with these figures, every 68 little Berliners received the same forename. The most fashionable female names are Lucie, Alice, Bertha, Hildegard, Elfriede, and Dora.

His Majesty the King has been graciously pleased to accept from the Rev. Sir George Ralph Fetherston, Bart., of Ardagh House, co. Longford, a copy of a new hymn tune composed by him, "She hath her heart's desire," the words of which are written by Mr. Arthur C. Benson. The hymn was sung at Windsor on the occasion of the first anniversary of the lamented death of Queen Victoria. The special presentation copy was beautifully printed in silver and violet, and was enclosed in a box of watered silk.

According to a friend of M. Jules Verne, who has been to see him at Amiens, the author has just finished a new book, which will be the hundredth novel written by him. It deals with life in the gold mines, and the scene is laid in Klondyke. M. Jules Verne, who is seventy-four years of age, is very nearly blind, and his doctors are endeavouring to persuade him to be operated on for cataract, but he told his visitor in quite cheery tones that "he hoped he would be dead before the operation came off."

Mr. Justice Darling continues to enrich the store of judicial jests. An architect, who spent his leisure in writing novelettes, was accused of having stolen the plot of one of his stories from an old collaboration. Giving evidence in the libel action he brought against his accuser, he complained that the person to whom the awful accusation was made had since refused to recommend him as an architect. "Not because," Mr. Justice Darling suggested, "you might steal the house, but perhaps the plot." He must have forgotten that there are storeys in houses.

Among the stories of his Academic life told by ex-President D. C. Gilman in the May *Scribner's* is one relating to a banquet of the Johns Hopkins University members. It was presided over by Mr. I. Wallis, a leader of the Bar, who proposed "The Universities of Great Britain," and he called upon Professor Sylvester to respond. The famous mathematician rose, uttered a few half-audible commonplaces, halted, searched his vest pocket in vain for notes, and sat down, saying as he did so: "I ought to have prepared myself for this occasion, but instead I went to the opera last evening, for I could not miss the opportunity of hearing Gerster; so I beg to be excused." It is

needless to say that the audience, who expected from him something unusual, did not expect this sort of a surprise. Quick as a flash, the presiding officer, Mr. Wallis, was on his feet, smiling at the discomfited Professor and saying, "I hope that will always be the motto of the Johns Hopkins University.—*Opera, non Verba*."

There is some clever work in Mr. W. J. De La Mare's poetic sketches of "Ten Characters from Shakespeare," in the May number of the *Monthly Review*. Take the last lines from "Juliet's Nurse":—

She prates and prates—
A waterbrook of words o'er twelve same pebbles:
And when she dies—some grey long summer evening
When the bird shouts of childhood thrill thro' the dusk
Neath night's faint tapers—then her body shall
Lie stiff with silks of sixty thrifty years.

And these from "Polonius":—

He moves small fingers much, and all his speech
Is like a sampler of precisest words
Set in the pattern of a simpleton.
His mirth floats eerily down chill corridors;
His wisdom prates as from a wicker cage;
His very belly is a pompous nought;
His eye a page that hath forgot his errand.

EUROPEAN TOPICS.

Mr. H. Panmure-Gordon has had the honour of receiving from his Imperial Majesty the Emperor of Japan, through his Excellency Baron Hayashi, the Order of the Rising Sun.

The marriage arranged between Captain J. R. Jellicoe, C.B., Royal Navy, and Florence Gwendoline, daughter of Sir Charles Cayzer, M.P., was to take place at Holy Trinity Church, Sloane-street, on July 1st.

The German Emperor has conferred the Order of the Rêd Eagle, with swords of the Second Class, on Captain E. H. Bayley, C.B., late commanding the *Aurora*, for his services in China during the Boxer outbreak.

A marriage has been arranged between Mr. Henry Outram Bax-Ironside, His Majesty's Acting Chargé d'Affaires at Stockholm, of Houghton-le-Spring, County Durham, and Countess Martha Gyldenstolpe, daughter of Count Gyldenstolpe, Master of the Horse to his Majesty the King of Sweden and Norway.

Mr. Edmund Oldfield, of Rushmore, Torquay, Honorary Fellow of Worcester College, Oxford, who died on April 11th, aged 85, leaving personal estate of the net value of £21,832 13s. 3d., "desiring to encourage the study of ancient art," has bequeathed to the University of Oxford his cabinet of antiquities and various specimens of Greek, Roman, and Etruscan art in marble, bronze, and terra cotta, with the request that they should be placed in the Ashmolean Museum and be known as the "Oldfield Bequest."

What appears to be a contraband consignment of rifles and ammunition has been discovered by the Customs authorities at the Victoria Docks. They were concealed in the false sides of a safe, one of a number on their way from Birmingham to Batoum. Considerable difference of opinion exists as to where the goods were made.

Much damage to property was caused on May 22nd by the experimental firing of the new 9.2 guns on the western heights of Dover. Firing practice was made at the marine targets. The vibration was so great that the houses in the neighbourhood of Shakespeare's Cliff sustained considerable damage. Windows were broken and ceilings brought down, while pictures and ornaments were shaken off the walls.

The *Times* understands that Sir Chih Chen Lofengluh, the outgoing Chinese Minister to Great Britain, has received a high office at the Court of Peking, about the person of the Emperor. The position is one that usually leads to substantive administrative appointments of the highest rank. Sir Halliday Macartney, the Secretary to

the Chinese Legation in London, has received from the Emperor the First Class of the Double Dragon.

A London dispatch of June 2nd stated that General Bruce Hamilton will supervise the surrender of arms and the swearing-in of Commandoes in the Western Transvaal; Brigadier-General Walter Kitchener, in the Western Transvaal; and Major-General Elliot, in the Orange River Colony.

The Franco-Japanese Society of Paris has entertained M. Motono, the new Japanese Minister in Paris, to lunch. The gathering was well attended, and the Minister's health was cordially drunk on the proposal of M. Bertin, director of Naval Construction, who presided. The excellent French in which M. Motono replied was much appreciated. The Franco-Japanese Society is a new organisation which owes its origin to M. Felix Régamé.

The new first-class cruiser *Leviathan*, which returned to Portsmouth on May 20th from Plymouth, ran an eight hours' steam trial on the deep-channel course, which realised a speed of 23¼ knots, the indicated horse-power being 31,000. On her 30 hours' trial at three-quarter power, the *Leviathan* maintained a speed of 21.6 knots with 22,866 horse-power. The amount of coal consumption was 175lb. per indicated horse-power per hour.

The Sultan has issued an irade recognising the right of Italy and Germany to protect their Catholic subjects in the East. This is the end of a prolonged contest, France, in virtue of old tradition, claiming the exclusive right to this protectorate. The refusal of the Sultan to recognise the French claims in this respect is a serious blow to France. No doubt his Majesty is not sorry to be able to make this retort to the sending of a French squadron to Mitylene.

It is affirmed in Belfast that as a result of the interview of Mr. Pirrie with Mr. Chamberlain and Mr. A. J. Balfour the White Star Company will not cease to exist on joining the Navigation Syndicate, but there will be merely a transference of shares. Mr. Morgan's syndicate will nominate seven British members of the combination, and will register the White Star line in their names under the English Companies Act. Present and future ships of the company will be at the disposal of the British Government, and will retain the British flag.

The investigations of Professor Thilenius, of Breslau, into the prehistoric remains in the Museum of Silesian Antiquities have led him to some very curious conclusions. He believes not only that a race of pigmies was distributed over Central Europe, but that they actually existed to within a thousand years of our own time. It is curious, if this be so, that no reference is made to them by ancient writers, for the passage in Herodotus mentioning the pigmies who fought with the cranes, obviously refers to an African, not a European race.

Sir Charles Dalrymple, M.P., told a neat story at the luncheon given at Ipswich the other day in celebration of the turning of the first sod of the new Suffolk light railway. Some years ago, he said, he went down to Dover and attended a luncheon given by Sir Edward Watkin in support of the Channel Tunnel scheme. He remarked at table to a friend of his, "I suppose we are being booked for support to the tunnel?" "Don't you be afraid," was the reply; "a great many people here are lunching one way, but will vote the other." The influence of judiciously dispensed hospitality, however, is not to be underrated; "feed the brute" is often as effective a method in public as it is proverbially in domestic life.

Professor George Adam Smith, whose excursions into the domain of the "higher criticism" have been causing some little perturbation in the minds of some of the older members of the Church to which he belongs—the United Free Church of Scotland, the General Assembly of which Church has just decided not to try him for heresy—is one of the most erudite of theologians, and a writer whose works have early attained the

rank of classics in their special department. His "Historical Geography of the Holy Land" has gone through a large number of editions in a very short time, and besides much else that primarily appeals to the theological student he has written a fascinating Life of Henry Drummond. Professor Smith has occupied the chair of Hebrew and Old Testament Exegesis in the United Free Church College, Glasgow, since 1892.

Congressman Littlefield, of Maine, tells this story about a call he once made on a friend in that State. "The preacher was calling at the same time. In the midst of our conversation the small son of the family, named Reginald, came running in. His clothes were torn and one of his eyes was blackened. 'Reginald,' said the preacher, 'you've been fighting again. Your clothes are torn and you have a black eye. Fighting is very wicked. Come here and let me pray for you.' 'Aw, g'wan,' said Reginald; 'go home and pray for your own kid. He's got two black eyes.'"

A curious discovery has just been made by Mr. Fuller, of Yately, Hampshire, into whose possession there recently passed a richly embroidered tablet, representing King Charles II. and Queen Catherine. Neatly concealed in the back of the tablet he found the parchment will of Thomas Hodgkins, a London merchant. The document is dated April 14, 1648, and is now in the possession of the vicar of Ridge, Hertfordshire. It is believed that it will lead to the discovery of an accumulated sum of many thousands of pounds for the poor of that parish, in whose favour the will is made.

The *Temps* contains details respecting some shooting practice carried out by the French Northern squadron, an old warship, the *Surcouf*, being used as a target. Three hundred and forty shots had to be fired before she was sunk, and 41 of these shots were fired at a range of from 2,200 to 4,000 yards. The percentage of hits was 12 per cent., a very satisfactory average, the *Temps* considers, if one compares it with the percentage of hits in the battle before Santiago—namely, $2\frac{1}{2}$ —and takes into consideration the fact that the mark on this occasion was a much smaller one than that presented by the Spanish vessels.

Scotsmen in London have vowed a vow to protect the native kilt for Scottish soldiers. The General Council of the London Scottish Association and Societies, with a membership of over 10,000, has held a meeting on the subject, and unanimously agreed to record "its protest against the proposed change in respect to the dress of the Highland regiments, particularly the suggestion to discontinue the clan tartan kilts," on the ground that such a change would adversely affect recruiting in the Highlands, and it respectfully "urged the Secretary of State for War and the Commander-in-Chief to postpone any alteration until after the commanding officers and officers generally of the Highland regiments have been consulted."

Kingston-on-Thames commemorated on 19th inst. the Coronation of King Edward the Elder, which took place there at Whitsuntide just 1,000 years ago. It was the first time that the anniversary had been observed, and the festivity was due to a number of interesting historical circumstances. First, it was the millenary, for King Edward was crowned at Kingston on Whit Sunday, 902. Then Edward the Elder was the last of the Kings of the Saxon heptarchy, while King Edward VII. is the first to rule over the British Empire. Further, there were just 50 Kings from the Edward of 902 to King Edward of 1902. Kingston certainly rose worthily to the occasion. The ancient Coronation-stone treasured in the little town was tastefully decorated, and the streets were gay with bunting. There was a great emblematic procession through the town. The afternoon was given up to a military tournament and sports, the evening to dancing.

A NEW LAW IN CRYSTALLOGRAPHY.

Mr. A. E. Tutton, F.R.S., has been delighting an audience at the Royal Institution with a discourse on the constitution of crystals. The veriest tyro in the present day, remarks a correspondent of the *Westminster*, can scoff at Albertus Magnus and his notion that the intense cold on Alpine summits makes the ice so dry that it congeals into crystals. Or again, at Agricola, to whom the crystal was "succus frigore densatus," Linnaeus, Delisle, Haüy, Mohs, and Weiss are names which mark the first stage of scientific crystallography, and the transition to modern doctrine. Mr. Tutton is a signal instance of the savant who scorns delights and lives laborious days. Immersed during the week in his labours under the Board of Education, he has nevertheless succeeded in realising to the full in the limited time at his disposal that "fearful joy" which may occasionally be "snatched" by the devotees of that imperious mistress—Science. His work on crystallography is to be found in the Philosophical Transactions of the Royal Society, and in the *Zeit. für Krystallographie*. From his researches he has deduced a new law: The properties of the crystals in any series of salts are functions of the atomic weights of the metals they contain. He showed in the lecture, by means of a large cluster of diamonds, that the emanations from transparent crystals are twofold. The exterior faces reflect white light; coloured rays penetrate to the interior of the crystal, and are there reflected and refracted. One of the most remarkable of the many interesting illustrations and experiments given in the course of the lecture was in connexion with what are known as interference figures. The figures given by some of the crystals, of which the lecturer has made a special study, exhibited the curves crossing from the horizontal to the vertical as the temperature of the crystals varied, or as the crystals were illuminated with the light of the different colours of the spectrum.

THE DUTCH EAST INDIES.

The *Morning Post* has an article on this subject written by one who evidently has knowledge of the matter, even if his inferences are not in all cases correct. In the course of the article, which will doubtless interest many of our readers, the writer states:—

It was in a frank spirit of plunder that the white men first visited the East, and until within the past few decades it was generally held that a colony was chiefly valuable as a source of individual or national income. Holland alone among the European Powers has held doggedly to the old opinion. The whole system of administration in the Dutch Indies is framed in obedience to this principle, and any surplus revenue that her colonies could produce has always been claimed by Holland as her undisputed right. The Malayan populations of her colonies are by nature indolent, inefficient, and ease-loving, but by nicely calculating the precise amount of taxation which a native can pay without incurring danger of actual want, provided he be diligent, the Dutch have presented their Oriental subjects with the alternative of a life passed in unremitting toil or the most abject indigence. As those who know the character of the Malayan race will admit, this is a choice of evils the bitterness of which cannot easily be exaggerated, and the natural result has been a widespread hatred of Dutch rule. The most sinister part of this feeling of disaffection lies in the fact that the natives of the Dutch Colonies do not draw a distinction between a white man and a brown man as such, but differentiate only between the Christian and the Mahomedan. The hardships, therefore, which they endure and the burdens under which they groan are regarded by them as the fruits of a settled policy whereby the infidels seek to oppress the true believers. The spirit of religious fanaticism is thus stirred by actions which, in truth, have no connection with religion. The authorities in Batavia do not blink the fact that the natives are disaffected. Every able-bodied white man is enforced to enrol himself in a force whose existence is designed to cope with possible native risings. In all towns and districts places are arranged where the European population can congregate in the hour of danger. The white men are not merely aliens in the land, but know that they are hated aliens, Franksteins engaged in controlling a monster which at any moment may turn and rend them.

This knowledge, more even than Dutch persistency, is the secret which explains the long duration of the war in Acheen. Holland would willingly have withdrawn from that contest more than a decade ago, but

the shock to her prestige in the Archipelago which such withdrawal would entail has been a risk too great to run. The natives, partly through lack of power to combine, partly through the want of able leaders, and partly through the rigorous toil that saps their energies and is their unchanging lot, have hitherto effected nothing more serious than a sporadic and an abortive rising, easily and bloodily subdued; but the will to rebel is quick in them, and given a leader and propitious circumstances, appalling things may occur in spite of the watchfulness and the precautions of their rulers. Meanwhile, there is another aspect of the situation which promises trouble to the Mother country. In spite of the Dutchmen's freely expressed and openly-displayed contempt for and lack of sympathy with the native races, the practice of living in concubinage with brown women is almost universal, and, curiously enough, the offspring of these unions rank as white folk, and are admitted into Colonial society on terms of equality. Thus there is throughout the Dutch Indies a large and ever-increasing Eurasian population which despises and abuses the full-blooded native as only those can do who have a trickle of the same stuff in their veins, and is yet alienated by birth, training, and associations from the country in distant Europe to which it nevertheless claims to belong. To this population of a mixed race must be added the many Dutch families who have settled permanently in the colonies, rearing their children in the temperate climate of the hills, and bringing them up as colonials first and Dutchmen afterwards, and that rather by tradition than by any community of views and sympathies.

As yet the trouble indicated is but a tiny cloud on the political horizon. The colonists are not ready for revolt. But the trouble is there, and its threat is unmistakable. The colonists, however, will find themselves in a position of the greatest difficulty. They desire liberties for themselves, but the bare idea of extending this blessing to the native population would appear to them in the light of the veriest insolence. Combination between the white man and the brown man in the Dutch Indies is an impossibility, and it is the rooted conviction of every colonist that the natives must, above all things, be kept under. That this would be a difficult achievement for them if unaided by some other European country must be evident even to the most arrogant among them. But if there be no hope of obtaining what is demanded in other directions from Holland, there are certain Powers, it is thought, that might be willing to extend their protection to the colonists while granting them the rights for which they crave. That some such development is to be ultimately looked for is the conclusion at which various independent observers of the situation have arrived, but there is considerable diversity of opinion as to the Power most likely to become the inheritor of the Dutch Colonies. Until quite recently the local Dutch were accustomed to say openly that Great Britain would naturally step in, obtaining the troublesome island by the payment to Holland of a generous sum. At that time the feelings of the colonists, as far as secession was contemplated at all, most distinctly favoured this view, and our own interests in this part of Asia made it not improbable that, given the opportunity, we should be willing to assume charge of the Dutch islands. Now, however, the animosities excited by the Boer war have worked a complete revolution in Dutch colonial sentiment, and when to this is added the notorious leniency to the native races which characterises our rule, and is an abomination in the sight of the colonial Dutch, a chance of any voluntary cession being made to Great Britain must be regarded as remote. Germany, on the other hand, is thought by many to stand a far better chance of acquiring the Dutch Indies. The ultimate absorption of Holland in the German Empire is something more than a dream, and if this inclusion were to be effected the Dutch Colonies would, it is thought, pass naturally into the keeping of the Emperor William. The dream of the German expansionist has long been the nightmare of the Dutch. The presence of a powerful neighbour on the borders of Holland, casting covetous glances at their country, has impressed the popular imagination, and no matter how entirely the colonists have lost touch with their Fatherland they have not ceased to look on Germany as their natural enemy. Anyone who has not had intimate personal dealings with the Dutch in the East Indies cannot realise how strong the inherited feeling of dislike and distrust is in them. As it seems to be as unconquerable as it is illogical, it may well be thought to be sufficient to place the acquirement of the colonies by Germany by peaceful measures quite beyond the range of practical politics. America need hardly be considered seriously. Though it has not been usual to regard France as the probable inheritor of the Dutch possessions in Asia it must be admitted that her prospects are in this respect superior to those of either Great Britain or Germany, though it is safe to prophesy that if this transference of territory were to take place Germany would demand its *quid pro quo* nearer home, and that the days of Holland as a separate State would then be numbered.

THE SHIPPING COMBINE, & AFTERWARDS.

If Mr. Pierpont Morgan's latest achievement were really destined to deprive Great Britain of three auxiliary cruisers, we could hardly seek consolation by reflecting that they would be superseded before the transfer took place. The White Star boats have lived longer than their rivals, and have grown old more slowly. The *Germanic*, built in 1874, still takes her turn, while the Cunarders *Gallia* and *Servia*, built respectively five years later, have been withdrawn. Unless the turbine, or some other propeller, drives out the twin screw, the loss even of the *Teutonic* and *Majestic*, still more of the *Oceanic*, would be a serious matter for us in any naval war for the next twenty years. But consolation for the Combine may be found in other ways. To begin with, it has been certain for years that American capitalists would try to capture the Atlantic Ferry as soon as they could. The enterprise is not only business; it appeals to sentiment. Consider what the service means to Americans—their sole means of getting to the rest of the civilised world. To Englishmen, it is merely the best set of steamship services extant, with three or four others, all purely concerned with the British Empire, dividing their attention. From the first, it has appealed to American ambition, and in its early days it seemed likely that the desperate efforts of New York capitalists to control it would succeed. The Collins line was subsidised in 1849 by the United States Government, and for some six or seven years (as Mr. Henry Fry has recorded in his *North Atlantic Steam Navigation*) had the cream of the passenger traffic and held the record for speed. But its attempts to "break the windows of the Cunarders with sovereigns" brought it near bankruptcy; two great disasters, the loss of the *Arctic* in 1854 and of the *Pacific* in 1856, finished its ruin; and by the time its finest ship, the *Adriatic*, was ready for sea, it could not run her. Then Commodore Vanderbilt, who had begun with ferry steamboats, tried his hand, but his best ship, called after her owner, was too expensive to run, and he generously presented her to the United States Government during the war and devoted himself to railroads. Then came the war and the *Alabama*, and when peace was restored there was the West to be developed, and a protective tariff which made it hopeless to run ships under the American flag. But American capital has long been in the trade. The Guion Line now defunct, was largely owned in America; the Atlantic Transport and the Red Star are virtually American. And so we may solace our souls by the Stoical reflection that we are merely witnessing another stage in the realisation of manifest destiny.

But does the Combine mean control? One cannot but doubt it. Colossal cargo carriers, like the Atlantic Transport liners or the *Cymric*, cannot suite the convenience of individual shippers as the ocean tramp can. And as to passenger traffic: while steerage passengers may go by the lines which work with the trunk railroads, and can give them the lowest through rate, the class for whom the fast steamships are run, and for whose benefit records are broken, will travel, regardless of cost, by the line which breaks them oftenest. But the Combine is tied to its railroad termini, especially New York—a magnificent port when you are in it, but approached by a crowded and tortuous channel, flanked, and fronted by sands which shift so continually that the buoys which indicate them cannot be marked on the chart, with a bar kept down by dredging, but still not passable except at half-tide; and therefore hardly the proper terminus of an express service. Fancy if the Dutch mail steamers still started from off the Tower! And just as Queenborough and Harwich have taken the place of London for express traffic, so other ports must take that of New York. For years we have heard of projects for connecting Milford, or more recently Berehaven, with Gardiner's Bay, or some other harbour at the east end of Long Island. That would save six or seven hours at least—say, three-fourths of a business day—on the American side, and considerably more at the British. But the suitability of the American harbours is questioned; it would be no great advantage to be deposited in Brooklyn, but until the East River is tunnelled there will be an awkward break of continuity between this route and the West. And the north shore of Long Island Sound does not seem to afford a satisfactory terminus for monster ships. But there are better alternatives. Lord Strathcona's suggestion of a subsidised line from an English port to Louisburg, which is free from ice at all seasons, is perhaps a counsel of perfection. Louisburg wants developing; it is only some 200 miles nearer England than Halifax. True, there is coal near at hand, but not steam coal. The commissariat might prove a difficulty; and it is on a branch line of a railroad that probably wants relaying to make it suitable for fast traffic. St. John's, N.F., again, though less than 2,000 miles from the Irish coast, is all but unapproachable during the early part of the year, and the neighbourhood is more or

less beset by icebergs and fog during the early summer and spring. It could be made possible, of course, to get to St. John's from London—say, *via* Berehaven (barring accidents) in something less than four days, to proceed at most seasons, by the new railway and the steamer service (six hours) from Port aux Basques to Sydney, Cape Breton, in about twenty-four hours more, to reach Moncton, on the Canadian Pacific, in another seven, and then to get to Montreal in fifteen more, or to New York in about the same time. Total, rather less than six days, no doubt greatly reducible hereafter as regards the land portion of the journey. But whether a service which involved two ferries—one of six hours, one across the Gut of Canso from Hawkesbury, in Cape Breton, to Port Mulgrave, in Nova Scotia—and consequently precluded through-cars from St. John's to New York or Montreal—would attract passengers may well be doubted. What is within reach, if the Canadian Government will give a subsidy, is a fast service from Plymouth to Halifax (2,400 miles), or even from Liverpool to Halifax (slightly less). The sea passage would be four days and three-quarters, or less; the express from Halifax now reaches Montreal (756 miles) in twenty-four hours; the time from Halifax to New York, *via* Bangor (Maine), Portland, and Boston might be three or four hours less, though the railroads of Eastern Maine might need some relaying and speeding up. And the New York and New Haven Railroad, the best in the United States, probably has its stock too firmly held by private investors to be brought into any Trust. Finally, as indeed Lord Strathcona has suggested, it would be a proud day for Canada if she could beat her neighbours at their own game. And what chances a fast service to Halifax would offer to the sportsman who cannot afford a grouse-moor! "One-third of New Brunswick is a good game country"; "the interior of Newfoundland is a vast deer park"; moose, caribou, bear, and deer; wildfowl of sorts, grouse, woodcock; salmon and trout fishing in abundance—such are a few of the attractions offered by the Canadian Pacific east of Montreal. The old Collins line ultimately received 33,000dols. per round voyage as subsidy, for fortnightly sailings—say, £6,000. It probably costs more than that to get the *Deutschland* across the Atlantic. What sum is the Dominion Government prepared to stand?—J. S. MANN, in the *Westminster*.

JOHN BULL'S EATING HOUSE.

BY AN HABITUÉ.

My recollections of Simpson's extend over thirty years, and the announcement that it is to be swept away for the Strand improvements fills me with dismay. What saddles of mutton I must have consumed in that time! It is not considered good form at this establishment to omit to have a second helping. The juicy joint is wheeled alongside your table, and the carver, whose face has been so familiar for years, whets his blade in your presence and deftly cuts off a slice first from the saddle portion, and then a fatty tit-bit from the tailend. After this a large spoonful of gravy is poured over the succulent morsel, the cover is replaced, and the joint wheeled off to some other hungry mortal. I have often thought how amazed the foreigner must be who accidentally wanders into this paradise of good English fare. The "carte du jour" which is handed to him must appear curious reading. It runs very much as follows:—

Roast Beef,
Saddle of Mutton,
Roast Beef,
Saddle of Mutton,
Roast Beef,
Saddle of Mutton,

and so on, with very little variation to the end. "What a nation of barbarians," I hear him say. "How is it possible that any digestion except that of an ostrich, could consume such repeated helpings of 'Selle de mouton.' Poor fellow, it is he who is the ignorant. These repeated allusions are, of course, to show the succession in which the joints follow each other, so that say you come to your meal at one o'clock, you can tell (after referring to the waiter) which is the best cut to choose from. Ten to one if it is the foreigner's first visit he will go away forced to confess that he has never eaten such meat in his life. The vegetables, too, he will disparage as being all "cuits à l'eau," and so they are, but such simplicity is in keeping with the rest of the entertainment.

Simpson's is the most conservative establishment I have ever met. The little boxes are just as they were in my salad days. The same waiters, grown old in the service, remain on from year to year. Who does not remember, if he is, like the writer, an old habitué, William the bland of countenance and portly of build? He had arrived, so he told you, at the head of his profession from humble beginnings. "Would you believe it, sir," he once remarked,

"that I commenced life as a boy at one of W. H. Smith's book-stalls!" Could it be possible that he, William, had reached such a pinnacle of greatness from such a lowly state? From being a simple, but respected, waiter, he had latterly been promoted to taking the amount of your bill, and his cheery voice could be heard all over the room as he intoned the words "Money on 10," or whatever was the number of your box. Poor William's health broke down some years ago, but he is often inquired after by those who knew him in the days of his splendour. The stereotyped reply to the inquiry is that William is still alive, and living in a little cottage in the suburbs of town, attending to his garden, and narrating to his friends and neighbours stories about all the celebrities he has waited on in his day. His only wonder is that Simpson's can be carried on successfully without his presence, and although this may be an exaggerated estimate, his loss is regretted by everybody.

In speaking of Simpson's the Divan must not be forgotten. There is nothing Oriental about this part of the building, and divans and luxurious sofas are conspicuous by their absence. No hours wait upon you with chibouques, and captivate you with their languorous black eyes. It is altogether a very commonplace apartment, and I have never seen a turban or a yashmak there. Little tables abound among very British surroundings. At the same time, there is a great quiet and repose, which is distinctly Eastern, and quite refreshing after the busy bustling Strand. On the tables are chessboards with substantial and well-worn chessmen, which have evidently been parties to many a hard-fought encounter. A sprinkling of foreign-looking and serious-minded men are engaged at their favourite game. Absolute silence reigns, only disturbed at intervals by the magic word "Check!" A waiter hovers about, bringing from the lower regions from time to time choice cigars and fragrant coffee. The Divan is no place for the frivolous, but it is an institution which, from its age and its historical record as a chess centre, will be much missed, not only by the votaries of the game, but by those who, by courtesy, are privileged to look on while an encounter between giants is taking place.

Simpson's is undoubtedly an old-fashioned place, but it is to be regretted that it should be included in the category of Vanishing London. Even if rebuilt—as I hear it will be—I doubt whether it will retain its old charm to those who have been accustomed to it as it is for so many years. It will probably be more of the Restaurant than the superior Eating House. Possibly—but I am writing without actual knowledge—it will be modernised out of all recognition. The old English waiter may perhaps be replaced by the German. The thought of a German waiter in such a thoroughly British house gives one the shivers, and if William heard of it it would probably be fatal to him! The boxes may have to make room for separate tables and saddles of mutton be replaced by foreign kickshaws. Such thoughts make an old man sad. No one goes to Simpson's for a light meal; at least, such is my experience. It means one, if not two cuts off the joint with a "follow," a pile of fresh vegetables done to a turn, a piece of old Cheddar (such cheese!), with green-meat and pulled bread, and last, but not least, a good substantial glass of O. and E., or Old and Elegant. If you wish to be considered an habitué, O. and E. is the term to be used; if not, it is permitted to ask for Old Port; but to my mind it never tastes the same. I verily believe it is of quite a different vintage. Many an old fellow like the writer will heave a sigh when his accustomed haunt becomes a thing of the past.—*Globe*.

THE NEW BATTLESHIP "LONDON."

A large party of officials from the Admiralty, including Lord Selborne, Admiral May, and Captain Angus Macleod, visited Portsmouth Dockyard on May 22nd and spent a long time on board the battleship *London*, which is now quite ready for the pennant, says the *Globe*. They were keenly interested in the mechanism of the turret, and the method of manipulating the heavy guns. The *London* is fitted with a very clever device for training and elevating the turret guns. It consists of a pistol grip placed in the sighting position. By raising or lowering this pistol grip the guns are elevated or lowered, by moving it to the right or left as required the guns and turret are trained on the object, and by pressing the trigger beneath it either gun or both can be fired at the will of the observer. And all this is done without having to take the eyes off the sights, almost one might say without thinking.

The gun circuits also claimed official attention. These are on a different principle to those which proved defective on the *Mars*, and it is considered that a repetition of the *Mars* disaster is an impossibility with them. A general memo has been issued, by the way, directing that the use of all auxiliary circuits of this defective type shall be discontinued for the present, pending an alteration which will provide an

efficient safety arrangement. At the same time, it is worthy of note that these or other circuits on a similar principle have been in use for the last ten or fifteen years, and no accident has resulted from them. That one should occur now only emphasises the fact that it is impossible to absolutely eliminate the personal term from the equation of the condition of safety. The *Mars* accident appears to have been due simply and entirely to an unfortunate mistake, and a mistake, moreover, that, six months ago, any gunnery expert would have denounced as patently impossible.

After leaving the turrets Barr and Stroud's new range and order indicators were examined and tested. These have been fitted to the latest of the Japanese battleships, but the *London* is the first ship in our Navy in which they have been regularly placed. They consist of dials, with pointers indicating "ranges" or "orders," and are placed between the conning tower and the gun positions. The mechanism is clock-work, and the communication is maintained between the positions by electric circuits. They appear to be very simple and efficient to work, but their construction is somewhat complicated and it is probably beyond the art of an ordinary mechanic to repair them. Whether or not they will be efficient in action is an open question, but it is the opinion of many naval officers that by no means can communication be maintained once an action has commenced. There is, indeed, a growing feeling that this complicated system of bells, telephones, and indicators of all sorts which now prevails in battleships is a waste of money, and is almost harmful in its influence on the training of the guns' crews. As a rule these devices work perfectly in peace time, and at "general quarters" communications can be efficiently maintained between the conning tower and any gun, hence the guns' crews get to rely too much upon orders received from the conning tower, and lose that independence and initiative of action upon which they most surely will have to rely when real war comes. Another objection is that a blow upon the conning tower will possibly put them all out of adjustment, and make chaos worse confounded. It is rumoured that in view of this possibility, a conning tower in the *Belleisle* will be fitted up with instruments of all sorts and subjected to a moderate gunfire to test the reliability of these instruments under service conditions. After the range indicators, the electric motors for working the ammunition hoists and the after capstan were inspected. The ventilation of the ship, too, is almost entirely controlled by electric motor fans, and for all such purposes motors are most suitable, saving as they do in attention, weight, and efficiency.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE KING'S CONDITION.

London, June 27.

The latest bulletin of the King's condition, dated the 26th, is most favourable in every respect.

The bulletin issued this morning says that the King passed a fair night and obtained some natural sleep. His appetite is improving and the wound is more comfortable. His condition is attended with less anxiety.

The following has been kindly communicated to us by H.B.M.'s Legation:—

London, June 27, 1.35 p.m.

The King has had a fair night and there is less cause for anxiety.

London, June 28.

The latest bulletins say that the condition of the King is satisfactory, that there are no disquieting symptoms and that the temperature is normal. Within a week the doctors will be able to judge definitely regarding convalescence, but it is fully intended if His Majesty's state continues satisfactory that the Coronation shall take place in the early autumn.

A telegram from Baron Sannimoya, Grand Master of Ceremonies, now in Prince Komatsu's suite in London, received by the Japanese Imperial Household on June 28th, says that King Edward, since the performance of the operation, is steadily recovering, and that the Coronation festivities will therefore take place at no distant date.

London, June 29.

The King has been transferred to his

couch. He is cheerful and active-minded. His progress is marvellous. He passed a comfortable day on the 28th, and in the afternoon it was announced that further bulletins would be discontinued.

The following bulletin was issued on Monday morning by H.B.M.'s Consulate:—

London, 1.55 p.m. June 29.

King passed good night satisfactory progress.

London, June 30.

The bulletin issued at four o'clock on the afternoon of the 29th said that the King's progress was in every way satisfactory. The local discomfort is much less.

No bulletin regarding the King was issued last night and henceforth only two bulletins per day will be published, one at ten o'clock and the other at seven.

Lord Cranborne has announced that the King is getting rapidly better.

London, July 1.

The bulletin issued on the afternoon of the 30th said that a comfortable day was passed by the King and that the discomfort of dressing the wound, which gives much distress, is less.

London, July 2.

The bulletin issued at 7 o'clock in the evening said that the advance in the King's condition was maintained. His appetite is improving. The discomfort of the wound is less. His Majesty is still easily fatigued by the least exertion.

MR. CHATER KNIGHTED.

London, June 26.

The Hon. C. P. Chater, C.M.G., of Hongkong, has been knighted.

PRINCE KOMATSU.

Prince Komatsu goes to Paris in about a week's time.

MORE CORONATION HONOURS.

June 27.

Mr. Pelham L. Warren, C.M.G., (Consul-General at Shanghai) has been made a K.C.M.G., and Mr. W. T. Archer, Consul at Bangkok, Commander of St. Michael and St. George; Dr. HOOKAI, of Hongkong (unofficial member of Hongkong Legislative Council) has been appointed a Companion of the new Imperial Service Order.

THE TRIPLE ALLIANCE.

London, June 29.

A treaty has been signed at Berlin prolonging the Triple Alliance unchanged.

THE KING AND HIS SUBJECTS.

The King is touched by the loyalty and devotion shown in thousands of letters and telegrams from all classes and creeds throughout the Empire. The one thing that weighed upon his mind was the disappointment of his subjects at the postponement of the ceremony of the Coronation.

SERVICE AT ST. PAUL'S.

London, June 30.

There was a crowded and impressive intercessory service at St. Paul's on Sunday. The Duke of Connaught and Lord Lansdowne were present.

PRINCE CHENG.

London, July 1.

Prince Cheng has departed.

COLONIAL PREMIERS CONFER.

The conference of Colonial Premiers has been opened. The proceedings are private. Mr. Chamberlain, Secretary of State for the Colonies, presided.

COLONIAL TROOPS FETED.

The Colonial and Indian troops have been taken round the fleet at Spithead.

BONFIRES.

London, June 30.

It is suggested that the Coronation bonfires be lighted to-night.

CRONJE TAKES OATH OF ALLEGIANCE.

London, July 1.

Cronje has signed the oath of allegiance at St. Helena.

CORONATION BONFIRES LIGHTED.

The Coronation bonfires were started throughout the United Kingdom by the discharge of a huge rocket from the great wheel at Earl's Court.

PRINCE KOMATSU.

Prince Komatsu lunched with the Duke of Connaught yesterday.

FRENCH INDO-CHINA.

M. Beau, the Minister of France in Peking, has been appointed Governor of Indo-China.

THE COLONIAL CONTINGENTS.

The Colonial Contingents were reviewed by the Duke of Connaught to-day at the Horse Guards amid intense enthusiasm. Immense crowds were gathered in the neighbourhood of the Parade-ground.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH POLITICS.

Saigon, June 29.

The Chamber of Deputies has voted confidence in the Government by 393 votes to 74, in the sequel of an interpellation about the Humbert affair, in order to prosecute all the culpable and carry out all judicial consequences.

THE FRENCH ARMY.

Saigon, July 1.

The Minister of Marine, in a speech delivered at Versailles, declared that it was necessary to have a national army occupied uniquely with military affairs.

(RECEIVED AT THE NAVAL DEPARTMENT IN TOKYO.)

THE CORONATION SQUADRON.

Admiral Ijuin reports that on the 27th instant the *Asama* and the *Takasago* left Portsmouth for Sheerness.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

CHOLERA IN SHANGHAI.

During the week commenced on the 16th inst., over five hundred deaths from cholera occurred in Shanghai according to a telegram from the Japanese Consul.

CHINA'S TARIFF.

The Commissioners of the United States and China commenced their negotiations for the revision of the tariff on the 27th instant at Shanghai.

PEKING DIPLOMATISTS.

The Austro-Hungarian Minister in Peking, who is the Doyen of the Corps Diplomatique in that city, left for Europe on the 21st. June. Thus the United States Representative becomes Doyen.

THE ISTHMIAN CANAL.

On the 26th of June the United States House of Representatives passed without amendment the Senate's bill for the construction of an interoceanic canal. The bill provides that if full proprietary rights can be acquired in the Panama Canal, the President shall have discretionary power to choose between Panama and Nicaragua.

CHOLERA.

The Russian Representative in Tokyo informed the Japanese Government on the

28th ultimo that Russia had declared Saga to be a cholera-infected district.

TIENTSIN.

With reference to the Tientsin civil-government question, the Russian representative on the Board having been withdrawn, Russia has officially stated that she will take no further part in the negotiations for the rendition of the city.

(RECEIVED IN TOKYO.)

RIOTS IN FUHKIEN.

Owing to the imposition of all kinds of increased or new taxes in Fuhkien province, several hundreds of the inhabitants have raised a riot. The things taxed are opium, *sake*, pots, land, timber, paper, tea, houses and shops, business, beans, fish-nets, pigs, sheep, vegetables, fire-wood, rafts, clams, etc., the whole product of these taxes being one million taels annually.

(FROM THE "JIJI SHIMPO.")

KING EDWARD.

London, June 25.

The King's condition continues as good as can be expected and his temperature is normal. It will, however, be several days before the crisis is passed.

In consequence of the King's illness all the Coronation preparations have been postponed.

The Naval Authorities have issued a notice stating that the Naval Review at Spithead has been postponed.

Later.

The King is gradually recovering and no anxiety need be entertained.

PEACE IN COLUMBIA.

Peace has been restored in Columbia and political offenders are granted amnesty.

PROPOSED NAVAL REVIEW.

The Government has rejected the proposal to carry out the Naval Review at Spithead notwithstanding the King's illness. The war-ships now assembled there will therefore be dispersed within the course of next week.

THE KING'S CONDITION.

London, June 26.

The wound caused by the operation on the King is healing satisfactorily.

THE CIVIL GOVERNMENT OF TIENTSIN.

Viscount Cranborne, Under-Secretary of State for Foreign Affairs, speaking in the House of Commons, stated that the Government has instructed the British Minister in Peking to propose a change in the conditions regarding the transference of the Civil Government of Tientsin.

TROUBLE IN SOUTH AMERICA.

The insurgents of Venezuela have been successful, and it is rumoured that the Government forces, and the Vice-President, have surrendered.

DEATH IN LONDON.

The Rt. Hon. William Lidderdale, a director of the Bank of England, is dead.

THE BRITISH PRESS AND JAPAN.

The British press, in a series of articles, has sincerely praised Japan on account of her having attained an important position commercially in China and Korea, and also because of her scheme for further expanding her naval forces.

KING EDWARD.

London, June 27.

The King's temperature is normal and he is gradually recovering.

London, June 28.

The first period of the King's illness has safely passed and the Court physicians have announced that there is no longer any acute crisis. Should His Majesty's condition improve as rapidly as is expected the Coronation festivities will take place in August, when there will be illuminations in the streets of London, military reviews in India and other British dominions and receptions to princely guests from various countries.

THE UNITED STATES AND COLUMBIA.

The hostilities between the insurgents and the

Government of Venezuela have ceased. Various American enterprises in Columbia have consequently assumed a tone of activity, and the right of gold mining, and collecting gum and asphalt has been secured, as also a monopoly of river navigation.

AGUINALDO.

Mr. Roosevelt, President of the United States, has granted an amnesty to Aguinaldo, the former leader of the insurgents in the Philippines.

TRIPLE ALLIANCE.

The treaty for the continuance of the Triple Alliance was signed at Berlin to-day, all the clauses in the former Treaty being preserved.

THE KING'S CONDITION.

London, June 30.

The King's recovery is remarkably rapid.

THE JAPANESE SQUADRON.

The Japanese cruisers *Asama* and *Takasago*, together with the newly built torpedo-destroyer *Asashivo*, have weighed anchor for Sheerness.

FOREIGN AMBASSADORS.

The German, Portuguese, Russian and Chinese Ambassadors for the Coronation have already left London.

A CONSUL EXPELLED.

The Turkish Consul at Geneva, has been expelled from that city.

MILITARY REVIEW.

The Prince of Wales was to inspect the Colonial troops to-morrow and also the Indian troops on Wednesday.

RUSSIA IN KOREA.

A St. Petersburg journal, the *Svet*, in a leading article, states that, in view of the imperfect dock accommodation at Port Arthur, Russia must acquire ice-free ports, otherwise her warships may be compelled to take shelter in Japanese harbours during winter. The same paper declares that as it is likely that in the event of an outbreak of hostilities, Japan would blockade Port Arthur and Vladivostock, Russia must acquire a base of acting on the Pacific coast, and points to Masampo as best fitted for the purpose.

(FROM THE "JAPAN HERALD.")

THE KING'S CONDITION.

London, June 26.

The morning bulletin states that the King has improved in all respects.

THE CORONATION HONOURS.

Besides a baronetcy for Sir Thomas Jackson, General Manager of the Hongkong and Shanghai Bank, and a knighthood for the Hon. C. P. Chater of Hongkong, the honours include the Grand Cross of the Order of St. Michael and St. George for Sir Ernest Satow, British Minister to Peking; and the Order of the Knight Commander of St. Michael and St. George for Mr. Pelham Warren, British Consul at Shanghai.

(The telegram also gives the name of "Koka" as having received a C.M.G., but we have been unable to identify who this is.)

THE KING'S ILLNESS.

London, June 27.

The latest bulletin with regard to the King's condition states that there are no disquieting symptoms.

U.S. NEGOTIATIONS WITH THE VATICAN.

London, June 29.

The negotiations between the United States and the Vatican with regard to ecclesiastical affairs in the Philippines are not progressing satisfactorily, the Vatican's demands being regarded as impossible.

THE PHILIPPINES' BILL.

London, July 1.

At a conference between the U.S. House of Representatives and the Senate on the Philippines' Bill, a compromise was agreed to, eliminating the gold standard clauses and postponing the constitution of the legislative assembly until a census shall have been taken.

PRINCE CHEN.

King Leopold has entertained Prince Chen at dinner at Ostend.

(FROM THE "DEUTSCHE JAPANPOST.")

GERMAN NEWS.

Berlin, June 27.

The press of the whole of Europe, especially of Germany, expresses great sympathy with King Edward's illness.

The railway Swakopmund-Windhoek, German South-West Africa, has been opened.

This railway will greatly help in developing the resources of a country which is more than one and a half times the size of Germany.

The relief of the German occupation corps in China left Germany.

The shares of the German Shantung Railway have been emitted at the rate of 103.5.

Berlin, June 28.

The German Emperor has placed King Edward VII. à la suite of the German Navy.

Turkey has issued a circular note in which she maintains her right upon Tripolis.

The troubles in Venezuela are increasing. The insurgents took Santa Ana de Coro, capital of the Venezuelan State of Falcon, on the Maracaibo bay.

Berlin, June 30.

The Triple Alliance has been renewed under the old terms and the documents were signed at Berlin by Count Bülow, Count Lanza and Mr. v. Szögyényi-Marich.

The United States have granted amnesty to the political prisoners of the Philippine Islands including Aguinaldo.

Vice Admiral von Büchsel has been appointed Chief of the German Naval Staff in succession to Vice Admiral von Diederichs resigned.

Prince Henry has left London, King Edward's condition causing no further anxiety.

Mr. Beau has been appointed Governor General of Indo-China.

Berlin, July 1.

The renewal of the Triple Alliance has been welcomed with great sympathy by the whole press of Europe.

Near Cape Haiti, (island of Haiti) fighting with rebels has been reported.

With regard to the collision between a German torpedo-boat and an English steamer at Kiel, King Edward VII. Admiral à l. s. of the German Navy, has wired to Emperor Wilhelm his most hearty congratulations on behalf of the excellent behaviour of the German crew. The drowned German captain's last orders were to first rescue the crew of the English steamer.

(FROM THE "N.-C. DAILY NEWS.")

NORTH HONAN QUIET.

Changchoufu, June 21.

Everything in North Honan is peaceful, and itinerating is uninterrupted.

THE KING OF SAXONY.

Berlin, June 21.

King George, the succeeding King of Saxony, has issued an address to his army, stating that good faith to the Confederation of the Empire, which he inherited from his brother the late King, will be the guiding principle of his reign.

DISTURBANCES IN SZECHUAN.

Chungking, June 23.

The news is confirmed of the massacre at Yung-hsien of a preacher and nine converts belonging to the American Methodist Mission.

An insurrection has broken out in Tsechow sub-Prefecture. The officials are quite helpless, and matters there are getting very serious.

THE CORONATION SPORTS.

Bombay, June 26.

At the National Sporting Club, on the 25th inst. Gus Ruhlin beat Tom Sharkey in the heavy-weight contest in eleven rounds.

(FROM THE "SHANGHAI MERCURY.")

CHOLERA AT SOOCHOW.

Soochow, June 21.

Cholera is still raging here among the natives and the deaths are numerous. Each day many are reported but there are cases that are never reported, as it seems to rage in one locality for a while and then shifts to another. It has been reported that there were at one time as many as 100 deaths in one day. In the last few days there have been two or three "scars" among the foreigners but nothing serious has resulted yet.

All precautions are being taken as regards food and water. The foreign and native physicians are kept busy answering calls at all hours of the day and night.

CANADA AGAIN FOREMOST.

London, June 22.

The Canadian coronation arch erected at Whitehall is one of the handsomest decorations in evidence. Much material for its erection was brought by the

Canadian contingent. Great pleasure is expressed at the interest displayed by these Western "Sons of the Empire," whose services in South Africa were second to none.

THE POLICY OF IMPERIAL DEFENCE.

London, June 22.
The *Times* says that yesterday's Parliamentary debates have committed the Government to the only rational and efficient policy of Imperial defence, namely treating as a whole, but involving the separate but correlated functions of the Army and Navy.

GREAT CROWDS IN LONDON.

Coronation visitors are crowding into London from all parts of the globe. The streets are crowded with the multitudes viewing the decorations which are rapidly approaching completion.

BAD WEATHER STILL PREVAILS.

London, May 22.
The unsettled condition of the weather is causing great anxiety. Some of the earliest decorations are already bedraggled with rain.

FAMINE IN SZECHUEN FEARED.

Chengtu, June 21.
A famine is feared in Szechuen and the Boxers are spreading near Lunguanhsien.

A telegram from Tszcheo states that hundreds of Boxers hold a fortified position there, and that the situation is urgent.

A CHINESE CRUISER BLOWN UP.

Sheakwan, June 22.
The Chinese cruiser *Kaishi* was destroyed by an explosion at thirty minutes after noon to-day. A half minute after the explosion she sank. Only two lives were saved, 150 being killed and drowned.

KING EDWARD'S ILLNESS.

London, 24th June, 1.15 p.m.
His Majesty the King is undergoing an operation to-day.

1.55 p.m.
The King is suffering from strangulated hernia. His condition was satisfactory on Saturday. Hopes were entertained that the King would be able to endure the Coronation ceremony, but a recrudescence yesterday necessitated an operation.

2.15 p.m.
All London was thunderstruck on hearing the news and dismay prevailed everywhere. The vast crowds parading the streets witnessing the decorations are dumbfounded. Large crowds have congregated round the Palace and Mansion House. Much sorrow is expressed at the date of the Coronation being postponed. The exact date of the Coronation has not yet been suggested as weeks may elapse before the King is well enough to go through the ceremony.

The Earl Marshall has announced that the King sorrows greatly owing to his serious illness necessitating a postponement of the Coronation, in consequence of which there will be no London celebration, but the King hopes that country celebrations will remain unaltered.

2.40 p.m.
The operation was successfully performed at noon to-day.

2.50 p.m.
The King has regained consciousness and is now asleep.

DR. TREVES OPERATED.

6.16 p.m.
The King bore the operation remarkably well. Dr. Treves operated. The King recovered consciousness directly after the operation and asked for the Prince of Wales.

Lord Salisbury announced that the operation was singular, but not essentially grave, and that Dr. Treves had performed seventy operations of the kind with success, which left every prospect of a prosperous issue, but all must hope and pray.

At first the people refused to believe the news. Consols fell one point. Stock markets have weakened. Intense anxiety and excitement prevail.

It is rumoured that a special Service of Intercession will be held at Westminster Abbey on Thursday (To-morrow.)

The news of the King's illness came like a thunderclap to the general public.

The Bishop of London made the first announcement at the rehearsal at Westminster Abbey this morning, asking those present to join in the Litany and pray for the recovery of the King.

The news travelled like wildfire along the densely crowded streets.

London, June 24.
The King returned to Windsor from London looking pale and tired, and leaned heavily on his stick when walking.

Despite the disquieting rumours concerning the King's ill-health, all London is en fete and crowds are constantly parading the streets. The Rt. Hon. Sir Wilfrid Laurier, Premier of Canada, has arrived, accompanied by his staff. Many prominent Ameri-

cans are present, most of whom have secured houses or windows along the route of the Coronation procession. Rates at the various hotels have been doubled and trebled in the last few days and crowds are still entering London by land and sea. The troops comprising the Coronation contingent have suffered to some extent owing to the inclemency of the weather, but to-day's sunshine has improved their condition and spirits wonderfully. The repairing of Westminster Abbey was completed yesterday and everything is in readiness for the great event.

LATEST NEWS FROM LONDON.

London, June 26.
The last bulletin posted states that the King has improved in all respects. His condition at present is quite favourable. All London is showing its joyfulness at the good news of the latest bulletin. The country towns have gone on with the illuminations, free dinners, etc., but the coronation "Masques" are not to be produced. The foreign delegations have been most sincere in their expressions of sympathy and condolence. The weather is most favourable; universal regret is felt that the ceremonies could not have gone on. Dr. Treves is in constant attendance and every one expresses satisfaction at the treatment the Royal patient has received at his hands.

The Duke of Connaught visited Buckingham Palace early this morning. When he left the King's condition was most satisfactory and his temperature and pulse were normal.

ROOSEVELT EXPRESSES SYMPATHY.

President Roosevelt's was one of the first messages of condolence received after the news of the King's serious illness was announced. Immediately following were those of the Emperor of Germany and President Loubet. The Mikado's message was a model of brief and sympathetic courtesy.

Few, if any, of the large multitudes assembled for the Coronation are as yet leaving.

The *Lancet* and the *British Medical Journal* publish a clinical history of His Majesty the King's illness. Both give a hopeful view of it, and ask the public to discredit all the wild rumours that have been circulated. The Bulletins are absolutely sincere, and the King is suffering from perityphlitis and nothing else. The first symptoms showed themselves on Friday, 13th instant.

The Archbishops and Bishops request the use of the Second Collect contained in the "Office for the Visitation of the Sick" in public and private prayers during the illness of the King.

The Foreign correspondents of the newspapers testify that the sorrow and anxiety are almost as great abroad as at home.

THE HONOURS LIST.

The honours list has been issued and is generally approved of.

The new Order of Merit, it is thought, supplies a long felt want.

Russian	2.35
Langkat	2.35

SUGAR.

The market is quiet and there is no change in quotations.

	PER POUND.
Brown Takao	Y. 4.90 to 5.50
Brown Manila	5.10 to 6.10
Brown Daitong	4.30 to 6.50
Brown Canton	6.00 to 6.60
White Java and Penang	6.00 to 6.80
White Refined	8.70 to 10.10

EXPORTS.

RAW SILK.

The market for new silk has opened, a few very small purchases having been made on the basis of quotations, which are now, of course, for new silk. Demand is not active, markets on the other side being very dull. Probably the month will be well advanced before there is any large business. Meantime the best reports say that the amount of the crop in Japan will be about equal to last year. But the shortage in North China is now assured, and that will probably maintain prices here on a somewhat higher basis than those of last season.

QUOTATIONS.

TEA.

Settlements from June 14th to the 30th amount to about 20,806 piculs against 9,777 piculs for the same period last year. Second crop leaf is now arriving and is of fair quality, but asking prices rule as high as were those of first crop. Settlements for the season to June 30th were 94,864 piculs against 109,839 piculs last year.

CUTICUR

REMEDIES

THE SET

Consisting of CUTICURA SOAP, to cleanse the skin, CUTICURA Ointment, to heal the skin, and CUTICURA RESOLVENT, to cool the blood, is often sufficient to cure the most torturing, disfiguring skin, scalp, and blood humours, rashes, itchings, and irritations, with loss of hair, when the best physicians, and all other remedies fail.

Millions of Women Use Cuticura Soap

Exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations, inflammations, and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sanative antiseptic purposes which readily suggest themselves to women, and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world. Sold throughout the world. "All about the Skin," post free of Aust. Depot: R. TOWNS & CO., Sydney, N.S.W. So. African Depot: LENNON LTD., Cape Town. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 12TH, 1902.

DEATH.

At the General Hospital, on Wednesday, the 9th inst., at 9.15 p.m., EARLE C. SWAN, aged 25 years. A native of California, U.S.A.

SUMMARY OF NEWS.

KING EDWARD is steadily improving and the Coronation will probably take place in August.

A GOODS train was upset at Obasute Station, on the Shinonoi line, on the night of July 6th. Happily no one was injured.

THE British cruiser *Perseus* has captured a dhow with a quantity of arms and munitions of war for the Mad Mullah.

LORD STANLEY, in the House of Commons, said that 14,398 soldiers have been pensioned as medically unfit in consequence of the war.

ON the night of the 1st inst. a robber entered the house of Mr. Gauntlett, of the Okayama High School, and carried off a quantity of Japanese and foreign clothing.

SIR HECTOR MACDONALD has been gazetted to the command of the troops in Ceylon; and has been promoted Brigadier with the temporary rank of Major-General.

KAWA-RI EIJIRO, a second class soldier belonging to the Fourth Regiment of Cavalry, Osaka, was sentenced by the Osaka Court-martial to im-

prisonment for life on account of having murdered two women in that city. The crime was committed in the spring of this year.

DURING the 34th fiscal year (1901-2) 24,160 cases of raw silk were exported by the Mitsui Bussan, Doshin Kaisha, Hara Gomei Kasha and Kiito Gomei Kaisha in Yokohama.

ON July 2nd a passenger train was derailed at Tennoji Station on the Kansai Railway and five persons sustained injuries. The accident was due to a mistake on the part of the driver.

THE windows of the grogshops in Nagasaki are to be made opaque—a rule which is to be enforced by the police. This, remarks the Nagasaki paper, is a step in the right direction.

THE Hunan S.S. Company's shares having been fully subscribed for, the company will call on its shareholders to pay $\frac{1}{4}$ of the face value of their holdings from July 25th to July 31st.

MR. STEPHEN LIHRMAN has been appointed Mexican Consul at Yokohama. He took up his new duties on June 30th. The new Consul is also entrusted with the consular business of Kobe.

IN consequence of the collapse of No. 3 tunnel between Zushi and Yokosuka railway traffic on that section was interrupted for hours of July 8th. Traffic was resumed late in the afternoon.

MR. YAKAWA MOTO-OMI, Secretary of the Communications Department, has been ordered to represent Japan at the International Marine Convention to be opened in Hamburg, in September this year.

DURING a heavy squall which visited Yokohama about 5 p.m. on Monday, the German mail steamer *Sachsen* parted her stern lines and swung round on the pier, where she was berthed. No damage was done.

THE steamer *Hokoku Maru* was successfully raised on July 4th at high tide. The vessel, after undergoing official inspection at Shimonoseki, left the latter port for Kobe the following day. The loss is estimated at over yen 2,000.

THE Formosan Government contemplate erecting in Formosa a wireless telegraph apparatus to communicate with the opposite shore of China. Experiments are now being made under the direction of the Formosan Communications Bureau.

AS a consequence of the Card Taxation Law, which has just come into force more than 130 card manufacturers and dealers in Nagasaki have lodged applications for the suspension of their business. They have decided to ship all goods in stock abroad.

A REPORT from Mr. Takahira, Japanese Minister in Washington, received by the Foreign Office, says that the President of the Louisiana Purchase Exposition has issued a notice that the Exposition will open on May 1st, 1904, and remain open until December 1st.

NEWS from Shizuoka says that during target practice by the Third Regiment, on July 8th, at Mihono-matsubara a soldier was accidentally struck in the breast by a bullet. Death was instantaneous. Another soldier was injured slightly on this occasion.

A CELEBRATION will take place at Hachioji under the auspices of the Railway Bureau, on July 19th in honour of the completion of the Sasago tunnel, on the Central Railway running between Hachioji and Nagoya. The work was started on December, 1895 and finished on July

6th this year. Its length is said to exceed 15,246 feet.

HIS Excellency Mr. Isvolsky, Russian Minister in Tokyo, entertained Prince Boris Vladimir and his staff at the Russian Legation on the afternoon of July 9th. Among the *invites* were the Russian Consul-General from Yokohama, officials of the Foreign Office and the Treasury and many others.

IT is reported that an arrangement has been effected between the Korean Government and the Mitsui Bussan Kaisha, whereby the latter has agreed to act as agent of the peninsular authorities in the matter of exhibiting Korean products at the coming Domestic Exhibition at Osaka.

THE frequency of British torpedo-boat-destroyer and torpedo-boat collisions and other accidents was emphasized on June 7th in a reply of the Admiralty, through Mr. Arnold-Forster, to a question in the House of Commons, showing that there were no less than 110 such occurrences in 1900 and 1901.

TWELVE non-commissioned officers and men of the 145th French Infantry, in garrison at Montmedy, have just performed the remarkable feat of marching 85 $\frac{1}{4}$ miles in 26 $\frac{1}{2}$ hours, or about 3 $\frac{1}{2}$ miles an hour, over one of the most difficult routes in France. Lieut. Frevet was in command. The *Gaulois* adds that the battalion, with band at head, met the men on their return.

ABOUT half-past 2 p.m. on July 6th Tetsu, maid-servant in the service of a foreign resident at Negishi, Yokohama, while walking along Inarino-mori near Negishi, was suddenly seized by a man who had wrapped up his face in a handkerchief. By threats, the man took from her a purse containing five yen and then fled. The matter was at once reported to the police but the man has not yet been arrested.

AN Osaka report says that the steamer *Kinai Maru* (2,015 tons) belonging to Mr. Kato Tomijiro of Osaka, while on her way from Moji to Tokyo, ran aground near the Iwaya light-house in Awaji province on the night of July 1st but fortunately sustained no damage. Attempts are being made to raise her at high tide. The vessel is laden with 1,800 tons of coal and is insured in the Tokyo Marine Insurance Company for yen 10,000.

JULY 9th was an eventful day at Oiso. As usual every year, the various tea-houses and bathing-houses held a celebration in honour of the opening of the season of sea-bathing, and invited thereto customers from Yokohama, Tokyo, and other places. On the present occasion nine arrests were made by the police, the persons being charged with gambling. The affair took place in the Ryujo-kan, a Japanese hotel, and among the arrested were four gentlemen of Yokohama. Nor was this all. Several further arrests, including three women, were made at other tea-houses during the evening, some of the persons being charged with gambling and others with shameful conduct.

THE death is announced of Dr. S. Kashimura, President of the well-known Sanryudo Hospital, Kanda, Tokyo, the sad event taking place on July 7th at his villa in Shinagawa, at the age of 57. He had been suffering from consumption. Prior to his death, the deceased received the Court title of *jugo-i* at the Emperor's hands, in recognition of his distinguished services both in official and non-official circles. The deceased, who was well known to foreigners and Japanese, once occupied a chair in the Medical College of the Tokyo University and in 1889 opened the Sanryudo Hospital. In 1893 the title of *igaku Hakushi* (Doctor of Medicine) was conferred upon him.

PRINCE BORIS IN JAPAN.

Friday, July 4.

Three Japanese newspapers comment editorially on the arrival of Prince Boris Vladimir, namely, the *Jimmin*, the *Hochi*, and the *Chino*. The *Jimmin* (*Seiyu-kai* organ) dwells on the necessity of distinguishing between the coming of a distinguished member of a foreign State and the foreign policy of that State. Hospitality and politics, it says, should be kept separate. Marquis Ito received a remarkably warm welcome when he visited Russia last year. Evidently the cordiality of his reception was due to the fact of his being Ito, not to the fact of his being a representative of Japan. Prince Vladimir ought to be welcomed with equal warmth and sincerity. It is only folks whose politics disturb their reason that detect deep political motives in every visit of a distinguished or illustrious person to a foreign country. As for those that bring forward the Anglo-Japanese alliance and allege that whatever the sentiment of the allies towards Russia, Russia, on her side, can not but feel that the alliance is intended to place obstacles in her path in Asia, they are either people incompetent to understand the force of circumstances, or folks actuated by a desire to make mischief between countries. Because Japan has joined hands with one Power there is no reason why she should be unfriendly with others. That is behaving like a girl with one lover. The greater the number of her friends the better. She can cultivate them all sincerely without failing in her duty to any one of them.

The *Hochi Shimbun* says that such a guest should be heartily welcomed. There is nothing political about his visit, but it can not fail to have an effect upon politics. Some people say that the Anglo-Japanese alliance has set up a barrier between Japan and Russia. That is absurd. There are no necessarily conflicting elements in the policies of Russia and of the allies. Both policies alike are founded on the purposes of preventing disturbance in the Far East and promoting the development of commerce, nor can it be supposed that the Government of His Majesty the Tsar, a genuine lover of peace, has any other object. Probably one main cause of the common misunderstanding about Russo-Japanese relations is that they have hitherto been chiefly political and little commercial. But the time has come when the two countries are to be drawn together by community of commercial and industrial interests. The Siberian Railway, the Manchurian Railway and the Korean railways are all instruments for establishing an *entente* on material grounds. It is to be hoped that the business men of Japan will show their appreciation of the situation by according a hearty welcome to the Russian Prince.

The *Chino Shimbun* takes a very similar line. It contends that Port Arthur, Dalny and Vladivostok are now to become gates of commerce, and that the seas adjacent to Japan will be the highway of a new and great trade. These are the facts to be kept in mind by the Japanese people when they think of Russia. Russia's object in building the Trans-Asian Railway was not merely political: it was also commercial, and it would be wise that in her sentiments towards Russia Japan should cease to be guided solely by politics and should pay due attention to community of material interests. The opening of Manchuria and the preservation of Far-Eastern tranquillity are to be effected by a Russo-Japanese *entente*, not by discord

between the two Powers, and there could be no more mistaken policy than that which regards a collision between Japan and Russia as inevitably indicated by the interests of the two States. The coming of Prince Vladimir has no political significance, but Japan would be making a mistake if she failed to utilize the occasion for good ends.

The Prince's arrival in Tokyo was saluted by 21 guns fired by a battery in the grounds of Yuraku-cho; a position sufficiently remote from Shimbashi not to startle the horses of carriages assembled for the use of the Prince, his suite and the notables who went to meet him. From the railway platform to the place of entering the carriage prepared for His Highness a red cloth was spread, and it need scarcely be added that a guard of honour escorted the Prince *en route* for the Detached Palace. An exceptional feature was that the whole of the western side of the route from Shimbashi to the Palace was lined with troops of all arms, and the eastern side by a force of police. His Imperial Highness lunched at the Russian Legation and subsequently attended a religious service at the Cathedral of the Greek Church in Surugadai. In the evening at 6.30 o'clock he proceeded to the Imperial Palace and after audience with the Emperor and Empress, had the honour of dining with Their Majesties and the Princes of the Blood, the Minister President, the Minister of State for Foreign Affairs and other notables, the Russian Minister of course being present. On the following morning (3rd instant) the Emperor visited the Prince at the Detached Palace, and the Prince subsequently lunched with His Imperial Highness Prince Fushimi and dined with Prince Kanin. According to present plans the Prince will leave Tokyo on the 5th.

Monday, July 7.

On the 3rd instant the Emperor conferred the Grand Collar of the Chrysanthemum on Prince Vladimir, the presentation being made by His Majesty's own hand on the occasion of visiting the Prince at the Shiba Detached Palace. Various orders were also conferred on members of the Prince's suite.

The Prince visited His Excellency Baron Komura, H.I.H. Prince Arisugawa, His Excellency Count Katsura, H.I.H. Prince Kanin, H.I.H. Prince Nashimoto, H.E. Count Tanaka, H.I.H. the Prince Imperial, and finally H.I.H. Prince Fushimi, at whose residence luncheon was taken. That evening the Prince dined with Prince Kanin. The usual programme of amusements were provided for the Prince, including fireworks, fencing, archery, *jujutsu*, painting, wrestling, etc. Visits were also paid to various educational institutions.

The Prince left Tokyo by the 9.40 a.m. train on the 5th instant, and on reaching Yokohama, laid aside his official capacity and became a private individual for the purpose of making visits to Nikko and Hakone. After resting at the Imperial Pavilion near the Benten hatoba, His Highness went on board the battleship *Sevastopol* at 1 p.m. The various warships dressed in his honour and fired salutes when he went off to his ship.

Prince Boris Vladimir and his staff landed at Yokohama from the *Sevastopol* on the afternoon of July 6th and put up at the Grand Hotel. In a few days the Prince will visit Nikko, Hakone, and other places of note. Mr. Madenokoji, Master of Ceremonies, will, it is said, accompany the Prince.

Prince Boris Vladimir and staff left Yokohama for Tokyo on July 8th by the 5.30 p.m. train.

The previous day His Highness visited various Japanese stores in Benten-dori and purchased a number of curios. The Prince and suite then called on Tamamura and had their photographs taken.

CHINESE NEWS.

Friday, July 4.

The Shanghai correspondent of *The Times*, says that "daily experience justifies the general opinion that the protocol of September, 1900, is an unique monument of the collective helplessness of Western diplomacy in Peking." That is exactly the view long ago taken in this country. Whenever the Protocol has been subjected to any strain, it has at once broken down. None of the measures taken in accordance with it has worked smoothly and successfully. Conspicuous above all was the singular sanguineness shown by its negotiators in leaving the problem of tariff revision to be solved by China's good will. Some people regard it as essentially characteristic of China that she yields nothing to persuasion and everything to force. It will be time enough to say that she has not learned that habit from her Western teachers when any evidence can be adduced to show that they have ever yielded anything to her persuasion. As for the fact, however, it is apparently incontrovertible: unless she is tightly screwed down she will wriggle out of an unpleasant engagement if possible. Japan acted on that conviction when she made the Shimonoseki Treaty, for she provided a substantial guarantee that China should not play fast and loose with her when it came to revising her commercial treaty. But the negotiators of the Protocol made no such provision, and the consequence is that tariff revision makes no kind of progress. Another contingency that the Protocol does not provide against is the nullification of all the tariff revisors' labours through dissensions among the Powers. Great Britain's commissioners are taking infinite pains to contrive the commutation of *likin*, and are said to be now willing to agree to an increase of the import duties to 20 per cent. provided they can attain their end. But what likelihood is there that all the other Powers will agree to such a radical change? None whatever, we imagine.

Some say that Messrs. Arnold Karberg and Company offered to pay to the Chinese Government a sum of fifty million taels annually for a monopoly of the preparation and sale of opium throughout the empire, and others allege that fifteen millions was the sum offered. We are inclined to think that the latter is the more probable figure. Either payment would constitute a most welcome and useful addition to the revenue of China just at present. But the scheme is not likely to mature. A Peking clique headed by Prince Ching advocates the acceptance of the German firm's offer, whereas the Viceroy Chang Chih-tung and Yuan Shih-kai strenuously oppose it, and the combined influence of the latter is too strong to be ignored. Most people will be disposed to say, we imagine, that China would be performing a suicidal act if she adopted any such plan. If by the term "preparation" of opium is to be understood the various processes usually involved in that operation, it is obvious that the German monopolists would be obliged to organize an immense staff of experts and assistants throughout the provinces where the poppy is chiefly grown, namely, Szchuan, Yunnan, Kweichow and Hupeh, and indeed in many other provinces also. Mining and railway concessions would

be a mere bagatelle compared with such an arrangement and the dangerous contingencies connected with it.

The average prices of foreign goods imported into China between 1897 and 1899 were considerably less in terms of silver than they are now. That is obvious, for the prices of the imports are gold prices, and consequently though they may undergo no change from year to year assessed in gold, they do undergo a considerable change when converted into silver. But the specific import duties now imposed were calculated on the basis of the 1897-99 prices, and being stated in silver, they represent a smaller percentage of the prices on which they are based than they did at the time they were fixed. Thus if P be the prices of 1879-99 and if silver has fallen 10 per cent. in terms of gold since that time, it is plain that where a five-per-cent. import tariff produced $\frac{P}{20}$ in 1897-99, it now produces only $\frac{P}{22}$. The Chinese are said to have become sensible of that fact, and to be anxious to have some arrangement made to meet it, as well as some arrangement for periodical re-adjustments of the balance. There really is no effective remedy for all these complications except that China should adopt gold monometallism. The world has condemned itself to make no use of one of the precious metals which formerly rendered excellent service, and China merely subjects herself and everybody else to great embarrassments by declining to follow the world's example. We do not pretend to say how she is to effect the reform, but until she does effect it, nothing will work satisfactorily.

The *Yomiuri* alleges that the principal points aimed at by the Japanese commissioners in negotiating the new commercial treaty with China are: (1) free navigation of all Chinese inland waters; (2) removal of restrictions on the export of rice; (3) a veto on the use of Japanese names by Chinese merchants; and (4) the protection of patents and trade marks.

Monday, July 7.

The Empress-Dowager is said to have recently expressed radical dissent from the Boxer propaganda and from the anti-foreign campaign. Her Majesty said that the instigator of the Boxer outbreak was Yun Nen and that Princes Tuan and Chuan encouraged it. Replying to a minister who urged that ever since the flight to Jehol in 1860 the imperial house had suffered only insults at the hand of foreigners, and that to treat them with consideration was a great mistake, the Empress-Dowager severely condemned such a doctrine. Only a small span of life remained to her, she said, and during that time it was her determination not to involve her country in trouble for the sake of avenging personal wrongs.

These details are given by the Peking correspondent of the *Fiji Shimpō*. It would seem that Prince Tuan has now been twice denounced from the Throne as an instigator of the Boxer trouble. His cause was taken up by several persons at one time, and the Foreign Ministers were condemned for insisting on his capital punishment. The latter criticism was probably just from the point of view that to demand from the Throne something which the Throne had obviously no power to accomplish without recourse to mediæval methods, was merely to create a tactless impasse. On the other hand, it was out of the question that Prince Tuan should go undenounced. At any rate it is satisfactory to know that the Foreign Representatives

were right in their diagnosis. What is now to be said about Yung Lu? He was denounced in equally strong and confident terms, yet he remains at the right hand of the Throne, and all his proceedings since the return to Peking have been apparently inspired by progressive instincts. Is the Empress-Dowager acting the part of a mere hypocrite, openly condemning Princes Tuan and Chuan and openly favouring their guilty comrade Yung Lu? That is scarcely credible.

The projectors of the Hunan S.S. Company held a meeting in Tokyo on the 2nd instant. The report submitted to them was very favourable. It showed that 452 persons had applied for shares from all parts of the empire, and that the total amount of capital required—1½ million *yen*—had been fully taken up. The meeting decided that the first installment on the shares should be called in between the 25th and the 30th instant, after which a general meeting of shareholders will be held for purposes of organization, men being sent in the meanwhile to the scene of operations to make the necessary arrangements. The projectors have further resolved that Chinese subjects shall be the only foreigners allowed to hold shares. The names of the Establishment Committee are Baron Shibusawa and Messrs. Yasuda Zenjiro, Kondo Rempei, Kato Masayoshi, Masuda Ko, Hayakawa Senkichiro, Asada Masabumi and Shiraiwa Ryohei.

It is affirmed—according to an *Asahi* telegram dated the 3rd instant from Peking—that the Kwangsi rebels are very active, and that things are in a most disturbed state about Nanning, Taiping and Suching. The telegram further quotes this report as saying that the Government troops are short of ammunition and provisions, and that their commanders ask urgently for supplies and reinforcements. Thus the mystery of Kwangsi deepens. Foreign observers, who have been to the so-called "disturbed" regions announce that signs of disturbance are quite imperceptible, yet Chinese rumours remain as persistent as ever.

Tuesday, July 8.

We read in the *N.-C. Daily News* that the Chinese Throne has been memorialized to abolish the Grand Secretariat, a body which bears the same title as the "Cabinet" in Japan (Chinese *Neikwōh*, Japanese *Naikaku*). The reason assigned is that this once important body has been gradually deprived of all its functions. Originally the Grand Secretaries acted as chief advisers to the Crown, but a large part of that function disappeared when the Manchu dynasty came to the throne, since the Emperor had a board of military councillors called *Chun-chi Ta-chên*; and in 1900 the organization of a department of State Affairs (*Cheugwen Chu*) still further reduced the sphere of the *Neikwōh*'s usefulness, inasmuch as the new office virtually discharged all administrative duties during the period of the Court's refugeeship. On the other hand, a Grand Secretary receives 4,000 *shih* of rice by way of pay—a *shih* is 166 catties—, which is the equivalent of about 16,000 taels annually, and the expense of the whole body is 80,000 taels. Its abolition would therefore be a boon to the Treasury.

The United States Government is said to have adopted a very liberal view with regard to the Tientsin question. Washington has not gone quite so far as St. Petersburg, for whereas the latter is supposed to have separated itself altogether from its heretofore

colleagues, the former proposes a concession in the matter of a foreign civil administration only, and, moreover, America continues to be represented at the discussions. As for France, it was expected that she would follow Russia's example, but she appears to have made a compromise between her convictions and her inclinations by abandoning her support of Germany's extreme view and declaring that she is willing to adopt the decision of the majority. It is to be hoped that this problem may not cause a permanent rupture in the camp of the allies. We do not hear much of what England is doing, but certain rumours appear to indicate that she is not inclined to press China too closely. One of the main anxieties, we presume, is that if China's wishes are complied with, the complaisance of the Powers will be misconstrued by the Chinese nation.

The members of the Tariff Commission, headed by Sir James McKay and Taotai Shêng, are still travelling up the Yangtse. They have had their interview with Liu Kunyi, and they are now on their way to Wuchang to meet Chang Chih-tung. Telegraphic news from Shanghai insists that their object is to come to some arrangement with the three Viceroyalties about the abolition of *likin*, but our readers will remember that London intelligence represents the British Government as having abandoned all hope of obtaining the commutation of that objectionable impost. Either London or Shanghai must be altogether mistaken.

There is a telegram from Peking to the *Fiji Shimpō* which says that an *émée* has occurred in the province of Kirin, and that the Chinese officer in command there has applied to General Korchakoff for aid. Such incidents are fatal to China's prospect of recovering Manchuria. Russia will of course decline to evacuate so long as the Chinese acknowledge their incompetence to preserve order in her absence.

Wednesday, July 9.

In commenting on the distribution of the 67½ millions sterling exacted from China by way of Indemnity, the *North-China Daily News* puts England's share at nine millions, America's at 8 millions, France's at 11½, Germany's at 14, Russia's at 14½, and says that "the rest including Japan" receive 10½ millions. That method of stating the case is not intentionally designed to be unfair to Japan, but in fact it is certainly very unfair. For in the first place it excludes her, in appearance at all events, from the ranks of the Powers that bore the burden and heat of the day, whereas she stood at the very head of them, and whereas the relief of Peking would not have been effected nearly so soon and might never have been effected at all without her strong and resolute aid; in the second place, it groups her with Powers like Italy, Austria-Hungary and Belgium, a most honorable association, of course, from a general point of view, but exceedingly misleading from the point of view of the Chili campaign; and in the third place it leaves the public in doubt as to whether Japan's claim may not have been as large as England's or America's. Perhaps our Shanghai contemporary was not in possession of minute details. We may therefore explain that Japan asked for only 5 millions sterling, or three millions less than the United States, 4 millions less than England, 6½ millions less than France, 9 millions less than Germany and 9½ millions less than Russia. It is not right that the great moderation shown by Japan in the

matter, as in everything connected with the last Chinese complication, should be obscured by such rough-and-ready methods of calculation as those of the *N.-C. Herald*. Among all the Powers that took any important part in the campaign Japan could least afford to be pecuniarily generous. Yet she was precisely the Power that showed conspicuous moderation. England and America doubtless regulated their demands in strict accord with their outlays. If the other Powers did the same, there is nothing to be said except that their manner of conducting military campaigns is remarkably uneconomical.

Peking sends us another sensation *via* the correspondent of the *Asahi Shimbun*. It relates to Prince Boris' recent visit to the Chinese Capital. The Prince is said to have repaired to the residence of Yung Lu one night in disguise, and to have remained with the Chinese statesman until a very late hour, the issue of the conference being a secret agreement, by which China pledged herself, on the one hand, never to alienate any part of Thibet—in other words, promised to include Thibet in the sphere of Russian influence—, while Russia, on her side, promised to protect the Empress-Dowager and Yung Lu in all emergencies. The story has not even the merit of being plausible. It is a very clumsy fabrication.

The latest about the Kwangsi trouble relates to the appointment of Wang Chih-chung as Governor of that province. Wang, whom the world knows as the ambassador sent by China to thank Russia after the retrocession of the Liaotung Peninsula, is said to have assured the Empress Dowager that a majority of the Kwangsi rebels are Hunan men, and that if he were entrusted with the duty of quelling them, he could easily bring them to listen to reason. The Empress took him at his word, and appointed him to the Governorship.

It is alleged that the result of the Tariff Commissioners' interview with Viceroy Liu at Nanking was not very conclusive or satisfactory. The Viceroy would not hear of removing the veto on the export of rice or the import of salt. As to *likin*, he was not unwilling that abolition should be effected on condition that a due portion of the customs revenue was appropriated to pay the losses incurred by the local exchequers. But he desired to limit the abolition to goods carried by water, and to exempt from its scope salt and opium, the *likin* on those two staples being fundamental public assets. Further, he insisted that transit dues must be maintained. Sir James McKay, on his side, intimated that 12½ per cent, seemed to be the maximum basis of an increased tariff. Altogether the interview appears to have been fruitless, and it is probably for that reason that the British Government has announced its hopelessness of effecting any radical change in the matter of *likin*.

KOREA.

Most confusing reports come from Korea about arrests connected with the organizations of the Chosen Kyokai in Japan. Several Korean politicians are said to have been inspired by the appearance of such a Society to revert to their old schemes for effecting a change of Cabinet and carrying out other designs. They were arrested, and have now been lying in prison for some time, their friends, it is said, being subjected to all kinds of extortions on their account.

That is conceivable enough, but what complicates the intelligence is that these men are supposed to have contemplated the final ostracism of the refugees in Japan, who, however, are of their own political complexion. We do not understand it, and can not arrive at any conclusion more definite than that Söul has fallen into one of its periodical political paroxysms.

According to the *Nippon*, Mr. Kato Masuo's appointment as adviser to the Korean Government has not yet been confirmed. Three reasons are assigned for the delay. The first is that the agreement to appoint Mr. Kato was made between Li Yong-ik and the Japanese Representative in Söul, and that although Li had the Emperor's sanction, the other Ministers are offended because they were not consulted. The second reason is that in the Korean Government's agreement with Mr. Sands, it is provided that should there be question of employing any other foreign adviser, Mr. Sands must be consulted, and the new employé must rank below him. The third reason is that while M. Pavlov raises no objection to the engagement of Mr. Kato, he requires that a Russian subject also shall be engaged, and it seems probable that the French Representative will then prefer a similar demand on behalf of one of his nationals. The *Nippon* treats these objections seriously, but we are disposed to doubt them *in toto*. Certainly the statement about the Ministers of Russia and France must be regarded as extremely apocryphal.

M. Pavlov furnishes many paragraphs to the newsmongers. The latest exploit attributed to him is peculiar. Having failed to secure the appointment of Mr. Alexieff as financial adviser to the Korean Government, he is said to be urging that the salary of the Danish adviser to the department of posts and telegraphs should have his salary increased to 3,500 *yen* annually. A splendid ambition, truly, for the Russian Representative to conceive, and a fine *solatium* to his country for the disappointment about M. Alexieff! These reports are agreeably silly.

It is reported from Mokpo that the Korean guilds there have decided not to receive the notes of the First Japanese Bank for larger amounts than 5 *yen*. No explanation of this decision is given, though certainly an explanation is needed seeing that when the notes were first issued they were said to have found much favour among the people and to be circulating freely. These are the notes, it will be remembered, having a likeness of Baron Shibusawa.

News from Korea is to the effect that work has been resumed on the Söul-Wiju Railway, or, to speak more correctly, on the Söul-Songdo section of it. The Korean Government is building this line itself, with funds obtained nobody knows where. The operations were commenced with a brave parade some time ago, and then were suddenly abandoned, obviously owing to scarcity of funds. Now again about 150 navvies have been set to work, a pittance of money having been obtained, it is said, from the Imperial Household. Of course it is all very transparent. The Korean Government has not means, and does not begin to have means, for building the road, and the work it is now doing must be regarded simply as a make-believe. The proper person will doubtless come along at the proper time and buy the concession.

ENTERTAINMENTS TO MR. WU.

On the occasion of a recent entertainment given to Mr. Wu in Tokyo, the Chinese *savant* was reported as being greatly struck by the names *Dobun-kai* (Same Script Society) and *Doki Club* (Same Sentiment Club), the latter being his hosts. A shrewd suspicion may have been entertained by some people at the time that what struck Mr. Wu was the remarkable variety of terms under which Societies are organized in Japan at present, rather than the significance of their appellations. If so, his perplexity was probably augmented by the last dinner given to him in the capital when no less than three Societies combined to do him honour, the *Toho Kyo-kai* (Oriental Countries Association), the *Hokushin-kai* (North-China Society), of which we now hear for the first time, and the *Kokuryo-kai* (Amur Society). China is pretty rich in societies—Triads, White Lotus and what not—but they are secret affairs, nor did the most sensational writer ever attribute to them anything like the number and variety that mark modern Japanese associations. We should like to see what Mr. Wu writes on his return to China about the intellectual activity represented by this epidemic of associations.

Marquis Kuroda acted as chairman at the *réunion* on the 5th instant, and made a neat speech. He recalled the great debt Japan owed to China in the field of civilized progress, and said that it might now be the former's turn, as it certainly would be her pleasure, to show her gratitude by helping China along the new routes indicated by contact with the Occident.

Mr. Wu, in replying, departed from the rule hitherto observed by him and ventured into the field of international politics. It afforded him profound satisfaction, he said, to hear Marquis Kuroda's allusion to the ancient ethical relations between China and Japan. No doubt Japan had taken whatever was useful from China, the two countries being such close neighbours. But Japan had now gone further afield, and borrowing from the distant Occident, had succeeded in making herself strong and respected. Unfortunately China not only refrained from any such effort, but did not even send her people abroad to examine foreign systems. It was at this point that the speaker branched off into politics. Manchuria had fallen into Russia's hands, he declared, and the problem of its recovery presented many difficulties. The only hope lay in education, by which a spirit of independence and patriotism might be created among the Manchu and the Mongol peoples. He concluded by asserting that much depended on the assistance lent by Japan in such matters, especially by societies like the *Toho Kyo-kai* and other similar associations.

PRINCE CHING AND MR. WU.

These visitors to Japan are to be received in audience by the Emperor on the 12th instant. The Japanese are certainly making a great deal of them. No people know better how to do that kind of thing and it is doubtless wise in the present case. The eight companies, banks, insurance offices, &c., with which Mr. Yasuda Zenjiro is associated, gave a great entertainment in their honour in the rooms of the *Tatemono Kaisha* (building company) at Nihonbashi.

THE TOKYO GAS COMPANY.

We read in Tokyo journals that some difficulty has occurred in connexion with the introduction of foreign capital for the purposes of gas manufacture in Tokyo. The difficulty is illustrative of the difference between Osaka and Tokyo as to business spirit. The Osaka folks are big men. They have grasped the elementary principle of all commercial transactions, namely, that no operation can be really successful unless both parties reap a reasonable profit from it. Therefore when they found that by doubling their capital and allowing American investors to hold one half of the shares, they could obtain the money needed for expanding their enterprise and, at the same time, lay aside a substantial reserve, they did not hesitate to avail themselves of the opportunity. The concession to foreigners of equal privileges with themselves did not terrify these adult traders. But when a similar occasion presented itself to the Tokyo Gas Company, the timid fledgelings of shareholders raised a cry of nervousness. It would be a calamitous thing in their opinion to let the foreigner have an equal chance even though he came to their assistance with substantial monetary resources; even though he brought to them the capital for lack of which their enterprise is languishing. One quarter of the stock would be quite enough, they thought, to spare to this ravening and dangerous creature. So there has been what the Japanese call an *ichitonsa* in the negotiations. Truly the Tokyo men are a pitiful crowd. What with fierce jealousy among themselves,—jealousy that makes them fight for years over enterprises of which the city is in urgent need—and reluctance to treat the foreigner with ordinary business equity, they simply stand still and make no progress at all. Occasionally one hears of leading citizens going to Europe or America for purposes of investigation. They would do better if they went to Osaka in search of a commercial education.

SUICIDE OF MAJOR KAJIKAWA.

It appears that the recently announced death of Major Kajikawa in Peking was inflicted by his own hand. He had been suffering for some time from insomnia and nervous prostration, so that finally he became convinced of his own incapacity to continue in the discharge of his duties. A letter written by him to a friend shortly before the end, contained a sentence that since he could no longer hope to serve his country in life, he looked forward to discharging loyal duties as a spirit. The fatal act was perpetrated in a moment during the brief absence of his comrade Captain Morita, and the weapon employed was a short sword. Major Kajikawa, who, at the time of his death, was attached to the Japanese Legation in Peking, had gained much distinction and a brilliant future was anticipated for him. He served under Major-General Kamiyo Mitsunomi, when the latter, as Lieut.-Colonel, held the post of military attaché in Peking before the China-Japan war, and it was by Major Kajikawa that a report was compiled which afforded invaluable information to the Head Quarter Staff in Tokyo about the condition of the Chinese Army in 1893. To obtain that information the Major had been obliged to adopt all kinds of disguises and to risk his life again and again. Thereafter he served in Manchuria, and showed the same high order of intelligence and daring. His death is regarded as a heavy loss to his country.

THE PROPAGANDA QUESTION.

Some attempt seems to be made in Peking to devise a system of rules for placing the question of missionaries and native Christians on a more intelligent basis. The telegraph alone being our informant we are not in a position to explain exactly what is happening, but it would appear that when Mr. Timothy Richard returned recently to Peking, the Chinese Government issued an edict to the effect that as he is an upright and thoroughly fair-minded person, his services should be availed of to elaborate some kind of understanding. The work has been going on therefore, though who may be Mr. Richard's *vis-à-vis*, or how it is proposed to give effect to any system of law thus enacted we can not discover. A late telegram says that the Chinese Government urges the advisability of introducing a clause providing that any bad conduct on the part of Christian converts should entail the transfer of their missionary to some other station, and that if it be proved that they have received encouragement from the missionary, or if he attempts to interfere between them and the judicial authorities he should be recalled to his native country. What reply Mr. Richard made to that proposition the telegram does not say. He is merely reported as having formulated a suggestion that any Chinese local official behaving unjustly towards Christian converts or failing to take steps such as shall protect them against violence, should be at once dismissed from office. The latter provision, however, entered into the agreement made by the Foreign Powers with China last year, and there does not seem to be any special reason for repeating it now. Obviously the idea of the Chinese Authorities is to resuscitate the Old Canton Hong system with respect to Christian converts. A great deal has been said and written against that system, but it was probably the best, if not the only, device available under the circumstances. The foreigners trading at Canton were not amenable to Chinese law and their Governments had not provided any efficient substitute for the jurisdiction to which these people should naturally have been subject. Under such singular circumstances the Chinese local authorities conceived the idea of strictly limiting the number of native merchants having access to foreigners for purposes of trade, and of requiring these "Hong merchants," as they were called, to be responsible for everything in connexion with the traffic, including the conduct of the foreign traders. The plan worked well enough as long as the East India Company's agents supplied a force co-operating for the preservation of order, and when the system ceased to be necessary owing to the appointment of foreign consuls, the comrade stepped into the niche that the Hong merchant had made for himself in the purely commercial field. There is some similarity between the situation of the missionary in the interior of China today and that of the foreign traders at Canton in the eighteenth century. The missionary is not amenable to Chinese law and he is beyond the reach of his own consul. Also he has under his wing a crowd of converts many of whom have embraced Christianity merely for the sake of finding refuge at its altar from the consequences of crime or license under its ægis to defy the laws. The abuses resulting from such interested conversions are not numerous in the case of Protestant missions,

seeing that Protestant missionaries, as a general rule, avoid interference between their converts and the law. As an illustration of that fact a resolution passed last September at the China conference of the China Missionary Society may be adduced:—

"That C.M.S. Native Agents be forbidden without previous sanction from their Superintendent to have any business with the Yamens, or to undertake business for Christians or others in law-suits or local feuds, on pain of dismissal.

"That in the opinion of this conference the European missionary, while showing sympathy with his native brethren in their troubles, should not interfere in any business with the Yamen, nor allow interference in any such business on the part of native agents under his superintendence, without previous consent of the local governing body of the Mission."

But it is notorious that some missionaries—perhaps we might write "many missionaries"—without doing the cloth an injustice—are betrayed by their eagerness to enrol converts into neglecting the duty of closely scrutinizing the conduct and motives of those they receive into the flock, and thus the mark of Christianity is put upon men who regard the foreign creed solely as a convenient instrument for wrong-doing. The Chinese Authorities apparently think that the only way to correct that state of affairs is to increase the missionary's responsibility: to make him answerable, in short, for the law-abiding action of his following. The system might work well. No one except the missionary himself is in a position, we think, to pronounce a definite opinion on that point. Certainly if the Protestant missionaries agreed to the introduction of any such arrangement, the Roman Catholics would find themselves in a conspicuously invidious situation, for it is scarcely conceivable that they would consent to abandon the pretensions they now assert with such practical thoroughness. Perhaps the Chinese appreciate that contingency clearly enough. They no longer retain their place on the ineffable pedestal of 1841 when the Celestial Government avowed its haughty indifference to the "tiltings of barbarians," and they would probably welcome any arrangement calculated to accentuate the differences between the two sections of Christianity.

THE MIDDLE SCHOOL OF OITA.

We had to report recently a strike on the part of the students of the Miye Middle School. On that occasion the fault seemed to be largely on the side of the faculty of the school and the Governor of the prefecture. News now comes of a strike at the Middle School of Oita, in which the students appear to be chiefly to blame. The account given in Tokyo journals is that the elder students, angered by some severe strictures passed by Mr. Uki, one of the teachers, against an increasing habit of imbibing *sake*, demanded his removal. Apparently the Principal yielded so far as to suspend Mr. Uki, but, at the same time, he rusticated some of the students. This led to a renewed and stronger demonstration on the latter's part. They drew up a document arraigning the principal and the teachers on various counts and demanding the dismissal of the whole faculty. Thirteen of them were now expelled, with the result that meetings began to be held outside the school for the purpose of planning a general strike. The trouble is not over. Of course this version comes from the side of the teachers.

NAVAL INCREMENT.

Writing about naval increment, the *Nichi Nichi Shinbun* notes the increase of the Japanese Navy during recent years as follows:—

	Total Tonnage.
1894	57,900
1896	79,000
1897	100,000
1898	134,000
1899	154,000
1900	204,000
1901	232,000

In the immediate future, the total tonnage will be raised to the *post-bellum* figure of 250,000 tons. Everybody agrees that Japan must not rest there. She has to keep up with the rapid additions made by other countries to their naval forces. That is not a matter of serious difficulty so far as ships are concerned: they can always be bought with money. But the men to man them is another problem. After the Restoration any number of recruits were obtainable for the army, as was natural in a country where a military feudalism had existed for centuries. The navy, however, could not be so easily supplied, maritime enterprise having been effectually checked under the Tokugawa rule. Difficulties about seamen may now be said to have been overcome. But that is not true of officers. Our contemporary here gives the following table:—

Year.	Number of officers and men actually serving	Total force including reserves.
1895	14,463	17,140
1900	28,308	32,981

This shows an increment of only 100 per cent. whereas the increase of tonnage in the same time was 400 per cent. The great difficulty is to get a supply of officers for the lower ranks—midshipmen and lieutenants. The only college for educating these officers is at Edajima, where not more than 600 cadets can be accommodated. There, then, a change must be effected. It will probably take the form of organizing another naval college at Yokosuka, and making arrangements that the preliminary education of candidates shall be effected in the middle schools.

FOREIGN TRADE.

The volume of Japan's foreign trade for the 1st half of the present year was 241¼ million *yen* against 245 millions in 1901; imports exceeded exports by 21½ millions against 15½ millions in 1901; and the excess of specie imports was 6½ millions against an excess of exports amounting to 7 millions last year. As to the excess of imports (general) over exports, it is to be observed that the returns of trade for the first half of the year usually exhibit that feature, and that a measure of redress is effected during the second half. It is noticeable, with regard to exports, that an increase of 5½ million *yen* has taken place in the export of manufactured goods; and with regard to imports, while there was an increase of 14¼ millions in materials, a decrease of 12 millions took place in articles of luxury.

The fact that during the first six months of the current year, exports totalled only 110,863,382 *yen* against 115,340,036 *yen* for the corresponding period last year, a decrease of 4,476,654 *yen*, is easily accounted for. Mainly it is due to the remarkable clearance of silk stocks last year, so that the export of that important staple this year shows a diminution of as much as 7½ million *yen*. The second factor of importance is that the export of cotton yarns, which promised well

at the close of last year, was greatly impeded by the sudden fall which took place last spring in the gold-value of silver and by the costliness of bills on China. There have, on the other hand, been increases in other directions. Had it not been for these exceptional circumstances in the silk and cotton market, an increase of some 5 millions would have to be recorded over the whole export trade. As for imports, the figure this year is 132,750,672 *yen*, against 130,599,019 *yen* last year, an increase of 2,151,653 *yen*. But against that result—which does not please Japanese economists—have to be set the facts that the import of luxuries and articles of unproductive consumption diminished by 13 millions; that the import of rice fell off by 2½ millions, and that the import of several other staples showed a decline of 7 millions, the great increase being in articles for manufacturing purposes, namely, raw cotton, 19 millions, and in such articles as peas and fertilizers (*abura-kasu*), which increased by 2½ millions. Of course the decrease in articles of luxury, &c., does not represent an actual decline in consumption. It merely indicates that large stocks were imported last year for fiscal reasons. It must be remembered that in the prices of imports are included the cost of carriage and of insurance, whereas the prices of exports are those at the place of production.

THE SOVEREIGNS OF EUROPE.

After all it must be admitted that the Sovereigns of Europe are showing considerable capacity for impressing the world with a due conception of their value as factors in international politics. The Emperor of Germany has conferred an immense service on his country during the past three years. One can scarcely doubt that had not his strong hand been at the helm, the ship of state would have collided with England over the Boer war. The Emperor of Russia is supposed to be purposely kept in ignorance of the real state of affairs in his realm, but the world acknowledges that his influence is powerful in making for peace and that his instincts are all in favour of justice and liberality. If that Otsu incident had assumed the dimensions of a catastrophe, Tsuda Sanzo would have been blood-guilty towards many nations besides Russia. As for the aged Emperor of Austria, people decline to think of what may happen when his wise guidance is lost to the dual monarchy. Perhaps nature, *more suo*, will find some way to repair her ravages when His Majesty passes from this scene, but the risks are too great to be contemplated calmly. Then there is the young King of Italy who seems likely to tread in the footsteps of his wise father, and who is already beginning to be much *en evidence*. These various monarchs know how, also, to keep themselves before the public. Their excursions hither and thither—happily excursions without the theatrical accompaniment of “alarums”—are frequent, and the public remains just as ready as ever to draw breathless inferences from the comings and goings of these great folk. The Tsar, the President of France, and the Emperor of Germany take care that there shall be no lack of spectacular effect, and we now hear that the King of Italy contemplates a visit to London, whereas the President of France and the Tsar talk of going to Rome in October. Whatever may be said to the contrary, Italy does not appear to be so closely linked to the Triple Alliance as she used to be.

MILITARY SERVICE.

The question of reducing the period of service with the colours from 3 years to 2 is occupying some attention in Japan at present. Germany made that change some time ago, and France is evidently on the point of making it now. But a Japanese officer whom the *Fiji Shimpō* has consulted seems to think that Germany's plan gives poor results. He points out that it is a popular error to imagine that a two-years' system can be administered without any increase of outlay as compared with a three years' system. In Japan, for example, in order to keep a company at its full strength of 125 on a peace footing, 41 conscripts—we omit fractions, though, *more japonico* decimals of a man are discussed by this officer—have to join the colours every year, whereas if the two years' plan were adopted 62 would have to be taken yearly, and, moreover, the establishment of the company would have to be increased. As a matter of fact, the German company is 142 strong on a peace footing and 71 recruits are passed into its ranks annually. Again, in order to train a soldier within a period of two years, it would be necessary to increase the hours of daily instruction from 6 to 9, and to devote the whole time to drill, which latter change would necessitate the engagement of a large staff of employees to do work now done by the recruit himself. This officer further maintains that a good soldier can not be manufactured under three years, and that the product of the German system is not half as good, *ceteris paribus*, as the product of the Japanese system. He also holds the doctrine, unless we misunderstand him, that after a soldier, having spent three years with the colours, has been four years in the reserves, he is virtually of no more use for military purposes than if he had undergone only one year's training in all. We can hardly imagine that such a theory is seriously maintained. Still more difficult is it to believe that Germany's system was unwisely adopted. This Japanese officer argues wholly from a military point of view, as is perhaps not unnatural. But there is also another point of view. It is not a nation's sole aim to convert itself into a military machine. The productive capacities, the intellectual development, have also to be considered. Germany has given to all these things the fullest consideration, and has come to the conclusion that in the best interests of her people a compromise is wisest—a compromise between solely military exigencies and the functions of everyday life. If she is content with the soldiers she gets by present methods, we are disposed to think that the same programme should satisfy Japan, and that to grudge a little additional outlay by the State for the sake of diminishing by one-third the cruel burden now laid on the people at large, is the very falsest kind of economy.

FORMOSA.

In spite of the hopes recently expressed that all the serious elements of disorder had been effectually dealt with in Formosa, news now comes that a fresh raid has been made by the insurgents at Nansho, a place in the Shinchiku district. There are no details except that the insurgents were some 200 strong. The Shinchiku district is the most disturbed in Formosa.

COUNT ITAGAKI.

Count Itagaki may be said to have retired from active political life but when he does re-enter the arena, his voice seems to be as powerful as ever. He has just paid a visit to Tosa, and calmed the angry waves that threatened to shipwreck political amity in that province. The Count pronounced a verdict in favour of the reform party, and the others immediately bowed to his opinion. The gist of the matter is decentralization of political power. Some seeds of future conflict may have been left, but for the present peace has been restored in the Kochi household.

In settling the Tosa trouble Count Itagaki seems to have echoed one of the sermons constantly preached by Marquis Ito in recent years. He bade the contending parties lay aside their differences and unite for the purpose of working out reforms of much greater importance than the issue of any local squabbles. The gist of those reforms was, first, that for local headmen persons should be chosen entirely independent of political parties, having a large property stake in the welfare of the locality, and enjoying the confidence of their fellow townsmen; secondly, that for the communal assemblies men should be elected who can be trusted to consider communal interests earnestly and who shall not be bound by small considerations relating to the particular districts to which they belong; and, finally, that the representatives returned to the Diet should be men entirely free from parochial prejudices and prepared to view all questions from a national standpoint. Count Itagaki succeeded in inducing the opponents to unite for the purpose of carrying out these reforms, which are certainly most essential, for at present party spirit permeates the whole representative machinery, local as well as central. Perhaps that is to a certain extent inevitable, local assemblies having been the school where party politicians were educated. None the less it is a state of affairs calling loudly for redress. Local headmen and members of communal bodies have now been proved to be shockingly corrupt, and quite unfit to be entrusted with the care of public business. Marquis Ito with his wonted political foresight, has long appreciated this trouble, and Count Itagaki justly says that Tosa, the birth-place of liberalism and, indeed, of Japanese political parties, should propose to itself the proud role of now becoming an example to its own progeny.

THE TSUSHO ISAN.

The Foreign Office in Tokyo publishes a bi-monthly periodical containing trade reports from consuls abroad, but the reports are so belated that the public finds them of little service. We learn from the *Fiji Shimpō* that they are now to be issued every week. Of course that is an immense improvement. But our contemporary thinks that there is room for still further progress. Originally the publication was monthly; now it is fortnightly and henceforth it will be weekly. But even the weekly numbers will lose much of their interest unless their contents are fresher. That is the *Fiji's* criticism and we endorse it. For instance, lying before us at present is the number of the periodical issued on the 25th of May. It opens with a Consular report from Vladivostok dated March 29th. That report must have been in the hands of the Foreign Office by the 7th or 8th of April and could easily have been given to the public by the middle of April instead of

the end of May. So at least it appears to outsiders. As a general rule official reports on trade are not considered of cardinal importance, but we doubt whether the Japanese people are yet prepared to treat them with indifference. The *Fiji Shimpō* does not say much on this subject, but it hints that Consuls are not always well qualified to give information to merchants and manufacturers, and that possibly the want of celerity on the part of the Foreign Office is due to some perception of that fact. However, it is evident that if the reports are worth publishing at all, their value should not be impaired by tardiness, and while the promise of weekly issues indicates a step in the right direction, the *Fiji* urges still further improvement.

CHOLERA.

July 3.

The cholera is not attacking many victims in Tokyo but it is certainly wide-spread. A case is now reported in the Hongo district, and thus, up to the present, the districts affected are Shitaya, Hongo, Honjo, Kanda, Nihonbashi, Kyobashi, Shiba, Kojimachi and Shinjuku. It has been decided to dis-infect all mail matters.

The record from Saga since the beginning of the outbreak is 59 cases and 32 deaths.

A telegram from Peking says that cholera has invaded the precincts of the Imperial Palace and that there have been many cases.

July 4.

The record for the 3rd instant includes an outbreak on the night of the 2nd in the Fukuoka jail in Echizen, to which place the malady doubtless spread from the neighbouring prefecture of Saga. Thirteen of the prisoners were attacked. All public entertainments were interdicted in Fukuoka from the 3rd and vigorous measures of sanitation were adopted.

There were no new cases in Tokyo on the 3rd instant. But considerable alarm is felt lest the disease should invade the jails. Minute instructions have been issued to the prisoners and various precautionary steps have been taken. A similar course has been followed at the Government Printing Bureau where a very large number of men and women are employed.

The number of cases in Tokyo up to the 3rd instant was 15, of which 12 ended fatally.

July 5.

The cases of cholera in the Fukuoka jail have increased, so that the total up to the morning of the 4th instant was 28, of which 5 ended fatally.

There has also been a case at Hakata, in the same province of Chikuzen; another at Fukushima in Awa, and cases are reported from Ehime, and Shizuoka.

The Shitaya district in Tokyo reports two new cases.

July 6.

The epidemic is spreading among the prisoners in Fukuoka prison. Forty-five have been attacked since the outbreak.

There has been a doubtful case in Moji, although strict precautions had been adopted with regard to vessels coming from the infected districts.

In the town of Fukuoka three new cases are reported.

Tokyo has had two cases since the last report. They occurred in the Kyobashi and the Akasaka districts.

The *Japan Times* publishes a note about the outbreak of cholera in the Fukuoka

prison. From it we learn that tubs containing excreta of the patients were washed at 28 places in the river Ishido which flows through the town of Hakata, and that the municipal authorities of the latter, when they learned what had been done, caused carbolic acid to be immediately poured into the river. It is difficult to know which of these acts was the stranger. Undoubtedly the prison officials responsible for such criminal negligence ought to be put on their trial for man-slaughter if any cases of cholera occur in Hakata, but as for the Hakata municipality and its despatch of a dose of carbolic acid to catch the polluted water that had already flowed down some hours, if not some days, previously. Horace's rustic was a wiseacre compared with them. Both stories seem to us exceedingly doubtful.

There has been one more case of cholera in Tokyo—in the Kyobashi district. The disease is still held at bay by efficient sanitation.

July 9.

Cholera seems to be growing serious in Fukuoka prefecture. Fifteen new cases were reported on the 5th instant and seven on the 6th. Up to the latter day the total number of cases have been fifty. A female teacher in the Kurume Elementary School has died from the disease. Kurume seems to be the principal seat of the malady. Twenty persons were under treatment there at the date of latest advices. The Hakata jail, where such strangely insanitary performances were reported to have taken place, does not seem to have had any more cases.

The disease has also invaded Saitama prefecture and Wakayama prefecture, but only one patient is reported from each place.

There has been another case in Tokyo, at Nakano-cho in the Asakusa district.

The number of cases in the Fukuoka jail has now reached sixty, of which 12 have ended fatally. The death rate is exceptionally low, but it is terrible to think of a number of men cooped up in a prison which such a malady has invaded.

No new cases are reported in Tokyo.

In Moji there has been one fresh case.

July 10.

The cholera is still held at bay in Tokyo. There has been only one more case—in Asakusa—but it ended fatally.

In Fukuoka prefecture the town of Kitonomachi in the Matsui district is suffering severely. Up to the 8th instant there had been 38 cases, 22 of them fatal. In the town of Fukuoka there were three new cases on the 8th instant, but happily the disease seems to have been checked in the jail. All the schools in the prefecture have been closed.

Moji has had three cases up to date; Nagasaki has had one new case, and Yokkaichi also reports one.

A RUMOUR.

Mr. Oda Tokuno, a renowned priest of the Shin sect, has just returned from travelling in India and China. He is represented as alleging that thirty of the Lama priests in the diocese of the Dalai Lama who recently visited Japan, have been bought by Russia, but he does not say what they are to give for the money. What a business Russia does in bribery and corruption, to be sure! That fabulously huge fund that she is supposed to keep lodged in the strong boxes of her own clergy must be a veritable purse of Aladdin to stand the perpetual drain to which it is exposed.

AMERICA AND THE HOUSE TAX.

We observe that the professor of veracity in Kobe now asks his ingenuous readers to believe that "so far from the United States Government declining to be a party to the arbitration" (about the house tax), "it has officially expressed a wish that the scope of the arbitration should embrace the question in dispute in all its bearings." That is very interesting. It is curious to find the American Government attempting to dictate the basis of an arbitration to which it is not a party. For whatever the Kobe professor of veracity may say to the contrary, the fact is beyond all dispute that the American Government has officially intimated its non-participation in the arbitration. Efforts have been made—very strenuous efforts—to induce it to change that decision, but thus far no change has been made. As to the scope of the arbitration embracing "the question in dispute in all its bearings," the professor of veracity himself would be puzzled to explain his own meaning. The question in dispute is simple, whether or no foreign holders of perpetual leases are exempted by treaty from the obligation to pay local taxes on account of the buildings that stand on the leased property. This talk about "all its bearings" is mere embroidery without any genuine significance. Further the professor of veracity alleges that "American nationals refused to pay under protest," though instructed by their Government to do so, "for the excellent reason that the Japanese Government would not accept that form of payment, and they were distrained on like the rest." Is it pretended then that American citizens tendered their payment under protest? And is it pretended that the Japanese authorities were lying when they officially informed the United States Representative that such protest would be accepted? The plain fact is that the professor of veracity is remarkably deficient in information, and that in his wholesale accusations of mendacity against others he vividly illustrates Merlin's saying, "they that most impute a crime are prone to it."

THE SCHOOL TROUBLES.

There is trouble in the Middle School of Hikone. This makes three cases within the past few weeks: the first in Miye prefecture, where the fault seemed to lie with the faculty of the school; the second in Oita, where the students appeared to blame, and the third in Hikone, concerning the rights and wrongs of which it is difficult to judge. The Department of Education has issued an Instruction the gist of which is that students and faculties alike are culpable, and that Governors of prefectures should take steps to punish teachers found guilty of inciting students, and to punish students found guilty of planning strikes. The *Kokumin Shimbun* interprets this to mean that one source of trouble is jealousy among teachers, so that the latter are betrayed into forming cabals among the students. We observe that the *Yomiuri Shimbun* takes occasion to criticise the Educational Department very severely. That journal represents a section of public opinion which has constantly maintained that the abuse of favouritism disfigures all the Department's doings; that there are cliques among its officials who labour to promote the interests of their own *protégés* only, and

that "no one need apply" who has been educated at a private school or in foreign countries unless he has the good fortune to have secured the ear of one of these coteries. The line now taken by the *Yomiuri* is that the result of favouritism has been to put incompetent men into posts of high responsibility. It is absurd, says our contemporary, to lay the blame entirely on the students—which, it will be observed, is exactly what the Department's Instruction does not do—for obviously if the teachers were competent to win the respect and confidence of their pupils, all this insubordination would not be witnessed. Therefore the Educational Department is merely reaping as it has sown, and its *post facto* measures, as embodied in the last Instruction, give no hope of a radical remedy. It appears to us (*Japan Mail*), however, that in proclaiming the fault to lie, partly at any rate, with intrigues among the teachers, the Educational Department has put its finger upon a diseased spot hitherto unnoticed, and perhaps the true means of correction have now been found. Meanwhile we can not but agree with the *Yomiuri* that the responsibility for these scholastic *emeutes* lies primarily with the faculties of the schools. Such, at all events, would be the conclusion at once drawn in Europe if similar incidents occurred there.

NOTES ON CURRENT EVENTS.

It is stated that negotiations are on foot to effect an union of the Tokyo and Shinagawa Electric Companies. The Shinagawa Company has at present 6,000 customers and a regular income of 6,000 *yen* monthly. It has applications for 5,200 more lights, but it is not in a position to meet the demand without extending its works, whereas the Tokyo Company has plenty of spare power. Amalgamation commends itself as the wisest course under the circumstances.

It is stated that vehement opposition to the progress of the harbour-improvement scheme has developed in Nagasaki. Several of the officials of the harbour-works office have resigned, and the Mayor is expected to follow their example.

On the 1st instant the *Hokoku Maru*, carrying 1,715 tons of granite, and bound for Vladivostock from Shimonoseki, ran aground at Mutsure-jima.

The committee for investigating the Japanese language has held nine meetings since its organization and has arrived at some decisions. For example, it has decided that a phonographic script must be employed, but whether it shall be *kana* or *romaji* remains to be settled. It has also decided that differences between the written language and the spoken language should be abolished, and that the system of etymology must be carefully revised. Another resolution is that the problem of local dialects must be examined, and a standard dialect fixed. It will thus be seen that although the Committee has arrived at some very important decisions, it has still a very large amount of work before it. While making the above points its cardinal objects, it proposes also to lose no time in attacking the question of reducing the number of ideographs in ordinary use and of establishing some kind of recognised literary style so as to do away with the flagrant differences presented even in the columns of leading newspapers. The epistolary style has also to be considered, that being one of

the least intelligent formalisms of the Japanese language, and so have many other points which we need not weary our readers by detailing.

The *Hochi Shimbun* alleges that Mr. Sengoku, President of the Kiushiu Railway, has been able to announce to the shareholders that, as the result of Sir William Bisset's visit to Japan, British capitalists are prepared to lend a sum of twenty million *yen* on the security of the Hokuyetsu, the Kiushiu and the Hankaku (Osaka and Mai-zuru) railways, provided that the necessary changes are made in the laws of the country. Our contemporary adds that a bill for that purpose will be introduced in the next session of the Diet, all the Ministers of State being agreed as to the advisability of such a measure. We are disposed to think that the statement attributed by the *Hochi* to Mr. Sengoku may a little premature, but doubtless the laws are the main obstacle.

Telegrams from England say that Prince Komatsu was originally to have returned to Japan in September, having visited Madrid to offer congratulations to the new King of Spain. His Imperial Highness' plans have been disturbed, however, by King Edward's illness. He will now, having visited Madrid as originally planned, make a tour of the various countries of Europe, and if by that time King Edward is sufficiently recovered to hold the coronation ceremony, the Prince will attend it; but should the ceremony be prolonged for any lengthy period, he will return to Japan without waiting for it.

Mr. Fujita Shiro, formerly Vice-Minister of Agriculture and Commerce, has been appointed head of the recently formed silk-spinners' trust in Kyoto. The trust consists of six companies and has a capital of 3,758,000 *yen*. Its dimensions certainly seem to be small but it claims to include all the companies engaged in this work in Japan. The trust has been very fortunate in securing the services of a man so able and energetic as Mr. Fujita. There is a general expectation that this movement will soon extend to the cotton-spinners also.

The Foreign Languages School held its third graduation ceremony in the School buildings at Kanda, Tokyo, on the 5th instant. Dr. Takakusu, when handing their certificates to the successful candidates, said that the French Representative, M. Dubail, had announced his intention of giving various prizes to the most distinguished students of the language and literature of France, but the prizes had been delayed in transit and were not yet to hand. The graduates numbered 35 in English, 14 in French, 24 in German, 12 in Russian, 5 in Italian, 19 in Chinese, and 9 in Korean, or 115 in all.

Telegrams from Washington say that Congress has risen without passing the ship subsidy bill, or the bill for restricting immigration, or the bill providing compensation for losses connected with sanitary measures in Hawaii. The Japanese have reason to congratulate themselves about the postponement of the immigration bill, but it is certainly a great hardship that sufferers by the heroic measures of the Hawaiian authorities should have to wait three years for just compensation.

Intelligence comes from Kure that a somewhat serious disturbance took place at Kure during the night of the 7th instant. About

seven hundred blue-jackets from men-of-war in harbour invaded three inns, smashed all the furniture and were with difficulty reduced to order after nearly three hours' rioting. The trouble does not seem to have arisen out of drunkenness or a fight. The alleged cause is that the men were enraged because the inn-keepers had opposed the attendance of *geisha* at the entertainment recently given to British sailors.

It appears that the blue-jackets' disturbance in Kure was due, not to the failure of certain persons to supply *geisha* at the Anglo-Japanese entertainment, but to the supply of an inferior article. It will be necessary to have committees of selection in future on these occasions. A *geigi-chosa i-in* might have been the means of averting disaster from much furniture and many household utensils in Kure.

The torpedo-destroyer *Asashiro*, which was recently handed over by her builders, received orders, it will be remembered, to remain in England for the purpose of taking part in the Coronation Ceremony together with the *Takasago* and the *Asama*. The destroyer has now been ordered to return to Japan, but the *Asama* and the *Takasago* are to remain for some time longer.

Prince Komatsu was on his way to Madrid at the date of the latest advices, where he will offer the Emperor of Japan's congratulations on the coronation of King Alfonso, and will hand to His Majesty the Grand Collar of the Chrysanthemum. Thence the Prince is to proceed to Rome and Berlin.

Wakayama prefecture is now included in the circle of local corruption. Seven persons have been arrested there on charges of misappropriating public money or giving or taking bribes—namely, three members of the prefecture, two head-men and two contractors.

A heavy flood is reported from Ashiwo village. Two lives were lost, nine persons injured and several houses overthrown or inundated. Whether the mines have suffered is not stated. Presumably the Watarase River is the cause of the trouble.

The *Musashi* having been successfully floated at Nemuro, underwent some temporary repairs, and was towed out by the *Kasagi* on the 7th instant, bound for Yokosuka Docks. As to the *Yayeyama*, there is no further news about her.

The *Nippon* confidently asserts that Admiral Ijuin has received orders to keep the *Takasago* and the *Asama* at Sheerness until the date for the Coronation is fixed, and then to go for a cruise in European waters, returning to England in time to take part in the ceremony. That commends itself as a very wise course.

A telegram from Shanghai says that twelve foreign children at the school in Chefoo have died from the effect of eating a chicken pie. It is possible that copper poisoning was the cause, but the telegram speaks of ptomaine, from which it would follow that putrid meat or eggs were used in making the pie.

Among the names of lads passing the examination for six vacancies among the China Student-Interpreters we find the following:—Penrhyn G. Jones; George S. Moss; and Edgar G. Jamieson. Mr. G. S. Moss, who stood second on the list, is a son of Mr. C. D. Moss, of Yokohama; and Mr. Jamieson is a son of Mr. George Jamieson,

for many years Her Majesty's Consul-General in Shanghai.

As the Secretary of the Imperial Chinese Legation was driving to the Foreign Office in Tokyo on the 8th instant, his horses took fright, and the carriage being overturned, Mr. Sien sustained severe injuries. He was taken to the Red Cross Hospital where, we hear, he is doing well.

The *Shinonome* was successfully floated off on the 6th instant. Her armament had already been taken out of her and carried to Saseho. The report of her floating is official, but nothing has been published as to the amount of damage sustained by the vessel.

THE QUESTION OF THE NORTHERN RAILWAYS.

This question is so interesting, so important and so illustrative, that we collect for our readers' information the details so far as they have been published by *The Times*:—

Peking, May 16.

The recent agreement signed by Sir Ernest Satow, Hu Yu-fen, and Yuan Shih-kai defining the conditions for restoring the Peking—Shan-hai-kwan railway to the Chinese civil administration has evoked opposition from several Powers. One clause, signed on behalf of the British and Chinese Corporation, who issued a loan in 1898, for which this railway was the security, stipulates that any branch or extension built within 80 miles of this railway shall be built by the Imperial Chinese railway administration, and then emphasizes and confirms the words of Article 3 of the corporation agreement of October 10, 1898, that if the funds of the administration are insufficient for the purpose the latter shall apply to the corporation. The recent agreement specifies as examples of such lines railways from Tung-chau to Tong-shan, from Tien-tsin to Paoting-fu, and from Peking to the Great Wall.

An objection was first lodged by Belgium, who in railway matters in China can count upon the support of the French Legation. Belgium avers that while the peace negotiations between all the Powers were proceeding Li Hung-chang, on April 9, 1901, gave a formal undertaking that the Tien-tsin-Pao-ting-fu line, if built, would be constructed by the Peking and Han-kau Railway Syndicate on the same terms and conditions as the trunk line, and also declares that the recent agreement was signed without the knowledge of the Chinese Foreign Office; for so the Foreign Office, eager in the Chinese way to shift the responsibility elsewhere, informed the Belgian Chargé d'Affaires. Obviously, even if the undertaking was given by Li Hung-chang, a contention which is emphatically disputed, the event was long subsequent to the rights granted to the corporation in 1898. An objection has also been lodged by Russia, who protests that the conditions governing the construction of the railway from Peking to the Great Wall violate yet another of the multitudinous prior engagements, mostly signed by Li Hung-chang and concealed in the Russian archives in Peking.

May 18.

The railway question, about which I telegraphed on Friday, continues to be the subject of some interest in Peking. It is instructive as showing the hopeless weakness of the Chinese Foreign Office under the irresolute guidance of Prince Ching.

The recent agreement signed on April 29th was signed with the Imperial sanction and the full approval of Yung-lu, Prince Ching, and other high officials. M. Lessar, having first made a petulant verbal protest, has written within the last few days a despatch attacking Yuan Shih-kai and Hu Yu-fen and complaining that within three weeks of the signing of the Manchuria Convention China should sign an agreement disregarding the prior rights of Russia. The Foreign Office, frightened, memorialized the Throne, blaming Yuan Shih-kai and Hu Yu-fen. A secret edict was immediately issued censuring these two officials and commanding the Board of Civil Appointments to determine a suitable penalty, and they now stand, while still retaining office, degraded two steps in rank.

On Saturday Prince Ching approached Sir Ernest Satow, requesting him to consent to the revision of the agreement in order to appease Russia, but the emphatic refusal given will help to convince China that we shall stand no nonsense. Our position is unassailable, the agreement was prior to M. Lessar's interview with the feeble Prince Ching, and was unanimously approved by the Chinese as being the best possible in the interests of China, enabling her to

retain in her own hands all the railway extensions in the metropolitan province.

Peking, May 20.

The attempt of the Chinese Foreign Office to injure and weaken the influence of Yuan Shih-kai and Hu Yu-fen for signing the railway agreement with Sir Ernest Satow, which is indisputably most advantageous to China, is strongly criticized here. The recommendation to the Board of Civil Appointments that they should be reduced two steps in rank has not been given effect to, nor will it be, the Court having had its eyes opened to the injustice attempted. Both officials have received the powerful support of Yung-lu.

China to-day formally addressed the Foreign Ministers, enclosing a copy of the agreement, and requesting their assent. M. Lessar still protests against the composition of the military co-directorate, which, however, has worked harmoniously and satisfactorily since it was originally created by Count von Waldersee, with the approval of the allied commanders.

Paris, May 19.

The *Temps* regards the agreements relative to the railways in China concluded by Sir E. Satow as tantamount to the abrogation by England of the policy of the open door. For although the Peking-Shan-hai-kwan Railway is Chinese, its shareholders and nine-tenths of its managers, engineers, and servants are English, and the preamble of the agreement of April 29 last declares tranquilly that that agreement is in the interests of British bondholders. The *Temps* admits that these conventions constitute what may be called "good war" in face of the policy of Germany and Russia; and the journal thinks it quite natural that the United States, which has always clung tenaciously to the open door policy, should now protest with the other Powers. The *Temps*, however, has not the heart to be too severe against England, for it recognizes that trading interests are not so much at stake as political interests, and this accounts for the abandonment of the principle of the open door. "What England wishes to prevent is the acquisition and consolidation by Russia of a political hegemony at Peking by the conquest of the railways. It is a continuation of the system that has already produced the Anglo-Japanese treaty of alliance."

Brussels, May 20.

The Brussels Press fully endorses the protest of the Belgian Chargé d'Affaires in Peking on the railway question, and arguments are brought forward substantially the same as those of the *Temps*. The *Indépendance Belge* is chiefly concerned with the political consequences if the protest is disregarded, and thinks that England's action, as the natural outcome of the Japanese alliance, is likely to destroy the existing harmony of the Powers; but, says the journal, this might have been foreseen, and it is clearly the intention of the Cabinets of London and Tokyo to adopt a continual policy of pin-pricks with respect to the other Powers.

Peking, May 25.

Following the method adopted by some foreign nations in their diplomatic dealings with China, whereby the nation requires compensation for withdrawing an untenable claim, Belgium has expressed her willingness to withdraw her objection to the recent railway agreement between Great Britain and China provided she is granted a concession at Han-kau at the terminus of the Peking-Hankau Railway. When the concession was previously sought China refused it.

YACHTING.

There were three yacht races on Saturday afternoon, one for 39-raters, another for the cruising class, and a third for the 21-raters, which is reported elsewhere.

The 39-raters raced over the Kawasaki-Honmoku course, with the result that *Mary* won the Commodore's Cup, the second prize going to *Maid Marion*. Following were the corrected times:—

	h.m.s.
<i>Mary</i>	5.19.25
<i>Kingfisher</i>	—
<i>Golden Hind</i>	—
<i>Maid Marion</i>	5.27.50

The cruising class had a race over the Nagahama course—or perhaps it would be correct to say that they raced over part of it but the wind was so light that only one of them went over the whole distance and she finished at 6h. 47m. 30s. corrected time, and so won the Racing Committee's Cup.

THE BLUNDERING PHRASE.

MR. BALFOUR seems to have virtually apologised for Lord CRANBORNE's blunder in describing the incidents that led to the Anglo-Japanese alliance. There was nothing else to be done. Lord CRANBORNE made a mistake, and confession alone could extenuate his tactlessness. The public would be interested in learning what he had in mind when he said that England does not seek such alliances but grants them, and to satisfy that interest an explanation from Lord CRANBORNE himself would have been desirable. But apparently the Government thought that no explanation could be complete or even palliative, and that the wisest course was to atone for the error by a statement in the opposite sense. The trouble is that in the absence of some suggestion from Lord CRANBORNE the Japanese will naturally imagine that he expressed the opinion not of himself alone but of many Englishmen when he represented the alliance as a kind of concession on England's part. The best answer to that, however, is the reception given to the news of the alliance at the outset by the press of Great Britain and by men of all parties. The arrangement was welcomed with a degree of heartiness that removed all possibility of doubt as to the view taken of it in Great Britain. But of course there are malcontents on every occasion of national importance. Japan has her own malcontents in this instance, politicians and publicists who claim that the alliance was an error as tending to antagonize Russia, and who go so far as to allege that if an alliance was to be made, Russia should have been the party chosen instead of England. It is conceivable that if the exponents of that view undertook to heckle the Japanese Government in the Diet, the former's delegate might, in an unguarded moment, be betrayed into saying that Russia did not seek an alliance whereas England did. Englishmen would of course object to be depicted as looking out, cap in hand, for international compacts of any kind, and then we should have the Japanese Government acting the part of apologist. In a word the situation now existing in England might easily exist in Japan *mutatis mutandis*. There is no blinking the fact that racial prejudice is not dead in England. It is scarcely even moribund. There are many Englishmen to whom the Orient is still, and probably will always be, the Orient, with all the objectionable attributes and disqualifications attaching to that term in the eyes of men incapable of conceiving anything wholesome or tolerable outside the realm of Christianity. The fact is very unpleasant, but it is fact nevertheless, and statesmen have to deal with it. We do not pretend that they ought to deal with it in the manner chosen by

Lord CRANBORNE, but we do say that a statesman may easily be pushed beyond the limits of fine tact when he finds himself in the presence of such a prejudice. No Japanese can honestly pretend to think that his own country is free from cognate prejudices. They abound here as they do everywhere, though their expression is less overt than it is in the West. England and Japan must take each other as they are. When all is said and done the alliance was remarkable chiefly because the proudest and most conservative country in Europe first adopted the unprecedented course of clasping hands with an Eastern State on equal terms. Let us not forget that feature of the incident. One side or the other had, of course, to take the initiative. History will tell us by and by which took it, and may perhaps attach to that initiative some import hurtful to the pride of one of the contracting parties. But it must always remain certain that the Japanese themselves, as well those who had watched Japan most closely and with keenest interest, did not believe her to be so close to complete emancipation from the bonds of Oriental disqualification as the alliance proved her to be. There must of necessity be an *aliquid amari* in connexion with such an incident, and we believe that all sensible Japanese will regard Lord CRANBORNE's utterance and the opinion it expresses as the sacrifice that must be made by their country to superabundant good fortune.

DEATH OF MR. E. C. SWAN.

We announce with deep regret the death about 9.30 on Wednesday night in the General Hospital, Yokohama, of Mr. Earle C. Swan, upon whom an operation for appendicitis was performed last Saturday afternoon. Mr. Swan had been ill only a few days when his medical adviser, Dr. Munro, decided that surgical treatment was necessary, but it was later resolved to postpone it and in the interval an abscess formed and burst internally. The news of his demise at the early age of 25 will come as a shock to the community which saw, or read of, him as it were the other day, in full health and manly vigour engaging in the Athletic Sports on the Cricket Ground and had been accustomed to regard him as a most prominent figure in local baseball. The deceased gentleman, indeed, was Captain of Baseball in the Y.C. and A.C. and would but for his unfortunate illness have pitched in the match with the Commercial School on the Fourth of July, as well as in the return match which had been fixed for to-morrow, but will now be postponed.

Considerable comment has been evoked by an occurrence on Monday morning, which, while it is admitted had probably very little if any effect upon Mr. Swan's general condition, is yet condemned very emphatically. A foreign nurse was in charge of the case and as is usual her place was taken by a Japanese nurse when she had to leave the patient and obtain a few hours of rest. Such an occasion occurred on Monday morning, a trusted Japanese attendant being left with the case. It becoming necessary to obtain and administer certain medicine to the patient this nurse rang for assistance. No one responded. She rang, it is said, half a dozen times and yet no one came. Deeming it absolutely indispensable that the medicine should be secured she left the room quietly and hurriedly strove to execute her errand. But her patient, under the influence of sudden pain, rose as soon as she had gone and when she returned she

found the door locked and poor Mr. Swan at large inside the apartment. Before he could be put under restraint he had broken various articles in the room and had put his head through a window, causing injury to his left eye which if he had lived would probably have seriously impaired that organ. These are, we believe, the facts of the case and while it may be admitted that his momentary restlessness and the injury that he sustained added one point to the odds in favour of his ailment and against the operation designed to cure it, the fact that his attendant should be unable to procure assistance and be compelled to leave her patient's bedside is commented upon with much emphasis. Residents interested in Mr. Swan have called the incident by severe language. Doubtless the general public, whatever terms it may employ, will agree that the matter calls for attention from those in authority.

After the operation Mr. Swan's case, with the exception of the occurrence above noted, seemed to be satisfactory, but on Wednesday unfavourable symptoms appeared, and the discovery that part of the intestine was adhering to the peritoneal wall rendered necessary a supplementary operation, which took place at noon. Primarily intended to relieve the patient from suffering and offering only the faintest hope of recovery, this succeeded in the first object, but Mr. Swan continued to sink. He was conscious during the afternoon and sanguine as to his case, but lost sensibility towards the end and passed away, as we have said, about 9.30 in the evening.

Mr. Swan was a graduate of the University of California at Berkeley and came out to Japan in the autumn of 1899, chiefly on account of his health, but also to enter upon an engagement to teach English in the Higher Commercial School at Kanda, in Tokyo. His services were much appreciated and a Fourth Class Decoration was conferred upon him. Some three months ago he was appointed Secretary of the Yokohama Engine and Iron Works, and even during the short time of his employment had afforded his employers the best of reasons for congratulation upon their choice. Mr. Swan's parents are dead but a sister and brother live in California. His modest and unassuming manner and his fine disposition had won for him the respect of all with whom he came in contact, and the sad circumstances of his death render the event peculiarly distressing to his many friends.

COMMONWEALTH OR REPUBLIC?

Canon Dalton's most interesting paper at the Royal Colonial Institute on the Prince of Wales' recent Colonial tour contained one very remarkable passage. Discussing the enthusiastic reception of the Prince and Princess at Melbourne, he referred to the cosmopolitan nature of the population, and continued:—

At the time all were full of the greatness of Australia, and the illimitable future that awaited her "advance." There was an unexpressed sense perhaps in the background that "one fleet, one flag, one throne" would sustain them and add to their greatness; but it was a remarkable thing that no note of Imperial union was struck in any local public manifesto during the opening week of the Commonwealth. It is idle to conceal from oneself that there exists a strong undercurrent of Republican aspiration in Australia, chiefly, perhaps, in Victoria and New South Wales. If only they could feel thoroughly persuaded that they would be powerful enough to stand alone, there are many in the rising generation—amongst whom those of non-British blood are by no means a negligible quantity—who would be eagerly ambitious for an independent Australia thus to take its place among the other great nations of the world. But then Germany, Japan, and France have interests in the Pacific which they cannot but perceive are too likely to clash with the part they are anxious for Australia to play; nevertheless the younger patriots sometimes indulge a vague hope that a friendly Republic on the other side might help them to formulate a Monroe doctrine for that Ocean, though at present they have no fleet of their own, and are not likely to have one for some time to come. The majority of the more thoughtful Australians regard such views as idle vapourings, or at best as a sign of the nation's mannishness rather than manhood.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

The addresses delivered by Mr. Darmapala in various places in Japan have already been briefly noticed in these columns. We find reported in the *Nippon* a lecture given by him at the Imperial University on "Indian Religion, past and present," which seems to have awakened a good deal of interest. The *Nippon* informs us that Mr. Darmapala is the son of a rich Ceylon merchant and that he has devoted himself to religion since he was 20 years of age. He is now 37. He has travelled extensively in Europe and America, and this is his third visit to Japan. Japanese religion being closely connected with the Indian forms of belief embodied in Buddhism, what Mr. Darmapala has to say on the religious belief of his fellow-countrymen naturally attracts a good deal of attention in this country. The following is the substance of his lecture as reported in the *Nippon*: No one but an Indian can thoroughly understand the real state of the religious belief and feeling in India. All that is oldest and most philosophical in India has been embodied in her religions. Before Shaka's time Indian religion had two prominent characteristics: (1) the importance it attached to ceremony; (2) the high regard in which it held a life of contemplation and thorough isolation from the world. From very ancient times incense was burnt, flowers presented in honour of the gods, and numerous ablutions performed, rendering life one round of ceremonies. Then the notion that suffering in this life voluntarily undergone was a sure way of insuring bliss in the next was so strongly held that in all parts of the country men taxed their ingenuity to discover new methods of self-castigation. Men were to be seen suspended to trees for hours at a time, crawling along the road on their bellies in a most abject manner, or with one hand raised high in the air and kept that way day and night. These conditions still exist to-day to a very great extent. Prior to Shaka's time in addition to the above there existed a caste system which taught that the Brahmins only are worthy of high esteem; all other classes are to be despised. It was one of the objects of Shaka's life to break down the barriers that divided the members of the human family resident in India. The essence of Shaka's teaching was the necessity of our getting to know self, and of our being able to get rid of self. To become entirely unselfish, this is to enter paradise. There are those who think that the essence of Buddhistic teaching is cessation from effort of all kinds. But when Shaka was asked what was the leading feature of his doctrine he replied "activity." The life of the dreamer and the recluse is not in accordance with the real teaching of Shaka. Disgust with the world and general pessimism are supposed to be the result of Buddhist teaching, but they are rather to be traced to an imperfect understanding of Shaka's real mind. In modern times Japan has become the chief centre of Buddhism. I have spent much time in pleading the cause of Buddhism in various countries: in Siam, Annam, Burmah and elsewhere, but in none of these countries are there such hopeful signs as I find here. Japan must utilize her position among the leading nations of the world for the propagation of Buddhism. I should like to see her sending Missionaries to Western countries. There are in America a number of people that wish to become Buddhists, but there are only three Buddhist priests in the whole country. . . . Japan, while showing great activity in military, commercial and industrial affairs, is asleep as regards religion. The young Buddhists of Japan have it in their power to make a great stir in the world if they will only rise to the occasion.

* * *

In the *Chûô-kôron* appears a long defence of Mormonism from the pen of a Mr. Hiroi. This writer is of opinion that the merits of this form of Christian belief have not been recognised by the Japanese nation. Very few people know anything about the Mormon teaching, says Mr. Hiroi. Mormons are said to be polygamists and that is considered sufficient to make inquiry into their doctrines unnecessary. Under these circumstances

it is important to state briefly just what they do teach and thus the public will be placed in a position to form a correct estimate of the character of the sect as a whole. Their teaching may be conveniently arranged under 12 heads (1) The Mormons believe in a Divine revelation. They hold that at no time in the history of the world has this revelation ceased, nor will it cease in the future. (2) In interpreting the Bible they strictly adhere to the rules of what is known as historical exegesis. They reject infant baptism but baptize converts from other sects. (3) The orthodox doctrine of the Trinity they consider a mathematical and logical contradiction. In its stead they hold that God's nature is divided into 3 sections: intelligence, feeling and parts (*bubun*). They believe that God formerly resided on the earth. "As man now is, God once was, as God now is, man may become." (4) They agree with the teaching of Origen and with the Universalists in the matter of the universality of salvation. (5) They hold that there is no harm whatever in the worship of idols as long as it is sincere. They maintain that the worship of the absolute, a Being without parts, or feeling—such as ordinary Christians profess to carry on—is impossible. Since in worshipping idols some manifestation of deity is being worshipped, the practice is to be commended as preferable to bowing down before mere emptiness. Abstract qualities, they hold, are not suitable objects of worship. (6) In morals they regard the rewards and blessings which people receive in this world as the effects of traceable causes. But they maintain that no conduct in this life will prevent final salvation. (7) As regards their own practice, polygamy has been abolished. But they hold that it is encouraged by the teaching of the Bible. (8) Their church organisation is of a primitive type. They have apostles, prophets, elders, pastors, ministers, evangelists, interpreters and healers of disease. They believe in modern miracles. (9) Following the practice of the early apostles, they follow a trade while teaching religion. Ministers receive no pay from the church. They maintain themselves by hard work. (10) Their views generally may be described as highly optimistic. They therefore do not regard theatre-going, dancing or any other innocent form of amusement as displeasing to God. (11) Notwithstanding laxity in other pleasures, they condemn smoking and drinking and even the use of coffee and other exciting stimulants. (12) They are no believers in dogma, but advocate a commonsense religion founded on Bible teaching. Whether Mormonism will succeed in Japan it is impossible as yet to say, concludes Mr. Hiroi. But it should be given as fair a chance of success as any other form of Christianity. Let it be judged on its own merits and let there be no attempt to stir up narrow-minded prejudice against it.

* * *

The *Chûô-kôron* informs us that the Buddhists have been busily devising means for influencing the general elections to be held in August. According to the regulations now in force neither Buddhist nor Shintô priests are allowed to interfere with the elections in any way or to offer themselves as candidates. Subordinating their religion to political considerations, some 30 priests early in the month of May resigned their offices, became laymen and, armed with letters of recommendation from various well-known priests, set to work to influence the voting public in their favour, but their scheme was discovered and the Government are now taking steps to frustrate their designs. The *Chûô-kôron* takes this episode as an occasion for giving a sketch of the Buddhist connection with the Diet in past years. On the pretence that in the first Diet there were pro-Christian members who would be likely to favour anti-Buddhist legislation, some six or seven priests succeeded in obtaining seats. But, contrary to expectation, the members of the Diet kept clear of the subject of religion altogether. They neither condemned Buddhism nor recommended Christianity, and so the would-be Buddhist advocates had no occasion to speak, and their electors, seeing this, felt that they had been somewhat hoaxed. Consequently in the second Diet there was a great falling off in sacerdotal mem-

bers, Wakahara Kwanzui being the only priest chosen. Dissolution followed dissolution, resulting in the Diet being left without any representative of the priesthood. The Religions' Bill presented to the fourteenth Diet revived the interest of the Buddhists in legislation. Their discreditable connection with the steps taken to get that Bill rejected are too well-known to need notice here.* The object of the Buddhists who are candidates for election now is no doubt the passing of a bill in favour of giving State aid to Buddhism. But what chance is there of their being able to carry out a project of this kind? The spirit of the age is altogether against any such narrow-minded policy. The very fact that the Buddhists adopt such means for making their influence felt shows to how small a degree they are actuated by religious feeling. Is it not questionable whether these traders in prayers and charms should be regarded as religious at all? In what do they differ from hawkers of other wares?† Why then do they need any special representation in the Diet more than other business men? There is no objection to Buddhists becoming politicians in an ordinary way with purely political objects in view, but the attempt to further the interests of Buddhism by means of the Diet had better be abandoned, as all such schemes are doomed to failure in this 35th year of *Meiji*.

* * *

Under the title of "Knightly Ways and Christianity," the *Tôkyô Maishû Shinshi* discusses the connection of Christianity with the code of morals known as Bushidô in this country. To a certain extent this organ endorses the views of Mr. Togawa on the connection of the *samurai* class with the propagation of Christianity, which we stated in the last Summary, but the *Maishû Shinshi* observes that a more important question than that treated by Mr. Togawa is the extent to which the mediæval warrior, whose character has contributed the principal qualities that go to make the modern gentleman, needs Christian teaching and Christian influences. In Europe the modern gentleman is, in a word, a Christianized mediæval knight, says the *Maishû Shinshi*. Will our Japanese Bushidô furnish the same type of man without the help of any religion? We trow not. Great efforts are being made in various quarters to revive interest in the Bushidô, but those who rely on this moral code for the reform of manners and ways propose to divest it of those elements of Confucianism which helped to supply its deficiencies in former years, and certainly have no intention of introducing Christian elements in their stead. The chivalry of the West was for many centuries characterised by three qualities: (1) Courage; (2) integrity and sincerity; (3) the fear of God. This last element is altogether wanting in the Bushidô it is sought to revive among us. It is the duty of Christians to use the spirit of chivalry as a basis for developing a thoroughly Christian type of character.

* * *

In No. 982 the *Tôkyô Maishû Shinshi* points out that in late years there has been a great falling off as far as Protestant churches are concerned in the annual rate of increase of converts. The figures for the Congregational churches given are as follows:—No. of baptisms in 1894, 204; in 1895, 1,027; in 1896, 2,801; in 1897, 1,040; in 1898, 670; in 1899, 420; and in 1900, 475. There is no other Protestant church, says the *Maishû Shinshi*, which shows a record of this kind, but the experience of most of the churches has been that the zenith of prosperity was reached in 1896, and that from then till last year there was a gradual decline. The Episcopal church members have been better sustained than any other body. In 1896 they had 889 baptisms, but in 1900 the number had not fallen below 722. The evangelistic efforts of the spring of last year resulted in such an addition to the number of professing Christians as has not been known for many years, and though this year's

* It was reported at the time that a sum of 600,000 yen was used in bribing members of the Diet in connection with that bill.—(WRITER OF SUMMARY.)

† The term applied to them is 讀經屋 *Toku-kyôya* "Scripture-reading tradesmen."

results are not likely to be quite so good, they will certainly bring a substantial increment to the Christian church.

The *Tōkyō Maishū Shinshi*, commenting on the Annual Methodist Conference, held in May (14th—21st) says:—The Methodist report for the year shows remarkable progress. The increase in members was 323, that is, 12 per cent. of the total number of numbers belonging to that church. The addition to the number of Sunday-school children was 249, or about 10 per cent. of the total number of scholars. The total number of baptisms was 338, being more than double the number recorded last year.

* * *

In reference to the class of buildings used for religious purposes which should be exempted from taxation, there has been some correspondence between the Governor of Tōkyō and the Home Office, the *Maishū Shinshi* tells us. It was quite clear that churches being used exclusively for religious purposes should be free from taxation, but in the case of what are known as *Seikyōjō* (preaching places) and *Kōgijō* (lecturing places) there was some doubt, owing to the fact that in many cases private houses are used for such purposes. The Governor of Tōkyō seems to have considered it difficult to allow of the exemption of these buildings from taxation when used by Christians, seeing that Buddhist and Shintō buildings of the same class have not hitherto been free from taxation. But the Home Office has treated the matter in a very liberal spirit, and has given directions that the class of buildings in question shall all be exempted no matter to what religious sect they belong.

* * *

Writing on "Catholicism and Equality" the *Kōye* says: It is represented in some quarters that our religion is opposed to the principles of equality, fraternity, and liberty, but it is not so. No organization in the world has done more to bring about a state of equality and to promote brotherly feeling than our Church. Following the example of Christ, who washed his disciples' feet and exhorted his disciples to be ready to serve each other in the same way, the early Christians both taught and practised lowliness of spirit and preached the equality of all men in the sight of God. All who assemble in our churches are regarded as equal while there. This equality of Christians was taught by St. Paul, who found fault with the Corinthians for practising a contrary principle.

* * *

Yo no Katei-Kwan is the title of a book covering 92 pages lately published by L'Abbe F. Ligneul. It consists of a sketch of ideal home life considered from a Christian standpoint. The work is divided into eight chapters. Chap. I. explains the principle that forms the basis of high-class home life. The chapter opens with the remark that there never has been a time when the desire for reform, progress and improvement of every kind was stronger than it is now, but in a great many cases the changes urged or actually made are only superficial. The world is capable of improvement in endless ways, but the elevation of home life is specially to be desired on account of its bearing on the after-life of the members of various families. The author then goes on to show how the character of the home is a reflection of the characters of the man and the woman who control it and there follows an account of the virtues these persons should cultivate. The titles of the following chapters are: Chap. II.—The Home in ancient times. Chap. III.—Changes in the Home. This refers to historical changes in the relation and attitude of the members of families to each other in Europe, more specially of the man to the woman. Chap. IV.—General discussion of Marriage. Chap. V.—The marriage system prevailing in ancient times. Chap. VI.—The marriage system of modern times. Chap. VII.—The reason of woman's power and the object it has in view. Chap. VIII.—The nature and object of marriage. This work is for sale at the Sanseisha at 20 sen a copy.

Another little book by the same author is entitled *Mushugi, Mujinbutsu*, the contents of which formed the substance of lectures delivered

by L'Abbe F. Ligneul some little time ago. The gist of the pamphlet is stated in the title. There can be no striking personality without character-forming principles as a basis. What persons are to be most admired, the character these persons bear, what principles should guide us in life, and how learning and experience are connected with these principles—these form the chief topics of discussion in this little work. The final chapter discusses the possibility of founding a new religion. The conclusion the author reaches on this subject may be easily conjectured. The notion which has been fathered by Dr. Inoue Tetsujirō and a few others is ridiculed as displaying ignorance of the fundamental character and objects of true religion. The *Mushugi, Mujinbutsu* sells at 5 sen a copy at the Sanseisha. Mr. Mayeda Chōta is the translator of the two works mentioned above.

Mr. Ebina Danjō has just published a book that is characterised by the earnest, philosophical tone which seem to be inseparable from all Mr. Ebina's public utterances. It is called *Taikoku no Shin-seimei* (The New-life of the Empire). The following headings of chapters give one an idea of the character of the book. Chap. I. Introduction. II. Our Living God. III. The strength of the world. IV. The position of the "I" (the single individual) in the Universe. V. The source of energy (of mind). VI. The union of knowledge and conduct. VI. The belief of Fichte. VII. The religion of Lessing. VIII. Immortal Life. This work is issued by the Keiseisha and sells at 30 sen a copy.

Nyozō-gakwan (如是我觀) "Things thus appear to me," gives the views of Mr. Shimada Saburō on politics and religion. It is a book of considerable size divided into no less than 52 parts. It discusses government, finance, race, Buddhism, Shintō, Confucianism and Christianity in a somewhat elaborate manner, supplying quotations from various writers on religion and commenting thereon. It sells at 50 sen a copy, the Keiseisha being the publishers.

The *Reikai no myōshu* (A strange tendency in the Spirit World [religious world]), by Mr. Miyagawa Tsuneteru gives the author's views on religions in general and Christianity in particular. The work is divided into 9 chapters and sells at 28 sen a copy.

Dr. Harnack's work on Christianity, which in its German and English editions has had such a large sale in Europe, has been translated into Japanese by Mr. Takagi Jintarō, D.D., and is for sale at 50 sen a copy at the Keiseisha. The translator is of opinion that no such book has been published since the appearance of Schleiermacher's greatest work, the *Der Christliche Glaube*, and he recommends Japanese Christians and others to give Dr. Harnack's views their earnest attention. The Japanese title of the work is *Kirisutokyō to wa nanzo ya?*

In the *精神界*, *Seishinkai*, an interesting comparison is drawn between the teaching of Dante and the views of the famous priest Genshin, as expressed in the *往生要集* *Ojō-yoshū*. Genshin's work appeared in the Heian era (A.D. 800-1186) and in many respects it stands by itself in Japanese literature, showing greater power of imagination than Japanese writers are wont to display. Comparing the eschatology of the two writers, the *Seishinkai* proceeds: Dante writes of three worlds, Genshin of ten. The finest part of Dante is his description of hell and the same may be said of Genshin's; Even in the figures of speech used there is great similarity between the two writers. Dante speaks of "fire-snow" and a phrase in Genshin runs thus: *Ningen no hi* (火), *kore wo hi sureba yuki no gotoshi*. In describing the extent to which men can hate each other, Dante makes use of a special figure of speech. He says that if the small branches of every tree in a deep forest were broken, the voice of hatred would proceed from every aperture of those branches. Genshin in writing of the perpetuity of crime and its consequences, says that though the sinner may be ground into minute fragments, each fragment will possess a voice which proclaims the heinousness of the crime committed. There is a remarkable passage in Genshin which describes the tortures of mind produced by love that can never

be satisfied. It runs thus:—*Katana no ha no hayashi no shita ni ichi zainin ari. Sono ki no uye wo mireba, uruwashiki fujin ari, zainin sono ki ni noboran to su. Ki no ha, katana no gotoku shite, waga niku wo saki, hane wo kudaku. Yōyaku nobori mireba, fujin wa sude ni kudarite chi ni ari; sono fujin koburu metsuki nite yonde, iwaku:—Nanji wo omoute, koko ni itaru; naze kitari chikazukazaru, to. Zainin kikite, yoku no kokoro sakan nari; sunawachi ki yori kudareba, kuno onna mata kono uye ni arite maneku Kaku no gotoki koto hyaku, sen no oku no toshi nari.** There is a striking similarity between this picture of ungratified passion and Dante's description of the sad experience of Francesca.

What difference there is between Dante's representation and that of Genshin proceeds from the fact that Dante was more than half a poet and twisted his religious belief to make it serve the purpose of his art, says the *Seishinkai*; whereas Genshin had nothing of the poet in him and his object in writing was wholly religious and moral. Dante's type of sinners embraces a greater variety than are mentioned by Genshin. With the latter the thief, the murderer, and the adulterer are presented in a somewhat abstract form and subjected to the most exquisite torture conceivable. The *Seishinkai* concludes its comparison with the remark that descriptions of heaven and hell, such as those furnished by the two writers quoted above, were no doubt suggested by the desirability of working on the feelings of men in order to induce them to do what is right and avoid what is wrong. That the states described have any objective reality nobody but the most ignorant believes, but as displaying the tortures to which the mind may be subjected in the case of highly sensitive natures they are undoubtedly valuable.

* * *

Writing in the *Jinja* (神社) *Kyōkai Zasshi*, Dr. Inoue Tetsujirō attributes the lack of care in preserving shrines to foreign influence. In an article entitled, "The rank in Society of Shintō shrines," he says that these places are regarded as sacred spots by all right-thinking Japanese, that for public recreation the grounds attached to them have considerable value, that for artistic purposes the shrines are useful, and that their connection with the whole history of the nation should not be forgotten. In addition to the above they constitute a bond of union between parishioners. They have associations which make them dearer to the hearts of Japanese than anything introduced from abroad. Since it became the fashion to worship everything Occidental, continues Dr. Inoue in his wonted quasi anti-foreign style, these Shintō shrines have been neglected and allowed to get out of repair. This shows slavery of mind on our part. Dr. Inoue concludes by observing that in addition to the employment of other means of keeping up these shrines, the characters of the priests who have charge of them need to be improved.

* * *

The Greek Church organ, the *Seikyō Shimpō*, in an article entitled, "The Self-instruction and self-support of religious teachers," voices a complaint which we have come across in various Christian magazines as to the insufficiency of the means of support possessed by religious teachers in Japan. It is impossible, says the *Seikyō Shimpō*, for religious people to live apart from the world if they wish to spread Christianity. They find that the more exclusively they devote themselves to their sacred calling the harder it becomes to live. Of course retirement from society is a course that may be easily adopted.

* "In a forest beneath a tree whose every leaf was a sword was a certain criminal. On looking up he perceived a beautiful woman on the top of the tree. He made ready to ascend the tree, but its leaves were like swords. They cut open his flesh and broke his bones. But when at last he reached the top, the woman which he had seen there had already descended, and, beneath the tree, with admiring eyes, she said: 'By thinking of you I have come to this. Why don't you come near to me? Hearing this the criminal's desires became intense; but on descending from the tree, he found that the woman was again at the top, and beckoning to him there. This went on for millions upon millions of years.'

But it involves the loss of opportunities to do good. To give up one's whole life to self-culture, to practise self-denial and self-sacrifice: this is all very good in its way, but it will not convert the world. No sooner does the evangelist begin to branch out into aggressive action against the powers of darkness than he is troubled with financial difficulties that hamper him at every step. No sooner does he hear of instructive books that have been published and desire to purchase them than he has to face the fact that without cutting down some of the necessities of life he cannot do so. Yet the lack of sufficient instruction tells on his work in various ways. How can he influence the world without possessing adequate knowledge of its state? And how can this knowledge be acquired without extensive reading? There is a perpetual feeling among evangelists that they only meet the demands of the age in a very partial manner, and this is largely owing to straitened means.

* * *

Kirisuto Ronshū is the name given to a collection of essays bearing on the nature of Christ, which were called forth by the publication of Mr. Ebina Danjō's views on this topic. They are published by the Keiseisha and sell at 25 sen a copy. Included in the collection are articles by Messrs Uemura, Kozaki, and Minami, Dr. Takagi and the Rev. George Albrecht.

The *Nihon Shūkyō Fūzokushi* (History of Religious Customs) is a bulky volume covering 600 pages and selling at 1 yen 50 sen a copy. The author is Mr. Katō Kumaichirō, and the publisher Moriye, Igura, 5 chōme, Azabu, Tōkyō. According to the prospectus which has reached us it is a most elaborate work, treating of all the various Shintō, Buddhist, Confucian, Taoistic and Indian customs practised in this country, enumerating the principal objects of worship and explaining some very curious practices and superstitions that have mixed themselves up with religious worship; a history of the propagation of the different religions is given, and maps are furnished showing the extent to which the various creeds have spread. The book seems deserving of a large sale.

* * *

Under the title of "A thing to be borne in mind by those who study Christianity," Mr. Uchimura Kanzō writes in the *Keisei* in the following strain:—Japanese who desire to study Christianity encounter a very serious difficulty in obtaining a knowledge of the real thing. The Christian view of human nature is so diametrically opposed to our Japanese notions that a change from our native state of mind to that of the Christian is like going from Peking to London at a leap. In order to assist Japanese to understand and accept Christianity, what is called a Japonicising of the Christian religion has taken place. But of what does this Japonicising consist? Nothing but an alteration of the original teaching to an extent that renders it a spurious article. What is called Japanese Christianity is not real Christianity nor is it Japanese religion (*Genni tonayerarete oru Kirisutokyo wa shin no Kirisutokyo de naku, mata Nihon no oshiye demo nai.*) It is characterised by vagueness and want of colour. . . . The study of Christianity is no other than the study of the Bible. There are very few earnest students of the Bible among us. Our Christians prefer noisy arguments on theological or philosophic knotty points to studying the Bible, and when a question is disputed then we have a set of people like the members of the Evangelical Alliance coming forward and attempting to determine what is to be believed by a majority vote. If these zealots would set to work to alter some of the many mistranslations contained in our Japanese version of the scriptures and allow people to investigate the scriptures for themselves, they would do more good. I don't mean to say that the Bible is infallible, and I don't argue that those who commence to study should be ready to believe everything they read in it, but I maintain that real Christianity is only to be found in the sacred writings, and those who aim at getting to know what it is had better go to the fountain-head at once, instead of applying to the dispensers of distilled truth.* The Missionaries

do not encourage the study of the Bible for its own sake without regard to its leading to belief in Christianity. They always seem to be afraid that the reader will come across some passages which will offend him and prejudice him against Christianity. Pure Bible teaching on many questions is diametrically opposed to our Japanese notions. Even our cardinal virtues, loyalty, and filial piety are most decidedly relegated to a very subordinate position in the teaching of the New Testament, whatever partial support they may receive from that of the Old. If this teaching be toned down so as to suit Japanese ideas, it is no longer Bible teaching at all. It is because this kind of thing is perpetually going on among us that I say that our Christianity is merely nominal. Christianity loses all its grandeur, it seems to me, in as far as it is Japonicised. If it is not of sufficient power to bring us up to its level then it is not the religion we take it to be. The very term *Nihonkwa* (化) *shita Kirisutokyo* (a Japonicised Christianity) reveals an utter misconception of the rank occupied by the Christian religion as an enlightening and reforming agency. Nothing is more harmful to the Christian cause than the palming off of that diluted form of Christian teaching called Japonicised Christianity as the genuine article. This spurious Christianity being what most worldly men come into contact with, it is hardly to be wondered at that they treat it with indifference or with scorn. . . . In order to understand and to appreciate Christianity we must get rid of our Confucian notions altogether. We must cease to reason about it as we reason about all other things that transcend reason. The antipathy shown by confirmed Orientalists to Christianity is what is to be expected. Their notions and Christian ideas are antipodal to each other. Let this fact be recognised; let there be no attempt to fill up the gulf which separates Christianity from purely Oriental thought.

THE FOURTH OF JULY.

American residents were fortunate in having fine weather for the celebration of their national holiday, though the fact that no U.S. warship was in port prevented the various men-of-war from dressing with bunting or saluting at noon. Most business houses were closed and both on the Bluff and in the former Settlement there was a good display of the Stars and Stripes.

A baseball game has come to be regarded here as an inseparable adjunct of "The Fourth," and happily the fine weather allowed of the usual match being played, the teams representing the Yokohama Cricket and Athletic Club and the Yokohama Commercial School, which was witnessed by quite a large assemblage, including many ladies.

There were bands at the chief hotels both at noon and in the evening and the music naturally formed a strong attraction, the verandahs being well crowded with residents and guests.

As is the custom, American residents called at the Consulate-General during the forenoon; and there were many official callers.

In the afternoon several yacht races took place. The first prize for the big boats being given by H. E. Col. Buck, U.S. Minister, and the others were subscribed for by U.S. residents. The wind was very light and one of the races could not be brought off in the time prescribed and will have to take place again.

In the evening there was a capital display of fireworks for which the weather was most favourable. The fire fountains were specially striking and the set piece representing the Capitol at Washington was greatly applauded.

Large crowds were on the Bund during the evening to view the fireworks and it is worth noting that thanks to the measures adopted by the authorities, the people were made to walk on the left side of the thoroughfare. Constables

* The reference is to the softening down of disagreeable truths to make them palatable which certain Japanese preachers habitually practise and to which Mr. Uchimura so strongly objects.—(WRITER OF SUMMARY.)

with lanterns were posted at intervals to regulate the traffic and it has to be said that they did so satisfactorily.

THE BASEBALL MATCH.

The baseball match did not attract quite so large a crowd of foreigners as we have seen gather on these occasions, but the attendance of Japanese was very large. The foreign team was typical of the Anglo-American *entente*, three Englishmen being included in the nine; the Japanese team comprised the best players among the Yokohama Commercial School enthusiasts. Owing the indisposition of Mr. E. C. Swann, the foreign battery was completely changed, C. H. Thorn pitching all through and E. W. Kilby catching. Both players came through the ordeal splendidly, and given a fair amount of practise Thorn should develop into a difficult pitcher to play with. He has speed, varies his delivery, and gets a bewildering curve on the ball at times. E. W. Kilby as catcher will also be difficult to beat. Considering the utter lack of combined practise on the part of the Y. C. and A. C. the team's performance on Friday was very meritorious, though one or two fumbles in the field were inexcusable. The Japanese weak point, as usual, was in batting: had their batting been as strong as their fielding was smart, the record of the game would read differently. The Y.C.S. started their score with a romp, four men getting back to the home-plate, after that till the sixth and seventh innings, the home side held them down, but in these two innings they piled up four more runs. The Y.C. and A.C. were leading up to the end of the fifth innings by one run. We append score and positions:

Y.C.S.			
Name.	Position.	At Bat.	Runs.

Mr. Tanaka was Umpire; Mr. W. K. Devin, Scorer.

YACHT RACES.

The 39-raters raced over the Tsurumi-Nakane course, 20½ miles, for a prize given by the U.S. Minister and for others presented by the U.S. residents of Yokohama.

Four boats were started, *Mary*, *Kingfisher*, *Golden Hind* and *Maid Marion*. The last mentioned had a very bad start, being caught by the starting gun outside the line and having therefore to return and recross it. The wind fell very light and it was feared that they would not be able to finish in time, but the leading yachts got home with nearly an hour to spare. *Maid Marion* led the quartette home round the Lightship but was caught by *Mary* in the last stage and beaten by something over a minute. On her time allowance of 6 min. 17 sec., however, she gained the first prize, *Mary* taking the second. There were no record points in this or the other races sailed. Following were the corrected times:

	Corrected Time.
	h. m. s.
<i>Mary</i>	6.05.25
<i>Kingfisher</i>	6.10.30
<i>Golden Hind</i>	6.26.33
<i>Maid Marion</i>	6.02.03

The cruising class raced over the Tsurumi-Nagahama course for prizes presented by the

U.S. residents. There was as usual a warm match between *Daimyo* and *Svanhild*. They rounded the Tsurumimark respectively at 2.09.30, and 2.09.45; at the Nagahama buoy *Daimyo's* time was 3.59.10, just 50 seconds ahead of her rival's at the Lightship. On the trip home *Svanhild* had cut off the lead and was a bare 15 seconds to the good, which she had increased at the harbour entrance to 30 seconds. *Svanhild* stood across the harbour but *Daimyo* put in short tacks, and the former crossed just 20 seconds ahead. The first prize, however, fell to *Mosquito* on a time allowance of 33 minutes which made her time 10 minutes better than that of the first boat in, the second prize going to *Surprise* on her time allowance. Following were the corrected times:—

	h.m.s.		h.m.s.
<i>Svanhild</i>	5.49.55	<i>Mosquito</i>	5.39.45
<i>Daimyo</i>	5.50.30	<i>Surprise</i>	5.46.55
<i>Molly</i>	5.51.05	<i>Asagao</i>	5.47.55

The 21-raters started to go over a nine mile course, also for prizes by the U. S. residents, but the wind fell light and became very fluky so that no boat could finish in the time provided. Another race was sailed on Saturday, however, and resulted in favour of *Wettinge*, *Pele* second. Following were the corrected times:—

	h.m.s.		h.m.s.
<i>Pele</i>	5.16.50	<i>Vixen</i>	5.17.32
<i>Stella</i>	5.36.09	<i>Sodesku</i>	5.20.57
<i>Yugao</i>	5.34.28	<i>Wettinge</i>	5.09.59

There was also a race for 12-raters which *Madeleine* won, *Dora* second and *Thelma* third.

THE BOOKSHELF.

All the Russias, by HENRY NORMAN, M.P.; London, Mr. William Heinemann. Price, 18/-net.

AFTER fifteen years' study of the subject and four journeys—one of nearly 20,000 miles—through European and Asiatic Russia, Mr. Henry Norman has sat down and written a book, which he calls *All the Russias*, and which has just appeared in London. The volume may be called Mr. Norman's *obitua dicta* upon Russia and things Russian, and all students of contemporary politics, we have no doubt, will hasten to peruse it. They will be repaid, we imagine, for though here and there the writing fails to rise above a modern journalistic level, still it is the journalism of a very intelligent man, a keen observer, and one gifted with an intelligent comprehension that gives him a sympathetic understanding of the people whose land, politics, ideals, and probable future he seeks to describe. The book is divided into several sub-divisions, themselves broken up into twenty-six chapters, which treat of the capitals (St. Petersburg, the new; Moscow, the old); Count Tolstoy, his influence at home and abroad; Finland; Siberia; the great waterway of the Volga; the Caucasus; Central Asia; Economics; Foreign Politics, and a Conclusion of the whole matter. The text is illuminated with one hundred and thirty-seven illustrations, chiefly from the author's photographs, and four maps, while there is a very carefully compiled Index.

Like all who have studied, however deeply, or however superficially, the problems presented by the widely extended empire which obeys the autocratic government of the great White Czar, Mr. Norman is stunned—almost terrified is the phrase he uses—with the very immensity of the thing.

The British Empire is enormous, too, but though one may have seen most of it a similar impression of totality is never produced, for it is scattered over the world and divided by great seas. Russia is a whole—you can walk from Archangel to Kishk and from Helsingfors to Vladivostok. The great Russian mystery is how all this is governed from the city on the Neva.

Again, and similar to this first impression, the apparently inexhaustible variety of races. After the vastness of the country, the mixture of peoples, and the centralization, comes the impression of strength. Russia is indescribably strong. Her strength makes you nervous. Russia walks rough-shod over and through obstacles that an older, a more civilised, a more self-conscious country would manoeuvre around for half a century. She wants Siberia—she takes it. She wants Central Asia—she takes it. She wants Port Arthur—she takes it. She wants Manchuria—she is taking it. She

wants Persia—we shall see. A constitutional Finland is in her way—constitutional Finland must become a Russian province. Russia has suffered of late from an acute financial and commercial crisis, intensified by the heavy cost of the rising in China and the relief of famine. In view of this, one would expect to see expensive national enterprises postponed or at least curtailed. Not at all. Everything proceeds as regularly as though a million roubles came floating down the Neva every morning. The great Siberian Railway is being pushed along at all speed. The army is being increased. The navy is being strengthened rapidly. Railways are building to the German frontier, to the Austrian frontier, in the Southern Caucasus, in Central Asia. During the ten years ending in 1899, 18,000 miles of railway were constructed. In 1899 alone the increase was 2,640 miles. And everywhere that Russia reaches there she erects handsome and permanent buildings—railway stations, cathedrals, administration offices, barracks. Few provincial towns in Europe or America have theatres and museums as fine as those of far-off Irkutsk and Tiflis.

So much for general impressions and the bright side of the shield. Though keenly appreciative of the material advance Russia has made during the past thirty years, Mr. Norman is not oblivious of the dark shadows and dreadful stains which fall athwart, or darken, the history of those years. In clear cut sentences, devoid of all sensational verbiage, he sets these forth in his pages and thus enables the reader to form a true mental picture of things as they are. He tells us of the cheapness of life, the exceedingly low valuation put upon the myriads of the lower classes by the bureaucrats; of the dreadful poverty which stalks the land from end to end; of the drunkenness which darkens the homes of the peasantry; the wholesale bankruptcy of the old nobility; of the spirit of speculation which pervades the civil and other public services; and the antagonism which is beginning to develop between labour and capital as education begins to slowly filter down among the terrible mass of the "under-side." For in Russia as elsewhere, the rough education which the spirit of the age demands shall be placed within the reach of all, has led to new aspirations and with them the birth of a consciousness of ability to realise them. And this means trouble sooner or later even in an empire as autocratic as that of Russia. It explains the seething discontent of the student classes, the unrest of the newly created artisan class; the dissatisfaction of the patient *moujik*, already more than disheartened by the miseries which accompany him and his like from the cradle to the grave. Yet, despite all, Russia is swinging into line with the humanitarian advance of the rest of the world.

The chapter devoted to Finland is very interesting in view of the discussion aroused in Europe by the practical abrogation of the old Finnish constitution. Finland is a land of brave men and braver women, with a civilization and ideals peculiarly their own. But the exigencies of Russia compel her to take the steps she is taking there, and much as we may deplore the extinction of free institutions, we must in common fairness agree with Mr. Norman that Russia has been moved to do what she has done in Finland by the force of imperative national self-interest. She believes herself vulnerable to a foreign foe coming *via* Finland, and in her view national security means military and other unification. So Finland must come into line with the rest of Russia, and those of her brave sons and daughters who cannot endure the change must seek new homes across the broad Atlantic. There is nothing else to be said.

The marvellous changes brought about by the construction of the Siberian Railway are well described by Mr. Norman. Certainly he traversed the district in the *train de luxe* which leaves Moscow every Saturday evening at a quarter to nine o'clock, but he had frequent opportunities of getting off at the big towns, and those of our readers who met him in Japan know that he is not a man likely to neglect any opportunities that may chance his way. As we already knew, a very considerable portion of the railway will have to be entirely relaid ere it can be properly taken advantage of by trade and commerce, while Mr. Norman agrees with many other observers that its single track would seriously hamper any

large movement of troops over its permanent way. As he puts it:—

Its strategical results are already easy to foresee. It will consolidate Russian influence in the Far East in a manner yet undreamed of. But this will be by slow steps. The expectation that the line would serve at a moment of danger, or in pursuit of a suddenly executed *coup*, to throw masses of soldiers from Europe into China, is yet far from realisation. The line and its organization would break down utterly under such pressure. But bit by bit it will grow in capacity, and the Powers which have enormous interests at stake in the Far East, if they continue to sleep as England has done of late, will awake to find a new, solid, impenetrable, self-sufficing Russia dominating China as she has dominated, sooner or later, every other Oriental land against whose frontier she has laid her own.

Turning to one of the problems pressing for immediate solution in Siberia—the terrible amount of crime rampant throughout the land—our author says:—

It is evident to anybody who studies the state of Siberia that this wonderful country can never enjoy its due development until the whole system of convict transportation is done away with. Not a week passes without a murder in every Siberian town. Two emigrants had been killed in the Siberian train shortly before my visit. The head of one force of free labourers upon railway works was in Siberia for an outrage upon a child; the boss of another was a murderer. The porter at my hotel in Irkutsk was a murderer from the Caucasus. Theoretically, when bad characters are deported they are forbidden to leave the district to which they are assigned; practically, they leave as soon as it suits them, and their first object is to kill some peasant for his clothes and passport. Indeed, if they did not move away they would starve, for in many cases the authorities simply turn them out and leave them to their fate.

We have not space to follow Mr. Norman down the mighty Volga, across the Caucasus, and thence onward through Central Asia, Tiflis, Merv, Samarkhand, (what memories these names bring surging to the front as we read them!) absorbingly interesting as these chapters are. One strong impression they leave upon the mind: that Russia never moves into another kingdom, khanate, principality, or province with any intention of moving out again. She goes to stay and so far her conquests have been thorough and complete in every sense of the phrase; while equally strong is the impression that wherever Russia plants her flag and stations her Cossacks, there she kills British and all other alien trade. She has completely stamped out the once flourishing English trade of the Caucasus and Central Asia. Her ideal is to be self-sufficient within her own borders and she seems to be in the fair way of realising it. Soon she will be raising all the cotton she wants for her European mills in Central Asia; already she can raise all the coal, iron, manganese, petroleum, corn, and food products she may want within her own dominions; and so she is driving foreign goods out as fast as she can. All she wants with the foreigner is for him to buy her surplus products and to supply her with capital wherewith to develop her infant industries and open up her vast internal resources.

The portion of the book dealing with the Economics of the Empire really deserves a review all to itself, so astonishing are some of the facts which Mr. Norman marshals for his readers' delectation. In our author's view the magician who has wrought such a marvellous change in the economic history of Russia is M. de Witte, the Minister of Finance, who will visit Japan, probably, next Autumn. M. de Witte's life-story reads like a chapter from the memoirs of a self-made master of millions in the United States of North America. Beginning life as a journalist in Moscow, after graduating at the University of Odessa, he obtained a modest post on the Odessa Railway, and then by force of sheer ability rose to his present position at the right hand of the Czar. What he has done for Russia is writ large in her modern history. He has rehabilitated her finances, and turned her from a poverty-stricken agricultural land into a vast hive of industry,—and he is still not yet sixty. We refer our readers to Mr. Norman's pages for the gigantic figures which these reforms have brought into being: they are truly prodigious.

The last section of the book is purely political

and therefore polemical. Mr. Norman is no lover of Germany and thus views her actions *vis-a-vis* Russia and *vis-a-vis* England in none too favourable a light. As an English public man he would rather see an understanding between England and Russia, than one between England and Germany, we imagine. He supports his views with extracts from the Russian press and Russian publicists, and decries the anti-British views that find utterances in the Russian papers from time to time as being of little account and carrying no weight. Russia's destiny is to expand to the East and South and to find ports in the warm water, thus bringing her to the doors of Japan, of Persia—and probably India. But our author does not think she will draw the sword over Korea, or over India. The final voice in all such matters is the Czar's, and the Czar Nicholas is a man who loves peace and will ensue it, despite all the ravings of hot-headed journalists or the ambitions of Army Colonels—officers of his Army above the rank of Colonel look upon war as the climax of folly and would not have India as a gift, says our author. We close the volume under review with a feeling of thankfulness that such a capable man as Mr. Norman has had the leisure to write such an enlightening book about all the Russias.

MISS HUGHES ON THE TEACHING OF THE ENGLISH LANGUAGE.

Speaking at the meeting of the Imperial Education Society, held in Tokyo, on Saturday last, Miss E. J. Hughes said:—

I always object to a speech which begins with an apology, but I feel to-day that an apology is needed when I remember what a short time it is since I came to your country, and my still shorter experience of teaching English to Japanese students. My apology shall take the form of the three reasons why I venture to speak to you to-day on the teaching of English in Japan.

First.—In my province in England many of the people still speak the old British tongue and therefore from my earliest childhood I have been brought face to face with the problem of teaching English as a foreign language, and during the last 20 years I have been officially concerned with the problem in my own province.

Secondly.—I have had quite unusual opportunities of hearing English teaching in many foreign countries.

Thirdly.—It is of course a source of great satisfaction to me as a British citizen, to know that Japan has decided to use our English tongue as its gateway to Western thought and life and commerce. Because of this decision it is of the greatest importance that Japanese students should learn English well, with the smallest expenditures of time and energy. I find a very general dissatisfaction among Japanese teachers with the results now obtained and I confess frankly I share that dissatisfaction. If things require to be changed, Japan may be glad to hear all kinds of suggestions, and therefore I will venture to suggest!

I am going to emphasize seven important points, and then make a practical suggestion for the improvement of English teaching in Japan.

First:—It is important to decide why English is being taught, because the method must be profoundly affected by the end desired. There are two very different classes of Japanese students learning English for quite different reasons. I think they ought never to be taught together, because they require absolutely different methods.

The first class are those who desire to read foreign books in order to get the latest information on their special subject. They do not want to speak and write or think in the foreign language but simply to translate it, *i.e.* to translate what they see into the Japanese language. The educational result obtained by learning a language in this manner is very small, so small that it should not be regarded as part of a general education, but rather as part of a special technical or professional training.

The second class are those who really desire to know the foreign language, as a means of education, as an introduction to a foreign mental standpoint (a very valuable gain), to foreign life, and to foreign literature. They must speak it, write it, understand it, and think in it, as well as read it. If a language be so learnt, the educational result is enormous, and is worth much time and energy. Sound is far more important to this class of students than sight, and should be first taught, for obviously speaking and listening are of great importance. I propose to concern myself only with this second class of students.

Secondly.—The real object of language-learning is to think in the language. I feel sure that you will agree with me that a student cannot be said to know a language when he hesitates to speak it because he must speak it very slowly because he has to translate all the time; and he cannot follow an ordinary conversation because the ordinary rate does not give him time to translate. Now if we agree that our final object is to think in the foreign tongue then many things seem to follow logically. I will mention four of them.

(a) We should have no translation until the student has made considerable progress in the language, say, for example, not until the 4th or 5th year, because to translate is exactly what we do not want him to do. We want him to take the thought in his mind and wrap it up in the English form, and not think at all of the Japanese form. But how can we get the thought into his mind without Japanese? I think at first we should only teach him the English of objects which we can show him in the concrete or in pictures, and the English of actions which we can act dramatically or draw. (It is a constant astonishment to me in this country that Japanese teachers with their clever fingers and artistic skill do not seem to use the blackboard for drawing purposes nearly as much as we clumsy, inartistic Britons!) Sooner or later, however, our ingenuity will fail us, and we must give them the Japanese word or words, but as soon as they have the thought let them express it again and again in English until the thought is connected with the English. The abler the teacher, the more seldom will he have to use Japanese. About the 6th year, translation is of great value, but it should be very accurate and careful, and of course should be done by the pupils and not the teacher.

(b) We must have free composition. The pupils must express their thoughts straight into the foreign language, and there are obvious advantages in having much spoken composition before any written.

(c) The teacher must speak English as much as possible. This is obviously impossible for many present Japanese teachers. There are a small class of Japanese teachers who speak marvellously well, and many of them have never been out of Japan, thus proving conclusively that residence in an English-speaking country is not necessary for complete mastery of English, although such residence is of course very desirable, especially for the life and thought of a foreign country.

There are, I believe, also a very class of Japanese teachers, who with some additional help would very quickly gain a good command of the language. I will suggest later how I think that help could be given.

(d) Pronunciation should be carefully attended to. If we want to think in a language it is a great help, it is indeed probably essential, to speak in it. Now we shall not speak much in it unless we feel our pronunciation is fairly accurate. About pronunciation I want to say three things. 1st., as regards sounds I think it is an immense help to a teacher to know something of the science of vocal sounds, in phonetics. 2nd. I understand that you have very little accent or stress in Japanese. We have a strong stress in English, and this ought to be carefully taught from the beginning. We English people sometimes do not recognise a word spoken by a Japanese, even if each sound is pronounced quite correctly, if the stress is forgotten or misplaced. 3rd. There is something which I can only call the English tune for want of a better name, which when once learnt, it becomes much easier to understand and to speak English, and which I think should be taught from the beginning.

Thirdly. The size of the class.—This is a very important point about which experts are roughly agreed. I am going to be dogmatic in order to save time. I believe that if a class be larger than from 12 to 15 for an ordinary teacher, and from 15 to 20 for an extraordinary teacher the possible progress of the class is much retarded, and frequently the best methods cannot be used. If pupils and parents are willing for the pupils, to spend, for example, three hours over what they could learn in an hour why it seems to me a terrible waste of time, and most uneconomical, and I only hope that parents and pupils really understand the position. Again, if a teacher is willing to teach under such conditions as make the methods impossible, again it seems to me most wasteful of the teacher's time and energy. I only hope the teacher clearly understands. If we cannot afford to teach effectively all the pupils who want to learn English, my own view of the case is that it is better to choose out those who can profit most, and teach them properly.

Fourthly. The time to be devoted to learning English.—I think the Japanese a very reasonable race, but I think some Japanese teachers of English are an exception to the rule, when they demand 10 hours a week! It is most important that much time should be given in the beginning, as it saves much time in the end to get over the first stages of language learning quickly, therefore it is most desirable to have one lesson a day for the first 3 years, and after that the time can be lessened. Six hours a

week for the first 3 years; but I am going to be paradoxical and say no one can learn English satisfactorily in class. I take it that the object of the class is to teach the boys how to learn for themselves out of class. Home work in language teaching is most important. If I have taught a boy how to produce a new sound correctly, he still requires a great deal of drill in order to pronounce it easily, but that is his business not mine. It should be done out of class. Again to learn by heart is most important. It is my business to see that the pupil understands perfectly the specimen of prose or poetry to be learnt, but it is his business to learn it perfectly.

Fifthly. The function of the foreign teacher.—This is a burning question, but I rather like attacking burning questions. My audience includes Japanese and foreign teachers, and I have been myself a foreign teacher in Japan. This might appear to be an awkward problem for me to discuss here. But there is in my country an awkward plant called "a nettle." If you hold it doubtfully and tenderly it stings you. If you grasp it strongly, quickly and fearlessly it does you no harm. This is the way in which I shall attempt to treat this thorny problem. I am strongly of an opinion that native teachers are best for the first four years, but there are obvious advantages if after that they can be supplemented by a foreign teacher. Also under present Japanese conditions, many Japanese teachers during those first 4 years want the help of a foreigner. The Japanese teacher must of course be finally responsible for his class, he must be free to utilise the foreign teacher much or little, but I believe he would utilise him a good deal. If, for example, a really able foreign teacher (I mean, of course, an university man, such an one as could be obtained, let us say, for £300 a year, or a woman with a corresponding degree for £200 a year) if a teacher of this kind be attached to 15 or 20 schools he, or she, could hold conversational classes for the teachers, give information on pronunciation, and books, and allusions to English life, and English literature, on new methods, etc., and be in fact a kind of convenient human dictionary for the Japanese teachers of English, as well as take some of the higher classes and an occasional demonstration class for the benefit of the teachers. This I think should be the present function for the foreign teacher and you obviously require for it some one who speaks English beautifully, is familiar with the best English life, and has had the best English education. I always tell my pupils that the real function of a teacher is to teach his pupils to do without him, and the function of a foreign teacher is, I think, so to help Japanese teachers that they can soon do without him.

My sixth point is the relative unimportance of text books.—A poor teacher cannot really be turned into a good teacher by means of a good Reader, and if a teacher really understands his business he can use admirably even a moderate Reader. Nothing struck me more during my first visit to America than the importance which they attach to text books. I was glad to find that the great educationalists of America agreed that it was the conception of American book-sellers and local officials and not the opinion of American teachers which gave them their false importance. In England we give teachers great liberty in the use of text books, and no official or document of our Mombusho ever recommends a textbook.

My seventh and last point is the importance of real books in language learning.—Of course the easiest way of learning a language is to hear it on every side. When this is impossible (as it is in Japan unless a student goes to a foreign school, and even then it is only partly possible) then the next best thing is to read a great deal. By no other means can one learn accurately our absurd English spelling. Much of the time now devoted to spelling would be better devoted, even for spelling purposes, to reading. This is the easiest way of increasing one's vocabulary, and of learning English construction and idioms. I do not mean reading a difficult book where constant reference has to be made to a dictionary, but rather reading a large number of very easy books, and first in school, with a prepared list of words, and the teacher ready to help. I mean that each boy should read quietly by himself, and, when he has accumulated say half a dozen difficulties, get them removed by the teacher. Then later he can read a good deal at home.

I would like to remind you that when the Japanese student has learnt to read English, he has the key to one of the best literatures in the world, a literature which is strongly moral, which upholds the seriousness of life, the sacredness of home, and the responsibility of the citizen. Fortunately for England our literature is still alive and growing. The contributions of last century are large and valuable. In order to read any good English books it is, however, necessary to know not only the English language but much about English life, and something of the sources of English literature. This is the information which an intelligent foreign teacher ought to supply, and this is really the chief gain of an intelligently arranged visit to England.

I must now turn resolutely away from all the other

interesting problems connected with language teaching, and come to the practical suggestion which I want to make.

It is very important that Japanese students should speak English well. At present Japan is not satisfied with its English teaching. What is to be done?

I know how busy Japanese teachers are, and how little time and energy they can spare outside their work, but I am going to propose taking up a small amount of their time by work that I believe will eventually save much time and energy. I am going to propose the formation of an Association for the improvement of English teaching in Japan, an association that ought to be so effectively organised that every member shall do a little work, and no member shall be required to do much. I mean an association which would be a kind of focus or centre for teachers of English. There seem to me many obvious advantages in such a plan. It would bring together earnest, thoughtful teachers of English. If half a dozen blazing coals are separated their heat tends to decrease, but bring them together, and the heat is increased. However earnest and enthusiastic we may be it does us much good to get into contact one with another. If a new book, or method, or famous language teacher appears on the scenes anywhere in the world, a small voluntary committee of the association might examine and report to the other members. Occasional conferences might be arranged. Any famous foreign teacher of language who might visit Japan might be utilised by the Association. It means much work for an individual to do any work of this kind, but divided among many, it would mean very little. I do not know what is the custom in Japan, but in England the Parliament never brings in a bill relating to education. The English Mombusho never issues a rule or regulation or even clause without the teachers meeting and discussing these matters and forming an intelligent opinion on them, and we publish this opinion, and if we think the Parliament or the Mombusho have done wisely we express our approval and encourage them, and if we think they have done unwisely we fight them. If you do this in Japan, this association would be a valuable instrument for such work.

Again the association would enable Japanese teachers to learn more easily from one another. Many interesting experiments in language teaching are no doubt being tried, but few people profit by them. If there was an association which would encourage and report on experiments, there would be much less monotony of method than there is at present. I confess I have been somewhat surprised to find teachers in one class of schools ignorant of important facts concerning the teaching in another class of schools. You have in Japan public schools, private schools, and mission schools, and all three have certain special advantages, and certain special drawbacks. I do not propose to mention them as if I did, I suppose my life would be in danger! Any how it seems very desirable that all these three classes of schools should be represented on such an association as I propose. And let me plead for one moment with the Japanese gentlemen present, as I have often pleaded with English gentlemen—the time will come when men and women will have to work together, then let us begin to work together now. It will take Japanese women a long time to learn how to be useful on a committee. It has taken us a long time to learn in England, and many of us have not learned the lesson yet. In education more than in anything else probably it is important to have the woman's standpoint as well as the man's, therefore I would suggest that the association should see that women are well represented on it.

Everywhere have I been struck with the earnestness of Japanese students, and their great desire to learn English. They deserve the very best of teaching. Again and again have I met Japanese teachers of English who have never been out of Japan speaking English wonderfully well, (and I know how much toil this entails); keen about their work, but working, it has often struck me, somewhat in a lonely fashion, and very grateful for intelligent criticism and sympathy. To such teachers such an association would be a great boon.

I hope a large number of Japanese teachers of English will some day visit England, the home of the English language. A visit of 2 or 3 years is of course most desirable, but for many teachers this is impossible and a great deal can be learnt in 6 months, if the teacher carefully prepares beforehand, if the tour in England is carefully planned and if due notice is given to the many people in England who would gladly help. Such an association as I propose could greatly help teachers going to England.

I will say frankly here what it will be unnecessary for me to say out of Japan that many Japanese teachers are still unfamiliar with some of the newest methods of the West and an association such as I have suggested could do much, possibly by a central library, or by lectures, or in other ways, to increase such knowledge among Japanese teachers with reference to English teaching.

I see innumerable ways in which such an association, without demanding much work from anybody, but by co-operation and by utilising what already exists, could really do much valuable work.

It seems but yesterday I made my first speech here, to-day I make my last. In the intervening time I have learnt much about Japanese education, and have made many friends among Japanese teachers and students. I have developed such an interest in Japanese education that even across the thousands of miles that separate your country from mine, I shall hope often to hear the rapid progress of Japanese education, of the valuable work done by the Imperial Education Society, and I am optimistic enough to hope that I shall also hear of the good work done by an Association for the Improvement of English Teaching in Japan.

THE TEACHING OF ENGLISH IN JAPAN.

[COMMUNICATED.]

A decade and a half ago an editorial appeared in these columns the gist of which was that the great attention paid to teaching and learning the English language in Japan, had not been attended with corresponding results. Similar statements were the starting points of lectures delivered on July 5th by Baron Kanda and Miss Hughes in the hall of the Imperial Educational Society on the occasion of the farewell meeting tendered to Miss Hughes. Baron Kanda said that after many years devoted to the study and teaching of English he felt dissatisfied with the results, and therefore travelled to Germany to investigate the methods of teaching foreign languages in use there. Miss Hughes made the broader statement that among the teachers of English in Japan there was a general dissatisfaction with the results.

To be dissatisfied with the results is a natural tendency more wholesome in its effects than comforting in its operation. To expect results altogether equal to the efforts expended is unreasonable. Theoretically water rises as high as its source, practically it never does so. It might however be of interest to consider whether there is reason for the same degree of dissatisfaction now as there was fifteen years ago. To do so would involve measuring the vastly increased effort now given to the teaching of English. It is of more practical importance to consider the present status of English teaching in Japan, and this—imperfectly it must be confessed—can be conveniently done in connection with a review of the lectures referred to above.

Baron Kanda, one of the best exponents of the new school of teachers in Japan, spoke of the conflict in Germany between the new methods of language teaching and the old. He said that while the question of methods was still unsettled the results obtained in practice were much greater than those obtained in Japan. This comparison is, of course, unfair to Japan. The Germans are fitted by heritage and similarity of language to acquire English readily, while the Japanese, who have never had any concern before with speaking a foreign language, have neither of these great advantages. Even in Germany it has required a long time for these new methods to become able even to dispute the ground with the old. From the account given by Baron Kanda of the application of these new methods one feels that the time has not yet come for their adoption by Japanese teachers. Their use requires a command of language, and fertility of resource, beyond the attainment of nearly all Japanese teachers at present. The German teacher is not perfect in pronunciation, nor always correct in grammar, but he thinks in English and speaks freely on the spur of the moment. Of these so-called new methods it is commonly said "they are good for the pupils but they take it out of the teacher." Now before a method can take anything out of a teacher much must be first put in. Miss Hughes said delicately that she would say here, what it would not be necessary to say elsewhere, that Japanese teachers are not acquainted, in general, with the new methods. It seems that she might have gone a step further in her statement.

Elsewhere in the *Japan Mail* has appeared a verbatim report of the lecture delivered by Miss Hughes, but I will take up one or two of her points. First with regard to the use to

which the Japanese student puts his knowledge of English. It seems that in the blind rush to become an English scholar the runner has set no goal clearly before him. At present, though it seems that the ability to read alone should be the goal of many, we may say that all have the desire to speak English. The facilities for the accomplishment of this object not being sufficient many fail to reach any goal at all. Had their efforts been confined to obtaining the ability to read with ease, they might be in a position to enjoy the best of English literature instead of being stranded unable to do any one thing well.

With regard to teaching, Miss Hughes said that there should be no translation until the fourth, or fifth, year in the study of English, because the true object is to make students think in English and not to translate from Japanese. Comparing this ideal with the actual we find that translation from English into Japanese is the chief lesson during the first four or five years in the study of English. Translation is easy to teach, and it is easy to set examination questions in translation, and there may be some other like advantages in making this the chief lesson.

As to the size of the class. Miss Hughes said that there should not be over fifteen pupils for an ordinary teacher, nor over twenty for a teacher of extraordinary ability. With larger classes the best methods cannot be used. In Japanese schools there are probably few classes smaller than twenty, but, since it is not attempted to use the new methods, this matter is of no practical importance at present. It suggests, however, a great counting of the cost if it be decided to introduce the new methods. Not only would the teachers have to be trained much more carefully than at present, but the number would have, perhaps, to be nearly doubled. It would be more practical to diminish the number of students by weeding out those who are studying English without clearly knowing why they are doing so—a class by no means small, for if English is "fashionable" that is a quite sufficient reason with many for studying it.

Related to this question of diminishing the number of pupils is Miss Hughes's fourth point, that the early stages of the work of teaching a foreign language should not be spread over too long a time. But in Japan if we increase the amount of English teaching in the lower classes we increase the amount of effort that has little, or no, reward. Of those who begin the study of English in the higher primary school, or in the middle school, comparatively few continue their studies to the point at which their knowledge of English becomes of practical use. Must such students be made to spend more time on the study of English than they do at present? Rather it would seem wise to make English in some degree elective in the middle schools so that those who expect to continue the study of English can be separated from those who do not, and who cumber the ground for those who do.

Fifthly, Miss Hughes said that the question of the foreign teacher was a burning one, and one that needed to be grasped like a nettle, though she did not say what the special difficulties were. She complimented the Japanese teachers on their attainments, and said that for the first three or four years in the study of English Japanese teachers are undoubtedly the best. After that they need some help. Her remarks were very much condensed and at this point the interpreter—who performed a marvellous feat of memory and of interpretation—did not add to the impression produced by the original. The idea seemed to be that one foreign teacher should be attached to several schools as 'a kind of superior living dictionary' to help the teachers, and to take some of the higher classes. This would be a radical departure, and one perhaps novel in the teaching of a foreign language. It cannot be compared with anything that has been, or is,—nor, probably, with anything that will be—in Japanese schools. If it be adopted the present position of the foreign employee in Japan must be very much altered.

With regard to text-books, Miss Hughes said that they are of comparatively little importance, and that a good teacher can use even poor text-books. Compared with the teacher it is true that the book is of little importance, but in Japan a

good teacher may be hindered very much by being compelled to use books too difficult for his pupils. On account of the unreasonably difficult questions in translation set in the examinations for entrance to higher schools the teacher in a middle school is compelled to teach his students—if perchance he can do so—how to translate the essays of Burke, or Macaulay, the Pursuit of Happiness, and such like food for grown men. He must be an unusually good teacher who can make much out of such books except a certain per cent. of successes in an entrance examination. The question of text-books is, or should be, a burning one, for there are few adapted to the ability and needs of the pupils.

Finally, Miss Hughes emphasized the need of work by the pupil. She said that the object of the teacher should be to enable the pupil to do without him. With regard to this point also we must say that the actual condition is far from the ideal. To an extent almost unknown elsewhere the teacher is expected to do all the work, while the pupil will, for a few days, retain useless knowledge for the purposes of an examination.

It is not necessary here to consider the remedy that Miss Hughes proposed for all the ills and lacks that Japanese teachers are heir to. It was, in short, an association of teachers from government, private, and mission schools, in which each one should do something and no one nothing.

That such lectures are called for is necessary. For advance it is necessary that many problems, touched upon above, should be clearly perceived. Miss Hughes will probably report more fully elsewhere on the actual conditions in Japanese schools. Few have had such opportunities to make investigations as she has had; and few, probably, are more competent to give advice.

F M.

CRICKET.

BORN IN JAPAN V. THE REST.

Punctuality is not one of the shining virtues of the members of the Y. C. and A. C., and therefore it was nothing very surprising that the match, Born in Japan *versus* The Rest, started half an hour late on Saturday afternoon. This event is now a classic among the fixtures of the Club, the present being the fourth encounter. Twice before victory has rested with the Born in Japan, and once, playing without matting be it said, they were ignominiously dismissed for 26 runs. On the present occasion they proved easy victors, though playing one man short.

The weather was perfect, the sun being veiled at times by a thin haze of fleecy clouds, while the breeze was more or less constant throughout the afternoon. Winning the toss, the Born in Japan went to the wicket, sending out the Kilby Brothers to face the bowling of Fradgley and White. Harry Kilby began with a single off White's second delivery, but E. W. Kilby started his score with a 3, off the same bowler. Then they settled down to steady work and half an hour after the match began 30 was hoisted, only one boundary for 4 being among the hits—made by E. W. Kilby. Then Abbott relieved White of the leather, and E. B. S. Edwards went on to bowl at the Settlement end, Fradgley being taken off there. The next twenty runs were made in a little over ten minutes, both batsmen being well set, and playing good cricket. At 53 E. W. Maitland went on to bowl, relieving Abbott. E. W. Kilby had by now knocked up 27 and H. W. Kilby 26 runs. In Edwards' next over, Brady gave H. W. Kilby a life, though the catch was a bit difficult, and this, and the following over were maidens. A separation was at length effected, H. W. Kilby being sent back l.b.w. in an attempt to pull a short ball from Edwards across to leg—58-1-28. P. B. Clarke filled the vacancy, and E. W. Kilby making a couple off Maitland 60 was hoisted. A boundary was made by the same batsman next ball, and he snicked a single with the fifth delivery of the over. Before Clarke could break his duck he lost Kilby, who was smartly caught low down behind the wicket by Crawford, off Maitland—68-2-37. Strome now partnered Clarke and began with a couple off Maitland, while in the following over Clarke managed to start

his score by sending Edwards to leg for 2. With the score at 75, Stuart took over the bowling from Maitland and for a while things were dull; then Edwards found Strome's middle stump—77-3-2. The vacancy was filled by Allcock, who at once sent Edwards to square leg for 3; he made another 3 and then was clean bowled, middle stump, by the same bowler—87-4-6. Kingdon joined Clarke, but after knocking up a couple was sent back to the Pavilion, Edwards neatly lifting his bails—93-5-2. An even shorter stay was made by W. S. Moss—94-6-0. Then Wheeler joined Clarke and in the first over saw his partner's middle stump disturbed by Edwards—94-7-14. Pollard partnered Wheeler at ten minutes to 4 o'clock, and after making a couple was stumped by Crawford—97-8-2. Goddard, the new-comer, brought the score up to 100 with a hit to the boundary at 3 minutes to four. He made another single and a 3, and was then held by Edwards, the score standing at 105. The side being a man short, the innings were declared closed.

E. W. Maitland	30	12	0	1
F. O. Stuart	39	15	1	3

The Rest went to bat about ten minutes past four, F. E. White and A. R. Firth facing the bowling of P. B. Clarke and E. W. Kilby. White began with a single off Clarke, and he made another off Kilby in the next over. Then Firth rather unexpectedly drove Kilby to square leg for 3, stepping out to meet the ball; but in the next over, met his fate, P. B. Clarke sending him back, clean bowled—7-1-3. Abbott opened with a single, off Clarke, and White followed with a 3, but the new comer, succumbed next ball, being stumped by Allcock—11-2-1. Crawford partnered White but runs came very slowly on the dead wicket, and when White was caught and bowled by Kilby the score only stood at 13, of which the retiring bat had made 5. The rest was not stayed even when Maitland joined Crawford, for after a couple of maiden overs he played a ball from Kilby on to his own wicket—13-4-0. Edwards, who next went to bat, began with the intention of knocking up runs if hard hitting could do it, and at a quarter to five 20 was telegraphed. The next ten came fairly steadily and then Edwards was cleaned bowled by Clarke—30-5-16. Fradgley partnered Crawford but lost him quickly, the retiring bat being run out on a rather desperate venture—32-6-4. Still the wickets fell as did the poppies before Tarquin, and at 39, Fradgley retired stumped; Dr. Martin followed him, clean bowled,—41-8-3; while Stuart was caught by H. W. Kilby—44-9-2. Brady was the last to go in, and with the inevitable luck attending the position of fag-end, had only just arrived at the crease when Clarke very cleverly caught Bugbird—44-10-3.

COPPER PRODUCTION OF THE WORLD.

Henry R. Merton & Co., of London, have compiled their annual circular on the copper production of the world in 1901. We give below the estimates of this firm, for all countries save the United States and Canada, and *Brad-streets* substitutes for the former country the figures collected by the *Engineering and Mining Journal*, and for the latter, those of the Government. Here are the figures in long tons:

	1901.	1900.
Austria	1,015	865
England	600	650
Germany	21,720	20,410
Hungary	320	490
Italy	3,000	2,955
Norway.....	3,375	3,935
Russia	8,000	8,000
Sweden	450	450
Spain and Portugal.....	53,621	52,872
Turkey	980	520
Totals, Europe.....	93,081	91,147
Bolivia	2,000	21,000
Chile	30,000	25,700
Peru	9,520	8,220
Totals, South America	41,520	36,020
Canada.....	18,282	8,446
Mexico	24,795	22,050
Newfoundland.....	2,000	1,000
Totals, North America	45,077	32,396
Australasia	30,875	23,000
Japan	27,475	27,840
Cape of Good Hope	6,400	6,720
Totals, outside of U. S.	244,428	217,123
United States	270,616	268,229
Totals	515,044	485,350
Totals, metric tons	523,285	493,118

The increase in the total copper production of the world in 1901 as compared to the previous year was 29,692 tons, or 6.1 per cent. The increase in the production of the United States was only 2,387 tons, or 0.9 per cent., while that of the rest of the world showed a gain of 27,305 tons, or 12.6 per cent. In 1900 the United States furnished 55.3 per cent. of the world's supply, while in 1901 the proportion was 52.5 per cent. The important increases shown in production last year were those of 17 per cent. in Chile, of 16 per cent. in Peru, of 34 per cent. in Australasia, of 13 per cent. in Mexico and of 116 per cent. in Canada. Spain remains the largest producer, next to the United States.

Malakand has recently been the scene of an interesting find. A coolie at work turned up from the ground by the side of a tree some eighty or ninety gold coins said to be ancient, very rare, and consequently of great value. Being very dirty many of the coins were sold by him for a mere nothing or exchanged for tobacco. An expert avers that they are Indo-Scythian and that the British Museum possesses only one specimen like them.

FOURTH OF JULY AT SEA.

On board S.S. *Gaelic*,
July 4th, 1902.

Just five days out from Honolulu! It seems as if it should be six, but having gained a day in time instead of to-day being Thursday, the third, it is the Glorious 4th, Friday. We awoke this morning to find ourselves in the 180th degree of latitude, and in the Eastern Hemisphere. On entering the saloon we were astonished at the lavish and artistic decorations, with the flags of all nations showing boldly up. We were a small party on board, sixteen and three little people, but notwithstanding this we managed to celebrate this great day in true American fashion. The different nationalities on board contributed towards making the day a complete success. We ladies had arranged a surprise for the gentlemen, but as the day wore on it became quite rough, and had it not been for Mrs. Tilden our festivities would in all probability have fallen through. After tea she summoned us to her cabin, and for the next two hours we were a busy little band. We were going to dine as "coon" ladies. After we were thoroughly blackened Mrs. Tilden draped us most artistically in flags. Mrs. Tegner made a charming "mammie" in her black gown and bandana with a white rose stuck in it. Mrs. Tilden also made a pretty Aunt Cloe, draped in British flags and scarlet bandana. Miss Broghan looked very well as Topsy, draped in Old Glory, and flaring red kerchief. Mrs. Knights also looked well, and was well made up, draped in flags. Miss Draper, "draped" in the O. and O. flag, was quite the thing. Draped in the *Gaelic's* house flag Mrs. Bottenheim looked well and acted up to the part.

The gentlemen having been told to go in to dinner, shortly after seven o'clock we ladies marched in to the strain of the "Georgia Camp Meeting," beautifully rendered by Mr. Morphy, doing the cake-walk-step around the saloon, and so on to our seats. The surprise was perfect, and everyone was in a gale of mirth for the rest of the evening. Our gallant and genial Captain Finch, R.N.R., then proposed the toast of the evening, and the Glorious Fourth was drunk in champagne to the strains of the "Star Spangled Banner." The ladies had been requested to write an Ode to the Fourth of July, the prize being a charming Honolulu souvenir. The Chairman of the Committee called for order, and announced that two poems being equally good, the Committee could not decide which was the better one, so we were compelled to draw lots. The lucky number fell to Mrs. Tegner for the following lines:—

The Fourth of July is the day for me,
The Glorious Fourth with its echo so free.
The roar of the drum and the sound of the band
Make hearts thrill with pride throughout the land.
And many memories of past and of old
Of the brave boys in blue have been told.

Yet the boom of the cannon each year,
And the old sound of the rockets, and bombs so dear,
Makes the heart of every good Yankee thrill
For the Glorious Fourth, and now let us fill
Our glasses, and drink to the flag
With its Stars and Stripes, the dear old rag.
Hurrah!!!

The other poem, written by Miss Rosalie Bottenheim, was as follows:—

The Yankees look high
On Fourth of July
To have such a bully time.
And the British sigh
On the Fourth of July
To have lost so goodly a mine.
Let no ill feelings
This great day mar
But for the Stars and the Stripes
Give a bully hurrah!!!

And for which she was awarded a Souvenir. After dinner we were entertained by "Topsy" and Mr. Morgan in a most fetching cake walk and other dances. We were also photographed by flash light. We drank the health of the Commander and Officers, who had done so much to make the evening so successful, and returned a vote of thanks to Mrs. Tilden, and concluded the evening by singing "For She's a Jolly Good Fellow."

Mrs. A. H. BOTTENHEIM.

LAW CASE.

JOVANSSEN v. CLUB HOTEL.

In the Yokohama Chiho Saibansho on Thursday morning, before Judge Kato, the hearing was resumed of the suit, adjourned from June 18th, brought by Mr. Adolphe Jovanssen, formerly manager of the Club Hotel, Ltd., Yokohama, against the Club Hotel, claiming yen 18,775 damages in consequence of sudden dismissal from the post of manager.

Mr. Ideura appeared for plaintiff and Mr. Sawada for defendants.

Counsel for defendants said that Mrs. Clyde, who was to have appeared as a witness at the present hearing, left Yokohama for China about June 27th, but that she will return to this port shortly, when she may be summoned to the Court.

Counsel for plaintiff said that there was a point which he would like to explain. This referred to the sum claimed by his client, in which were included travelling expenses and other charges for plaintiff's wife, which defendants thought quite unreasonable. According to the contract between plaintiff and defendants, the latter agreed to give plaintiff and his wife 25 pounds per month for the first year of their services, 27 pounds and 14 pence (?) for the second year and 30 pounds for the third year. In other words, plaintiff and his wife were engaged by defendants and it was therefore quite just and proper for plaintiff to claim the sum above referred to. As previously stated, plaintiff was suddenly dismissed from the post of manager of the Hotel, and was obliged to return to England in consequence, the post at the Grand Hotel, which plaintiff obtained shortly after his dismissal, being of a temporary character.

The Judge asked plaintiff's Counsel whether the cancelling of the contract by the Club Hotel applied to plaintiff only or to both plaintiff and his wife.

Plaintiff's Counsel replied that the contract was drawn up for both plaintiff and his wife. In view of this, though his wife was still in the Club Hotel yet the contract became null and void as regarded his wife. In short, plaintiff had a right to claim damages for himself and his wife. Counsel added that his client was experienced in directing the affairs of hotels in Europe and that after plaintiff joined the Club Hotel as manager there had been an increase in the receipts of the Hotel.

Defendants' Counsel contended that at the previous hearing plaintiff stated that he came to Yokohama, resigning his post in England, and took up the post of manager of the Club Hotel. This statement was utterly false. Counsel produced a printed document forwarded to the Club Hotel from a European nurse of the Nursing Association attached to the British Legation, who alleged that the plaintiff had behaved improperly toward her when she was staying at the Club Hotel. It read as follows:—"In reference to the present affair, I should like to remark that Jovanssen applied for the post of manager of the Metropole Hotel, Tokyo, in answer to an advertisement which appeared in the *Caterer* (an English newspaper circulating among hotels) and that as the post of manager of the Metropole Hotel had been already filled by the time his application reached Japan his application was passed over to the Directors of the Club Hotel by Mr. John W. Hall and he was engaged by the Club Hotel through the London agent of Mr. Hall." When the above passage was read, the Judge announced that there was no necessity for Counsel to continue reading.

Plaintiff's Counsel said he understood that Mrs. Clyde, who was expected to appear to-day as a witness, had been purposely sent away from Yokohama by defendants.

Counsel for defendants said he would have asked the Court to examine as witnesses two European nurses belonging to the Nursing Association, towards whom the plaintiff was alleged to have behaved improperly while in the Club Hotel, but as these ladies were too busy to attend the Court they sent to the Club Hotel a written document, which had been first submitted to Lady MacDonald by them. The document

was produced by Counsel to the Judge, but the latter refused to accept it, saying that he would consider this point.

It was then arranged to summon as witnesses Mr. Hopkins, Secretary of the Club Hotel, and Mr. Cotte, proprietor of the Restaurant de Paris, No. 75, Yokohama, at the next hearing. The case was adjourned *sine die*.

SAITO v. HAHN.

In the Yokohama Chiho Saibansho on Saturday morning before Judge Iriye, the hearing was resumed of the suit instituted by Mr. Saito Torakichi, timber merchant, of Ishikawa Nakamachi, against Mr. V. Hahn, of Negishi, claiming from the latter yen 75 alleged to be the balance due on a contract. Plaintiff's case was that he had supplied materials amounting to yen 1,456 to a carpenter who had contracted to do building work for the defendant, that the carpenter died without paying him and that he then claimed the amount from the defendant who promised to pay yen 150. Defendant stated that he had agreed to do so under threats and that he could not pay the remaining half of the money and had so intimated to the plaintiff. A man named Isoda was examined and testified that the defendant agreed to pay yen 150.

On the application of the defendant it was decided to recall this witness.

In the Yokohama Ku Saibansho on Thursday morning, before Judge Iriye, the hearing was resumed of the suit, adjourned from June 26th, brought by Mr. Saito Torataro, No. 4, Ichhome, Ishikawa, Yokohama, against Mr. C. Hahn, No. 4,221, Negishi, Yokohama, claiming yen 75 with five per cent. interest from November 1st, 1901, until the execution of judgment, costs of the case to be borne by defendant.

Plaintiff was represented by Mr. Minagawa and defendant by Mr. Nagashima, although at the previous hearing defendant appeared in person.

Mr. M. Isoda, interpreter of the German Consulate, was examined as a witness. The Judge asked witness whether he had ever been asked either by defendant or plaintiff to act as interpreter with regard to the present affair. Witness replied that some time ago he was asked to do so by a Mr. Kaneko Umekichi, who acted as representative for plaintiff, who then demanded from defendant 75 yen. The defendant refused to comply with plaintiff's request on the ground that the plaintiff used inferior materials in the construction of the house belonging to defendant. Witness added that he only acted as interpreter and had no connection whatever with the case.

Counsel for defendant asked witness whether it was customary for the interpreter of a Consulate to act for the benefit of persons outside the Consulate, when applied to. The witness said that whenever application was made to the German Consulate asking for assistance he used to comply with the application, provided that permission was granted by the Consul.

Plaintiff's Counsel applied to the Court to summon as a witness Mr. Iwasasa Sutejiro, of No. 4, Nichome Ogimachi, Yokohama, who knew particulars of the present affair, especially about exhibit No. 1, which is said to have been written by defendant who in it promised to present plaintiff and some others with yen 150, one-half of which sum had already been paid by defendant as stated in the previous hearing.

Counsel for defendant asked the Court to postpone the proceedings, as he had not quite prepared himself. This was granted and the case was adjourned *sine die*.

PIGOTT v. HIOKI.

Judgment was delivered in the Yokohama Chiho Saibansho, by Judge Kano, on Monday morning in the case of Mr. H. C. Pigott, against Mr. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., Yokohama, claiming certain articles said to have been stored on the premises of the bankrupt firm and unlawfully attached by the Administrator as part of the estate. Plaintiff's case was dismissed with costs. Particulars of the plaint appeared in the *Japan Mail* of July 3rd.

STEALING ELECTRICITY.

A few days ago the Yokohama Chiho Saibansho pronounced judgment in the case of Fujita Seijiro, of Onoye-cho, Yokohama, and Yoshida Jirokichi, of Chitose-cho, Yokohama, who were recently prosecuted by the Yokohama Electric Light Company for having secretly conducted the electric current of the Company to Fujimura's house. The accused were sentenced to three months' major confinement each and six months' police surveillance.

MARTIN v. ITOGAWA.

In the Yokohama Ku Saibansho on Tuesday morning, before Judge Iriye, was heard an action brought by M. Martin, No. 55, Yokohama, against Itogawa Mankichi, of Ishikawa, Yokohama.

Plaintiff appeared in person and defendant was represented by Mr. Tamura.

The plaintiff, through the Court interpreter, stated that in April this year a decision was given by default in the Court in favour of plaintiff and defendant was ordered to paint the sign-board at plaintiff's premises and to pay damages at the rate of ten yen per day from Nov. 4th, 1901, to Jan. 9th this year. In accordance with this judgment the plaintiff, through a bailiff, visited the defendant's house for the purpose of attaching his property, but there was nothing to be seized. He farther said that he would like to conduct his case with the aid of Counsel, although he had employed Mr. Magaki in the previous hearings.

The Judge said that defendant had protested against the decision given by default in favour of plaintiff and as the Court thought this protest reasonable the present case would be heard. The Judge advised plaintiff to engage Counsel to conduct his case and this advice was accepted by plaintiff. The case was adjourned *sine die*.

EMBEZZLEMENT.

It is reported from Osaka that the Osaka Chiho Saibansho pronounced judgment on July 7th in the case of Nakajima Narataro, formerly in charge of the accountant section of the Nippon Life Assurance Company, and of Takemura Toyojiro, official of the company, who were lately prosecuted by the company on a charge of having embezzled over yen 4,600. The former was sentenced to one year and six months' imprisonment with hard labour and the latter to one year's imprisonment with hard labour.

MENDELSON v. TANAKA.

Judgment was delivered in the Yokohama Chiho Saibansho on Wednesday morning, by Judge Kano, in the case of Messrs. Mendelson Bros., Yokohama, against Mr. Tanaka Nijuro, of Kyobashi, Tokyo, asking that the latter should take delivery of one hundred tons of manure imported on defendant's order. Plaintiffs' case was dismissed and they were ordered to repay defendant yen 1,200, which the latter had deposited with the firm as bargain money when the contract was arranged between the parties. Particulars of the case appeared in the *Japan Mail* of July 3rd.

MASUJIMA v. HEIM AND KAUFNER.

In the Yokohama Ku Saibansho on Wednesday morning, before Judge Tanuma, the hearing was resumed of the suit, adjourned from June 29th, brought by Mr. R. Masujima, barrister-at-law, No. 14, Yokohama, against Messrs. O. W. Heim and J. Kaufner, claiming yen 13.50. Mr. Hioki appeared for plaintiff and Mr. Naito for defendants. As arranged at the previous hearing, Mr. Uyeno Kichijiro, Manager of the Yokohama Electric Light Company, was examined as a witness. Replying to the Judge's questions, he stated that was appointed Manager of the Electric Light Company in August, 1891. As to the number of electric lamps and their illuminating capacity in the rooms occupied by plaintiff, the diary of the Company showed that prior to one of the rooms being sub-rented to defendants, namely before Nov. 15th last year, there were 22 lamps in the rooms, three clusters in all, and that three of the lamps were of five candle-power, six ten candle-power, and thirteen sixteen candle-power. Lamps exceeding sixteen candle-power were never used in these rooms, before Nov. 15th last year,

the sixteen candle-power being the largest lamps in the rooms.

The Judge asked whether or not the Electric Light Company received a letter from defendants' representative, with regard to the supply of the electric light. Witness replied that the Company once received a letter from some representative of defendants but that he could not recall the contents of the letter.

Counsel for plaintiff said that the electric lamps in the rooms were all of sixteen candle-power before Nov. 15th last year, but after that date three were converted into twenty-four candle-power, as already stated at the previous hearing. Plaintiff's bill for lighting increased after Nov. 16th last year and he had to pay the increased charges until some time in April this year, at the rate of yen 7.81 per month.

The Judge asked witness how the rent of the light was assessed on plaintiff every month.

Witness said that charges were generally calculated by means of a meter, and the Electric Company's bills for plaintiff showed that yen 13.99 were charged for September, 1901, yen 10.48 for October, the same year, yen 22.25 for December, the same year, yen 27.32 for January, 1902, yen 21.06 for February, yen 23.80 for March, and yen 11.01 for April. As to the number of electric lamps, there were 22 in September and October, 1901, but these were increased to 25 after November 16 the same year. In December these were reduced to 13 and in January, 1902, there were 13 lamps, in February 12, in March 15 and in April 12 lamps respectively. He further said that in addition to one existing meter which was provided for lamps in three rooms, another special meter was fixed in one of the rooms, although he did not remember when it was installed. The installation of the special apparatus was only for the purpose of checking the amount of consumption of the electric current in the three rooms. For a long time past, Mr. Inouye Komajiro, of Motomachi, Yokohama, who appeared as a witness at the previous hearing, was authorized to act as agent of the Yokohama Electric Light Company in the matter of installing electric lamps in this city and therefore he, in compliance with the request of defendants, changed three 16 candle-power lamps to 24 candle-power in one of the rooms at No. 14, Bund, in November last year. Finally witness said that as the charges for all the lamps in three rooms were jointly calculated by the old existing meter apparatus—the new special apparatus being of no direct practical use so far as the present affair was concerned—the Electric Company sent its bills to plaintiff only. The case was adjourned *sine die*.

COMMERCIAL NEWS.

The Sample Museum attached to the Department of Agriculture and Commerce recently received from Paris a large assortment of stuffs for clothing now in vogue in the French capital. The new samples are exhibited in the third storey of the Museum.

The Fujisawa-Enoshima section on the Enoshima Electric Railway, now in course of construction, will be opened for traffic on August 15th. The work on the second section, namely between Enoshima and Kamakura, will be pushed forward with a view to opening during the course of this year.

On July 4th the Home Department issued instructions to five fire insurance companies in Tokyo to call on shareholders to increase their paid-up capitals. The companies and the amounts of payment directed by the authorities are: yen 60,000 for the Buppin Fire Insurance Company; yen 50,000 for the Nari; yen 20,000 each for the Zaisan, the Nippon Ryokan and the Naigai Fire Insurance Companies.

In view of the possibility of Siberia becoming a market for Japanese tea, various tea merchants in this country are planning the export of the article, by every means possible. Among others, the Nagasaki Tea Refining Company, of Nagasaki, appears to have been very successful. On July 4th the Company forwarded by the *Kokura*

Maru 3,000 boxes of tea to Halbin and 2,500 boxes to Strechinsk, and it is stated that the firm is in receipt of many orders from various parts of Siberia. The *Asahi* says in this connection that it is no exaggeration to state that the future prosperity of Japan's tea trade mostly depends upon the development of the export to Siberia and that Baron Komura's suggestion made at a recent meeting of tea merchants held in Shizuoka is well worth considering.

The half-yearly general meeting of the Mitsui Bank, took place in the hall of the bank, Tokyo, on July 5th. The accounts presented by the Board of Directors and passed at the meeting were as follows:—

Net profit	Yen. 311,000
Brought forward from last account.	136,000

Total	447,000
To reserve	160,000
Bonus	150,000
Carried to next account	137,000

The half-yearly general meeting of shareholders of the Osaka Shosen Kaisha will take place shortly at Osaka. The total receipts during the first half of this year are reported to have amounted to yen 2,969,856 and total expenses to yen 2,122,290, leaving a balance of yen 847,566. A dividend of ten per cent. will be declared.

The Sumitomo Iron Works, at Osaka, whose business is at present confined to the making of anchors for the Japanese Navy and of wheels for railways, is in future going to turn out tires. The new business will be started as soon as an expert, now in Europe, returns home.

A scheme is on foot at Osaka for organizing a street electric railway to be called the Osaka Shigai Denki Tetsudo Kaisha. The Company is backed by a capital of one million yen. An application for permission will be made to the Osaka authorities in a few days. Among the promoters are Mr. Noguchi Mohei and several influential persons.

It is reported from Osaka that a section of the members of the Osaka Chamber of Commerce propose to dissolve the Chamber and the proposal is gradually gaining strength. The draft of this proposal was expected to be submitted to a meeting of the acting committee of the Chamber to be held on July 9th. The members in favour of dissolution, says the report, maintain that the Chamber had entirely lost weight in the matter of directing affairs, both official and private, and is now looked upon as a heavy burden to the Osaka citizens. They further urge that it would be far better for Osaka to have a private institution of the kind, where important matters could be discussed as in the Chambers of Commerce abroad.

The Kiwa Railway Company will issue debentures to the amount of yen 320,000 early in August.

At a recent meeting of the Nishinari Railway Company, held at Osaka, it was agreed to prolong the line from Fukushima Station to Hanozono Bridge, *via* the river Aji-kawa and the foreign concession, a distance of two miles. The decision will be submitted for consideration at the coming regular general meeting of the Company.

The half-yearly meeting of shareholders of the Osaka Gas Company, Osaka, took place in its building on July 9th. The balance sheet for the first half of the current year showed that the Company incurred a loss of yen 5,452. At a special general meeting that followed a resolution was passed to increase the Company's capital from 350,000 to yen 400,000. At the instance of Mr. Tison, a foreign shareholder, it was agreed to place on record in future both in English and Japanese all the important business of the company. Owing to the resignation of the Board of Directors, Mr. Tison nominated Messrs. Kataoka Naoteru, Abe Hikotaro, Kishi Seiichi, Matsubara Choyei and Parrish to the Board of Directors, and this was accepted. The meeting then broke up. Mr. N. Kataoka will, it is understood, be appointed President of the Company.

NEWS OF THE WEEK.

Mr. E. V. Sioen, formerly of the Club Hotel, Yokohama, and latterly manager of the Hotel des Colonies, Shanghai, died of consumption at Shanghai on the 1st July.

Mr. F. Herb, whose bail was withdrawn simultaneously with the rendering of the Preliminary Court's decision, was released on bail on Thursday on depositing with the Court the sum of yen 1,000.

The following announcement is made by the *N. C. Daily News* apropos of the birth of the Prince Imperial's second son: "The family of the Crown Prince and Princess now consists of two sons and four daughters."

It seems that some damage was caused by the *Sachsen's* stern hawsers on Monday afternoon during the heavy squall. Two bollards were snapped and a considerable quantity of adjacent woodwork on the pier was damaged.

We acknowledge with thanks receipt of a report on "The Silk Industry of America, as shown by the Twelfth Census of the United States" compiled by Mr. Franklin Allen, whose ability to write on this subject is unquestioned.

According to a journal of economics, King Edward is insured for about three-quarters of a million sterling, whilst the Prince of Wales is content with a modest half-million. The Czar is insured for £800,000. The German Emperor's insurance also runs into six figures.

Telephone communication between Tokyo and Nikko will be opened for public service some time in August. The work is now being pushed forward under the direction of the Communications Department. The telephone between Nikko and Chugushi will also be opened shortly, the work having been already finished.

It is officially announced that the Emperor will attend the graduation ceremony at the Naval College, Tsukiji, Tokyo, on July 8th, leaving the Palace at 10.20 a.m. His Majesty will also attend the ceremony of distributing diplomas to the graduates of the Tokyo University on the 10th.

At noon on July 10th a dinner will be given on board the German flagship *Furst Bismark*, now in Yokohama, by the Commander-in-Chief of the German fleet in the Far East, who is inviting thereto the German Minister, Vice-Admiral Baron Yamamoto, Minister of the Navy, Admiral Viscount Ito, Chief of the Naval Board of Command, and several others.

A London telegram of June 9th says that Mr. "Larry" Waterbury, who played "back" for the American polo team in the first international test match in England on the 31st May, was summoned, at the instance of the Earl of Shrewsbury, for ill-treatment of his pony by the use of forbidden spurs, at Hurlingham. The case was settled out of court.

A London telegram in Australian papers, dated 29th May, says:—The Rev. Father Passerinie, Vicar Apostolic of Southern China, who is at present on a visit to Rome, is the author of a sensational utterance regarding the course of future events in China. He states that he anticipates a vast anti-European rising, which, he declares, will be all the more terrible because it is being patiently and systematically prepared.

Professor Leopold Messenschmidt, in "Der alte Orient," a popular German scientific journal, deals with a subject so caviare to the general public as the origin of the two-headed eagle of modern heraldry. According to the Professor, this eagle is found in the sculptures of the ancient Hittite Empire, was adopted from them, as their writings show, by other Oriental peoples that survived them, and from these was taken, in 1345, as the emblem of the Holy Roman Empire.

In the matter of public holidays the Russian workman is perhaps the most fortunate workman

in the world. His labour year is dotted at every few steps with days of idleness and vodka, tempered with an occasional kiss to an ikon. Every English employer of labour in Russia keeps an almanac hanging conspicuously from which are blacked out the days on which work is at a standstill. Even the ship captains who take cargo and passengers to St. Petersburg carry the marked almanac, and hurry or loiter to dodge the Russian holy day.

Senator Combes, who has succeeded M. Waldeck-Rousseau in the French Premiership, is in his sixty-seventh year, and began life as a doctor at Paris in the department for which he is now senator. He is much better known to the members of the French Parliament than to the outside world, for his work heretofore has been chiefly connected with the preparation of elaborate Parliamentary reports and documents of that kind. He is regarded as a great authority upon education, and he is believed to be free from any sympathy with the Socialists.

Messrs. Eyton and Pratt sold by auction on Saturday, the following race horses:—

	Yen.	Buyer.
Tachibana	110	Mr. Wada.
Hayakoma	85	Bought in
Brown Bess	195	Mr. Benney.
Sans Espoir	250	Mr. Suzuki.

A scratch baseball game was played on Tuesday afternoon by teams captained respectively by Messrs. Blake and C. H. Thorn. The teams comprised Messrs. Blake, McChesney, H. W. Kilby, Vaughan, Cowan, Mendelson, Pollard, Horiuchi and Furuhashi, versus Messrs. Thorn, McGowan, Merriman, E. W. Kilby, Crawford, Edwards, McGowan, White and Berrick. Nine innings were played between 5 and 6.40 p.m., the result being a win for Blake's nine by 17 runs to 11.

We have been favoured by a correspondent, "Helvetia," with the following results of the International shooting competitions with military rifles and revolvers which took place at Rome on the 30th and 31st May last. In the revolver contest, the Swiss led with a score of 2,182 points; Italy second with 2,123 points and France third with 2,115 points. In the rifle match for the championship of the world the Swiss team took first place with 4,449 points; Italy second with 4,318 points; France third with 4,273 points; Germany fourth, 4,018 points; Argentine Republic fifth, 3,697 points. M. Kellenberger (Swiss) who made a score of 932 points, was declared the champion of the world with the military rifle.

A very interesting article entitled "Zenkoji the Cradle of Buddhism in Japan" appears in the June number of *The Spirit of Missions*. It is from the pen of the Rev. J. Armistead Welbourn, and three capital illustrations accompany the text. In the same paper we read:—On Easter Day, in the Church of the Holy Trinity, Kyoto, the Right Rev. Dr. Partridge admitted Dr. Irvin H. Correll to the diaconate. The service, with the exception of the essential parts of the Ordinal and the sermon, were in the Japanese language. The Rev. J. Lindsay Patton presented the candidate and the Rev. Ambrose D. Gring was the preacher. Dr. Correll has been a missionary in Japan for twenty years under the Methodist Episcopal Board.

The opinion found expression some time back in some English paper that Delhi, and not London, is the place people in the United Kingdom should go to witness the gorgeous ceremonies connected with the King's Coronation. There seems to be a consensus of opinion that the capital of the great Moguls will be worth the visit, and stray references to the programme, which every now and again find place in the Indian papers, show that the expectation will be more than realised. The Viceroy is expected at Delhi on December 29th, and his arrival will be the occasion for a triumphal procession, with elephants in the train, through the city to the camp. H.E. will open the Industrial Exhibition, which will last a fortnight, on the 31st of that

month and on January 1 will hold the Proclamation Durbar in the great amphitheatre at which, already, 10,000 men are expected to be present. The State Ball is fixed for the 6th and will take place in the Diwan-i-Am. The vast assembly will include, besides the Viceroy, the personnel of the Government of India, the Commander-in-Chief and staff, the heads of the local Governments and Administrations, the heads of departments under the Government of India, Native Chiefs and Nobles, members of consular bodies and representatives of the Anglo-Indian and Native Press and a number of guests from Europe. The Amir of Afghanistan will be represented by a special representative.

The shorthand reporters of Sydney, N.S.W., having been found fault with for their method of reporting the speeches in the Legislative Council, retaliated by giving the speech of one of the Councillors exactly as it was spoken, as follows: "The reporters—ought not to—the reporters ought not to be the ones to judge of what is important—not to say what should be left out—but—the member can only judge of what is important. As I—as my speeches—as the reports—as what I say is reported sometimes, no one—nobody can understand from the reports—what it is—what I mean. So—it strikes me—it has struck me certain matters—things that appear of importance—are sometimes left out—omitted. The reporters—the papers—points are reported—I mean—to make a brief statement—what the paper thinks of interest—is reported."

The memorial meeting for the late Mr. T. Niwa and the usual monthly shooting matches will be held on Sunday, the 20th July (wet or fine), at Tsurumi from 8 a.m. to 5 p.m. Visitors are cordially invited to witness the events. Order of events: No. 1 standing singles; No. 2 walking singles; No. 3, standing. Three gold medals and other prizes will be presented for the best average scores of all matches.

Hikida Ryokichi, a member of the Chiba Prefectural Council, is reported to have been arrested on July 9th charged with having forged documents.

We acknowledge receipt of No. 34 of the new series of the "Engineering" Directory, which is compiled and classified from the current advertisements in *Engineering*, together with the telegraphic addresses, codes, and telephone numbers of the advertisers.

AMERICAN TOPICS.

Mark Twain has been made a Doctor of Laws by the University of Missouri—the State in which he was born and which his early books have made famous.

A Wilkes Barre dispatch estimates that the loss for three weeks of the strike in the hard-coal region, based on figures furnished by the operators and miners, has been as follows:

Loss to miners in wages	\$3,890,000
Operators' loss in price of coal, normal...	7,806,000
Loss of employees, other than miners ...	904,500
Loss to business men	2,250,000

Total\$14,850,500

Among the new industries that have been recently developed in the United States is the manufacture of arsenious oxide, says Dr. Joseph Struthers of the United States Geological Survey. This manufacture was taken up during 1901 by the Puget Sound Reduction Company, at Seattle, Washington, and an output of 300 short tons was placed on the market. Previous to 1901 the world's supply of arsenic and arsenious compounds was derived chiefly from the mines in Cornwall and Devon, England, and at Freiberg, Germany. In 1899 the world's production of the forms of arsenic amounted to 14,936,165 pounds, valued at \$581,911. The imports of arsenic into the United States during the last five years have averaged about \$340,000 per annum.

The total export of dutiable silk goods from the United States in April (four weeks) amounted

to \$2,153,370, as against a total of \$1,766,305 in the corresponding month of 1901. The largest items were piece silks paying specific duties, \$500,129; piece goods paying ad valorem duties, \$475,017; silk laces and embroideries, paying sixty per cent. duty, \$309,374, and ribbons, fifty per cent. duty, \$214,399. The value of the raw silk import for the month was \$942,973, as against \$914,447 in April, 1901.

The two greatest manuscripts in America according to the *Bookman*, are the manuscript of the Declaration of Independence, which is in the Government archives, and which has become illegible, and the life of Benjamin Franklin, written by himself (the only manuscript entirely in his own handwriting), which changed hands a few weeks ago and was added to a private collection in New York city. The Franklin manuscript was discovered in France some years ago, in the possession of the descendants of M. Le Vailland, to whom it had been given by William Temple Franklin, Franklin's grandson.

The South Carolina Interstate and West Indian Exposition, which has been in progress in Charleston since December 1st last, finally closed on June 1st. Financially it was not a success, although it is believed that the results accomplished in other ways will be of future help to the community. It is not expected that payment will be made on any of the stock subscribed. The bondholders will be protected. In the matter of attendance the Exposition was a failure, as the gate receipts did not come up to the expectations of the board of directors.

Importations of manufacturers' materials into the United States will in the fiscal year which ends with June by far exceed those of any preceding year in the history of American industries; the highest figure ever before reached was that of the fiscal year 1900, when the grand total was, in round figures, \$390,000,000. In the present year it seems likely to attain the enormous total of \$425,000,000. Of the ten leading materials, raw silk is one, and the importation of this in the first nine months of the fiscal year has amounted to \$33,188,523, as against \$19,531,319 in the corresponding period of 1901.

An immediate though unexpected result of a recent hot wave, says *The Electrical Review*, "was that in several of the large office buildings in the business centre of New York part of the elevator service had to be discontinued on account of the setting to work of innumerable electric fans, absorbing a considerable part of the current generating capacity of the installed plants. In one great building, which has ten elevators, two were put out of service shortly after business hours for the day began, solely by reason of the starting of fans in the various offices. This fact gives about as telling an illustration of the importance of the electric fan as a current consumer as can be found."

The new St. Bartholomew's Hospital in New York is so constructed that there are no internal corners to catch the dust. Says a writer in *The Evening Post*: "There are absolutely no angles or projections in the building above the basement. All intersections of all surfaces meet with a uniform curve; this has been carried out in all details, not only the walls, ceilings, and floors, but also the stairs, shelf and table standards, window recesses, etc., throughout. The sashes and doors are so constructed that there are no moldings or broken surfaces between the frames and glass or panels. The surface of the frame meets the glass with a feather edge, and the corners of the sash and door panels are also rounded, so that there may be no lodging-place for the collection of dirt or foreign matter. The angles or corners above the wainscot line are run in plaster. . . . Especial care has been taken in the construction of the operating-rooms. The room for more important operations on the fifth floor is considered the most perfect yet built. The corners of the room are rounded to a large radius and the ceiling domed."

The effect of blue light in reducing inflamma-

tion, diminishing pain, promoting absorption of morbid secretions, and curing diseases of the skin, has been shown by several recent researches, says the *Staats-Zeitung* (New York, March 30). "Dr. Kaiser has given to the Vienna medical society the results of his investigations on the effect of the blue rays on tuberculosis and tubercle bacilli. He threw the beam of a powerful lantern, filtered through a glass which allowed only blue rays to pass, directly upon cultures of bacilli. Similar cultures were attached to the back of a patient whose chest was exposed to the beam at a distance of five meters, for half an hour daily for six days. In all these cases the bacilli were killed, even when the invisible heat rays were also filtered out. The blue rays, therefore, penetrate the human body. The effect of exposing tuberculous patients to the light was markedly beneficial. A few days' treatment produced a perceptible improvement and a diminution of the number of bacilli in the sputa. Tuberculous abscesses which had resisted every other treatment during three months were healed by the blue light in four weeks."

The report of the American Iron and Steel Association shows that the total value of iron and steel exports in the calendar year 1901 amounted to \$102,534,575, against \$129,633,480 in 1900. Imports of iron and steel amounted to \$20,394,995, against \$20,443,911. The decline in the value of exports was largely due to the great shrinkage in the exports of pig iron, which amounted to only 81,211 tons, against 286,687 tons in 1900. In the first nine months of the fiscal year 1902 total exports of iron and steel amounted to a value of \$73,067,830, against \$90,147,005 in the corresponding period of the previous year. Imports of iron and steel for these nine months amounted to \$17,901,132, against \$13,496,815. In the first quarter of the calendar year 1902 exports of iron and steel amounted to \$23,839,561, against \$26,141,090 in the same months of 1901, showing that the decline in exports is still growing. In this period there was an increase in imports of iron and steel, the total value amounting to \$5,892,146, against \$4,008,057. Conspicuous among the imports of the first quarter were 33,374 tons of pig iron, against 5,311 tons in the corresponding quarter of 1901.

"Within the last six or eight years," says the *Electrical World and Engineer*, "the Massachusetts steam railroads have suffered seriously from trolley competition. Up to 1894 their revenue was larger from their passenger business than from carrying freight. All this has changed, figures showing an excess in revenue from freight in 1901 of over \$6,000,000, while in 1894 the excess in revenue from passengers was \$3,449,526. An encouragement to the steam roads, however, is to be found in figures showing that the electric street-railway lines have steadily been carrying fewer passengers per mile since 1895, while the former have recovered some of their previous losses during the same time. It is now generally admitted that while the street railway of Massachusetts made quite considerable inroads into the business of the steam lines when electricity first became an important factor, which has only been during the past eight or nine years, the latter have proceeded to make some recovery of lost patronage, and that the street railway has become less rather than more threatening. In other words, the trolleys, while establishing a traffic of their own, are now creating new traffic for the steam roads, as it was predicted they would do."

SILK ASSOCIATION OF AMERICA.

The report laid before the thirtieth meeting of the Silk Association of America contained the following references to the alleged silk frauds:—

Among the events of prime importance to the silk trade in 1901 are the revelations publicly made by Mr. Wilbur F. Wakeman, Appraiser at the Port of New York, respecting frauds on the revenue by bold evasions of the tariff laws.

The public journals have published columns on the subject *pro* and *con*. The first effect of the controversy was the removal of Mr. Wakeman from

office by President Roosevelt in December last. Soon thereafter the President appointed Mr. W. Wickham Smith of this city as a Special Deputy Attorney General of the United States to investigate that portion of the disclosures made by Mr. Wakeman, which are known as the "Japanese Silk" cases. For the past two months Mr. Smith has been actively at work on the investigation, and his report may be expected soon. The particulars of the charges are, therefore, not now given here. They will be submitted to our members and suitable action taken on the report when Mr. Smith shall have completed his investigation. Some facts incident to the transaction are, however, noteworthy and are presented therewith.

FIRST.—Although Mr. Smith is clothed with the powers and authority of the Attorney General's Office in the investigation, his services are not paid for by the Government, but by the merchants of New York. The reason assigned for this anomaly is that there are no funds in the Attorney General's contingent account available for the purpose. Merchants are therefore at their own expense in proving this matter in its preliminary stage. In effect, they are defending the Government against the incompetency or negligence, or worse, of its own officers and agents.

When Government officials who are assigned to enforce its revenues protect instead defyers of law and defrauders of revenue, it is no wonder that honest men cry out. In this case an honest man, who, as Appraiser of the Port, was set by President McKinley to see that the revenue laws were impartially and efficiently enforced, cried out to his superior officers against the inefficiency or partiality, or worse, of his subordinates, and protested against the political system of rewards and punishment that maintained them in their positions notwithstanding his charges. Honest men heard his cry and demanded of an honest President that the charges be investigated, report made, the guilty punished, and a new way found to collect old debts.

SECOND.—There is no use in disguising the fact that the dry goods district of New York know very well that importers are not equally and impartially treated in the appraisal of similar duties on similar articles, whether subject to *ad valorem* rates on foreign invoice sworn value, or to specific rates per pound on declared weights of contents of packages. The importers themselves know these facts, for they learn them by experience with their competitors in the business world.

Attention is respectfully called to the accompanying testimony of a prominent New York merchant respecting very serious undervaluations of imported silk ribbons during the some period of evasions of the revenue laws in the "Japanese Silk" cases. By long acquaintance with Custom House methods at this port, Mr. William Schramm, of the well-known firm of Schefer, Schramm and Vogel, is well qualified to speak advisedly concerning these matters. The silk ribbon frauds of which he makes mention have not been exploited in the public press, but they have been going on all the same. Their latest phase is the constant "advances on re-appraisal" which commenced before Mr. Wakeman's removal from office and continued under his successor, Hon. George W. Whitehead.

THIRD.—It seems easy, and the supposition is reasonable, that honest officials of the Government should be able to collect full duties for instance on imported silks where the tariff laws determine the classification of the article and the duty rate per pound is plainly fixed; but the removed Appraiser charges that the system controlling these matters in the Appraiser's department and in other branches of the Customs service at the Port of New York is practically so faulty that he was unable to apply and enforce the plain mandates of the tariff laws. In other words, it was beyond his control. His reasons for his inability to secure impartial treatment to all importers are fairly well understood by the merchants of New York.

It may be too much to expect that evil practices outside of the Government circle can be entirely done away with. The amount of money involved is too great a temptation for depraved human nature to withstand, but when the appointed defenders of the Government's revenues are in league with its despoilers and share in the spoils, when the sum of money divisible under this system is so great that it becomes a matter of common notoriety, then the outcry becomes too great to be ignored.

FOURTH.—It is a reasonable assumption that every effort will be made both by the President and by the new Appraiser to dispel the doubt and uncertainty which yet seems to linger in some minds as to the truth or falsity of Mr. Wakeman's charges. Honourable merchants greatly desire that the stigma now resting upon all merchants as a class, by reason of these disclosures, shall be placed where it belongs individually, and the mercantile world here be relieved from the disastrous competition which such practices make easy and profitable. This is no more

than their due. A trusted and conscientious officer of the Government having made these charges, the result of their investigation should be made known at the earliest possible date, let the blame rest where it may.

CORRESPONDENCE.

BELLEVILLE BOILERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Under "European Topics" in your issue of this date, I read as follows:—

The new first-class cruiser *Leviathan*, which returned to Portsmouth on May 20th from Plymouth, ran an eight hours' steam trial on the deep-channel course, which realised a speed of $23\frac{1}{4}$ knots, the indicated horse-power being 31,000. On her 30 hours' trial at three-quarter power, the *Leviathan* maintained a speed of 21.6 knots with 22,866 horse-power. The amount of coal consumption was 1.75lb. per indicated horse-power per hour.

Would it be too much to ask you to kindly let me add for the benefit of some of your readers, that the boilers which have driven the *Leviathan* through the water at a speed of $23\frac{1}{4}$ knots an hour, are "Bellevilles," the very same "Bellevilles" that some 18 months ago, were so prematurely condemned by the Water Tube Boiler Committee presided over by Vice-Admiral Sir Compton Domville, in a most unfavourable report which at the time of its issue, was published by the press of the whole world?

Thanking you in advance for your courtesy, I have the honour to be, sir, yours faithfully,

DENYS LARRIEU.

Tokyo, July 4th, 1902.

INFORMATION FOR THE "DOJIN-KAI."

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—It is an encouraging sign of the times to see a Philanthropic Society organized in Japan for the specific purpose of "sending physicians to China and to open hospitals there." If the object be purely a philanthropic one it should surely have full support and encouragement from every one interested in China and Japan. But the question comes up; who are going to support these hospitals and physicians? Has the "Dojin-kai" backing enough to establish a number of hospitals and keep them running? Now when the Dojin-kai goes into China to establish hospitals it will find in almost every large city one or more excellent hospitals with attendant male and female physicians who are graduates from the best American and European Medical Colleges, and they will also find the beds cleaner, the surgical instruments better and freer from rust, and the attendant nurses' caps and uniforms washed oftener than in any hospitals in Japan, unless it be a few of the best about Tokyo and the other larger cities. I do not know how many hospitals the Roman Catholic Church has in China, but the different Protestant Churches have 124, with 240 dispensaries besides. The latest reports give the total number of in-patients as 33,529, and the total number of persons receiving treatment in one year as 745,322, and total number of treatments as 1,700,452. It will doubtless be interesting to the promoters of the "Dojin-kai" to know how much it takes to run one of the hospitals for one year. I can not give the statistics for all, but one hospital in Soochow which has about the average number of patients spent for running expenses last year \$4,981.44 Mexican currency. This included everything except the salary of the foreign physician in charge. You might put it down then that the average running expenses of these 124 hospitals in China, not counting the salaries of physicians in charge, are about 5,000 yen each.

Viscount Nagaoka in his address said: "There are English, American, and French physicians in the Middle Kingdom, but their labours have the taint of religious propagandism, and are therefore distasteful to the people." No doubt the Viscount had in mind the condition of China 10 or 20 years ago when he said that. If he intends to work in a philanthropic way in China he had better keep up with the rapidly changing ideas there. It is a fact that to-day there are no foreigners in China so highly respected and so much in favour by all classes of people as the foreign physicians, even if "their labours have the taint of religious propagandism." These Missionary physicians go into the homes, professionally and socially, of the highest officials and wealthiest people. Through the influence of the physicians of the above mentioned hospital in Soochow, wealthy Chinese in that city have recently given over 20,000 taels to found a University under the ownership and control of Christian missionaries. This does not seem as if the people held these religious physicians in much "distaste." Not long since these same

physicians in Soochow invited the Governor of the province, the Treasurer and the Grain Commissioner, three of the highest officials in the province, to a dinner in the home of one of the physicians. They all came and ate a big dinner with the missionaries and then had a group photograph taken together. That photograph is unique. A Chinese Governor over twenty-one million people sitting with a group of Missionary physicians before a camera! I hope the "Dojin-kai" will establish many good hospitals in China and that it will send physicians there who will be able to associate thus with the highest officials in the land as well as to treat kindly and skillfully the poorest old sick woman who may come to their hospital gate.

Yours truly,
July 4, 1902.

WILL PATTILLO.

CHOLERA IN SAGA KEN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In referring to the cholera in Saga, should you not say Saga Ken? Readers of the *Mail* will naturally think of Saga city as being badly infected, while there is hardly any in the city, but nearly all is in other places of Saga Ken. Trusting that this is a proper suggestion, I remain.

Yours truly,
Nagasaki, July 7, 1902.

A. OLTMANS,

MR. CHAMBERLAIN ON FISCAL POLICY.

In the course of a speech at Birmingham on May 16th, Mr. Chamberlain made some important observations which showed that he regards a change in British fiscal policy as a matter of urgency, in view of the new conditions with which it is necessary to deal. He said:—

The position of this country is not one without anxiety to statesmen and careful observers. Political jealousy, commercial rivalry, more serious than anything we have yet had, the pressure of hostile tariffs, the pressure of bounties, the pressure of subsidies, it is all becoming more weighty and more apparent. What is the object of this system adopted by countries which, at all events, are very prosperous themselves—countries like Germany and other large Continental States? What is the object of all this policy of bounties and subsidies? It is admitted—there is no secret about it—the intention is to shut out this country as far as possible from all profitable trade with those foreign States and at the same time to enable those foreign States to undersell us in British markets. That is the policy, and we see that it is assuming a great development, that old ideas of trade and free competition have changed. We are face to face with great combinations, with enormous trusts, having behind them gigantic wealth. Even the industries and commerce which we thought to be peculiarly our own, even those are in danger. It is quite impossible that these new methods of competition can be met by adherence to old and antiquated methods which were perfectly right at the time at which they were developed. At the present moment the Empire is being attacked on all sides, and in our isolation we must look to ourselves. We must draw closer our internal relations, the ties of sentiment, the ties of sympathy, yes, and the ties of interest. If by adherence to economic pedantry, to old shibboleths, we are to lose opportunities of closer union which are offered us by our Colonies, if we are to put aside occasions now within our grasp, if we do not take every chance in our power to keep British trade in British hands, I am certain that we shall deserve the disasters which will infallibly come upon us. The days are for great empires and not for little States. The question for this generation is whether we are to be numbered among the great empires or the little States. The realisation of the highest ideal will, in my judgment at any rate, make for the peace and civilisation of the world.

THE WRECK OF THE "KUMAGAWA MARU."

On the night of the eleventh of June there occurred on the coast of Korea, about eighty-five miles south of Chemulpo, one of the most disastrous wrecks that even the dangerous coast of Korea has ever witnessed. The *Kumagawa Maru*, a small steamship belonging to the Osaka Shosen Line came in collision with the *Kisogawa Maru* of the same line and sank in about three minutes. It is too early to give out anything as to responsibility for this catastrophe. That will be the work of a naval court which will place the responsibility, but the readers of the *Review* will be glad to hear the story of Mr. J. F. Bowlby, an American citizen who was on board the *Kumagawa Maru* and who narrowly escaped with his life. The first class passengers on the boat were Mr. J. F. Bowlby, Rev. H. G. Appenzeller, and two or three Japanese

gentlemen. Mr. Bowlby says that about ten o'clock that night he and Mr. Appenzeller partook of a light supper of tea and biscuits and then retired to their staterooms. Mr. Bowlby retired to his berth but did not go to sleep. His stateroom was immediately opposite that of Mr. Appenzeller and he could see the latter sitting in his stateroom reading. No whistle was blowing and the ship was apparently on her course.

Only a few minutes elapsed when without the least warning there came a terrific crash which brought Mr. Bowlby to his feet instantly and Mr. Appenzeller cried out, "What's the matter?" Mr. Bowlby hastily drew on his trousers and coat and vest without attempting to arrange them at all and in about ninety seconds after the collision he was making for the companion-way, with Mr. Appenzeller immediately in front of him. Behind him he saw one or two Koreans coming out of the second class cabin but he believes that they never reached the deck. As Mr. Bowlby set foot on the deck he saw that things were in desperate shape. The whole forward half of the deck was already submerged and the stern was lifted high out of the water. Mr. Appenzeller, who seemed to be labouring under great excitement, apparently made no attempt to get away from the ship but Mr. Bowlby leaped aft and climbed upon the rail. He knew there was no possibility of his not being drawn down by the suction and he knew that in order to save himself from being knocked about by broken rigging and other debris it was necessary to grasp some solid portion of the ship firmly and wait his chance to come up. He therefore seized hold of a rope that formed part of the rigging and as the boat settled he looked around and saw Mr. Appenzeller standing about where he was when he reached the deck, but now up to his waist in the water and groping vainly for something to take hold of. Nothing at all was said so far as our witness knows. All this had occupied only about a minute or perhaps less and then the ship went down at an angle of something like forty-five degrees. Mr. Bowlby clung desperately to his rope until he had been drawn down what he believes to have been some twelve or fifteen feet and then he felt a shock which he thought to be either the ship striking bottom or the boilers bursting. As it appeared later it must have been the latter for the water was very deep at that spot. Thinking that the suction would have subsided Mr. Bowlby let go his hold in order to rise toward the surface but he found that his right foot was entangled in a rope. He reached down and liberated his foot and then rose rapidly towards the surface. But when, as he believes, he had almost reached air he was sucked down by another eddy and it was some seconds before he could get his head above water. Mr. Bowlby has for many years been an expert swimmer or he would not have been able to keep his presence of mind under such almost desperate circumstances. When he reached the air he took two or three grasps and was then caught by another eddy and carried down again. While under water the second time he was hit severely in the back by a piece of timber but did not attempt to seize it. Upon coming to the surface again he began to swim against the current which was rapidly carrying him away from the *Kisogawa Maru* which he could dimly see but whose lights shone out quite plain, apparently a couple of hundred yards away. When the *Kumagawa Maru* sank he had noticed that the *Kisogawa Maru* lay almost alongside, at most not more than thirty feet away. But the tide had carried him rapidly away. He was now on the surface swimming against the current but nearly exhausted. His hand struck a piece of board about two feet long and eight inches wide and it helped to rest him a little. Then he found another piece about the same size. Before long a considerable piece of timber came floating down to him and he lay across it and rested quite easily but he was numbed with cold and he had lost all feeling in his feet.

Meanwhile he was aware of cries for help from the direction of the wreck and knew that boats were out picking up survivors but he did not call out as yet. Soon he became aware that a life-boat was floating bottom up towards him. A large part of the bottom was ripped off but it afforded a much better chance than the timber he was on; so with his little remaining strength he dragged himself up on the overturned boat and lay across it on his stomach. Tangled in some wreckage that was attached to his boat was the body of a Korean, evidently dead, with his head hanging down in the water and only his back showing. Before long one of the rescue boats from the *Kisogawa* came by but seeing that Mr. Bowlby was safe for the moment they left him in order to help others in worse condition. At last, however, they came to him and took him off the boat. He collapsed, and was taken to the *Kisogawa Maru* in a very exhausted condition. They put him to bed covered him with many thickness of blankets and poured hot saké into him. Of course, he saw very little of the other survivors and not being able to speak Japanese had very little opportunity to gain information. He

had been in the water fully three-quarters of an hour and it was morning before he was really in condition to do any clear thinking, owing to the physical exhaustion and the nervous strain.

The *Kisogawa* tried to anchor but could not do so because of the depth of the water. So she kept steaming about in the vicinity of the wreck trying to find other survivors, until one o'clock p.m. of the next day, when she turned her prow toward Chemulpo. Mr. Bowlby lost all his effects, including a considerable sum of money in U.S. gold, but when he arrived in Chemulpo and the news was telegraphed to the American mines in Un-san, where Mr. Bowlby had been working for some years, a purse of six hundred yen was made up among his friends with the generosity characteristic of the mining fraternity. This sum was telegraphed to him and on the sixteenth he sailed on the *Genkai Maru* bound for America where his wife and family await him. His watch which he had on at the time of the disaster stopped at half-past ten, so that wreck must have occurred a few moments before that. On the whole it seems to have been a remarkable exhibition of coolness, nerve and physical endurance, and Mr. Bowlby and his family are to be heartily congratulated upon his escape.—*Korea Review*.

THE BLOWING UP OF A CHINESE CRUISER.

FURTHER DETAILS.

A correspondent of the *Shanghai Mercury*, who wrote from on board the Japanese warship *Atago*, gives further particulars of the destruction of the Chinese cruiser *Kaichi* at Nanking on June 22nd. He says:—

We arrived with this ship on Sunday at Nanking and anchored two cables length away and on the port quarter of the *Kaichi* at 12.25 p.m. We had just given our ship her cable and whilst I was looking at the *Kaichi*, suddenly her port side blew out, then immediately the whole poop, main and mizen mast were shattered, in fact the whole of the after part of the vessel from the main-mast was blown to pieces. This was followed immediately by volumes of smoke and flames as high as the mast-head, and a terrific report followed. The concussion was great, and men, spars, deck, boats, cabin fittings, doors, furniture and effects were blown into the air several hundreds of feet, with numerous shells exploding on our beam and dangerously near some fishing boats. The *Kaichi* sank at once, even before some of the debris came down. We were enveloped in smoke and debris, so much so, that the captain gave orders to the men to run for shelter. When the smoke cleared away a little, there was nothing to be seen but a huge mass of floating wreckage, with only two men to be seen. One of the *Atago's* boats saved one of these men, a sailor, who was blown out of a port on the forward lower deck. The other man was a carpenter, whom I have not seen; a native lifeboat saved him. The U.S. man-of-war *Helena* was anchored about three-quarters of a mile off, and all her boats were immediately sent to assist, but there were no lives to save. A quantity of stuff fell on our deck, and amongst it was the log book of the unfortunate vessel. On the hulk *Quashing* a portion of a man—the trunk—fell on the roof, and a number of pieces of human bodies were seen floating on the wreckage. All the glass, lamps, and some of the crockery were broken on board the *Quashing*; they felt it badly as they were lying off the port beam of the cruiser.

The first portion of the vessel that was blown out was a piece of the main deck with beam attached to some angle-iron, weighing about three hundred-weight, this and a piece of iron plate were blown on shore some 500 yards distance from the wreck. Another piece was reported to be found much further away. A quantity of glass was broken at the Custom House, which was three-quarters of a mile away, and the shock was felt at the British Consulate over six miles off. Two sampans that were alongside the cruiser at the time were destroyed and the occupants killed. For three hours the ram and jib-boom were showing out of water above twenty feet. She was anchored in twenty-two fathoms of water, so half of the vessel must have been completely blown away, and the forward half was standing on end perpendicularly till 3.30 p.m., when it tumbled over.

The number of lives lost is estimated at about 140 to 150. The captain had just landed, and three officers were in Shanghai, leaving four officers on board. Some of the men were on shore on leave. Undoubtedly it was the magazine that blew up.

Upon enquiry I learn that she had four tons of gunpowder on board. The captain (Li), seeing us coming in when he landed, left word that his men were to return the salute of the *Atago*, so I surmise they were in the act of getting the necessary charges from the magazine for this purpose, when through some carelessness, perhaps, the explosion took place.

EXPORT OF RAW SILK.

Messrs. Vivanti Bros. publish the following statistics as to the export of raw silk from 1st July, 1901, to 30th June, 1902, including the shipment per *Turtar* and *Iyo Maru* :—

Firms.	U.S.A.	Europe.	Total.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

KING EDWARD.

London, July 2.

The King passed another excellent night. He is making splendid progress in all respects. The wound is healing.

London, July 3.

A bulletin issued at ten o'clock said that the King had slept well and that nothing has occurred to mar the excellent progress His Majesty is making.

In view of the improvement in the King's health it is proposed to organize a parade of the Colonial contingents on a large scale.

London, July 4.

The general condition of the King's health is further improved and the wound is giving comparatively little pain.

London, July 5.

The bulletins of the King's condition continue very satisfactory. The wound shows active signs of repairs.

London, July 6.

The King is better.

London, July 7.

The King's progress continues in every way satisfactory.

London, July 9.

A bulletin issued at 10 o'clock on the 8th says that the King had nine hours natural sleep and that his progress is uninterrupted. The wound is discharging freely. It is less painful to dress.

There is a credited report that the Coronation will take place between the 11th and the 15th of August.

London, July 9.

The King's progress is all that can be desired.

The *Times* says it has reason to believe that it has been practically settled the Coronation will take place in August.

Reuter understands that the King himself is pressing forward the Coronation.

London, July 10.

The King's progress is uninterrupted. He sleeps well and is gaining strength. The wound is slowly healing.

RETURN OF THE TROOPS.

London, July 2.

Out of 202,000 British troops in South Africa at the conclusion of hostilities, 70,000 are due to be brought home. Thirty-nine transports carrying 40,000 men are presently engaged, and besides 2,500 men will be conveyed weekly as passengers.

DUTCH ENTERPRISES.

The First Dutch Chamber has adopted a bill ratifying the Dutch-German cable convention; also a bill subsidizing a fleet of steamships for a service between Java, China, and Japan.

SOUTH AFRICA.

London, July 3.

The railways in the Transvaal and the Orange River Colony have been handed over to the civil authorities.

PRINCE KOMATSU.

Prince Komatsu and his entire suite have been received in farewell audience by Queen Alexandra. Throughout his visit he has been particularly honoured.

THE ANGLO-JAPANESE ALLIANCE.

London, July 4.

Replying to Sir Charles Dilke, who criticized the alliance with Japan and the British policy in China, Lord Cranborne, Parliamentary Secretary of the British Foreign Office, said that the Japanese alliance was based on traditional sympathies and mutual interests. He denied that Great Britain had failed in her open-door policy in China, but animadverted on the indolence of British concessionaires in China. He did not doubt that the terms regarding the rendition of the Provisional Government of Tientsin would be modified. Great Britain had not receded from her position regarding the payment of the Indemnity in gold but, at the same time, she sympathized with China.

RUSSIA EVACUATES MANCHURIA.

Later.

Count Cassini, the Russian Representative at Washington, has formally notified the American State Department that Russia has evacuated Manchuria and that the province is now ready for government by the Chinese.

THE PHILIPPINE AMNESTY.

President Roosevelt's proclamation of amnesty to the Filipinos provides a full pardon and amnesty for all insurrectionists, with the exception of those guilty of non-military crimes. All must swear allegiance to the United States.

PRINCE KOMATSU.

Prince Komatsu has left London for Paris and Spain.

ANGLO-JAPANESE RELATIONS.

London, July 5.

Lord Cranborne replying to a criticism that the treaty between Great Britain and Japan should have been concluded sooner, said that it "was not for us to seek treaties; we grant them."

FIRE AT LORENZO MARQUES.

London, July 6.

The British military stores at Lorenzo Marques, valued at half a million sterling were destroyed by fire on the 6th of June (? July).

DINNERS TO THE POOR.

Four hundred thousand poor persons have been dined in London. The Prince of Wales, the Duke and Duchess of Connaught, the

Duke and Duchess of Fife, Princess Beatrice and other royalties visited the various centres.

THE CONSTITUTION IN THE CAPE.

The Imperial Government has refused to accede to the petition for suspending the constitution in Cape Colony.

CRICKET.

In the third match at Sheffield Australia won by 143 runs.

THE KING'S CONDITION.

The bulletin on the morning of the 5th instant said that the King passed an excellent night; that he was cheerful, and that he felt much stronger. The doctors consider him practically out of danger. The evening bulletin has been discontinued.

AFFAIRS AT THE CAPE.

London, July 7.

The party in Cape Colony which advocate the suspension of the Constitution are disappointed at the decision of the Imperial Government and propose to continue their movement in Parliament.

LAND SETTLEMENT IN THE NEW COLONIES.

London, July 7.

Considerable progress has been made with the land settlement in the Transvaal and the Orange River Colony. The number of applicants is enormous. Large schemes of irrigation are in contemplation.

LORD CRANBORNE'S PHRASE.

The Times and the *Morning Post* criticise Lord Cranborne's phrase in connection with the treaty with Japan, and term it unfortunate.

ACCIDENT TO MR. CHAMBERLAIN.

London, July 8.

Mr. Chamberlain has met with a slight carriage accident. He received a scalp wound, and was taken to Charing Cross Hospital for the night.

A later telegram says that he is doing well and that there is no concussion.

LORD KITCHENER.

Lord Kitchener has arrived at Southampton.

LADYSMITH.

General Sir Redvers Buller, with the authority of the War Office, has published the Ladysmith dispatches. They show that he counselled the abandonment of Ladysmith after the failure at Colenso. Lord Lansdowne advised another attempt and General Sir George White refused to make terms.

The newspapers unanimously say that Buller is self-condemned.

THE CAPE PARLIAMENT.

London, July 9.

The Cape Parliament has been summoned for Aug. 20th.

MR. CHAMBERLAIN'S ACCIDENT.

Mr. Chamberlain is still in hospital.

MR. CHAMBERLAIN.

London, July 10.

Mr. Chamberlain has been taken from hospital. He is progressing favourably but quiet is essential.

LORD METHUEN.

Lord Methuen has arrived at Southampton. He is much better.

(RECEIVED AT THE LEGATION OF FRANCE.)

INDO-CHINA.

Saigon, July 2.

The Council of Ministers has designated as Governor of Indo-China M. Beau, Minister of France in Peking, who has accepted by telegraph. M. Beau, who has obtained a

congé for the purpose of proceeding to France, will probably stop in Indo-China to assume possession of his new post, and will then go on to Paris to receive the Government's instructions.

FRENCH NEWS.

Saigon, July 4.

It is denied at the Japanese Legation in Paris that Japanese officers command the Siamese who have invaded the neutral zone.

The United States has established civil Government in the Philippines.

Saigon, July 5.

M. Beau goes to Paris by the Trans-Siberian Railway.

In the Chamber of Deputies M. Delcassé declared that he has the assurance that the renewal of the Triple Alliance, recently signed, does not menace France, and that the Franco-Italian accord remains absolutely the same.

The Senate is discussing the reduction of military service to two years.

Saigon, July 6.

The Senate has voted an article in the Law saying that military service shall be equal for all without any distinction.

Speaking in the Chamber, the President of the Council, replying to an interpellation, defended the legality of the formation of congregational schools, and affirmed that the Government had decided to have the Law respected.

The Chamber after a vote of confidence, decided that the speech should be *affiché*.

FRENCH NEWS.

Saigon, July 7.

The medical bulletins declare that the King of England is out of danger.

(RECEIVED IN TOKYO.)

LORD CRANBORNE'S PHRASE.

In the House of Commons on the 7th instant Mr. Joseph Walton asked whether His Majesty's Government intended to take any step for removing the injurious impression produced by the language used by Lord Cranborne on the 3rd instant. Mr. Balfour replied that undoubtedly Lord Cranborne's expression, if separated from its context, was calculated to mislead. But it must be remembered that the words had been used in connexion with a suggestion that Great Britain, abandoning her traditional policy of isolation, had embraced any available alliance in a moment of necessity. His Majesty's Government did not dream for one moment of denying that the alliance between Japan and England had been concluded for the consummation of a common aim, and on a basis of absolute equality between the high contracting parties.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

CHOLERA AT CHEFOO.

A Japanese woman was attacked by cholera at Chefoo, and died on the 7th. This is the first case of cholera at Chefoo.

THE AMERICAN COTTON CROP.

Owing to the prevalence of drought during the month of June in America the cotton crop has been greatly injured. Texas has suffered especially. It is estimated that the crop will only be 84 $\frac{7}{10}$ % of the average crop for the last ten years. The price has risen greatly in consequence.

ALLEGED JAPANESE CAMPHOR MONOPOLY IN CHINA.

A statement that a Japanese camphor monopoly has been established at Foochow is untrue, but the Chinese Government has

established a camphor manufactory there and has entrusted the sale of the article to Japanese. Possibly money may be borrowed from Japanese to carry on the factory.

TIENTSIN.

It is incorrect that a meeting of the Foreign Ministers was held on the 6th to consider the question of Tientsin, but a meeting of commanding officers was held at Tientsin. Russia has definitely withdrawn from the conference, and America and France have changed their attitude in the sense of agreeing to restoration. It is therefore probable that the place will soon be restored to China.

NORTH CHINA.

The Japanese Consul in Chefoo reports that the German railway in Shantung, which is already open from Kiachow to Tsushan, was opened on the 1st July from the latter place to Weihien.

CHINESE PORTS INFECTED.

The Governor of Vladivostock has proclaimed that in accordance with instructions from the Minister of Home Affairs, Chefoo, Tientsin, Taku and Newchwang are to be regarded as infected ports, and all immigration of labourers thence to Vladivostock is to be interdicted.

(FROM THE "JIJI SHIMPO.")

CONFERENCE OF COLONIAL PREMIERS.

London, July 1.

A conference of Colonial Premiers has been opened at Westminster. Mr. Chamberlain, Secretary of State for the Colonies, referred to the problem of national defence and called attention to the urgent necessity of opening rapid shipping intercourse between the mother country and the colonies with a view to effecting closer relations commercially and politically. The proceedings were strictly private.

MILITARY REVIEW.

There was a grand military review to-day. Queen Alexandra, accompanied by Prince Komatsu, the Duke of Connaught and many other Princes, was present at the review. The outside of the parade ground was densely crowded by spectators and visitors from foreign countries.

GERMANY AND CHINA.

Germany has already commenced the construction of several gunboats with a view to employing them on the interior waters of China.

MILITARY REVIEW.

London, July 2.

Queen Alexandra to-day inspected the Indian Contingent (for the Coronation) amid the great enthusiasm of assembled crowds.

PRINCE KOMATSU.

Prince Komatsu leaves London to-morrow.

LANCASHIRE COTTON MARKET.

In consequence of a report as to the monsoon in India the cotton and cotton cloth markets of Lancashire are dull.

FRENCH INDO-CHINA.

His Excellency M. Beau, French Minister in Peking, is appointed the Governor-General of Indo-China.

RUSSIA IN MANCHURIA.

London, July 3.

Viscount Cranborne, Under Secretary of State for Foreign Affairs, speaking in the House of Commons, declared that the British Government recognised it as unnecessary to raise any protest against the action of Russia in Newchwang, because Russia has already promised to evacuate Manchuria.

GREAT BRITAIN AND JAPAN.

Sir Charles Dilke, criticising the Government's foreign policy to-night, regretted that the conclusion of the Anglo-Japanese alliance was premature, and declared that the Government's policy was weak and inconsistent. A vehement discussion then took place.

THE TIENTSIN QUESTION.

London, July 7.

China has asked the United States Government to persuade the other Powers to restore to China the Civil Government of Tientsin. The American Government has acceded to this request and has approached the other Powers to reconsider the question through Mr. Conger, the United States Minister in Peking.

SUGAR BOUNTIES AND AUSTRIA-HUNGARY.

Austria-Hungary has refused to comply with the resolution passed by the Sugar Convention in Brussels.

TELEGRAMS TO SOUTH AFRICA.

The restrictions imposed on telegrams to South Africa have been cancelled.

COTTON MARKET IN LANCASHIRE.

In consequence of the dullness in the cotton market, Lancashire cotton spinners have convened a special conference.

FIRE AT DELAGOA BAY.

A fire has occurred at Lorenzo Marques and £50,000 worth of ammunition belonging to Great Britain were burned.

ACCIDENT TO MR. CHAMBERLAIN.

London, July 8.

The Hon. Joseph Chamberlain, M.P., Principal Secretary of State for the Colonies, met with a carriage accident and was taken to the Charing Cross Hospital for treatment. His condition is somewhat grave but the wound is steadily healing.

THE DATE FOR THE CORONATION.

The Coronation will take place in August. Its date will be officially announced.

DEATH OF THE EARL OF ARUNDEL.

The death is announced of the Earl of Arundel, the only son of the Duke of Norfolk.

[Note.—The Earl of Arundel and Surrey was born on Sept. 7th, 1879, and his life's story is a tragedy of the British Peerage.]

THE TIENTSIN QUESTION.

There is a rumour that the United States came into collision with other Powers relative to the Tientsin question. The rumour is denied in official circles, however.

LORD KITCHENER.

Lord Kitchener will arrive in London on Saturday and will receive a triumph. 15,000 troops will line the streets to welcome him.

KOREAN AMBASSADOR.

The Korean Ambassador for the Coronation left London yesterday.

(FROM THE "JAPAN HERALD.")

RUSSIA AND NEWCHWANG.

London, July 2.

Viscount Cranborne, Under Secretary of State for Foreign Affairs, answering Sir Charles Dilke, stated that the reason why Great Britain had not protested against the collection of likin by Russia in Newchwang was that it was expected that an agreement would be shortly concluded to restore Newchwang to the Chinese.

THE PHILIPPINES.

Both Houses of Congress have adopted the Committee's Philippine recommendations, and the President has signed the Bill.

PRINCE KOMATSU.

London, July 3.

Queen Alexandra yesterday received Prince Komatsu, whose indisposition prevented acceptance of Her Majesty's invitation to luncheon. He departed for Paris and Spain to-day. The Prince of Wales and the Duke of Connaught witnessed his departure, cordially shaking hands with him. A large crowd, which had assembled, cheered the Prince.

ANGLO-JAPANESE ALLIANCE.

London, July 4.

In the course of a debate on the Anglo-Japanese alliance, Sir Charles Dilke said that the alliance with Japan must be hostile to Russia.

Lord Charles Beresford congratulated the Government on the alliance, declaring that nothing

so materially good for England had been accomplished within recent years.

Viscount Cranborne, Under-Secretary of State for Foreign Affairs, meeting the criticism of the alliance for not having been concluded sooner, said it was not for us to seek treaties; we grant them.

The *Times* describes the foregoing as an unfortunate phrase calculated to convey a wholly erroneous view of Great Britain's attitude towards her ally.

THE "LIKIN" TAX.

Viscount Cranborne, Under Secretary of State for Foreign Affairs, has stated in the House of Commons that after full consideration of the question, the Government has abandoned hope of securing the total abolition of the *likin* stations in China; he hoped, however, that some fiscal arrangement would be made to relieve trade of this enormous, uncertain, and illegal burden.

THE PHILIPPINES.

The Governor of the Philippines has reported to Washington that the acceptance of American authority in the islands is general, and that the pacification is complete.

MR. BALFOUR TRIES TO APOLOGISE.

London, July 8.

The *Daily News* describes the statement made by Mr. Balfour as an elaborate apology for Viscount Cranborne's terrible gaucherie (in declaring that it was not for England to seek treaties; she granted them). The same paper believes that Baron Hayashi, Japanese Minister to St. James's, is greatly concerned if not incensed.

Earl Spencer intends to question the Marquis of Lansdowne on the subject.

THE PHILIPPINES.

London, July 10.

It is proposed that the question of what the United States should pay for the Friars' lands in the Philippines should be submitted to arbitration, as also the question of the indemnity to be paid for the ecclesiastical buildings occupied by the Americans.

Of the arbitrators, America is to choose two and the Philippines Government two, the fifth arbitrator being chosen from a neutral source. Governor Taft proposes that this fifth arbitrator shall be Lord Curzon of Kedleston, Viceroy of India.

Brown Daitong	4.30 to 6.50
Brown Canton	6.00 to 6.60
White Java and Penang	6.00 to 6.80
White Refined	8.70 to 10.10

EXPORTS.

RAW SILK.

There has been a quiet market during the week. Buyers are not eager, and sellers refuse to make any serious concessions in price. Consequently the daily settlements are very small and it remains to be seen in the future whether foreign markets will improve or whether our native friends here must reduce quotations.

GOLF HANDS

Red Rough Hands

ONE NIGHT CURE.

Soak the hands on retiring in a strong hot creamy lather of

Cuticura SOAP

Dry, and anoint freely with CUTICURA, the great skin cure and purest of emollients. Wear during the night old, loose kid gloves, with finger ends cut off and holes in the palms.

For sore hands, red, rough hands, itching, burning palms, and painful finger ends with shapeless nails, the CUTICURA treatment is simply wonderful.

Complete External and Internal Treatment for Every Humour. Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure torturing, disfiguring humours, with loss of hair, when all else fails. Aust. depot: R. TOWNS & CO., Sydney, N. S. W. So. African depot: LEXNOR LTD., Cape Town. "All about the Skin, Hands, and Hair," free. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

PEACH'S LACE CURTAINS

SEND YOUR ADDRESS for our New Illustrated Catalogue; Foreign Edition Post Free. The most complete List of Lace Goods issued.

Import your own Goods DIRECT FROM the LOOMS, and save three Profits, LACE CURTAINS, MADRAS MUSLINS, CAPES, LADIES & GENTS, REAL SWISS, ROLLER BLINDS, BLOUSES, LOOM HOSIERY, GUIPURE D'ART, LACES ALL MAKES, COLLARETTES, HOUSEHOLD LINENS

POPULAR PARCEL Y. 10.25

Lot No. 338 CONTAINS:—1 pair Rich Artistic Drawing-Room Curtains, 4 yds. long, 2 yds. wide. 2 pairs alike, Handsome Dining-Room Curtains, choice old lace design, 3 $\frac{1}{2}$ yds. long, 60 in. wide, 1 pair neat Floral Pattern Bed-Room Curtains, 3 yds. long, 50 in. wide, 1 pair new fashionable Sash Curtains, 1 table centre, renaissance design, 1 Set of Duchess Toilet Covers, one 45 in. long, and five smaller. Ecu if desired. On receipt of Post Office Order for Y. 12.75 or 26/-, the lot sent per Parcel Post, direct to your address in Japan well packed in oilcloth.

Customers throughout the Empire testify to the reliable work, Marvellous Value, and Durability. First Prize Medals, Toronto 1892; Chicago, 1893.

S. PEACH & SONS, Lister Gate, Nottingham, England. Established 1857.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 19TH, 1902.

DEATH.

On the 17th inst. at No. 179 F, Bluff, ESTHER, relict of the late James Esdale, aged 85.

SUMMARY OF NEWS.

THE Kaiser has decided that German war uniforms shall be grey.

A KÔBE report says that the Italian Consul at that port will start for Hokkaido in a few days to investigate trade there.

THE Grand Lodge of Freemasons of England has sent in all £10,337 to South Africa for the relief of loyal Brethren who have suffered from the war.

AN Osaka report says that the Osaka Beer Brewery Company, at its regular general meeting held on July 15th, declared a dividend of 20 per cent.

MR. MATSUMOTO KAMETARO, President of the Aikoku Bank, Tokyo, was arrested on July 15th and taken to the Tokyo Chiho Saibansho on a

charge of fraudulent bankruptcy. The property of the chief officials of the bank was attached at the same time.

THE war-ship *Musashi*, which was successfully raised some days ago, arrived at Oginohama on July 15th on her way to Yokosuka. The latter place will be reached in a day or two.

MR. KIMURA RIYEMON, a rich merchant of Yokohama, has been elected a member of the House of Peers, representing the highest taxpayers in Kanagawa Prefecture. He succeeds Mr. S. Hiranuma, who has resigned.

THE negotiations between the Korean Government and the Söul-Fusan Railway Co., with regard to the location of a station at Wungtaimun have been completed. The Company will shortly receive 29,000 *tsubo* of land.

TAGUCHI SEKI, a woman employed at a restaurant in Saseho, has brought an accusation in the local Court against a police-inspector and a policeman charging them with torture and with having injured her by assault and battery.

CAPTAIN PRINCE NASHIMOTO, who is an instructor in the Military College, will set out for Europe either in September or October this year for the purpose of studying military affairs. Captain Prince Kuni, will also proceed to Europe early next year for a similar purpose.

It is reported that Dr. Baelz, of the Tokyo University, will return home shortly. The doctor attended the Imperial Household Department on July 12th and had an interview with Viscount Tanaka, Minister of the Department, relative to his departure.

THE British steamer *Fook Sang* (1,660 tons), of which Messrs. Jardine, Matheson & Co. are the agents, has been sold to the Osaka Shosen Kaisha, which company intend to use the vessel on the China service. She was formally taken delivery of on July 15.

THE N.Y.K. steamer *Tamba Maru* ran aground 200 yards from the Police Pier in Hongkong harbour on July 3, when leaving for Japan. After being stuck in the mud for an hour and three quarters she floated off uninjured and proceeded on her voyage.

At a special meeting of chief officials of the Osaka Gas Company, held at Osaka on July 9th, it was arranged to appoint Mr. Kataoka Naoteru, President of the Company, with Mr. Tison as Vice-President. Mr. Graham was authorized to take charge of the foreign affairs section.

It is reported from Osaka that the inauguration of the Daido Life Assurance Company took place at that city on July 15th. The new establishment was organized jointly by the Asahi, Gokoku and Hokkai Life Assurance Companies, which recently amalgamated for that purpose.

A BIRMINGHAM safe company has been fined £100 for attempting surreptitiously to ship percussion caps to Persia, concealed in the lining of a safe. The company stated, in defence, that the caps had been enclosed by their employees, without the knowledge of the directors.

On the afternoon of July 15th an employé of the Central Warehousing Company, Midoricho, Yokohama, was robbed of yen 600 while in the Yokohama branch of the One Hundredth Bank. It appears that the employé, having withdrawn

the sum from the bank, was about to put the money in his pocket when a man, who was standing near by, suddenly seized the money and fled. The thief has not yet been arrested.

As the result of the promulgation of the new regulations for Chambers of Commerce it is alleged by Tokyo journals that the following twelve Chambers of Commerce will be dissolved:—Kawagoye, Naoyetsu, Ota, Ishioka, Minato, Tochigi, Chiba, Hamamatsu, Gifu, Onomichi, Saka and Kagoshima.

It is reported in the home papers just to hand that in the sale to Mr. Alfred Holt of the China Mutual Steam Navigation Company's ships, Mr. Holt is only acting as agent, the real purchaser being Mr. Hill, the president of the Great Northern Railway of America. Mr. Hill, who is having two huge steamers built to his order for the Pacific trade, will add the Mutual boats to the Seattle run.

PRINCE BORIS VLADIMIR and suite left Yokohama for America by the British steamer *Coptic* on July 15th at a little past 3 p.m. Prior to His Highness' departure the deck of the steamer was crowded with many ladies and gentlemen, among whom were Prince Kan-in, the Governor of Kanagawa Prefecture, the Superintendent of Kanagawa Police, Viscount Tanaka, Minister of the Imperial Household, the reception committee, and others who wished the Prince *bon voyage*.

THERE has been a fight in Formosa between Japanese soldiers and raiders. A dispatch from the Governor-General of Formosa dated July 7th reports that a number of soldier and gendarmes under command of Major Nishiyama, while searching for bandits, encountered a strong force of insurgents at a place called Koshiryosho, Taipeh Prefecture, on July 5th. Fire was opened on both sides, and the Japanese force lost a sergeant and a private killed, while several others were wounded. One of the enemy was captured.

PILGRIMS to Fuji are warned to make their ascent by the ordinary routes only and not to penetrate prohibited paths. Several days ago the corpse of a man was found on the slope of the mountain and on being examined it was discovered that he had been struck in the bowels by a bullet fired by soldiers, who occasionally have target practice at the foot of Fuji. Undoubtedly the unfortunate man had been walking along a prohibited path.

CONCERNING the proposed amalgamation of the Tokyo and the Shinagawa Electric Light Companies, a committee from both held a conference at Tsukiji, Tokyo, on July 10th. The representatives of the Shinagawa company said that they would like to dispose of the concern's property for yen 250,000, but the Tokyo committee cut down the price to yen 210,000. It was then arranged to hold another meeting in a few days, when the matter will be definitely settled.

THE members of the Yokohama Rinyu-kai (Japanese Cyclists' Club) held a hundred mile race on July 9th. The competitors, numbering 18, left the training track near Magane-cho, Yokohama, at 5 a.m. for Kawasaki, whence, turning back, the party proceeded to Odawara, thence to Fujisawa, whence they wheeled back to Yokohama via Enoshima and Kamakura, a distance of one hundred miles. Mr. Sagabe Ikko was the most successful, covering the whole distance in nine hours eleven minutes, and he was followed by Messrs. Sase, Fujishiro and Kawasaki.

THE CRANBORNE INCIDENT.

Saturday, July 12.

Extreme reticence has been the attitude of the leading Japanese journals up to the present with regard to Lord Cranborne's unfortunate statement. But two of them—the *Kokumin* and the *Nichi Nichi*—have now broken silence. The *Kokumin* admits that the affair is unfortunate, but says that Lord Cranborne must not be understood as having referred directly to the origin of the Anglo-Japanese alliance or as having deliberately made that alliance the basis of his remarks. He was merely answering persons who attacked the alliance and in doing so he must not be supposed to have carefully weighed the effect of his words on third parties. It would be a great mistake to interpret his words as representing the views of the British Government without any regard to the circumstances under which they were uttered. Moreover, Mr. Balfour, leader of the Conservative Party in the House of Commons, speaking on behalf of his Government, has offered an explanation to prevent misunderstanding on Japan's part, and has affirmed the absolute equality of the two Powers' standing with regard to the alliance. The *Times* and the *Morning Post* have also condemned Lord Cranborne's words. Thus both Government and people of Great Britain have sought to correct Lord Cranborne's error, and to make it clear that in allying herself with Japan she was in no respect lacking in respect for the latter. "We ourselves believe that Lord Cranborne spoke under the pressing necessity of explaining Great Britain's departure from her traditional policy of isolation, and although we think that his words showed more or less want of courtesy to Japan, we are not disposed to attach grave importance to a momentary blunder. Even on the extreme supposition that he intended to suggest that Japan had been the Power to take the initiative in seeking the Alliance, such a fact would not affect the comparative dignity of the allies. For whatever may have been the process adopted and the road followed by way of preliminary to the Alliance, from the moment that the Alliance was concluded the contracting parties stood on absolutely equal ground, neither being superior or inferior to the other. There is no such thing as platonic love in international relations. Each State is influenced solely by considerations of its own interests, and no Power goes out of its way to make an alliance merely for the purpose of conferring a favour on its ally. Great Britain saw her account in joining hands with Japan or she would never have entertained the notion. There is no occasion to inquire accurately into the diplomatic methods adopted to bring about the alliance. What is far more important is that the course of events had plainly led up to it. The incidents of the North-China Campaign and the subsequent coöperation of England and Japan in effecting a settlement, showed unmistakably that the interests of the two Powers were identical and that a common policy drew them together. This same Lord Cranborne, in replying to Sir Charles Dilke's criticism, said that the Anglo-Japanese alliance had its origin in community of experiences, community of sentiment and community of interests, and in the face of that definition there can be no doubt about the feelings of Great Britain towards the union. We need not now make close scrutiny into the preliminaries of the compact, nor need we

be perturbed because the British Under-Secretary of State made a *bevue*, for the facts are solid and British responsible statesmen have explained them."

The *Nichi Nichi Shinbun* prefaces its remarks by saying that the Anglo-Japanese Alliance must be regarded by the world as indicating that the high contracting parties stood on an equality and were influenced by feelings of sincerity towards each other. No doubt the proximate cause of the Alliance was the North-China trouble, but it has its roots in the community of the two Powers' interests and the identity of their policies. It was not concluded with the object or intention of conferring benefit on either at the expense of the other. Mutual respect is essential to the genuineness of any inter-State union. Without such respect alliances, even if possible, can not be permanent. It can not be questioned that this essential was satisfied in the case of the Anglo-Japanese Alliance. Unfortunately Lord Cranborne was betrayed into an expression which some of the great organs of British public opinion, as *The Times* and the *Morning Post*, condemned on the ground of its want of respect towards Japan, and naturally the Japanese have experienced some slight sentiment of umbrage in connexion with the incident. Looking, however, at the conditions that existed in Japan and England at the time of the conclusion of the Alliance and at the course of events in the two countries subsequently to the Alliance, it was impossible to suppose any want of the mutual respect alluded to above, and we therefore awaited the issue of the incident with confidence. That issue still leaves some slight perplexity as to Lord Cranborne's meaning, but the information that the Japanese Government has been able to place before the nation is of such a character as to dispel effectually the slight feeling of umbrage that threatened to be engendered in Japan. In unions between states the advantages of self-restraint make themselves finally felt though for a moment the exercise of that quality may suggest lack of dignity. A retrospect of the five months that have elapsed since the conclusion of the Anglo-Japanese Alliance helps to elucidate the fact and the present incident is an illustration of it. (These concluding remarks seem to embody a gentle reproof to England and a distant suggestion that big talk preludes bigger explanations.)

Monday, July 14.

The *Chiuo* attributes to Mr. Kato Takaaki an interesting comment on Lord Cranborne's recent *bevue*. Whether Mr. Kato is really responsible for the comment we do not know but the fact referred to is undoubted. When the first agreement—a secret agreement, it is often called, and certainly there was a measure of privacy about it—when the first agreement between Russia and China with regard to Manchuria came upon the tapis, it was the Japanese Government that undertook the task of protesting, and unquestionably the defeat of the agreement was due to that protest. But Lord Cranborne, speaking in the House of Commons, created the impression that the initiative had been taken by England, and to this day the world attributes the abandonment of the agreement to the joint action of England, America and Japan. Lord Cranborne did not make the slightest allusion to Japan in his speech, and the omission was not more unjust than ungracious. His lordship can not be called a very tactful statesman.

The *Jiji Shimpō* attaches no importance to

Lord Cranborne's utterance. It was merely a Rowland for an Oliver. He was attacked on the ground that England's isolation having become dangerous she was ready to grasp hands with any one, and in reply he made the now much-talked of assertion. Such things may easily happen in debate. Nevertheless it was undoubtedly language not becoming a high diplomatic official; a blunder in short. Japan, however, may be quite content with the condemnatory attitude of the British public and with Mr. Balfour's explanation. "The English and the Japanese peoples have profound confidence in each other, and there is not the least fear that their relations will be disturbed by a trivial utterance of that kind." It should be borne in mind—says the *Jiji* in conclusion—that the question before the British Parliament was not why England had made an alliance with Japan but why she had not made it sooner.

Friday, July 18.

We confess to a feeling of some surprise that the *Nippon*, which is *par excellence* the chauvinist journal of Japan, should have preserved silence on the occasion of the Cranborne incident. But we are still more surprised to find our contemporary coming out, at this belated hour, with an article of a decidedly inflammatory character, in which—and this is the strongest point of all—the Japanese people are accused of lacking self-respect and being unfortunately deficient in spirit. The *Nippon's* remarks take the form of a running commentary on a statement attributed to a certain foreign diplomatist, who, if we may judge from his language, was grievously disappointed that Lord Cranborne's *bevue* did not raise in Japan such a storm of indignation as to imperil the continued existence of the Anglo-Japanese alliance. If a foreign diplomat really uttered the remarks quoted by the *Nippon*, then we can only say that our contemporary should have been too astute to be caught by such an obvious attempt to fish in troubled waters; and if this foreign diplomat is a mere figment of the *Nippon's* imagination, an unsubstantial peg for supporting a jeremiad, then in truth our contemporary has much to answer for. Assuming, however, that the foreign diplomat is a genuine personage and that he really did make the comments attributed to him, namely, that there is a time for speech and a time for reticence; that if Japan really attaches value to being regarded as her ally's equal, she disqualifies herself by her spiritless patience, and that the world will unquestionably pronounce her people lamentably lacking in the quality of self-assertion—if a foreign diplomat truly said such things, then the *Nippon* justifies him by the reception it gives his advice. In England any foreign diplomat undertaking to pronounce an opinion of the kind, would be told to mind his own business. He would be reminded, politely or roughly, that the English people know their own interests, and that they have no need of a foreign instructor in the qualities of self-assertion and national pride. But the *Nippon* seems to think that the impertinent criticisms of this officious stranger should be humbly accepted by the Japanese as a proper and well merited rebuke, and taken as the text of a reproachful sermon. That is not like the *Nippon's* usual discernment and habitual spirit. Finally, we would ask our contemporary why it joined the conspiracy of silence from which it now draws inferences so sinister to its countrymen's character. If reticence in the face of

Lord Cranborne's words exposed the Japanese nation to such unpleasant criticism, why was the *Nippon* itself a conspicuous pre-server of that reticence? The time has passed for an anti-climax, and since the *Nippon* palpably missed its opportunity, this belated condemnation of those that were equally tardy can not be classed even with wisdom following the event.

LORD SALISBURY RETIRES.

Wednesday, July 16.

The *Kokumin Shimbun*, commenting on Lord Salisbury's retirement, says that when Marquis Ito visited England on the last occasion, he was received at Hatfield by Lord Salisbury's daughter, who, when walking round the park with the Japanese visitor, observed that Bismarck was undoubtedly a great statesman but that he had erred as to the time of retiring from office. Had he retired on the death of Emperor William his fame would have been better assured. From that observation Marquis Ito inferred that Lord Salisbury's intention of abandoning public life had been already formed. If an illustration be sought of Laotsu's saying that the time to retire is when fame has been achieved and duty done, then Lord Salisbury's case will always be pointed to as such an illustration. It is 49 years since he entered Parliament, and 36 since he became a member of the Cabinet. Three times he has been Premier of England, the first occasion being 17 years ago, and his terms of office in that position aggregate 14 years, a fact which in itself constitutes a convincing proof of his great ability. He retires at 72 years of age with the gratitude and admiration of all parties in, and all parts of, the British Empire. He may have thought of resigning after the general election in 1900 when the country offered him a new mandate by an overwhelming majority. But the Queen was still alive and the South-African question had to be dealt with. Her Majesty has passed away and the war is happily ended. Thus the time is ripe for his lordship's retirement. He had made everything ready for the step, so that, although it is a signal event in the politics of the world, it will cause no dislocation of the political machine in England, Lord Salisbury being succeeded by his nephew, who will have the benefit of his wise counsels. The *Kokumin* then gives some particulars of Lord Salisbury's career, which it considers to have been chiefly marked by ability in foreign politics, and it says that he remains to the conservative party a treasure-house of unparalleled sagacity and experience in foreign affairs. During his long public life he took care to educate men competent to replace him, and he is thus able to retire with assured confidence that the government of the country will proceed smoothly and without hitch. In every respect he has set an example of perfect statesmanship.

The *Asahi Shimbun* observes that Lord Salisbury's case must be clearly differentiated from those of statesmen who, though they possessed the confidence of the Sovereign that appointed them, did not possess that of his successor. His lordship retires, as Mr. Gladstone did, solely because he has done his work and needs rest. His Cabinet is in its eighth year of existence, and it is characteristic of the endurance and zeal of British statesmen that whereas three years of premiership tired out M. Waldeck-Rousseau, Lord Salisbury, though of ripe age, could

bear the fatigues of eight years. Japan regrets his retirement, but feels confident that in the hands to which he has bequeathed his work, the England of to-day and of to-morrow will be as the England of yesterday. Lord Salisbury was a true friend of Japan in the old and original sense of the term. He, first among European statesmen, detected the true sentiments of this country towards the neighbouring empire, and was willing to take her for coöperator and to trust her completely. Doubtless the Anglo-Japanese alliance is to be attributed ultimately to the labours of such men as Mr. Kato Takaki, Mr. Chamberlain, Lord Lansdowne, Sir Claude MacDonald, Viscount Hayashi, and the Japanese Cabinet, but the ultimate responsibility of such a marked departure from England's national policy rested with Lord Salisbury. The *Asahi* leaves to Englishmen the task of writing appreciations or criticisms of their great statesman's career. It confines itself to noting that by the election of 1900 he placed his Cabinet on a firmer footing than ever, and that the work of imperialism may now be safely trusted to Mr. Balfour and Mr. Chamberlain. Yet it does seem a pity that Lord Salisbury should have retired on the very eve of the Coronation.

The *Nichi Nichi's* notice is brief but appreciative. It observes that Lord Salisbury's intention of retiring had long been known, and that, owing to his wise arrangements, it will not cause any break in the continuity of British policy or any disturbance in British politics. Especially will there be no change in the country's attitude towards foreign affairs. The *Nichi Nichi* then gives a brief *resumé* of the chief incidents in Lord Salisbury's public career; notes that he concluded the Anglo-Japanese alliance and brought the South-African war to a conclusion, and observes that although the trend of the times was in his favour, the strength and success of his long-lived Cabinet bear conclusive testimony to his ability. It seems a pity that he did not remain in office until the Coronation, but in retiring at the moment when his fame is in its zenith he obeys the dictates of true statesmanship. Our contemporary then gives a eulogistic notice of Mr. Balfour, who, at the comparatively youthful age of 54, succeeds to this great charge. The *Nichi Nichi* thinks that he has given ample proofs of ability and that England's affairs will be safe in his hands.

Thursday, July 17.

The *Jiji Shimpō*, it need scarcely be said, has a clever and sympathetic article about the political event in England. It notes that Lord Salisbury's disposition to resign was manifested some time ago, and can not now surprise any one. Not since 1812, when Lord Liverpool remained at the head of a cabinet for 14 years, has any British Ministry attained such a long life as the Salisbury Cabinet. Nor has any Ministry a more remarkable record. His Lordship's name is connected with the settlement of the Venezuela dispute, with the annexation of Burmah, with the administration of Egypt, with the South-African war and with the Anglo-Japanese alliance. He has also been instrumental in carrying out most of the principal domestic reforms advocated by the Liberals, so that the tongue of criticism has been silenced. Such results must be justly placed to his credit. An essentially fair-minded man, free from self-seeking, resolute, a party-leader yet never swayed from his purpose or conviction by

party influence, he has made a record of unprecedented achievement. It may be said of him in the words of the Chinese philosopher that he closes his political career in possession of the fame of great deeds. In spite of sickness he remained at his post until the South-African war was concluded, thus setting a fine example of the sense of responsibility. The *Jiji* then points out that Mr. Balfour's qualifications and record indicate him as a worthy successor of Lord Salisbury, and that, so far as the personnel of the Cabinet is concerned, the change is limited in its scope. Nevertheless the direction of affairs passes from the hands of the old to those of the young, and that certainly means a change in the political situation; and will have a corresponding effect upon national sentiment. South-Africa will feel the difference; the Anglo-Japanese alliance will be strengthened with regard to the Far-Eastern question, and we may look for new deeds and new plans from this Cabinet of younger men.

THE "NORTH-CHINA DAILY NEWS" AND PRINCE KOMATSU.

Monday, July 14.

According to telegrams from Shanghai to the *Jiji Shimpō* there is some excitement and indignation in that Settlement because of the *North-China Daily News's* manner of treating telegrams about Prince Komatsu. The telegrams referred to extend up to the 12th instant, and as the latest copies of Shanghai journals received here are those of the 5th, we can not tell exactly what may have appeared in the columns of the *N.-C. Daily News* between the latter date and the 12th. Turning over our contemporary's columns we find that in its issues of the 2nd, the 4th and the 5th it inserted the following telegrams with the headings here given:—

MORE OF THE PRINCE.

London *via* Bombay, July 1.

Prince Komatsu lunched with the Duke and Duchess of Connaught yesterday.—*Reuter*.

AND YET AGAIN!

London *via* Bombay, July 3.

Prince Komatsu and his entire suite had a farewell audience with Queen Alexandra. Throughout his visit to England the Prince has been conspicuously honoured.—*Reuter*.

IS THIS THE LAST?

London, July 3.

H.M. Queen Alexandra yesterday received Prince Komatsu, whose indisposition had prevented his acceptance of Her Majesty's invitation to luncheon. Prince Komatsu departed from London to-day for Paris and Spain. T.R.H. the Prince of Wales and the Duke of Connaught witnessed his departure, cordially shaking hands with the Prince, whilst the crowd present cheered.—*Special Service*.

THE INEVITABLE!

London *via* Bombay, July 4.

Prince Komatsu has started for Paris and Spain.—*Reuter*.

Apparently some more facetiæ of an even less considerate character appeared in subsequent issues of the same journal, and the *Jiji's* correspondent says that not only the Japanese residents of Shanghai but also many of the foreign are indignant, and that all unanimously agree in denouncing such rudeness. Certainly the person who has charge of this department of the *N.-C. Daily News* columns has very little sense of the fitness of things and very little respect for the feelings of others. But truly it seems to us that his extremely silly jokes are not worth a scintilla of wrath. The only sufferer is the journal which allows its columns to be thus disfigured. We entertain no doubt that the *N.-C. Daily News*, so soon as the matter is brought clearly to the notice of the editor,

will make whatever amende is possible. One comment is called for by the message to the *Jiji Shimpō*. It is there stated that the Japanese Consul is perplexed how to act. We do not believe it for a moment. Mr. Odagiri is not the kind of official to make any blunder in such a matter. No remedy whatever is within his direct reach. If he has any means of privately conveying a suggestion to the editor of the offending journal, the desired end would be at once attained. But in his capacity of Consul the matter is wholly beyond his sphere, and by attempting to move in it officially he would be showing as little tact as the *N. C. Daily News* itself. The incident should be treated as a momentary aberration. What is incomparably more important is that the *N. C. Daily News* and other English journals printed in Shanghai and China should be persuaded to observe the elementary rules of politeness in speaking of the Sovereign and of the high officials of the land whose hospitality these newspapers enjoy.

Wednesday, July 16.

It appears from news received in Tokyo on Sunday that so far from apologising for its rudeness to Prince Komatsu, the *North-China Daily News* actually attempts to defend it. Mr. Drummond wrote to the Shanghai paper protesting against the nature of the headings used by it when publishing telegrams about the Prince, but the *North-China Daily News* replied that not one out of every hundred of its readers cared a single straw about the movements of Prince Komatsu. Such extreme boorishness is beyond all comment. There is nothing to be said except that the *North-China Daily News* under its present editor is wholly ignorant of the elementary rules of politeness. Its extreme insularity too is quite amusing. Were it a petty provincial journal published at some out-of-the-way place in Ireland or Wales, one can conceive that its uninformed and prejudiced readers would take no interests in the movements of an Imperial Prince, a near relative of the Emperor of Japan, sent by a country with which England has just formed an alliance to assist at the Coronation Ceremony of King Edward. But considering that Reuter's Far-Eastern service of telegrams are compiled for the benefit of a mixed community of all nationalities; that when they appear in Shanghai they are read by an audience which watches with keen interest the relations between Japan and England; that Shanghai is the chief emporium of a trade which depends for its development upon the maintenance of the policy to which England and Japan have pledged themselves—considering these things, the fact that the *North-China Daily News* is quite out of touch with the spirit of the times is very apparent. So far as Japan and Prince Komatsu are concerned, the incident is altogether insignificant. One does not stop one's vehicle in this country for the purpose of chiding a child that calls out *ijin papa* as one passes, and neither need any rational man be troubled by the gaucheries of a newspaper labouring under a temporary aberration of understanding. The noticeable point about the incident, as we observed in our last issue, is that these rudenesses are of a piece with the extreme grossness of language and invective habitually employed by Shanghai and Hongkong journals when discussing the acts of the Chinese Court and of Chinese high officials. The things said constantly about the Empress Dowager are

brutal; no other term can be applied; the things that used to be said about the late Li Hung-chang were an equally disgraceful display of licence, and the criticisms now constantly penned about Chinese statesmen, Chinese officials and Chinese administration, so far from promoting the cause of progress, impede it by rendering its advocates hateful and by enraging instead of encouraging their Chinese readers.

CHINESE NEWS.

Saturday, July 12.

Mr. Kano Jingoro, Principal of the High Normal School, has been making to the *Jiji Shimpō* some remarks about the coming of Chinese students to this country. Much of what he is represented as having said presents no novelty; namely, that education is much cheaper in Japan than in Europe, that the necessary books have already been translated into Japanese, and that identity of script facilitates the imparting of instruction. But one of Mr. Kano's assertions is either singularly ingenuous or erroneously reported. He is made to say that the gulf is so wide between the degree of Occidental civilization and the degree of Chinese civilization that to attempt any immediate blending of the two would be like grafting a bamboo on a forest tree. That sounds like putting Japanese civilization—which he recommends as better suited for amalgamation—on a lower plane than Occidental civilization, a proposition which Occidentals will readily endorse, but which we do not expect to hear from a Japanese. We apprehend, however, that Mr. Kano refers rather to the general scale of living than to the essentials of civilization. There his statement is unassailable, for the contrast between life in Japan and life in China to be much more marked than the contrast between life in the West and life in the East generally. Mr. Kano is about to pay a visit to China. He is already in charge of several Chinese students studying in this country, and his tour will probably have the effect of promoting the movement he advocates.

Monday, July 14.

An officer who has just returned from North China, and who speaks through the columns of the *Jiji Shimpō*, says that the barracks for the Japanese garrison troops in Tientsin and Peking have just been finished, and that, on the whole, they are certainly not inferior to those of any other nation, though their outward appearance may perhaps leave something to be desired. Among all the barracks the American are the best equipped as to mess-rooms and dormitories, and among all the troops the Japanese have the least palatable food, though that of course is inevitable from the point of view of economy. Water is one of the great difficulties. The Peiho is the only available source of supply and its water is quite undrinkable without being filtered. Arrangements have now been made, however, for filtering on a large scale, and there is ample provision of wholesome water. The troops are well behaved, and there can be no mistaking their determination to maintain the honour of their Japanese cloth. This critic's only cause of regret is that Japanese officers can not afford to live better. The officers of all other nationalities are to be constantly seen at the Astor House fraternizing and enjoying themselves, but the Japanese officer is conspicuous by his absence. Such pastimes are beyond his purse.

Apparently some light has broken upon the Indemnity question. A telegram from the *Jiji's* Peking correspondent says that, through America's intervention, Great Britain has been induced to consent to receiving payment of her installments in silver during the next eight years, after which time she will require to be paid in gold at the current rate of exchange. It is added that at the earnest request of Viceroy Yuan, the English Government has agreed to approach the other Powers for the purpose of securing their acquiescence in that arrangement. But Russia, Germany and France are all believed to be unwilling to forego gold payments. We imagine that every Western Government and certainly Japan would be disposed to treat China leniently in the matter were they not influenced by the conviction that if her finances were honestly administered she could pay ten such indemnities without any trouble whatever. The gold and silver embarrassment is a veritable mote in her financial eye compared with the beam of speculation.

The latest telegrams from Peking do not indicate that the Tientsin problem is as near a settlement as Reuter's intelligence indicates, but there would seem to be reasons for concluding that a little more time will unravel the perplexity.

Speaking of the Tientsin problem, we may mention a statement made by a Yokohama resident, who has just returned from China. He says that the experience of the provisional Government in Tientsin constitutes an object lesson in the capacities of Chinese finance if honestly administered. When the city was taken over by the Powers its treasury was absolutely empty and a small sum of thirty or forty thousand taels had to be put up by the Governments concerned for the purposes of working expenses. Since then the Commissioners have been spending some twenty thousand taels a month in salaries, yet now, after little more than a year's administration, they find that their debt is paid off and they have a surplus of five hundred thousand taels in hand. That is certainly a suggestive record.

The Cassini secret agreement made a considerable commotion at the time when it was invented by the newsmongers, but the Cyril secret seems to be falling flat. Yet its details are very explicitly given by the *Jinmin*. It is said to have been planned by the pro-Russian party in Peking, of whom the leaders are Yung Lu, Ku Fun-ki, Lin Tien-ling and Kon Kan, and they are supposed to have taken advantage of Prince Cyril's coming to consummate their plans. The objects of the agreement are to contrive the restoration of Tientsin on easy terms—which has been effected now by American intervention—; to put obstacles in the way of the arrangement proposed by England for the management of the Peking-Shanhaikwan Railway; to provide against British objections to the Peking-Chankiakow line, which is essential to the completion of Russia's railway communications with Mongolia; and finally to contrive that England and Japan shall not be able to open Manchuria to foreign trade after its evacuation by Russia. This seems to be a programme of common action rather than a convention. Its details are obviously devised by some one who has set himself to think out the most objectionable projects attributable to Russia.

Wednesday, July 16.

Some enterprising news-agent has supplied to four of the second-class journals of

Tokyo an elaborate statement of the contents of a secret treaty which M. Lessar is said to be pressing upon the acceptance of the Chinese Government, and which is strenuously opposed by Viceroy Yuan with the assistance of "certain two Powers." The treaty is intended to provide for the future of Thibet. It sets out by declaring that Thibet is of much importance to both the contracting parties, and then it goes on to provide that the two Powers shall coöperate, with the employment of force if necessary, to preserve order in that country; that "while granting freedom of conscience as far as possible" no creeds shall be allowed to be preached except those of Buddha and of the Greek Church; that if any third party attempts to make trouble in Thibet, Russia and China shall combine against it, and so on. The tale is an obvious canard. Even the *Yomiuri* accompanies its publication with expressions of uncertainty. It is another of the many illustrations of the abuse of news-agencies. Here we have no less than four journals all simultaneously coöperating to disseminate false intelligence obtained from the same source. If they even credited the story to a news agency, their readers would have some warning. But they publish it, one and all, as original news procured from independent sources.

It is stated that at a meeting of the officials of the Foreign Office and of the Grand Secretariat in Peking, a decision was adopted to pursue a middle course with regard to the abolition of *likin*. We do not know exactly what is meant by a middle course, nor do we see how anything of the kind could be satisfactorily accomplished. In such a matter it must apparently be all or none. There is even at this moment great uncertainty as to the amount of *likin* levied and as to the manner of levying it. Should the impost be only partially abolished, that uncertainty will furnish an easily exploited opportunity to evade the introduction of any substantial change. However, it is conceivable that Chinese officialdom has mapped out some practical plan likely to secure a measure of relief. We have little hope, but it will be well to suspend judgment.

Mr. Shiraiwa Ryohei proceeds to China at once as representative of the Hunan S.S. Company. We mentioned in a recent issue that it was proposed to admit Chinese shareholders. But as all the shares have been taken up in this country, the Chinese can be accommodated only by some of the Japanese shareholders agreeing to part with their stock. Mr. Shiraiwa is doubtless commissioned to act in that matter. The idea is to enlist the coöperation of influential Chinese on the spot by making them stockholders. Orders have already been placed for the necessary vessels. They must be steamers drawing not more than $3\frac{1}{2}$ feet, as the route to be traversed has only that depth of water occasionally.

Germany is said to have given her unqualified consent to the programme mapped out by the Foreign Representatives for the restoration of Tientsin. America's intervention is evidently going to succeed.

KOREA.

It has at length been decided that the metropolitan station of the Söul-Fusan Railway shall be outside the south gate of Söul, and that 29,000 *tsubo* of land shall be sold by the Korean Government to the Japanese Company. This question has

given some trouble and has been long on the tapis. Apparently the price of the land is 30 *sen* per *tsubo* for wet fields and 40 *sen* for upland.

Mr. Kato Masuo's appointment seems to have been finally settled. The *Chiuo Shim-bun* has a telegram saying that he has been nominated adviser to the Imperial Household Department.

It is stated that a treaty of amity and commerce has been concluded between Denmark and Korea, and that the exchange of ratifications will take place in a few days. The treaty is on the lines of previously concluded conventions.

Dr. Morrison, *The Times* correspondent in Peking, has arrived in Söul.

Mr. Takenouchi Tsuna, formerly a member of the House of Representatives, and now a principal official of the Söul-Fusan Railway, is represented as saying that the Korean Government has placed many difficulties in the way of the constructors. Four serious complications have occurred since the work began, the last being the land question, which has now been settled after much discussion. Last year the Company applied for 110,000 *tsubo* outside the south gate of Söul for the uses of a terminus, but although preliminary arrangements had already been effected with the owners, the Söul Government withheld its consent and has now been barely induced to agree to the acquisition of 29,000 *tsubo*. Mr. Takenouchi adds that work is progressing rapidly, that the second programme of construction has been commenced, and that the larger half of the work will soon be completed.

FORMOSA.

There seems to be somewhat severe fighting in the south of Formosa. A company of infantry and a detachment of gendarmes, sent out from Shinchiku on the 7th instant, were charged, on the following day, by a body of about 100 insurgents. The latter did not use their rifles, but attempted to charge home with cold steel. They were of course dispersed. On the 9th instant, an engagement took place at Koro between the insurgents and the police, and subsequently the latter surrounded Nansho, where a combat was still raging at the date of latest advices. A second company of infantry had been despatched by train from Taipeh.

The *Asahi Shim-bun* strongly criticises the sugar-bounty system in Formosa. It says that the thing has proved a failure and was bound to prove a failure. The method pursued by the Authorities put a premium on abuses. Six per cent. interest was guaranteed on the paid-up capital of the Sugar Company; not, as is usual, a guarantee that the net profits should be made up to six per cent., but a guarantee that that amount of subsidy should be granted for 5 years irrespective of the Company's earnings. Further, instead of promising the subvention from the time of commencing operations, it was promised from the time of paying up the first calls; and, finally, no provision was made as to the employment of the paid-up capital. The obviously-to-be-anticipated result was that the Company devoted 2 years to preliminaries, meanwhile obtaining a splendid rate of interest on its paid-up capital. It commenced operations last October and the *Asahi* claims that failure has been the outcome, and that such a system is bound to entail loss.

THE CENTRAL RAILWAY TUNNELS.

The Sasago tunnel was finished on the 12th instant. This is the heaviest piece of tunnelling work in Japan. It is on the Hachioji-Kofu Section of the Central Railway, and its length is 15,246 feet. Work was commenced in 1891, the line forming part of the First Programme of Railway Construction. Under that programme bonds aggregating 60 million *yen* were floated, and the greater part of the money was used for the Central Railway.

Japanese engineers may congratulate themselves on having now overcome the difficulties on the most mountainous stretch of railway they are ever likely to be called on to build. It is historically stated that when Hideyoshi, after overthrowing the Hojo, advised Iyeyasu to make Yedo his capital, the great soldier pointed out to the Tokugawa chief how admirably nature had provided for the fortification of Tokyo. Approach along the Tokaido was protected by the Hakone mountains; approach along the Nakasendo by the Usui hills, and approach along the Koshu-kaido by the Kobotoke range. The only weak point was on the north, from the Ueno direction, and there Hideyoshi advised the digging of the big moat now known as to the Sendai-bori. When Hideyoshi himself advanced to the attack of the Hojo's great stronghold at Odawara, he laid his plans on a vast scale, sending one *corps d'armée* by the Tokaido, another by the Nakasendo and a third by the Koshu-kaido. How he managed to preserve communications between three forces moving with such an enormously extended front, is an interesting military problem, but he did manage it. In fact, Hideyoshi never undertook anything that he could not manage, and never failed to manage anything that he undertook. Of all the approaches, however, that by the Koshu-kaido proved the most arduous, and the fight before Hachioji castle cost the invader very dear. If Hideyoshi would now rise from his grave and see how the iron horse has negotiated the difficulties of these three mountainous avenues, he would find much to marvel at. The Hakone pass has been circumvented by a detour *via* Gotemba on the west of the lake; the Usui hills are crossed by an Abt-system railway, passing through 26 tunnels; and the Kobotoke range has now finally been conquered, but at no little outlay of time and money. In a distance of 53 miles between Hachioji and Kofu no less than 42 tunnels have had to be pierced, their total length being 12 miles. The longest is the Sasano tunnel (13,246 feet) and next to it comes the Kobotoke tunnel (8,300 feet). Thus the railway record shows that the Hachioji-Kofu section heads the list with 42 tunnels; the Usui comes next with 26, and the Fukushima-Yonezawa is third with 19.

MARCUS ISLAND.

A telegram (special service) published on the 15th inst. by the *Japan Herald*, said:—

London, July 14.

A New York despatch states that the United States Government has granted a title to Marcus Island (south-east of the Bonin Islands) to Capt. Rosehill, who organised an expedition to take possession. On arrival of the transport *Sheridan* at San Francisco it was reported that the expedition had been stopped, the Captain reporting that he touched at Marcus Island, but that the Japanese soldiers ordered him off. The officer commanding showed the Government orders to take possession. Secretary of State Hay has cabled to the U. S. Minister in Tokyo to report.

With reference to this matter we learn on inquiry that the island in question is called "Shin-tori-shima." It lies in longitude 154° E. and latitude 24° 14' N., and on the 24th of July, 1898 it was formally included in the Bonin Islands and declared, by an announcement in the *Official Gazette*, to be under the administration of Tokyo Prefecture. Its name had originally been "Marcus Island," but some years prior to 1898 a Japanese named Mizutani Shinroku proceeded thither, and finding that a profitable business might be done in fishing and collecting the plumage of the *baka*, he applied to the Japanese Government for a lease of the island. His request was duly granted, the name of the place being simultaneously changed to "Shin-tori-shima." It lies immediately south of Iwo-jima, and has a population of some 40 or 50 Japanese of both sexes. But there are no soldiers there, and it is evidently erroneous to say that the *Sheridan* was ordered off by Japanese troops.

CHINA'S INDEMNITY.

In urging that Japan should give her consent to the payment of the Chinese Indemnity in silver, the *Fiji Shimpō* publishes an interesting table showing the amounts to be received by each nation and their comparative per-centage:—

	Share in Yen (Millions).	Per-centage of Total.
Russia	183	28.97
Germany	132	20.91
France.....	100	15.75
England	71	11.27
Japan	49	7.72
America	46	7.32
Italy.....	38	5.91
The rest	14	2.14
	633	100.00

Side by side with this table our contemporary places another showing the import trade of the various countries with China for 1899, that is to say, the year before the war, things not being supposed to have recovered their normal condition since that catastrophe:—

	Value of Imports.	Per-centage of total.
	Taels.	
British India	22,072,000	27.6
Japan	35,897,000	13.6
America	22,289,000	8.3
Russia	3,522,000	1.3
Rest of Europe	10,172,000	3.8
Hongkong	118,096,000	44.6
Rest of World	2,260,000	0.8
	264,748,000	100.0

The *Fiji* estimates that if the value of the Japanese commodities reaching China *via* Hongkong be taken into account, Japan's total exports to China would amount to 50 million taels, on which it may be estimated that she makes a profit of 10 millions annually. Now the point to be considered is whether by insisting on gold payments she may not cause to her traders a loss much heavier than the gain she secures for her treasury. For the exceptional demand thus created for gold must necessarily have the effect of depreciating silver, and depreciating silver means a strong obstacle to the development of an import trade. Japan is now receiving 2 million *yen* annually on account of the Indemnity and she will by and by be receiving 3.18 millions. Her total payments on account of principal and interest in 40 years will aggregate 106.85 million of *yen*. Now when the Protocol was signed the gold value of the tael was 1.40 *yen*, whereas it stands to-day at 1.15 *yen*, the depreciation being 0.25 *yen*. If Japan made up her mind to receive her installments in silver, her yearly loss at pre-

sent would be 350,000 *yen*, and it would mount ultimately to 700,000 *yen*, the aggregate loss on the whole sum being 19,070,000 *yen*. That is a mere bagatelle compared with the loss her merchants might suffer were the import trade checked owing to further depreciation of silver. Evidently Russia and France have little if any interest in this latter problem. The value of the commodities sent by them to China is a mere bagatelle, and, on the other hand, they have already financed their share of the Indemnity so that they would be embarrassed were any change made now. But countries like Russia, France and Germany must look out for themselves. There is no occasion why the interests of any other Power should be sacrificed on the altar of their convenience. England, America and Japan are vitally concerned in maintaining conditions favourable to the growth of their export trade to China, and they should follow whatever route leads to that goal instead of pulling chestnuts out of the fire for Russia, France, and Germany. The *Fiji* has devoted two articles to this subject and they show much acumen. The only question that will present itself is whether the appreciation of gold can be checked by the measure our contemporary indicates. It may not be disputed that the fact or the prospect of large quantities of silver being thrown on the market year by year during the next forty years in connexion with the payment of the Indemnity, must have a marked effect in lowering the gold price of the white metal. But suppose that Russia, Germany and France decline definitely to accept payment in silver, and suppose that England, America and Japan agree to receive silver. Would the situation be materially improved, so far as exchange is concerned? Apparently not, seeing that whereas Russia, Germany and France have to receive 415 million *yen* of the total Indemnity, England, America and Japan have to receive only 176 millions. It is evident, therefore, that if the three former Powers insist on gold payments, large sales of silver will have to be made every year. No great stretch of imagination is required to conceive that the prospect of impairing the export trade of Japan, England and America would not cause much chagrin to certain other States. The fact is that when the horses pull different ways the vehicle does not progress.

THE JUDICIAL QUESTION.

It has often been noted in these columns that one of the principal causes of delay in adjudicating law cases in Japan is insufficiency of legal tribunals and judges. A Tokyo contemporary, the *Nippon*, publishes an instructive table bearing upon this subject:—

GERMANY.	
Courts of Cassation	2
High Local Courts	28
Local Courts	172
District Courts	1,929
Population	56,345,014
Area	208,830 sq. miles

District Courts	310
Population	43,760,315
Area	147,655 sq. miles

CHOLERA.

Saturday, July 12.

The disease seems to have established itself in Kitanomachi, Fukuoka prefecture. We do not know anything about the size or population of Kitano-machi. It is evidently an insignificant place. There have been 49 seizures there resulting in 32 deaths. It is stated that two families have been entirely annihilated.

In the town of Fukuoka itself there have been 4 cases.

Two new cases were reported on the 10th instant in the Hongo district of Tokyo.

Monday, July 14.

News from Newchwang is to the effect that the cholera is gaining virulence. There are now some 30 or 40 cases daily. Mr. Segawa, the Japanese Consul, has lost his wife. It is added that the I.J.S. *Naniwa*, *Takao* and *Oshima* have left Newchwang and are now at Chefoo.

A telegram from the Governor of Fukuoka says that up to the 10th instant the total number of cases in the prefecture, exclusive of the jail, was 76, of which 48 proved fatal. There are also 34 doubtful cases. The jail record does not seem to be so bad as rumours alleged. The cases there aggregated 27 with 12 deaths. The same official telegraphs that a case of cholera occurred on board the *Ibuki Maru* at Moji on the 11th instant.

No fresh cases are reported in Tokyo.

Wednesday, July 16.

Cases of cholera on board ship at Moji are reported. The schools in Moji have been closed, and all the prisoners in the jail have been treated with serum.

There are no new cases in Tokyo, but some attacks of dysentery and scarlet-fever are reported.

Cholera is now reported to have appeared in Kanagawa Prefecture. On July 13th Mr. Arai Kakichi, of No. 964, Hiyoshi-mura, Tachibana district, was attacked by the disease and died the following day.

Thursday, July 17.

The total number of cases in Kobe up to the 15th was 12, of which 8 ended fatally.

The disease has also visited Kumamoto. One case is reported there. Sporadic cases continue to occur at Moji, and there has been another case in Shizuoka.

There are no new patients in Tokyo.

Friday, July 18.

Kyoto has had one fatal case of cholera among the hands at a silk-weaving establishment. Osaka also had a case—the first—on the 16th instant, and in Shizuoka on the 14th, there was another patient, who died. The remaining reports are Hiroshima 1 case; Hyogo 1; Moji 1 (making the total up to the present 15 including 3 deaths); Fukuoka, up to the present, 100 cases with 72 deaths, besides 10 doubtful cases, 4 of which ended fatally; and Tokyo, up to the present, 2 in the city and 2 in the suburbs, of genuine cholera, and 19 cases of doubtful cholera in the city and 8 in the suburbs.

THE EXCHANGES.

The Exchanges are beginning to agitate again. Their standing committee claim that there has been a marked decline of business since the new law was promulgated, and that things can not be left in their present condition. They invite all the exchanges to send committees to Tokyo by the 25th instant for a general meeting.

THE "YOMIURI" AND THE ALLIANCE.

In the *Yomiuri Shinbun* we find an article which deserves some attention. It is an article that suggests two intentions on the part of the writer; an intention of representing the Anglo-Japanese alliance as an affair much more beneficial to England than to Japan, and an intention of urging the Japanese people to take steps for redressing this balance. The former intention seems to have been inspired by Lord Cranborne's remark. In fact, were it not for the moral that forms our contemporary's exordium, we should read the article solely as a Roland for the Under Secretary's Oliver. "You have alleged," the *Yomiuri* seems to retort, "that England merely granted what we as suppliants sought. But we reply that the objects of this alliance, if achieved, will be of much greater service to you than to us, for those objects are to preserve the territorial integrity and the open markets of a country where your trade and your material interests are a hundred times larger than ours. You, indeed, have a strong navy, the strongest in the world. But you have a weak army, so weak that you dare not engage in a continental war. What you want, therefore, to secure the situation in the Far East is a country with a powerful military force organized within easy striking distance of the probable field of operations. Japan supplies that want, and you therefore sought her alliance. It is futile for your Under Secretary of State to affirm that we approached you, cap in hand. You wanted us, and you came in search of us."

Thus far the *Yomiuri* appears to be answering Lord Cranborne. The form of the answer loses sight of the fact that although England's army of volunteers is certainly weaker than the huge fighting machines constructed in some countries by a process of virtual slavery, she is the strongest country in the world for over-sea military operations. Nevertheless it is a good answer enough as far as it goes, and we have no right to complain if Lord Cranborne's blunder betrays a journal like the *Yomiuri* into a corresponding display of tactlessness. *Similia similibus* is the rule with many folks whose standard of ethics is still inferior. But the *Yomiuri* has the grace to gild its pill. It urges its nationals to strive zealously for the development of their material interests in China so that the disparity between them and their ally shall be less conspicuous. Excellent advice, which England of all others would be pleased to see followed. The *Yomiuri's* methods, however, remind us of the strident scientist who delivered a deafening screech into his neighbour's ear by way of preparation for a lecture on the theory of echoes.

THE HOUSE TAX.

In an article prefaced by the words "whether diplomacy can be reconciled with the common principles of morality has long been a moot question," the *Japan Herald* represents this journal as preferring against the Foreign Representatives the accusation that they deliberately concocted a scheme to cheat Japan, first, by inducing her to agree to arbitration, secondly, by persuading her to postpone any collection of the house tax pending arbitration, and finally by delaying arbitration *ad infinitum* so that the house tax might become a dead issue. We can only repeat our contemporary's words in

another form, namely, "whether journalism can be reconciled with the common principles of honesty has never been a moot question until the practice of Yokohama newspapers threw doubts upon the matter." If our contemporary thinks that the house tax is a proper subject for cheap jesting, it will not find many to agree with it. If it intends its article to be read as a correct analysis of what we wrote, either its integrity or its intelligence is singularly defective.

FLOODS.

News of inundations continues to reach Tokyo. The prefectures chiefly affected are Fukui, Niigata, Ishikawa, Toyama and Nagano. Railways are interrupted in various places, especially between Nagano and Nao-yetsu. It need scarcely be explained that floods at this season are disastrous to the rice crop, for the young plants, recently set out, have not had time to take firm root and are easily swept away.

From Hiroshima and Yamaguchi the intelligence is that a heavy thunder storm has taken place, and that a large tank was destroyed by lightning.

The rainy season will be over, according to the usual calculations, on the 20th instant, when the *doyo* commences. Certainly the *niubai* is going off the stage with some eclat.

From Hokkaido also comes news of inundations. The Yubari river is said to have risen suddenly and swamped a large tract of country, driving the inhabitants to take refuge on elevated places; and the Atsuma river in Iburi province has devastated a considerable area. It is said that in the Atsuma's flood some lives have been lost.

THE CORONATION NAVAL DISPLAY.

It would seem that the naval review at the Coronation ceremony is not to be abandoned. At all events the telegraph says that the *Asama* and the *Takasago* will remain in European waters so as to take part in the event.

Admiral Ijuin, who commands the squadron sent by Japan to the Coronation, writes to Japan, we observe, expressing in the highest terms appreciation of the brilliant reception given everywhere to himself, his officers, and men *en route* for England. He attributes all this to the good offices of Sir Claude MacDonald, who thoughtfully wrote in advance to the high officials at all the ports where the *Asama* and the *Takasago* were to touch. Such acts of tactful foresight as the British Minister performed on this occasion, are fully appreciated by the Japanese.

MR. ASAHINA.

The editor of the *Nichi Nichi Shinbun*, Mr. Asahina, has just returned from his extended trip in the Occident. He was entertained by his brother-journalists in the Tsukiji Seiyoken on the 16th instant, and in an interesting speech he spoke in glowing terms of Russia's material progress, and of the clever measures she adopts to make other countries take a sound and favourable view of her financial condition. Mr. Asahina's experiences have convinced him that the development of her trade and industries is her great aim at present, and that, since nothing could impede the consummation of that aim more than trouble with Japan, she is earnestly bent upon preserving good relations with this country.

UNIVERSITY GRADUATION CEREMONY.

The graduation ceremony of the Imperial University took place on the 11th instant, in the presence of His Imperial Majesty the Emperor. The number of graduates was 451, and to 13 specially distinguished His Majesty gave rewards in the form of silver watches bearing the inscription *Onshi*. The graduates according to colleges were:—

Law College.....	141	(namely, 56 in English law (including old-rule students); 7 in French law; 23 in German law; and political law, 55.
Medicine	94	
Engineering	117	
Literature	67	
Natural Philosophy...	12	
Agriculture	20	

It is noteworthy that the students in natural philosophy, who used to be conspicuously numerous, diminished on this occasion to twelve. It is also noteworthy that among the 67 graduates of the College of Literature only 8 graduated in foreign languages, 3 in English and 5 in German.

NOTES ON CURRENT EVENTS.

The entertainments of Mr. Wu and General Yu Lung continue in Tokyo. They are becoming a little monotonous if not ridiculous. We agree with the *Nippon* that it would be more to the point if lecture-meetings were arranged where the visitors might obtain some of the information they are seeking. But the *Nippon* goes further. It says, in effect, that if too much be made of the Chinese, they will mistake the sentiment of their entertainers and imagine that they themselves have a title to such attention. That is a statement which we should not have looked to find in a Japanese journal just at present, yet it is virtually endorsed by the *Kokumin Shinbun*, which affirms that the tendency of the Chinese is to gravitate in the direction of bulk. They may seem for a moment to be drawing very close to either Japan, or England or America, but all the while they are under the centripetal influence of the massive northern Power. No one should imagine that genuine international intercourse is an object with the Chinese. They may turn at any moment on those with whom they associate, and he that indulges in too expansive friendship for them, is reckoning without his host. As between the *Nippon* and the *Kokumin*, we should take less umbrage at the former's allegations than at those of the latter were we Chinese. But since we do not belong to that nationality, the question that interests us is whether Chinese sincerity is really regarded so lightly in Japan.

Over seventy blue-jackets have been told off for court-martial at Kure in connexion with the recent disturbance. We should have thought that such a case might have been disposed of without recourse to court-martial. Rumour says that the comrades of the men in custody are contemplating an attack on the gendarmerie.

The third of the *Jiji Shimpō's* children's picnics is to take place on the 21st instant. Over seventy little girls will be taken to Kuge-numa in Soshu, and there entertained. The two previous picnics proved signal successes, and doubtless the third will have an equally happy record.

Kudo Tetsuo, a reporter (*tansaku-gakari*) of the *Niroku Shimpō*, has been committed for trial on a charge of black-mailing. The

sum involved was only 300 *yen*, but according to the published reports the offense seems to have been clearly established. These black-mailers must be beginning to feel that their trade has gone back on them.

According to two of the Tokyo journals H.I.H. Prince Komatsu will return to Japan without waiting for the Coronation, which is now said to have been privately fixed for September. Doubtless the Prince's decision, if it be correctly reported, is due to the fact that the British Court has determined not to invite foreign Potentates or their representatives to the deferred ceremony.

It is stated that the American capitalist, Mr. Brady, is likely to make arrangements with the Kyoto citizens as he has already done with those of Osaka. Tokyo alone seems to be shy. Japanese newspapers speak of Mr. Brady as the "gas king" of America.

Some surprise and much regret is felt in educational circles owing to the resignation of Dr. Tomii, professor of law in the Imperial University. Doctors Hozumi Ume and Tomii enjoy the highest reputation for knowledge of jurisprudence. Dr. Tomii is well known to be a man of the highest integrity and entirely free from self-seeking ambition. Strong efforts are being made to induce him to reconsider his resolve.

The *Yomiuri* says that according to the latest returns there are 127 Japanese houses in Manchuria, their inmates totalling 1,006. The principal occupations are those of carpenter and inn-keeper.

Tokyo newspapers say that the two electric-light companies of the capital, the Tokyo and the Shinagawa, have agreed to amalgamate, the latter being absorbed into the former at a valuation of 225,000 *yen*. No further particulars are given, nor can we undertake to say how the amalgamation is to be made practical in the case of companies having their power-generating stations so far apart, and supplying quite different quarters of the city. As to the general wisdom of amalgamation, however, there can be no manner of doubt.

The *Official Gazette* announces the bestowal of various honours upon civilians in connexion with the North-China campaign. At the head of the list of names is that of Mr. Kato Masayoshi, Vice-President of the Nippon Yusen Kaisha, who receives the Third Class Order of the Sacred Treasure. The number of rewards is about 1,000.

While the news of M. Dubail's transfer to Peking will be received with universal satisfaction by his many friends, since it signifies promotion for him, his removal from Tokyo can not but cause much regret, for he has shown himself a worthy exponent of the remarkably able foreign policy of France under M. Delcassé's direction.

It is expected that Prince Cyril, who is now in the north, will leave Vladivostok on the 24th instant for Yokohama, arriving at the latter place on the 28th. It was thought possible that the Grand Duke Boris Vladimir might remain in Japan so as to travel in company of Prince Cyril, but His Highness adhered to his original programme and left Yokohama on the 15th instant by the *Coptic*.

The chain of causation occupies an important place in the creed of Buddha. One would scarcely have thought of tracing its

links from the Chicago World's Fair to a Conference of Oriental Religions in Kyoto in 1903. What adds interest to the chain is that one of the links is an American lady. When Beihikunda, the Indian priest, went to the Chicago Conference, he delivered a lecture which converted one among his audience, an impressionable female. This lady subsequently visited India and on her way home, spent some time at the great temple Hongwan-ji in Kyoto. There she met Mr. Oda Tokuno, who seems to have interested her greatly, for on her return to Calcutta at a later date, she wrote from the American consulate in that city, advising Mr. Oda to visit the birth-place of the Buddha. He did so, and there the idea matured of holding a conference in Kyoto in the year of the Osaka Exhibition. Mr. Oda, on his later journeys in China, met the celebrated Buddhist priest Yang Jin-shan, of Nanking, as well as the Dalai Lama in Peking, and enlisted their sympathies with the projected conference. We do not learn, however, that Confucianism or Taoism is to be represented. That is a pity.

From the 16th instant telephonic communication between Nikko, Chiussenji, Tokyo and Yokohama was established. The charge between Nikko and Chiussenji is 30 *sen* (including 10 *sen* for summoning the other party); the charge between Tokyo and Nikko is 60 *sen*; between Tokyo and Chiussenji the same; and between Yokohama and Nikko (or Chiussenji) 70 *sen*. There is also telephonic communication between Ikegami and Nikko, a line which does not seem to promise largely. The Tokyo-Chiussenji line will be a very great convenience—or a nuisance—to the members of the Corps Diplomatique who now make Chiussenji their summer resort.

There have been heavy floods in Fukui, Ishikawa and Toyama prefectures, in consequence of continuous rain from the 14th instant. Daishoji, in Kaga, seems to have suffered most. The Jinzu river has risen many feet, interrupting the railways.

A later telegram says that Fukui is completely submerged. No casualties to life or limb are reported.

On the 15th instant the whole of the workmen at the Kure naval docks, numbering three thousand, went on strike. It is stated that they contemplate remaining away from work for twenty days. The cause of the trouble has not been clearly telegraphed, but doubtless it is a question of pay. This is the largest strike that has yet taken place in Japan.

The graduation ceremony was held at Kyoto University on the 14th inst. Twenty-eight students graduated, of whom three received prizes from the Emperor. The University is not yet fully organized, only three out of its four colleges being in working order, and only one of them being in a position to turn out graduates. Professor Kinoshita, addressing the students, said that the number of graduates from the University during its five years of existence had been 79.

The death is announced of Rear-Admiral Endo. He died on the 15th instant of enteritis. Admiral Endo received his education in England, and spent some years at Greenwich. He was removed from the active list a few months ago on account of ill-health.

BICYCLE REGULATIONS.

The following bicycle regulations were issued by the Governor of Kanagawa Prefecture on July 15th, to be put in force at once:—

Art. I.—When riding a bicycle on a public road, the cyclist must have a bell, or some other sounding device fixed to the vehicle, or carry it himself, so as to give warning to others.

Art. II.—No training, nor races, nor trick performances of any kind on a bicycle shall be undertaken on a public road.

No cycle shall be ridden by more than the prescribed number of persons. No more than two cyclists shall be allowed to ride abreast.

Art. III.—When passing a crowded place or round a street-corner, the cyclist shall proceed slowly, giving warning by means of the bell or other device.

Art. IV.—When riding down a slope or along a narrow passage, the cyclist shall proceed slowly. At sharp inclines, however, he must alight from his bicycle.

Art. V.—While riding on roads within the limits of the city, the cyclist shall not remove both his hands from the handle.

Art. VI.—When meeting soldiers on the march the cyclist shall avoid them by passing on the right side, but he shall pass on the left side when meeting a procession of students, or a funeral, etc.

Art. VII.—Whenever a cyclist intends to pass a carriage or a cart from behind, he shall do so on the right side.

Art. VIII.—Cyclists shall use lamps when riding at night.

Art. IX.—A police officer, if he deems it necessary, shall order a cyclist to dismount or shall stop his riding.

Art. X.—Offenders against the foregoing rules are liable to a term of detention or to a police fine.

FUNERAL OF MR. SWAN.

The remains of Mr. E. C. Swan, whose death we reported on Friday, were interred in the General Cemetery on Friday forenoon. The coffin, which was covered by many floral wreaths and other offerings, was removed from the General Hospital about 10.30 to the Church, where a large company of mourners had assembled to join in the obsequies. At the close of the service at the Church, which was conducted by Rev. W. P. G. Field, the coffin was carried to the hearse and the cortège proceeded to the General Cemetery. The pall-bearers were Messrs. W. L. Merriam, E. J. Dyer, G. S. Bayley, J. T. Thompson, J. H. Allison, G. G. Brady, R. S. Miller, Secretary of the U. S. Legation, Bower, L. E. Sperry, and F. B. Abenheim. Mr. H. C. Smith, a distant relative of the deceased, who is at present in Japan, and Mr. D. H. Blake acted as chief mourners. At the graveside Rev. Mr. Field read the concluding portion of the burial service and Mrs. Jas. Walter, Miss Poole, and Mr. G. G. Brady sang "The Silver Cord will soon be broken." Among the many mourners were representatives from the U. S. Legation and Consulate General, and at the Cemetery the sad procession was met by a delegation from the Yokohama Commercial School. The wreaths and other tributes were numerous—a special and beautiful one being sent by the Y.C. & A.C.—and the service both in the Church and in the Cemetery greatly effected many present.

FIRES.

The Emperor and Empress have granted *yen* 500 toward the sufferers from the recent fire at Yubari, Hokkaido.

Fire broke out about 1.10 on Saturday morning in the shop occupied by the well-known Chinese tailor, Cock Eye, at No. 80, Yamashita-cho. The alarm was given from the Brigade Tower and a steamer proceeded promptly to the scene. As there was a plentiful supply of water the flames were soon got under control, though not before the building in which the flames originated had been entirely flooded. The police brigades also turned out and did good service. The cause of the fire is unknown. The place is said to have been insured for *yen* 20,000.

AGAIN THE HOUSE TAX.

THIS weary and painful subject is again becoming prominent. Notices have been served on the foreign residents that another installment of the tax is falling due and will be collected at the proper time. We presume that since the frivolity of carrying resistance to the point of suffering distraint did not present itself four months ago to the foreign officials whose duty it was to advise their nationals, it will not present itself to them now. Besides it is by no means certain that the term "frivolity" will be applicable on the present occasion. That may be seen by a brief examination of the facts.

When the question of collection had to be considered last spring, the situation was that 25 per cent. of the foreign residents had paid their taxes and 75 per cent. were defaulters. What was to be done under those circumstances? Evidently to let the matter rest there pending an arbitral decision, perhaps a year and a half hence, perhaps two years, would have been most unfair to those that had paid. It would have been discrimination in favour of the defaulters. On the other hand, to have returned the money already received would have amounted to something like an admission that it had been wrongly received, thus prejudicing Japan's case; and the alternative course of allowing interest on it in the interval was plainly not entertainable. The obviously proper plan was to collect the money due. Then, when all tax-payers had been placed on an equal footing, the situation could have been subsequently dealt with at convenience.

But the course of events has belied expectation. More than three months have elapsed since the principle of arbitration was accepted, in London at all events. Yet a basis of arbitration has not yet been found. The Japanese Government proposed arbitration with regard to one simple issue, the house tax. It is understood that according to their view the question to be submitted to the arbitral tribunal was whether, under the provisions of the revised treaties, foreign land-lessees in the former settlement areas were exempted from the obligation of paying taxes on the buildings that stand on their lands. Nothing could be less complicated, nothing more unequivocal. But while one of the three European Powers concerned in the arbitration is said to have drafted a basis on these simple lines, the other two, if rumour be correct, are seeking to adulterate their bases with phraseology of a tortuous nature, or to extend them to issues entirely alien to the subject and even difficult either to formulate or to comprehend. The result is a complete deadlock. The result is, also, an immediate prospect of renewed distraints. It was, we believe, the intention of the Japanese Government to refrain from any further collection of house tax pending arbitration. All the units of the foreign communities being now equally situated *vis-a-vis* the municipal exchequer, general

immunity might have been extended to them without unjust discrimination. But suppose that such a course were to-day adopted. Suppose that the Japanese Authorities decided not to call for any further payments pending arbitration. Then what would happen is that the Representatives of the European Powers concerned could postpone all further payments *sine die* by the simple device of continuing to disagree about a basis. They might keep Japan waiting for arbitration, and therefore waiting for the house tax, *ad infinitum*. To escape from that *impasse*, she would be compelled to accept any basis dictated to her. So she must again proceed to collect the tax. There is no practical alternative.

Perhaps those that so strongly denounced her for enforcing the payment of the tax last spring will now begin to see that she acted with common prudence. For had she postponed enforcement in consideration of the prospect of arbitration, she would find herself in a very embarrassed situation to-day. She would be compelled to wait passively until the dissenting Representatives were graciously pleased to formulate a common basis, the arrears of house tax accumulating all the while; or she would have to say, "Excellencies, formulate any basis that seems good in your eyes. I will accept it to get out of the deadlock, since otherwise I stand condemned to the certainty of never collecting any house tax at all."

We stated above that the problem of protest by the individual tax-payer has undergone a change. Such a protest seemed to be mere frivolity after the matter had been taken out of the hands of the individual and placed in those of his Representative and the Japanese Government; in other words, after arbitration had been agreed to. But arbitration has now ascended into the clouds of bewildered or nervous diplomacy. Everything is uncertain and the individual must look out for himself.

THE CAREER OF LORD SALISBURY.

In *Men and Women of the Time* will be found the following brief resume of the varied career of the Marquis of Salisbury, who at the age of 73 has just resigned the heavy burden of the Premier-ships of the English Cabinet:—

Salisbury, Marquis of, The Most Hon. Robert Arthur Talbot Gascoigne-Cecil, P.C., K.G., D.C.L., Minister and Secretary of State for Foreign Affairs, is the eldest surviving son of the 2nd Marquis of Salisbury, by his first wife, the daughter, and heir of Bamber Gascoigne, Esq., born at Hatfield in 1830, was educated at Eton and at Christ Church, Oxford, where he graduated and was elected a Fellow of All Souls' College (1853). In 1853 he was elected M.P. for Stamford, and he represented that borough in the Conservative interest until his succession to the marquise on the death of his father, April 12, 1868. While in the Lower House he was known as Lord Robert Cecil, until the decease of his elder brother on June 14, 1865, when he assumed the courtesy title of Viscount Cranborne. His lordship took an active part in all public measures which affected the interests of the Established Church, and in the chief political questions of the day, and he was a frequent contributor to the *Quarterly Review* and to other periodicals. In Lord Derby's third administra-

tion he was, in July 1866, appointed Secretary of State for India, which post he resigned on account of a difference in opinion respecting the Reform Bill, March 2, 1867, when two other Cabinet ministers, viz., General Peel, War Secretary, and Lord Carnarvon, Colonial Secretary, also gave in their resignations. On Nov. 12, 1869, he was elected Chancellor of the University of Oxford, in succession to the late Earl of Derby. In 1871-72 he and Lord Cairns, as arbitrators, conducted a long investigation into the complicated affairs of the London, Chatham, and Dover Railway Company. His lordship was again appointed Secretary of State for India when Mr. Disraeli returned to office in February, 1874. When, at the close of the war between Turkey and Servia, differences arose between the former power and Russia, the Marquis of Salisbury was sent as Special Ambassador to the Sublime Porte, and he and Sir Henry Elliot acted as joint Minister Plenipotentiaries of Great Britain at the Conference of Constantinople. His lordship left England Nov. 20, 1876, and, *en route*, visited Paris, Berlin, Vienna, and Rome. The progress towards agreement made at the preliminary meetings held at the Russian Embassy in Constantinople were so satisfactory that the formal Conference, at which the joint proposals of the Powers were pressed upon the Porte, was opened on December 23. At the same time the new Constitution of the Ottoman Empire was formally promulgated by its author, Midhat Pasha. The Marquis of Salisbury really took the place of leader at the Conference, which held altogether seven plenary meetings. On Sunday, Jan. 14, 1877, he had an audience of the Sultan, at which Sir Arnold Kemball acted as interpreter, and pressed upon his Majesty the two points on which the two Powers intended to insist, informing him that if they were not accepted the Ambassadors would immediately leave Constantinople. These two proposals were, that there should be a mixed Turkish and International Commission of Supervision, and that the first appointment of the Governors should be ratified by the Powers. On Jan. 18 a special meeting of the Ottoman Grand Council was held, and about 140 Mussulmans and about sixty leading Christians were present. The proceedings lasted two hours, and were opened by Midhat Pasha. With one dissentient voice the Council were unanimous in insisting on the rejection of the proposals of the Powers. The Conference held its last sitting on January 20, and immediately afterwards Lord Salisbury left for England. On April 2, 1878, he was appointed Secretary of State for Foreign Affairs, in the room of the Earl of Derby, resigned, and he at once wrote a memorable despatch, in which he clearly enunciated the policy of the Government with regard to the Eastern Question. He and the Earl of Beaconsfield soon afterwards were the representatives of Great Britain at the Congress of Berlin, and on their return to London they met with the most enthusiastic reception at Charing Cross, July 16, 1878. The Queen invested the Marquis of Salisbury with the Order of the Garter, July 30. On August 3 he and the Earl of Beaconsfield received the freedom of the City of London, and were afterwards entertained at a grand banquet at the Mansion House. He went out of office with his party after the defeat they sustained at the general election of April, 1880. At a meeting of Conservative Peers held on May 9, 1881, after the death of Lord Beaconsfield, the Marquis of Salisbury was elected to lead the party in the House of Lords. Since then his career has been identified with that of the Conservative party. He opposed, but finally accepted the Irish Land Act of 1881; he vigorously criticised Mr. Gladstone's Egyptian policy; he carried the rejection of the County Franchise Bill in 1884; he represented the Conservatives at the memorable conference between the opposing leaders, which led to the framing of the Redistribution Bill of 1885. On June 9 of that year Mr. Gladstone was beaten on a Budget vote, and resigned, and Lord Salisbury took office as Premier. The principal events of his short tenure of power were the annexation of Burma, and the re-opening of the Eastern Question by the revolution in Eastern Roumelia and the Servo-Bulgarian war; England supporting Prince Alexander by her "friendly" neutrality. After the

general election of November, 1885, Lord Salisbury was turned out on the address at the end of January. He vigorously opposed Mr. Gladstone's Home Rule policy, and after the second general election in 1886 he became once more Prime Minister. When the late Lord R. Churchill's resignation led to the reconstruction of the Cabinet, Lord Salisbury took the Foreign Office, in the place of Lord Iddlesleigh, resigned. In May, 1888, Lord Salisbury introduced a Bill into the House of Lords for the reform of that assembly, and the creation of life peers. The city of Glasgow presented him with its freedom on May 20, 1891, and in July the German Emperor and the Prince of Naples visited him, and were entertained at Hatfield. The general election of 1892 caused Lord Salisbury to go out of office, though his government did not actually resign till they had suffered defeat in the Commons. In February, 1893, Lord Salisbury opened the overhead electrical railway at Liverpool, and in the course of a speech delivered on the occasion, dwelt on the marvellous future of electricity. He is himself an electrician, and has applied it to practical purposes at Hatfield House and on his estates. He is also much interested in chemistry and the whole range of experimental physics, and spends much of his time in his private laboratory. On March 2, 1893, he presided at Oxford, as Chancellor of the University, over a meeting in aid of the building fund of the Radcliffe Infirmary, and spoke on that occasion on the necessity of giving increased attention to the study of medicine. In April, illness prevented him from visiting Belfast to attend great Unionist demonstrations, but he received a number of Ulster delegates at Hatfield, and himself travelled in Ulster in May. In August 1894 he presided over the meeting of the British Association at Oxford, and delivered a notable inaugural address, in which he dwelt on the necessary limitations to scientific speculation. In October 1895 the Liberal Government was defeated on the ammunition question in Committee on Army Estimates, and Lord Rosebery immediately resigned. Lord Salisbury was sent for, and duly formed an administration. His Cabinet, as ultimately constituted, consisted of nineteen members, of whom four were Liberal Unionists. The general election resulted in giving the Unionist Coalition a majority of 150, the strongest Government of modern times. During 1896 Lord Salisbury was much occupied by the conduct of our relations with America in regard to the Venezuelan Boundary dispute, and his conciliatory attitude has since been much appreciated at Washington. Indeed, the present cordial understanding between the two branches of the Anglo-Saxon race is, in great measure, due to Lord Salisbury's endeavours. The Armenian atrocities added very much to the burden of office. The action of Mr. Gladstone and others, who on every occasion vehemently denounced the Sultan, severely handicapped the Government in their efforts to obtain a peaceful solution of the problem. Isolated action on the part of England was strongly advocated, especially by a section of the press, but Lord Salisbury resolutely pursued a policy which enabled him to act in concert with the European Powers, since he held that a European war would follow the isolated intervention of Great Britain. During the Cretan crisis a similar attitude was followed, and Lord Salisbury's policy was very severely criticised. But the chaotic state of the island itself, and the conflicting interests of the Great Powers, rendered forcible action of any single Power very difficult. Upon the outbreak of a conflict at Candia, in which British soldiers were killed and Christian inhabitants massacred, Admiral Noel, in command of the British squadron, bombarded the town, and afterwards sent an ultimatum to the Turkish Governor demanding the ringleaders. His request was speedily complied with, and several of them were executed. Later, a collective note signed by Great Britain, France, Russia, and Italy, demanding the withdrawal of the Turkish troops from the island, was presented to the Sultan, who surrendered unconditionally. The evacuation was completed in November, when Lord Salisbury urged upon the Russian Minister at Constantinople to formally propose Prince George of Greece as High Commissioner

and Governor of Crete. The proposal met with universal approbation, and was ultimately accepted by the Sultan. Affairs in the Far East reached an acute stage during 1897-98. Li Hung-chang, the most influential personage in China, had been sent in 1896 to Europe as an Envoy Extraordinary, and after visiting the various capitals, came to London and received a hearty welcome. During his visit to this country, he went to Hatfield as the guest of Lord Salisbury, and endeavoured, in vain, to get his lordship to assent to an increase of the import duties levied upon British goods entering China. The refusal to accede to the wishes of Li Hung-chang was probably the cause of his hostility to England throughout the Chinese crisis, which was precipitated by the act of Germany in November 1897, when a force of German marines landed at Kiaochau in order to exact reparation of the murder of two missionaries. They made their position secure, and shortly afterwards demanded, and obtained, the port and the territory around it on a lease of 99 years. Russia almost immediately after occupied Port Arthur and Talienwan in a similar manner, and Lord Salisbury had to face a considerable alteration in the balance of power in the Far East. As a set-off against the Russian aggression, Great Britain put forward a demand, which was granted, for the cession of the islands and waters of Wei-hai-wei for the same number of years and on the same terms as Port Arthur had been ceded to Russia. Throughout the Chinese crisis Lord Salisbury was subjected to a good deal of criticism from both side of the House, and also in the press, for not pursuing a more active policy. But the lack of vigorous action was more apparent than real, as among the various concessions secured by his lordship were the opening of all inland waters to navigation to the vessels of all nations: the opening of various treaty ports; the assurance that no portion of the province adjoining the Yangtse-Kiang Valley should be alienated to any other power. The Chinese Government also undertook that so long as British trade continued to exceed that of any other nation the Inspector-General of Maritime Customs should be a British subject. A convention was also signed by which the mainland opposite Hongkong, and the island of Lan-tao and Mins Bay, were secured to Great Britain, the area thus acquired covering about 200 square miles. The consecutive victories in the Soudan, and the capture of Khartoum by Lord Kitchener in 1898 brought into prominence our relations with France and her interests in Egypt, and when a French force was discovered posted at Fashoda a serious situation was created. In September Lord Salisbury pointed out to the French Foreign Office that all the territories which had been subject to the Khalifa had passed by right of conquest to the British and Egyptian Governments, and that H.M. Government did not consider this right open to discussion. Lord Salisbury also insisted upon the withdrawal of the French force as a condition precedent to negotiation on the matter. His lordship had the unanimous support of the country on the question of the evacuation of Fashoda by the French, and ultimately a satisfactory solution of the difficulty was arrived at by which the French Government relinquished all claims to the Nile Valley in consideration of concessions made to them in the Niger Hinterland. During 1898 Lord Salisbury was obliged for some weeks to give up his duties and go abroad on account of his health, which for some time had given his friends much anxiety. The duties of the Foreign Office devolved upon Mr. A. J. Balfour during his absence. The Marquis of Salisbury is a member of the Council of King's College, London; Lord Warden of the Cinque Ports, and Constable of Dover Castle; High Steward of Great Yarmouth; Elder Brother of Trinity House, and Hon. Colonel of the 4th Batt. of the Bedfordshire Regiment and of the Hert's Militia. For many years he was Chairman of the Middlesex Sessions. Lord Salisbury's tenure of office during the Jubilee year of the Queen's reign will be memorable in his lordship's family for the honour which her Majesty paid him by going in person to visit him at Hatfield. In 1857 he married Georgiana Caroline, daughter of Sir Edward Hall Alderson, Baron of the Ex-

chequer, and niece of the celebrated Mrs. Opie. His eldest son is Viscount Cranborne (born 1861), M.P. for the Darwen Division of Lancashire from 1885 to 1892, and in 1893 returned for Rochester.

"THE CHILDREN'S HOUR."

Under the above title a very pleasant breaking-up entertainment was given at No. 31, Bluff, on Saturday afternoon by the pupils of Miss Gertrude Vincent. The recitations were given in character and the manner in which the children delivered their lines and entered into the spirit of their respective parts spoke volumes for the skill and assiduity, as well as the unwearying patience possessed by their gifted instructress. At the close of the performance—which seemed all too short to the delighted auditors, the prizes won for class-work and the recitation prizes—which were awarded as the result of a *plebiscite* among the spectators—were distributed by Mr. C. Griffin, after a witty speech of introduction. Lovely baskets of flowers from the children were then presented to Miss Vincent and her assistant, Miss Kenderdine, and a pretty spray to Mrs. W. Karl Vincent, who had assisted in staging the various scenes. The company on adjourning for refreshments, took occasion of the opportunity to inspect the clever drawings—free-hand, landscape, still-life and model—of some of the senior class, their high level of excellence being a surprise to many. We append the programme.

PART I.

RECITATION.... "Meddlesome Matty"..... *Gilbert*.
Misses Box, A. Cain, Tipple, Johnson and R. Tipple.
Masters Blundell and Graham.

RECITATION... "The Quality of Mercy"... *Shakespeare*.
Miss Mabel Austen.

SONG..... "The Last Dream"..... *Cowen*.
Miss Edith Bunting.

SCENE... "The Taming of the Shrew"... *Shakespeare*.
(Portion of Act II. Sc. I.)

Petrucchio Miss Reah Kenderdine.
Katrina Miss Dorothy Austen.

SONG..... "Dolly's Revenge"..... *Anon*.
Miss Muriel Cain.

INTERVAL.

PIANO SOLI... "King Henry VIII. Dances"... *German*.

PART II.

"JULIUS CÆSAR."

(Portion of Act IV. Sc. III.)

DIALOGUE... "Quarrel of Brutus and Cassius"
Shakespeare.

Brutus Miss Georgie Kenderdine.
Cassius Miss Edith Cain.

SCENE..... "Julius Cæsar"..... *Shakespeare*.
(Portion of Act II. Sc. I.)

Brutus Miss Reah Kenderdine.
Portia (Wife to Brutus)... Miss Muriel Cain.

Caius Ligarius (a Conspirator)... Miss Mabel Austen.

Lucius (a Page) Miss Gladys Scott.

SONG..... "Uncle John"..... *J. Weatherly*.
Miss Georgie Kenderdine.

SCENE..... "Julius Cæsar"..... *Shakespeare*.
(Portion of Act II. Sc. I.)

Portia (Wife to Brutus)... Miss Muriel Cain.
Artemidorus (Partisan of

Cæsar) Miss Edith Cain.
Lucius (a Page)... Miss Gladys Scott.

SCENE..... "A Midsummer Night's Dream"
Shakespeare.

(Portion of Act II. Sc. I.)

Fairy Miss Vera Graham.
Puck Master George Box.

MACHADO HOTEL CONCERT.

The first of the subscription concerts arranged for by the proprietress of the Machado Hotel took place on Saturday evening and proved successful in all respects. This hotel, situated on what is known as the New Road to Negishi and the Race Course, enjoys one of the finest sites that could have been secured in the district, being close to and overlooking the highway, which a few yards from this point makes a sudden turn almost on to the sea shore. By the erection of a bandstand on the hill-slope opposite, the music was heard to fine effect in the hotel and on

the ample lawn, and it is not too much to say that everyone of the large assembly present thoroughly enjoyed the evening. The hotel and grounds were beautifully lit up with acetylene lamps. Following was the programme, which the band of the German cruiser *Fuerst Bismark* (present by permission of Admiral Giesler) played during the evening :—

I.

- 1. "Hohenzollern Ruhm!"v. Unrath.
- 2. Ouverture z: "Leichte Cavalerie"v. Suppé.
- 3. Goldblondchen "Characterstück" v. Eibenberg.
- 4. Sarastro Arie: "Zauberflöte"v. Mozart.
- 5. "Rosen aus dem Süden" Walzerv. Strauss.
- 6. "Musikalisches Wandelpanorama" Potpourri.....v. Fetras.

II.

- 7. "The Handycap" Marschv. Rosey.
- 8. Ouverture z: "Stradella"v. Flotow.
- 9. Pilgerchor: "Tannhäuser"v. Wagner.
- 10. Jung Werner's Abschiedslied "Behüt dich Gott"v. Nessler.
- 11. "Immer oder nimmer" Walzerv. Waldteufel.
- 12. Potpourri: "Zigeuner Caron"v. Strauss.

YACHTING.

The 39-raters, seven of them, started at one o'clock on Saturday afternoon for a race to Uraga, the cruisers starting a quarter of an hour later for the same point. The wind was light, south-easterly, and all the craft carried gafftopsails and jibtopsails, *Maid* sporting her fine new suit of sails and looking very handsome indeed. *Mary* crossing the lee end of the line soon ran past the others and was first out of the harbour entrance, *Maid Marion* 40 seconds astern, *Spray* next. After passing the Lightship *Mary* stood in, the others holding out into the bay, and when they disappeared she seemed to be far to windward of everything. In the result *Maid Marion* gave up, the times of the arrival of the leading boats at Uraga being *Mary* 5.17.00; *Kingfisher* 5.26.00

Following were the times of arrival at Uraga and corrected times :—

	Finish.	Corrected.
	h. m. s.	h. m. s.
<i>Mary</i>	5.17.00	5.18.00
<i>Kingfisher</i>	5.27.00	5.24.00
<i>Harbor</i>	5.56.45	5.50.45
<i>Maid Marion</i>	did not finish.	
<i>Ahorigune</i>	7.25.15	6.50.15
<i>Spray</i>	7.15.05	6.45.05
<i>Wanderer</i>	7.27.35	6.37.35

Mary thus wins the Lady Members' Cup and *Kingfisher* takes the John Gillon Cup.

The cruising class started at 1.15 to race to Uraga for the "Asagao" Cup and other prizes. In this case the sport resulted as follow :—

	Finish.	Corrected.
	h. m. s.	h. m. s.
<i>Sevanhild</i>	7.08.47	7.08.47
<i>Dainyo</i>	6.42.45	6.42.45
<i>Mosquito</i>	7.36.15	7.06.15
<i>Surprise</i>	7.45.10	7.10.10

The first prize, that is the "Asagao" Cup, was won by *Dainyo* while *Mosquito* took the second, a Club prize.

The 21-raters also raced over a 7-mile course, for the "Wettinge" Cup and other prizes with the following finishing times :—

	finish.	Corrected.
	h. m. s.	h. m. s.
<i>Pele</i>	4.04.25	4.04.25
<i>Edna</i>	4.09.55	4.09.55
<i>Stella</i>	4.41.10	4.30.03
<i>Vixen</i>	4.17.20	4.13.51
<i>Nandeska</i>	4.14.30	4.10.01
<i>Sodeska</i>	4.18.40	4.15.11
<i>Wettinge</i>	4.17.10	4.11.06
<i>Bonito</i>	4.25.05	4.16.13

The first prize therefore goes to *Pele*, the second to *Edna*, and the third to *Nandeska*.

The 12-raters also raced and *Thelma* won against *Madaleine*, only two boats competing.

The House of Assembly of Natal has decided to present the Imperial Navy with a first-class cruiser. It was originally arranged to announce the gift during the Coronation festivities, but the newspapers got wind of the secret and discussed it.

LITERARY GOSSIP.

The fateful name "Ahana," ("The Dawn" of the Vedic myths) which is the title of a novel by Mr. K. M. Edge, about to be published in Unwin's Colonial Library, is given by an old priest to a child saved from the wreck and carnage of the Indian Mutiny, and brought up among Eurasians. The story is dated some twenty years after the great rebellion and its scenes are laid chiefly in the half-ruined colony of Phuta Shanr, an offshoot of the old city of Amanabad on the Owbara.

Mr. Unwin is publishing in his Colonial Library a book by Mr. Alfred Kinnear, the well-known London journalist, entitled "Across Many Seas." It is a volume of reminiscences of travels in all parts of the world during the last forty years, and throws many interesting sidelights on the history of the British Empire during that period. Experiences in America; India, China, Africa (both West and South) are included, and the book closes with the return from their Imperial trip of the Duke and Duchess of York.

A good story in connexion with Bret Harte is told by the *People's Friend*. He had not been in Scotland three months before he met with a gun accident, which happily did not prove as serious as was at first anticipated. In a letter written from Innellan, the quiet, unassuming little watering-place on the Clyde, to his friend Pemberton, he says: "At present I am invisible, and have tried to keep the accident a secret. When the surgeon was stitching me together, the son of the house, a boy of twelve, came timidly to the door of my room. 'Tell Mr. Bret Harte it's all right, he said; 'he killed the hare.'"

A gentleman recently advertised for the first edition of "The Ring and the Book," and the replies received give a general indication of the value set upon the four-volume edition by the trade and the public. The highest price asked was two guineas for the four vols., 12mo, 1868; the lowest 10s. and 10s. 6d. Other prices were 35s., 24s. 6d., 28s., 25s., 37s 6d., 29s., and 15s. These prices would have amused Browning very much. If there is too much uniformity in the published price of a book as issued by the publisher, certainly the second-hand bookseller makes up for it.

The death is announced of Mr. S. M. Livingstone, medical and University bookseller, of the firm of E. and S. Livingstone, South Bridge, Edinburgh. He held the office of his Majesty's Unicorn Pursuivant for Scotland. It fell to the brothers Livingstone to introduce some of R. L. Stevenson's early work into the world, as contributor to a University magazine. Stevenson says, when was decided to found a University Magazine, that "a pair of little, active brothers—Livingstone by name, great skippers on the foot, great rubbers of the hands, who kept a bookshop over against the University buildings—had been debauched to play the part of publishers." The yellow-covered periodical ran for four months, and "died without a gasp." One of the papers, "An Old Scotch Gardener" in "Memories and Portraits," is reprinted from the "College Magazine."

Mr. Louis Becke's new story, "Breachley, Black Sheep" is just being published in Unwin's Colonial Library. Its hero is a rough Colonial boy who, without inherent wickedness, is handicapped from the outset by his environment. His susceptibility to female beauty proves his frequent undoing till the ennobling and elevating influence of one woman saves him at last; and the redemption of his comrade Brandon and himself is told with much sincerity and simplicity of language. From the shores of Australia, away from the rough life of the Queensland cedar-getters in the northern rivers of that Colony, we are taken to California, and thence to the South Seas. The book gives a picture of social life in San Francisco, clear and vivid in its truthful colouring and culminating in a tragedy. Yet although the reader will be held by the staring grimness of many of the episodes in the book, there are some intensely humorous

situations; particularly in that portion which narrates Breachley's school-days in New South Wales. In brief, Mr. Becke has surpassed all his former work by this extraordinary but truthful tale.

Mr. T. Fisher Unwin is issuing in his Colonial Library a book called "The Epistles of Atkins." Its author, Mr. James Milne of the London *Daily Chronicle*, is already known for a *Memoir* of Sir George Grey, the famous pro-consul, and for a popular history of the Gordon Highlanders. The book is an effort to show on his own evidence, what the feelings, thoughts and experiences of the common soldier are in actual warfare, under modern conditions. The materials for this purpose are drawn from the many remarkable personal letters which British soldiers wrote home when the campaign was new, when its engagements were large affairs, and when the fighting man was impressionable. What Tommy Atkins has to tell us of the psychology of battle—for that is the note all through—is grouped, analysed and thrown into the form of a light, connected narrative. The volume will have illustrations from war sketches.

Another book Mr. T. Fisher Unwin is publishing in his Colonial Library is a life of Captain John Brown, of Harper's Ferry, the anti-slavery hero, whose name is familiar to most people from the lines :—

John Brown's body lies a mould'ring in the grave,

But his soul is marching on.

A stirring career was his, and a tragic death. On the night of October 16th, 1859, he seized the arsenal at Harper's Ferry, Virginia, at the head of a small band of followers, with a view to arming the negroes and inciting an insurrection. He was captured on October 18th, tried by the Commonwealth of Virginia and executed at Charlestown on December 2nd, 1859. Mr. John Newton, Brown's biographer, has been at pains to inform himself from every available source upon which it was possible to draw. The result is a most exhaustive work, in which the part Brown took in the Kansas border wars, all his preparations for the surprise at Harper's Ferry, and what occurred there, and his trial, are fully related.

Human Nature, a Revelation of the Divine: a Sequel to "Studies in the Character of Christ," by Charles Henry Robinson, M.A., Editorial Secretary to the S.P.G., and Hon. Canon of Ripon, was published by Messrs. Longmans, Green & Co., on May 15. The volume is intended as a sequel to the Author's "Studies in the Character of Christ," the object of which was to show that the existence of this character, as portrayed in the Gospels, is the strongest evidence that can be adduced in support of the Christian Faith. The *first part* consists of further "Studies" in the character of Christ. In these the Author has tried to develop the former thesis, and, at the same time, to discuss some of the objections which this line of argument has called forth. The *second part* is an attempt to show that the argument for the inspiration of the Old Testament rests upon internal, rather than upon external, evidence, and is of a similar kind to that previously considered in reference to the New Testament; that in both cases the unique character of the revelation of God and of man, which they contain, is the one convincing proof of their divine origin. The *third part* contains Studies in Worship, and consists of addresses which have been given, on several occasions, at Quiet Days for Clergy. The object of the first two sections is to show that human nature is a revelation of the divine; the object of the last is to dwell upon the natural outcome of this revelation. As the Author says: "All true worship involves a suggestion of the Incarnation, and is, whether consciously or not, a looking out and demand for it; and conversely, the study of God, incarnate in human nature, should tend to make worship more intelligible and therefore more real. This fact, viz. that worship is only possible on the assumption that there is something in the worshipper akin to that which he worships, has been recognised alike by heathen and by Christian teachers."

EUROPEAN TOPICS.

There has just died at Ipswich a Miss Butler, who, according to the *East Anglian Daily Times*, was a lineal descendant of Oliver Cromwell, through the Protector's third son Henry.

As a result of the Atlantic shipping "combine" and Messrs. Harland and Wolff's connexion therewith, the Works Committee of Belfast Harbour Board recommend the construction of a large new graving dock at Belfast. The cost is estimated at between £300,000 and £400,000, and it is understood that half of this amount will be taken up in harbour bonds by representatives of the Morgan "combine."

Mr. Chamberlain, in the House of Commons on June 2nd, in answer to Mr. James O'Kelly, said—The Governor-General of Canada has, on the advice of his Ministers, disallowed certain Acts of the Legislature of British Columbia which imposed serious disabilities on Japanese and the subjects of other friendly Powers. His Majesty's Government have seen the decision of the Dominion Government with great satisfaction.

The *Figaro* publishes an account of an interview with Count Matsukata. "The Japanese ex-Premier," says the *Figaro*, "declared he came to France more desirous than ever of seeing the bonds uniting the two countries drawn closer. The attachment of Japan to France was sincere. The Emperor had instructed him to inform M. Loubet in clear terms of his (the Emperor's) sentiments of friendship for France, and those sentiments were shared by the whole Japanese people."

The largest floating dock ever built has just left Shields Harbour for Bermuda. The *Newcastle Chronicle* states that it is 545 ft. long, and its lifting capacity, 15,500 tons, but by using the shallow pound this can be increased to 17,000 tons. The iron walls are of sufficient height to allow of a vessel drawing 32 ft. to be taken on the keel blocks. This new dock will take the place of the old floating dock which has been stationed at Bermuda for the past 30 years.

The culminating incident of the Zulu war is recalled to mind by the death of Major-General R. Marter, late of the 1st (King's) Dragoon Guards, for he it was who captured Cetewayo, the Zulu king, in the Ngome forest, and brought him to Ulundi. At the time of his exploit he was commanding a squadron of the Dragoon Guards, a company of the Natal native contingent, and a few men of irregular mounted troops. Another distinguished officer has passed away in person of Colonel H. Worsley, formerly Commandant of the 7th Bengal Native Infantry, who fought in the Indian Mutiny, and led his Indian regiment at the battle of Tel-el-Kebir during the expedition against Arabi Pasha in 1882.

The design and style of the new mace of the London University is evolved from a wand or staff of office, and is made entirely of hand-beaten, wrought, and "repoussé" silver gilt, with panels of translucent and "champ-levé" enamel. The head is surmounted by a Royal Crown, the orb of which is of lapis lazuli. Inside the Crown, fitting as a lid, incised in a line of mediæval characters, are the Royal arms, with the letters, "E.R. VII." The head is formed by four crowned and winged figures kneeling and holding shields. Two of these portray respectively the Arms and the Badge of the University, and the other two set forth the dates of its Foundation (1836) and of its Re-organisation (1900).

Another Mycæan palace has been discovered by Professor Halbherr, of the Italian Archaeological Mission at Hagia Triada, in the neighbourhood of Phæstos. Excavation revealed a portion of the basement, a gate, and walls decorated with frescoes, one of which presents a series of spirals interlaced with flowering plants. Among the objects already found are 300 Mycæan seals with characters of the pre-Hellenic Cretan alphabet, a tablet with an inscription similar to those at Knossos, and a number of terra cotta figurines

of the most primitive type. The *Times* correspondent at Candia thinks the place was presumably the country residence of the kings of Phæstos.

The British Consular report on the trade of Leghorn for last year notes that the Japanese coral fisheries have yielded an abundant quantity of good quality, and the coral of Japan is now said to be fully able to compete with the corals of Sardinia and Cape Verde in both quality and price. Large quantities of it have arrived in Leghorn in the past year, and have caused a manufacture in excess of the demand and a consequent fall in prices, especially in the Calcutta market.

A military career of considerable distinction has been brought to a close by the death at Johannesburg of Captain W. Greer. He commenced as a private, and won his commission on the field in Afghanistan. He was with Lord Roberts on the famous march to Candahar, and could boast of having earned four clasps, the same number as the present Commander-in-Chief. He served subsequently in the campaign against Arabi Pasha, and, like Colonel Worsley, whose death we referred to above, also fought at Tel-el-Kebir. Captain Greer, who had nine decorations, and had earned four or five more in the present war, was at the time of his death on the staff of the 8th Battalion Mounted Infantry.

A curious fact which a statistician points out is the tendency of Swiss guide-books to submit to political influences and vicissitudes. Thus, the "Baedeker" for 1844, in the chapter on Soleure, says: "At No. 5, Gurgelgasse, near the post-office, the noble Pole Kosciusko resided during the last years of his life. His remains are interred at the cemetery of Zuschwyl, a quarter of an hour from Soleure, on the right bank of the Aar. Weeping willows shade his tomb. The simple monument bears the inscription: 'Viscera Thaddæi Kosciusko.'" Twenty years later, the term "noble Pole" had given place to "banished Pole," and in 1895, the notice in "Baedeker" had been shortened to the announcement of the mere fact that Kosciusko died at a given address at Soleure in 1817. *Sic transit gloria mundi.*

A detailed examination of the air, snow, and glaciers of Mont Blanc has recently been made by Monsieur J. Binot, and the results have been described before the Paris Academy of Sciences. Freshly fallen snow, Professor Gregory states in the *Leisure Hour*, frequently contains no bacteria whatever; and even in snow which has lain for some time only a few are found. The water formed by the melting of glacier ice was found to be usually pure, but that of the river Arve at Chamonix contained more than 120,000 microbes per cubic inch. Altogether M. Binot examined 121 samples of air, ice, snow, and water, and from them he obtained no fewer than 300 different varieties of microbes. The microbe associated with enteric fever was observed in the beautifully clear and crystalline spring water on the Montanvert road, in such large numbers as nearly 200 per cubic inch. The water appears to be polluted by the herds of cattle which graze on the mountain pastures.

In some English counties, the servant girl question is assuming almost a tragic character in many households. Lancashire and Yorkshire are special sufferers, it appears, from the scarcity of female domestics; between the censuses of 1891 and 1901, the number in employment diminished by over 22,000 in the two counties jointly, although the population considerably increased. What became of the vanished young women, then? There was not any sensible increase of feminine emigration during the decade, nor do the local mills and factories appear to have absorbed a larger number. These are constant drains which vary very little, one year with another, and the same may be said of most other old industries in which women participate. The conditions of domestic service have greatly improved, too; the wage rate is much higher, and the general treatment, especially in "evenings out," is far kinder than used to be the case. No blame attaches, therefore, to the employers in

the aggregate; they value a good servant too highly to part with her without really grave cause. It is possibly, chiefly the false pride engendered by superficial education that brings the honourable calling into disrepute among the class who used to furnish recruits. They imagine, rightly or wrongly, that it is considered "degrading" by the sort of young men whom they would like to marry, and sooner than incur their contempt, they take up with work twice as hard and not half as well paid.

The *Gazette de Mons* states that the youth Sipido, after having suffered a term of imprisonment of 26 months for shooting at the Prince of Wales at the Gare du Nord in Brussels, has been liberated. Sipido passed through Mons on his way to Paris. He stopped at a cafe near the railway station for refreshments, and related that he had earned 140f. in prison making birdcages. Sipido was accompanied by his father.

Prince Henry of Prussia recently recovered an old relic of his family in a singular manner. On board a German warship, a cabin-boy, according to the *Kölnische Zeitung*, showed him a watch belonging to Queen Louise, the Prince's great grandmother, together with a document attesting its authenticity. Fleeing from the French troops in 1806, the Queen had stayed with ancestors of the boy's family, and had given them the watch, which the boy respectfully presented to the Prince. Prince Henry accepted it, and besides making a money payment, has had the boy admitted to the Hamburg School of Navigation.

Although Lord Kitchener was born in Ireland (at Ballylongford, co. Kerry, in 1850) he is in every sense an Englishman, for his father was the late Lieut-Colonel H. Kitchener, of Cossington, Leicestershire, who married Miss Chevallier, of Aspell Hall, Suffolk. The Woolwich Academy had the honour of preparing the victorious general for his military career, on which he entered by joining the Royal Engineers in 1871. From that time his has been one of almost ceaseless activity, and his name has been prominently before the public since he became Governor of Suakin after the Nile Expedition of 1884-85.

"A severe reprimand" was Admiral Lord Charles Beresford's personal description of a letter which he received from the First Lord of the Admiralty. The communication reached the noble lord towards the end of May, but not, as is generally supposed in parliamentary circles, in connection with recent declarations upon the state of the Navy. It refers exclusively to views expressed while he was on full pay. His lordship has sent the following message to the *Daily Mail*:—"It is quite true that I have received my reprimand for things said while on full pay. It is quite right that I should have received such a reprimand, and if I had been at the Admiralty myself I would have reprimanded any officer who had done likewise."

The young Highland officer, whose death in South Africa is so sadly announced just at the hour of England's rejoicing over peace, says an exchange, was the eldest son of Sir Thomas Sutherland, K.C.M.G., chairman of the Peninsular and Oriental Company. It was only in March last that young Eric sailed for South Africa with a draft for the regiment he had just joined—the Seaforth Highlanders. He was a handsome boy, full of promise, who had only left Eton quite recently, and passed straight from Sandhurst to the seat of war. The sympathies of all our readers will be extended to Sir Thomas and Lady Sutherland in their great loss, and the more so that it has occurred just at such a moment of national rejoicing. The circumstances under which the late Lieutenant Sutherland met his death are not yet reported. The official intimation merely says, "Killed near Fredericstad, May 29."

In the House of Commons on May 28th Mr. Weir asked the Under-Secretary of State for Foreign Affairs:—Seeing that the sum of £600 is placed on the Diplomatic and Consular Service Estimates for the salary of a Vice-Consul (Hyogo and Osaka), Japan, will he say at what place the

Vice-Consul performs the duties of his office; and will be state the whole amount expended for consular services at Kobe (Hyogo), including salary of consul, staff and all other expenses.—Viscount Cranborne: As to the first part of the question, the Consular Office is at Kobe (Hyogo), at which port the Vice-Consul is appointed to reside, but the Consular district includes the city of Osaka (the trade of which is only about 3 per cent. of that of Kobe), and the Vice-Consul performs duties there when necessary. The whole amount expended for Consular services at Kobe (Hyogo) is £2,181 per annum, exclusive of travelling expenses and outfits which depend upon the exigencies of the public service.

In reply to Mr. John Hutton, who asked the Secretary to the Admiralty whether his attention had been directed to the efficiency of the shooting of the *Barfleur* and *Terrible*, obtained under the system of instruction invented by Captain Percy Scott, C.B., of the *Terrible*, and whether the Admiralty would issue Captain Scott's models and apparatus to other ships in the Navy, so as to have the system thoroughly tried and reported upon, Mr. Arnold Forster stated in the House of Commons on June 5th that the Admiralty is fully acquainted with the excellent results of the firing on the *Barfleur* and *Terrible*, and with the still better results recently obtained on board the *Crescent* on the North American Station. The Admiralty have recognised the desirability of extending the use of Captain Scott's system, and have taken the necessary steps to supply the apparatus to such an extent as may be necessary.

The Earl of Selborne made a long and interesting statement in the House of Lords on June 6th on the subject of water-tube boilers and the comparative merits of various types of boilers. He defended the course taken by the Admiralty, first in adopting the Belleville boiler, and next in adopting a combination of cylindrical and water-tube boilers. In the course of his speech he referred to the China Station in the following terms:—There are 12 ships on the China Station with water-tube boilers, four of them battleships and the others large and small cruisers. I have been reading only to-day a private letter from the Inspector of Machinery at Hongkong, and he speaks in the highest terms of the machinery of all of them with the exception of the *Glory* which, though it has given a good deal of trouble, is now absolutely efficient. But that again was a case of mismanagement on the part of the *personnel*. Therefore, as a humble layman, and not making any pretence to expert knowledge, I do say that my judgment goes with the judgment of the Boiler Committee—that so far as we can see at present the water-tube principle has come to stay, and that, although the Belleville may probably not be the type which will suit our needs the best, yet we shall work up to a thoroughly satisfactory standard of cylindrical boiler.

The steamer *Telemachus* recently proceeded down Belfast Lough for her trial trip and adjustment of compasses. She is the latest addition to the fleet of China liners owned by Mr. Alfred Holt, of Liverpool, has been built and engined by Messrs. Workman, Clark and Co., (Limited), and is the twelfth vessel constructed by them for the same owner. She is 452 ft. long, 54 ft. broad, and 35 ft. 3 in. in depth, and has a gross tonnage of 7,450 tons. She has been specially designed and constructed as a first-class general cargo steamer for the China trade, and fulfils the requirements for a Board of Trade passenger certificate. The double bottom is of cellular construction for carrying water ballast, two large deep tanks being also arranged at the forward and after ends of the engine and boiler space, suitable for either water ballast or cargo. There are four large holds for the cargo, practically clear of obstruction, and obtained by box girder construction, by which the stanchions are dispensed with. The six large hatches are equipped with 17 powerful steam winches, and 25 strong derricks. A special feature of the vessel is the sternpost and rudder. The foot of the stern frame is cut away, and the upper

part formed of a steel plate of U section. The sternpost is formed of a wrought-steel tube, from which the rudder is hung. After a successful trial the vessel left Belfast for Glasgow and Liverpool, whence she has left on her maiden voyage to the Straits, China, and Japan. Another new steamer, named *Jason*, a repeat of the above vessel, also built by Messrs. Workman, Clark and Co., was launched on May 24th from the Belfast shipyard, and makes the thirteenth constructed for the same owner in these works.

AMERICAN TOPICS.

A remarkably interesting autograph manuscript of John G. Whittier was sold at auction in New York lately. It consists of twenty-two verses of four lines each of his beautiful poem "The Eternal Goodness." Another interesting item in the same sale was a fine four-page letter of Oliver Wendell Holmes, dated December 29, 1855, relating to his address to the New England society and discussing his views of slavery. Still another item of great interest was a letter of three pages written by Washington Irving to Daniel Webster in regard to the former's recent appointment as minister to Spain.

It is understood that Lord Strathcona believes that in ten, or at most fifteen, years Canada will be capable of producing all the breadstuffs required by England. In Manitoba and northwestern Canada—where thirty years ago they were importing the flour they themselves used—there was grown last year 12,000,000 quarters of wheat. There is yet room for many millions of people to grow both grain and live stock, so that granted the necessary emigration and settlement facilities Canada could, as just noted, supply the people of Great Britain with all the necessities and many of the luxuries of life.

The eighty-sixth annual report of the American Bible Society, which has just appeared, is cheerily optimistic. The income of the society shows from each distinctive source of revenue—individuals, churches, auxiliaries, and bequests—a substantial gain for the past year over the year previous. The total receipts for the year 1901-02 was \$433,173. The aggregate of the year's issues was 1,723,000 volumes, of which a little more than one-third were distributed in the United States. The remainder went to foreign mission countries. One recent advance movement of the society has been the establishment of a special agency at Atlanta, Georgia, for the purpose of circulating the Bible among the coloured people of the south. Rev. J. P. Wragg has been appointed superintendent and he is rapidly organizing an extensive force of colporteurs.—*Interior*.

Rev. George H. Hepworth, who died in New York, June 7th, had a remarkable and diversified career. He built up a Unitarian church in Boston with a large congregation, which disbanded a few years ago, after his successor, Dr. M. J. Savage, left it. Dr. Hepworth went to New York in 1870 and was pastor of the Unitarian Church of the Messiah, from which he withdrew after two years, declaring his belief in the divinity of Christ, and organizing the Church of the Disciples, which continued in the Congregational denomination for several years. He was for nearly twenty years connected with the New York *Herald*, writing brief editorial sermons for its Sunday edition. He made an investigation of the Armenian massacres in Turkey a few years ago, bringing home valuable information. As a preacher and author he exercised a large influence for good. He was sixty-nine years of age.

Princeton University has elected a new president in record time. At a meeting of the board of trustees, June 9, Dr. Francis L. Patton, who has been president since 1888, presented his resignation without warning, and within an hour Professor Woodrow Wilson, of the chair of jurisprudence and political economy, was chosen to succeed him as recommended by the retiring president. The reason given by Dr. Patton for his resignation was his desire to devote

more time to literary work. He will remain in the university as professor of Biblical instruction, ethics, and philosophy of religion. Woodrow Wilson, the new president, was born at Staunton, Virginia, in December, 1856. He began his academic studies at Davidson college. In 1875 he went to Princeton and was graduated with high honours from the institution. From Princeton, President Wilson went to the University of Virginia, where he studied law for several years. Afterward he practiced law in Atlanta, Georgia. Leaving his Atlanta law office he went to Johns Hopkins to devote his whole time to his chosen studies. While at Johns Hopkins he wrote his work on "Congressional Government," which was published in 1885. The work has passed through many editions. In 1886 he received his Ph.D. from Johns Hopkins and was professor at Bryn Mawr from 1885 to 1888. In 1887 Wake Forest college, North Carolina, made him an LL.D., and in 1888 he was elected to the chair of history and political economy at Wesleyan university. In February, 1890, he was made professor of jurisprudence and political economy at Princeton. Just before leaving Wesleyan Professor Wilson published his study of contemporary government called "The State."

Though statistics as to the commercial affairs of Alaska are fragmentary in character, the Bureau of Statistics of the Treasury Department declares that in general terms it may be said that Alaska, for which the United States paid Russia \$7,200,000 in 1867, has supplied furs, fish and gold amounting to about \$150,000,000 in value, about equally divided between these three items; that the investments of capital from the United States in Alaska are probably \$25,000,000, with a large additional sum invested in transportation to that territory, and that the annual shipments of merchandise from the United States to Alaska now aggregate more than \$12,000,000, and have aggregated since the purchase nearly or quite \$100,000,000. Meantime, the population has grown from an estimated 30,000 at the date of purchase to 32,052 in 1890, 63,592 in 1900 and an estimated 75,000 at the present time. The number of fur-seals taken on the Pribilof islands from 1870 to 1901 is 2,187,317 (estimated value \$35,000,000), and the value of the seal and other furs taken since the purchase of Alaska by the United States is estimated at about \$50,000,000. The fur-seal industry, which has declined in the last few years, was succeeded by the fishing industry, Alaska now supplying about one-half of the salmon of the country. The value of the salmon pack in Alaska last year is estimated at about \$7,000,000, while the value of gold and silver mined since the purchase is also about \$50,000,000.

One of the most curious schools in the world is conducted at the Waldorf Astoria Hotel, in New York. The scholars are the waiters of that establishment, and Oscar, the chief, is the school-master. Twice a week school meets, and every waiter is expected to attend punctually. Few of the diners at the big hotel know that in each room there are three men whose sole office is to watch the waiters and see that they do their duty by the guests. When they discover a waiter disobeying the smallest rule of propriety they make a record of the infraction in a little book kept expressly for this purpose. This book is then handed over to Oscar, and at the next school session the culprit is called up and shown the error of his ways, and the whole class gets the benefit of a little lesson on the subject.

Bishop Thoburn, testifying before the Philippines Committee of the U.S. Senate said—"England has advanced civilization in the far East. Hongkong and other places were made great points of commerce as well as of civilization. Hongkong is better governed than Chicago and human life is safer there than in Chicago. The greater protection to personal rights in Hongkong than in Chicago is due to the fact that the Government has a stronger arm in Hongkong than in Chicago. As a matter of fact, we all know that in Chicago a man is not safe in walking the streets at night, while he is in Hongkong."

MONTHLY SUMMARY OF JAPANESE
CURRENT LITERATURE.

In our May summary we gave the substance of part of an address delivered by Baron Kaneko to the Bijutsu Kyōkai entitled "My Views on Fine Art," which was extracted from No. 158 of the Report of the Transactions of the Society. In the following number the last part of the address is published, from which we cull the following observations:—Fine Art in Europe since the days when its zenith was reached has gradually declined. To a large extent science has killed it. Photography has superseded drawing and painting as far as the representation of existing forms and appearances goes. It is true that the ideal world still furnishes abundant material to the artist, but no such masterpieces as were produced in ancient and mediæval times are forthcoming now. It was felt for some time in Europe that in order to revive interest in art some new ideas were needed. European artists who visited this country some fourteen or fifteen years ago seemed to see in the works of such artists as Kōrin, Kano and Okyō the very stimulus that was sought in the West, and so there at once arose in Europe and America a school of artists which made Japanese art its model. But as for our artists, instead of keeping to that in which their ancestors had excelled, they began to imitate the European mechanical reproduction of actual objects, that is, they undertook to compete with photographers and of course usually failed. So that in this as in other things we have found ourselves putting on the clothes which Europe has cast off. While the West was sighing for a revival of the ideal in art, we were content with the mechanical and the formal. It seems to me that the styles known as the Tōsa, Kano, Maruyama, Shijō and Unkoku should each be studied with undivided attention and should each serve as models for imitation. I do not mean it to be inferred that I think there are no defects in these styles, but what I maintain is that each of them possesses qualities not found in the same degree of perfection elsewhere and which from the point of view of the lover of fine art it is most desirable to preserve. In the study of the works of the ancient artists, and in endeavouring to imitate them, care must be taken not to mix up the design and the form of the picture. There are not a few pictures whose design is very superior, but whose form is grotesque and ridiculous. I am very fond of what are known as the Taiga-dō pictures, but they are extravagant beyond description. Where in the whole world are such tigers and such men to be found as one sees represented in these sketches? But in originality of conception and, in certain cases, sublimity, they serve as excellent models for modern artists. Mr. Kubota Beisen, in comparing European art with Japanese, says that the religious pictures which are so popular in the West are liked because they represent the actual feelings of human beings, but the Japanese chief works of art are purely ideal. In them the gods assume a superior form to that given to the Deity in the anthropomorphic representations of the West. With this I do not agree altogether, for our representations of divine beings, it seems to me err to a still greater degree than do those of Europe. They are fantastic and not calculated to excite admiration. . . . In worshipping the ideal excessively Japanese artists have grown to think that no attention need be paid to form at all, but Europeans can never be brought to admire whole-hearted pictures that ignore the most fundamental principles of proportion, contour and perspective.

* * *

Under the title of "Abuses connected with Foreign Doctors," the *Nipponjin* says that foreign doctors encourage extravagance among the Japanese and frequently give orders which, if carried out, would run whole families into debt. Where 50 or 60 *sen* a day is all that a poor family has to live on, to order so many pints of milk and so many eggs, or chicken soup, and the like, spells ruin for the rest of the family. In addition to orders of this kind, a change to Atami or to Nasunohara is recommended without regard to the expense involved in such trips. The fact is that

compared with Japanese ways of living foreign ways are all extravagant, and most foreign doctors fail to realise that the stereotyped orders about nourishing food and good air in the majority of cases can't be carried out at all in this country.

In the same magazine Mr. Fukumoto Sei discusses the character of the inhabitants of Kyūshū in general and that of the Chikuzen folks in particular. He begins with the assertion that national character is to a considerable extent the product of climatic influences and racial peculiarities. In Japan, says Mr. Fukumoto, the land is rich, the climate pleasant, and living cheap. Hence our people are fond of pleasure and an easy life. The scenery is beautiful. Hence our love of fine art and of poetry. But nature occasionally grows fierce and the land is swept by gales, deluged with floods, shaken by earthquakes, or buried in lava from live volcanoes. So it happens that Japanese human nature has its fits of violence. Mr. Fukumoto's theory is that the inhabitants of Kyūshū for the most part migrated from Luzon. He says that the fundamental characteristics of the race are clearly exemplified in the Chikuzen people, the chief of which he takes to be a love of ornamentation and great disunion.

* * *

In the *Kyōiku Kōhō*, Mr. Mitsukuri Gempachi gives us a short account of the great change which public opinion in Germany has undergone in reference to the career of Napoleon I. The following is the substance of what Mr. Mitsukuri has to say on this subject:—After an interval of seven years, when a short time ago I visited Europe, nothing struck me more than the change which public opinion had undergone in reference to Napoleon I. When I first went to Europe the Franco-Prussian war was fresh in the memories of the Germans, and in Germany Napoleon was denounced as though he were the Devil incarnate. The reason of this was that at that time the Germans were not very sure of their union and they were very apprehensive that France would retaliate sooner or later. It was to their interest to keep up a hatred of the French nation and its great hero Napoleon I. But now that the danger of German disintegration is past and the probabilities of another Franco-Prussian war are extremely remote, German feeling towards the French has undergone modification, and, in its stead, anti-English feeling has been fanned into a flame. It is no use pretending that there is any rationality or justice about this anti-English feeling. It is the result of envy of England's colonial expansion and commercial prosperity. The adverse German criticism of England's method of conducting the Transvaal war was actuated by the same spirit of jealousy. Of course it may be said that such revulsion of feeling as frequently takes place in Germany is extremely unscholarly. One expects this among uneducated people, but not among scholars. But it would seem that European scholars are by no means proof against the inroads of national feeling and hence it is that frequently their learned discussions are quite unreliable. Formerly it was contended in Germany that Napoleon was an ambitious despot who was actuated by no better motive than a love of conquest, but now an entirely new explanation is given of his conduct. It is said that French colonial expansion was the one great object he had in view in all his wars. He endeavoured to take Egypt with a view of driving the English out of India and founding a great empire in the East. The defeat of the French at Trafalgar and subsequent events forced him to abandon all attempt at the realisation of his purpose, but there is no doubt, say recent German writers, that the great ambition of his life was a perfectly lawful one, namely, the establishment of French predominance throughout Asia and Africa.*

* * *

Dr. Takaki Kenkan has for many years past figured as an earnest champion of the improvement of Japanese physique. In the *Kyōiku Kōhō* is published the first part of an essay which the learned Doctor has contributed on this subject.

* The late Professor Seeley, it may be noted, expressed this opinion more than 20 years ago in his lectures on the Expansion of England.—(WRITER OF SUMMARY.)

Much of what he says has been said before, but, he observes, progress is lamentably slow, and the only hope of effecting anything is by persistently hammering away at the same theme. Here is the gist of what Dr. Takaki has to say in the first of his articles:—There is in all countries a close connection between national greatness and physical development. Where there is general bodily weakness it must tell on a nation's chances of successful competition with other countries. The French are not as a people so robust as the Germans. The Anglo-Saxons are as a race better developed than any of their rivals, and hence it is that they predominate everywhere and in all things. But when we come to examine the physical status of the Japanese and Chinese, we find it is very low. Considering our condition as regards health of mind and body, we cannot but be conscious that in mind most of our people are still back in the feudal ages. They want to live in idleness. One of the chief objects of our students when at school is subsequent idleness or the occupation of some post of honour that involves next to no labour. Students hurry from school to school without knowing what kind of life they are going to follow after leaving the University. Among the hundreds of graduates that leave the University, those who are able to support themselves are comparatively few. In the whole country there are only 23,192 students in the various kinds of existing business schools. The whole nation seems bent on entering Government service. Among civilians there are 4,448 officials with *sōnin* rank, then there are 715 military officers and 602 naval officers, making a total of 5,765. But if it be asked how many there are whose one desire is to become *sōnin*, the answer is, the whole of the students throughout the country. Numbers of men after graduating are glad to accept 10 or 12 *yen* a month as policemen or to become agricultural labourers.†

In the *Chūō Kōron* Dr. Takaki Kenkan dwells on the evils connected with the Japanese habit of squatting on *tatami*, which he treats under six headings as follows:—(1) The habit of sitting on mats interferes with the growth of the lower half of the body. Ordinarily development goes on till about the age of 23. The posture assumed by the Japanese stops the free circulation of the blood and hence checks growth. It is on this account that the legs of Japanese are about an inch and a half shorter than they ought to be. As a proof of this I may quote the fact that the legs of boys who have been habitually sitting on chairs in the Middle Schools are on an average 2½ inches longer than those of old men whose whole lives have been spent on mats. Were the habit of squatting to be entirely abandoned, our soldiers would undoubtedly rank second among the world's armies in the matter of length of body. (2) This shortness of the legs lessens the rate of motion. An ordinary Japanese finds it hard to keep pace with a foreigner in walking. Seeing that our 45 million people are all short-legged, we are in danger of falling behind in the race of life in a variety of particulars. (3) The amount of work that can be performed is reduced by shortness of stature. A short man can not reach as far as a tall man, and so in the use of various implements he stands at a disadvantage.‡ Tools and implements have to be altered to suit him. (4) The effort to rise from the squatting posture is far greater than that required when chairs are used. This is so much waste of energy. (5) The practice of sitting on the mats contributes to idleness. Squatted on a cushion with a tobacco tray in front of him, the ordinary Japanese is disinclined to exert himself in any way. (6) The use of mats is most uneconomical. Eight mats cost about 16 *yen*. The pine wood planks beneath them cost 4 *yen* 29 *sen*, making a total of 20 *yen*

† It will be seen that what we have given above is all introductory to the main subject. Several months have elapsed since the article appeared, but no sequel has been published. This is a habit that certain magazines habitually practise.—(WRITER OF SUMMARY.)

‡ The use of the foreign horse plough may be cited as an instance of this, where a short man stands at a great disadvantage.—(WRITER OF SUMMARY.)

29 sen. If these mats be re-covered once a year, an outlay of 8 yen is required. If the money thus spent, together with 10 per cent. interest thereon, be considered, on the supposition even that an eight-mat room is occupied by 4 persons, it will be found that at the age of 40 every Japanese has laid out on his mats and the floor beneath them a sum of 1,011 yen 60 sen and 7 rin. If, following foreign fashion, a room were constructed of planks, the same size as the eight-mat room, it could be done for 11 yen 20 sen. A table and 4 chairs would cost another 11 yen 20 sen. The total, reckoned at 10 per cent. for 40 years, would make a sum of 230 yen 42 sen and 2 rin.* Taking the population of Japan at 42 millions and reckoning 2 mats for each person, we find that the cost of supplying the nation with mats for 40 years would be 43,499,101,000 yen; whereas they could be provided with foreign-style rooms for 9,908,146,000 yen. So that the gain by adopting the foreign style would be 33,590,000,000 yen. As regards dress, the habit of sitting on mats injures clothes to an unnecessary extent, says Dr. Takaki.

* * *

In No. 37 of the *Keisei* appears a letter from the editor's brother, Mr. Matsumura Shōnen, who has been for some little time past studying entomology in Germany. He, like Dr. Anezaki, whose letter to the *Taiyō* was noticed in these columns some little time ago, has been unfavourably impressed with what he has encountered in Germany. He says that though the country can boast of a very large number of scholars, the majority of them are idle; that as regards morality Germany is in a far worse state than in Japan; that even in the case of youths of 14 or 15 there are few who have kept free from women. And that as for the number of loose women to be seen on the streets, it is quite beyond the conception of ordinary Japanese. Mr. Matsumura comes to the conclusion that no very young men whose education is incomplete should be sent to Germany. At the present time, writes Mr. Matsumura, I am at Buda-Pesth examining and assisting in the arrangement of insects in the Museum here. The Hungarians were originally Orientals, and so I find in the customs of the people much that resembles our Japanese ways. Dr. Shiratori Kurakichi is here for linguistic investigation. He has found that the Hungarian and Japanese languages resemble each other very closely. Subjoined are a few illustrations of this:—Japanese, *shio* (salt); Hungarian, *s'o*. Japanese, *mitsu* (honey); Hungarian, *mez* (pronounced *meetsu*); Japanese, *mizu*; Hungarian, *viz* (pronounced *beezu*). Japanese, *koro* (time); Hungarian, *koru* (pronounced *koru*); Japanese, *o-tcha* (father†); Hungarian, *afya* (pronounced *at-cha*); Japanese, *otooto* (younger brother); Hungarian, *ocsa* (pronounced *otcha*†). Magyar is used in all the chief places of amusement, and so strong is the anti-German feeling here that the use of German in such places would immediately cause a riot. The Hungarians have never forgiven Russia for the part she played in 1848, and hence they welcomed the Anglo-Japanese Alliance, which they interpret as anti-Russian, and their friendliness to our country at the present time is very great. Mourning over the fate of his country, a Hungarian scholar said to me: "Would that our ancestors had never entered Europe! Had we kept to Asia as you have, we should to-day be an independent people. Since we entered Europe we have been treated like a stepson; we have been longing for liberty and struggling to obtain it, but have not yet succeeded."

Commenting on his brother's letter, Mr. Matsu-

* Dr. Takaki leaves out of consideration the fact that the *tatami* are used as beds by the Japanese; so that to the above calculation the cost of a foreign-style bedstead must be added. In other respects his estimate of the cost of providing mats seems to us too high. One yen per mat for covering is excessive. —(WRITER OF SUMMARY.)

† In colloquial *otaban* becomes *otchan*. —(WRITER OF SUMMARY.)

‡ The Kaga people use the word *o-jia* for younger brother, which sounds exactly like the Hungarian *ocsa*. —(WRITER OF SUMMARY.)

mura Kaiseki says that steps should be taken to cement still closer the bonds of fellowship between ourselves and the Hungarians. A thorough study of their customs and institutions should be undertaken.

* * *

In one of the fortnightly supplements published by the *Kokumin Shinbun* appears an article from the pen of Dr. Inoue Tatsujirō on "The Deficiencies of Chinese Civilization," of which the following is the gist:—Of late Chinese and Korean students have been arriving in increasing numbers in this country for education, and the question of our responsibilities as regards the neighbouring countries from which these students come should engage the attention of all thoughtful people. In order to understand exactly what is wanted in China it is desirable to discuss the nature and deficiencies of her civilisation. These I shall now proceed to enumerate. (1) *The idea of right is wanting.* Though the term *kenri* was used in very ancient times in China, the modern signification of that term was not known. 權利, *kenri* was used in the sense of 權勢, *kensei*. In Chinese life the individual is subordinated to the family. Though loyalty, filial piety and charity are much praised in China's standard works, there is nothing about the value of independence of spirit and individual liberty. The Chinese have no adequate conception of what is involved in personality. It is astonishing that after 3,000 years of thought they should never have formed an idea of what is involved in the rank borne by each individual citizen. Most of the existing corruption in the country is to be traced to this defect. Not having realised what personal rights are, they have no scruples about robbing their neighbours. Uprightness and honesty proceed from the consciousness that individual rights, one's own and those of others, are sacred. (2) *Scientific ideas are wanting.* Scientific development is discouraged by the very nature of the Confucian morality, which is intensely conservative and condemns in an indirect way all searching after new things or new methods. (3) *The logical faculties have not been developed.* Such Chinese philosophers as attempted to found a school of rationalists, men like Suntsz, Puhtsz, Hwuitsz, Kungsun-lung and Hanpaitsz were all regarded as heretics by the nation and next to no interest was taken in their writings. Even the logic found in their works is very crude. The Chinaman no doubt does reason on experience to a certain extent, but his reasoning is lacking in precision and in minuteness. Perhaps one of the reasons why minuteness and accuracy of expression have not been developed in China is to be found in the character of the written language. Their ideographs undergo no inflections whatever, and so it is impossible to express in Chinese delicate shades of meaning. The more classical the style in China the less logical are the ideas. It is quite impossible to express minute Western thought in thoroughly correct ancient Chinese—the only language that is highly thought of by the educated classes. In order to convey new ideas to the people the use of *kana* or of Romaji will have to be resorted to, and a more pliable style of composition adopted. (4) *The idea of union and co-operation is lacking.* Though the Chinaman has no idea of individual rights, he has very pronounced opinions as to individual profits. At first sight this might appear to be incompatible with the strong family feeling which exists; but it is not so. (5) *The idea of progress is wanting.* It would not be true to say that China has no ideals. She has ideals but they are unrealisable ideals connected with the past. She looks back, instead of looking ahead. The whole teaching of Confucius was in this direction. In conclusion I wish to observe that no mere internal reform will suffice. China may train an army and possess a good navy, but until the minds of her people have been thoroughly changed, her position will not be free from danger. As an Eastern nation which has adopted Western civilisation, we have it in our power to bring about the transformation of the Chinese.

* * *

The *Chūō Kōron* enumerates the sins of certain

Japanese newspaper writers under ten headings, as follows: (1) They twist facts to suit their own likes and dislikes and plan the destruction of innocent men. (2) They write with no sense of responsibility and have no notion of how to promote the true interests of the country. They aim at exciting the ignorant without regard to consequences. (3) On the questions of the day they have no minute knowledge, and so we find the sturdy resistance of the Boer republics to England described as an illustration of "the perpetuity of Royal lineage" (皇統連綿, *Kōtō-renmien*). (4) The minuteness with which the doings of *geisha* and prostitutes are recorded serves as a guide to places of ill-fame. (5) Their rôle is to sow discord among men, to slander, to abuse, to advertise trickery and robbery of every kind. (6) They live by blackmailing, by oppressing the weak and the timid. (7) Their production of a manuscript that is full of base insinuations and slander and threatening to publish it if money is not forthcoming, is an exact imitation of the method of the highway robber. (8) By a skilful manipulation of affairs they manage to keep their own crimes out of sight while making money by revealing the imaginary faults of others. (9) Their writing is all exaggerated and calculated to injure the minds of readers and destroy their consciences. (10) Their methods, language and whole conduct resemble those of the vagabonds known in this country as *haori-gorotsuki*.¶

* * *

The *Sanseido* a few weeks ago brought out a new English-Japanese Dictionary which bears the marks of being very carefully compiled and which, considering its size and cost, certainly has no equal in this country. The compilers are all well-known scholars, Baron Kanda and Doctors Yokoi, Takakusu, Fujioka, Ariga, and Hirayama. It covers 1,248 6-in. pages printed in small type. The Chinese characters are printed in No. 7 type. The book sells at the ridiculously low figure of 68 sen a copy, and so is evidently chiefly designed for the use of students. We have examined a number of the definitions given and they seem to us excellently done. Of course it is impossible to tell how far the compilers have made use of the labours of other lexicographers, but never before have so many well-known linguists put their names down as the compilers of an English-Japanese Dictionary. We express ourselves thus designedly, for we are informed on the best authority that in the compilation of books in Japan names are repeatedly inscribed on the title page implying authorship when there has been no adequate share in the work of compilation performed by the persons referred to.¶ If the material found in Baron Kanda's English-Japanese Dictionary could be used for bringing out a new Japanese-English Dictionary the result would be the possession of a lexicon far ahead of anything now existing. There are no *kana* attached to the ordinary Chinese characters appearing in the *Ei-wa Jiten* which we are reviewing, and, the characters being printed in such small type, only those foreigners to whom the forms of the ideographs are very familiar can use it. This many foreigners will regret, as the dictionary not only translates single words, but all the chief idioms or phrases in which the word occurs. For example, under the word "take" we first have 30 different senses in which the word is used and then more than a page of small type is covered with the translation of the phrases given in standard English dictionaries; such as "to take account of, to take advice, to take liberties, to take advantage of" &c., &c. Remarkable accuracy has been attained in rendering the various figures of speech with which the dictionary deals. The Appendices, which cover over 100 pages, have been compiled in imitation of our best standard dictionaries and contain a large amount of infor-

¶ Applied to persons who dress respectably, but obtain a living in some dishonest manner, usually by bullying timid people. —(WRITER OF SUMMARY.)

¶ The scholars who figure as the compilers of the new *Ei-waji-ten* are not, we think, the kind of men to allow their names to be used without bearing the responsibility attached to actual compilation. —(WRITER OF SUMMARY.)

mation that should prove most valuable to the Japanese student of English. In the introduction the compilers inform us that in translation they have used classical language (*gagen*) as much as possible, but that when colloquial has had to be employed, the Tōkiō dialect has been adopted. The separate meanings of words are indicated by numbers; (1), (2), (3), &c. In giving translations of technical terms they have in every case indicated by a single character the branch of knowledge to which the word belongs. Thus 化, *Kwa* for Chemistry, and 動, *Dō*, for Zoology. In the case of proper names in many instances they have wisely not attempted to render them in *kana*, but for names constantly used in the *Official Gazette* and the leading papers, the Chinese characters have been resorted to. *Kana* have been supplied only in the case of those characters whose pronunciation is not generally known, and even then only when they occur for the first time. Where the same word occurs several times, the student will find "as above" only. In the compilation of the work Dr. Yokoi has been principally responsible for the Agricultural terms; Dr. Fujioka for the Electrical terms; Dr. Ariga for the Law, Political, Economic, Diplomatic, Philosophical, Psychological, Mathematical, Educational, and Fine Art terms, and Dr. Hirayama for the Astronomical terms. These particulars are all stated in the preface, which we take it was written by Baron Kanda or by Dr. Takakusu, as the part they have played in the compilation is left unstated. The public is certainly to be congratulated on the publication of such a thoroughly scholarly work as the *Shinyaku Ei-wajiten*, which is bound to command a large sale.

* * *

Writing in the *Taiyō* on "The Anglo-Japanese Alliance and Japan's Foreign Policy" Mr. Ozaki Yukio says:—It is high time that steps were taken to carry into practice the principles of the Anglo-Japanese Alliance. Unless the agreement is to be made the basis of new political action on the part of the high contracting parties it will prove to be a dead letter alliance. Although Russia has pretended to welcome the Alliance, she has certainly acted in a different manner since it was drawn up. In Talienwan and Port Arthur she is taking steps to shut out Japanese, English and American commerce. In Korea she is doing all she can to lessen Japan's influence over the Government and to increase her own. And so it comes about that, instead of the Alliance helping us, it has hitherto been a decided drawback. But on this account we are not to agree that the Alliance is of no use to us. It will help us directly we begin to act on it in the same practical manner as Russia follows. It has long been my opinion that the proper course for us to have taken was to come to an agreement with England about China and with Russia about Korea. Our agreement with England about Korea will not help us much as long as Russia is still opposed to us there. Russian interests in Korea are far greater than those of England, and she will not readily recede from the position she has assumed. . . . In reference to Russia's action in Manchuria, public opinion in this country seems to me to be needlessly adverse. It is argued that if Russia holds Manchuria Korea will be threatened, and that if Korea is threatened Japan will be in danger. Had we no army this argument would hold good, but should there be occasion for it we could pour troops into Korea in sufficient numbers to make it safe against attack. Though most people seem only to think of utilizing the Alliance for increasing our prestige in the Far East, in my opinion it should be made the occasion for new diplomatic action. To think of the Alliance as only aimed at Russia is a mistake. There is nothing in our agreement with England opposed to our coming to an understanding with Russia about Korea. In fact England would be pleased were we to accomplish this. It must not be overlooked that our feeling in reference to Russia's occupation of Manchuria and that of England differs considerably. As long as Russia grants to all nations the same commercial and industrial rights in Manchuria as they now have, England will have no objection to Russia's occupation. This fact makes it clear that if we resolutely op-

pose Russian occupation under any circumstances whatever, we shall stand alone. If Russia contends that her occupation is necessary for the protection of her commerce and her railway, there is no Western Power that will object. Can we reasonably object? Were our commerce in Korea threatened, should we not take similar steps to protect it? Russia's action in Manchuria is not to be regarded as antagonistic to the principles of the Anglo-Japanese Alliance.

* * *

In the *Taiyō* appears the report of an address delivered at the Mitsui Shūkaijō by Dr. Takamine, giving a history of his life and investigations prior to his discovery of a new method of making spirituous liquors. We epitomize below the *Taiyō's* report:—Seventeen years ago I went to Europe and America in company with Mr. Masuda Kō, our object being the purchase of appliances for dealing with the manure used for our rice-fields. These we bought and, returning to Japan, for some time I gave myself to this new industry. The first year we lost over the business, the following year we made enough to cover expenses and the third year we managed to obtain a small profit. The future of this industry seems to be attended with uncertainty. It may succeed, and that is all that can be said. At that time my attention was drawn to the subject of liquor-making by some of my relations* and I proceeded to compare the Japanese and foreign ways of distilling and fermenting. The first thing that struck me was the fact that in Europe and America corn containing starch and specially barley which has germinated is used for making alcohol. And the idea was that without the diastase which is found in germinated barley alcohol is not to be obtained. But no malt is used for making Japanese sake. We use *kōji*, or yeast, in its stead. It seemed to me, then, that if I could discover a better method of making yeast than that hitherto followed I should obtain a far cheaper and more effective way of producing alcohol than that adopted in Western countries. In making malt the weather has to be considered, but Japanese yeast can be made in any weather, and it only took 50 or 60 hours to make diastase in the Japanese way. But the process was costly and the diastase produced was inferior in strength to that derived from malt. My invention consisted in finding out a cheaper method of making diastase, which was the use of bran instead of barley or rice. The diastase thus produced I found to be much more powerful than that contained in our Japanese ordinary sake-brewing yeast, and of course the price of this material was infinitely less than that of barley or rice. In America up to the time of my invention every year enormous sums of money were spent on barley for brewing purposes. At the time of my invention there was a great Brewers' Trust in Peoria the value of whose shares was some 33 million dollars, and they were doing an enormous business, the companies connected with that trust producing from 700 *koku* (1 *koku*=39.70 imp. gal.) to 3,000 *koku* a day. I placed myself in communication with the brewing companies of Peoria. My first experiment there proved a success, but the second failed. But the failure was caused by the jealousy of the malsters. My instructions were not carried out, and I found that I had raised a very hornets' nest about me. My life was threatened and I dared not appear out of doors in the day time. The difficulty was temporarily got over by the company's purchasing the patent and keeping on the malsters. Arrangements were now made for an experiment on a large scale. The company laid out some 200,000 dollars on the preparations for this experiment. These preparations aroused the ire of all interested in the use of malt. Everything was complete and we calculated on commencing to turn out 1,000 *koku* of alcohol per day from the day following that fixed for the experiment, when all our machines were set fire to by the obstructors and the works were all destroyed. Not only did the malsters burn the place, but they caused it to be reported that the fire had originated with Takamine, his

object being to hide the shame of failure. At this time I was dangerously ill and my life was despaired of. My despondency knew no bounds. But subsequently another experiment was arranged for and it was eminently successful. But my troubles were by no means over. When I went to America in 1895, I found that a violent opposition to my invention existed in the very company with which I had an agreement. The shareholders turned out the officers who favoured my method, and put in others who refused to make use of my invention. But since my patent extends to another 10 years I shall succeed in making it a thorough success in America despite all opposition. I began life without a penny. With me necessity was the mother of invention. Both in Japan and America there is now advertised for sale what is known as *Taka-diastase*. This is used largely for medicinal purposes as well as for making alcohol.

Dr. Takamine goes on to tell how his invention has led to other inventions of a medicinal kind. Dr. Takamine's father served as a doctor under the Kaga *daimyō*, and from his early days the eminent inventor took a keen interest in medicine. Dr. Takamine, we believe, has returned to America.

CUSTOMS FEES.

The following Customs fees will be charged from the 1st August:—

Fee for the opening of a Custom House or a branch after office hours:—

	PER HOUR. Yen.
From sunrise until sunset	10
From sunset until 12 p.m.	20
From 12 p.m. until sunrise	30

The above rates may be reduced by half at branch offices, according to circumstances.

Fee for permission for shipping and discharging, delivering and transporting goods at a Custom House or a branch:—

	PER HOUR. Yen.
From sunrise until sunset	2
From sunset until 12 p.m.	4
From 12 p.m. until sunrise	6

Custom House or a branch:—

	PER HOUR. Yen.
During the time required for inspection	3

When travelling expenses are incurred they are also charged.

Fee for the entrance and clearance of a foreign trading vessel at an unopened port:—Yen 30.

FEES PROVIDED IN ART. 76 OF THE MINUTES OF THE CUSTOMS LAW.

	Yen.
Certificate (each)	2.00
Exports and Imports, Daily Statistics (one month)	30.00
Other statistics relating to shipping and cargoes (each)50

THE MYSTERY OF FAITH.

Lord, with how small a thing
Thou canst prop up the heart against the grave!
A little glimmering
Is all we crave!
The lustre of a love
That hath no being,
The pale point of a little star above,
Flashing and fleeing,
Contents our seeing.
The house that never will be built; the gold
That never will be told;
The task we leave undone when we are cold;
The dear face that returns not, but is lying,
Lick'd by the leopard, in an Indian cave;
The coming rest that cometh not, till sighing
We turn our tremulous gaze upon the grave.
And Lord, how should we dare
Thither in peace to fall
But for a feeble glimmering even there—
Falsest, some sigh, of all?
We are as children in Thy hands indeed,
And Thou hast easy comfort for our need,—
The shining of a lamp, the tinkling of a bell,
Content us well.

ROBERT BUCHANAN.

* It may be mentioned here that Mrs. Takamine is an American lady.—(WRITER OF SUMMARY).

DR. JOHN H. BARROWS.

The President of Oberlin College, Dr. John H. Barrows, died at Oberlin, on June 3. Dr. Barrows was born in Medina, Michigan, on July 11, 1847. After studying theology at Yale, Union, and Andover theological seminaries, he undertook home missionary work in Kansas. After nearly three years of educational and church work in Kansas he was pastor of the First Congregational church, in Springfield, Illinois, for a year. Prior to taking up the presidency at Oberlin, in 1898, he had been for fourteen years the pastor of the First Presbyterian church in Chicago. He was most widely known, however, for his services as one of the prime inaugurators and the presiding officer of the World's Congress of Religions held at the time of the Columbian exposition in Chicago. In 1896 he attracted much attention by receiving the first appointment to the Haskell lectureship established under the direction of the University of Chicago. On this appointment he travelled in India and Japan, delivering one hundred and thirteen lectures. On his return to the States, Dr. Barrows delivered many lectures, including the Morse course at the Union theological seminary on "The Christian Conquest of Asia." Dr. Barrows was one of the trustees of the United Society of Christian Endeavor, and one of the advisory council of the Chautauqua system. He was also president of the Council of Seventy of the American Institute of Sacred Literature. His published works were: "The World's Parliament of Religions," "A World Pilgrimage," "Christianity, the World Religion," "The Christian Conquest of Asia," "I Believe in God," "The Gospels as True Histories," and a life of Henry Ward Beecher, said to be the best brief biography of the Brooklyn preacher.

CIVILIZATION AND THE BIRTH-RATE.

M. Neymarch recently read before the Society of Statistics of Paris an important study on the question of decrease of births with an increase of civilization, in which he examined some of the economic, financial, and social causes which, according to him, exercise a greater influence than physiological causes. M. Neymarch believes first that the more civilization is developed and the more a country progresses, the more births have a tendency to decrease. In Germany the birth rate was 42 per 1,000 in 1875, and twenty years later 36; in England during the same period it decreased from 36 to 29, and in France the same years it decreased from 36 to 25.2.

The economic causes which influence natality greatly are the following: 1. The expense of living, or to be more exact, the increase in needs. It is not demonstrable in its ensemble that the cost of living is greater than formerly, but that which is incontestable is that "needs" have augmented. 2. The desire for greater comfort for one's own and for one's self. One considers the expenses of the family with reference to the revenue or the capital possessed, what it will cost to raise several children, pay for their instruction, education, maintenance, etc., and what it will cost later to "establish" them. 3. One desires to conserve the acquired wealth and not to decimate it among a large number of inheritors. 4. The lowering of the revenues obtained from capital. A person who formerly could live happily and at ease on a capital of \$20,000 producing a revenue of from \$1,000 to \$1,100 per year, that is, five to five and one-half per cent., has to-day with the same capital only a revenue of \$550 or \$600, whereas his taxes, his charges, and his needs have increased. 5. The increase in taxation. 6. Feminism, or the accession of the woman to the work and occupations formerly reserved to the man. The woman becomes more and more the producer, she is occupied in commerce, in domestic service, in the liberal professions, in mines and trades, in shows, and in general affairs. This work in France occupies 3,353,831 women who think less of maternity than of their professional occupations. Besides these, there can be cited an entire population

which has no children, to wit, bachelors over 25 years of age, 3,861,599; homes without children, 1,808,838; divorcees, widows, and widowers without children, 3,000,000; total 5,970,437.—*Revue Scientifique.*

LAW CASES.

ILLEGAL BOARDING OF SHIPS.

The hearing was resumed on June 10th, in the Kobe Ku Saibansho, before Judge Yoshida, of the charge of breaking the Customs Law, preferred against Mr. W. Waggott, an employé of Mr. H. Julien, ship-chandler of Sakaye-machi, Kobe, who it was alleged had boarded the steamer *Indrasamha* outside the harbour. Evidence was given in support of the charge. Defendant, who said he had been in Japan since 1870 and in the ship-chandlery business in Kobe for nine years, admitted that he did know the harbour limits and was ignorant of the regulations. He declared that he was not the only man who boarded the steamer there, nor did he visit it to sell provisions, but had merely paid the steamer a visit. He did not know that the steamer was outside the harbour limits, and on those grounds he asked for an acquittal. The Judge imposed on defendant a fine of yen 5, in accordance with Articles 28 and 81 of the Customs Laws.

THE JOVANSSEN CASE.

Two foreign witnesses, lady nurses from Tokyo, were examined on Friday in the Club Hotel by Judge Mabuchi in connection with the Jovanssen case. The date of the next hearing has not yet been fixed.

THE PEREIRA LIBEL CASE.

It is stated that the hearing of the appeal of Mr. C. Pereira and the two Chinese of the Wing Hing Printing Office, which was fixed for the 7th inst. in the Tokyo Appeal Court, has been postponed to September 12th at 9 a.m.

THE HERB CASE.

The trial of Franz Carl Herb, aged 52 years, a native of Switzerland, formerly an import and export merchant at No. 177, Yokohama, began at 9 a.m. on Thursday, July 17th, in the Yokohama Chiho Saibansho. Judge Danno presided, and with him were associated Judges Mabuchi and Kobayashi. When the case was called only one or two Japanese spectators were present in the Court Room, but later in the forenoon a couple of foreigners appeared and watched the proceedings for some time. Accused was not under arrest, being on bail while the case proceeds. The trial was opened by Procurator Honda reading over the "Ruling relating to the closure of Preliminary Examination" and the attached "Reasons" which contained the particulars of the various charges, the accused standing the while, (these appeared in our columns on June 23rd).

On the application of Mr. J. de Becker, who appeared for the accused, the latter was allowed to sit down.

The finding of the Preliminary Court having been interpreted to the accused by the Court Interpreter, Mr. Hattori, the Court proceeded to interrogate him. The questions put merely elicited answers to the same effect as the Preliminary Court's finding, the gist of which we reproduce:—

The accused, Franz Herb, commenced the export and import business at Yokohama in 1890 with a capital of yen 14,000 in partnership with the late Conrad Wagen, who furnished the greater part of the capital. In 1894 Wagen died and in consequence his share of the capital was withdrawn from the business by the deceased's executor. Owing to the want of capital, accused prevailed on Kawakita Naoto, No. 60 Benten-dori Sanchoe, Yokohama, and borrowed yen 6,000 from him. He was thus enabled to continue in business. This was in January, 1895. Of the borrowed money yen 2,000 was recovered by the creditor shortly afterwards. Even for the rest of the loan accused had as deposit with the creditor some goods or other as security all the time. In 1896 accused made arrangements with the Hongkong and Shanghai Bank to borrow money from time to time on the security of merchandise. Accused, however, continued to suffer

loss and incurred much debt. Under such circumstances, accused, as a temporising means, incurred the following liabilities to the Hongkong and Shanghai Bank without the intention of repaying them:—

1. On 16th Sept., 1901, accused borrowed yen 1,490 from the bank on the security of four boxes of woollen cloth which he represented to be stored in the godown though in reality they did not exist, and by issuing a promissory note payable after three months.
2. On the 20th of the same month he borrowed yen 1,460 by a similar means; pretended security, 22 tons steel.
3. On the 27th of the same month he borrowed yen 2,255 by a similar means; pretended security, 135 barrels of iron wire.
4. On the 30th of the same month he borrowed yen 3,190 by a similar means; pretended security, seven cases of wool and other articles.
5. On the 15th Oct., 1901, he borrowed yen 13,440 by a similar means; pretended security, 21 cases of wool and other articles.
6. Oct. 18th, yen 1,560 security, three boxes of gloves.
7. Oct. 22nd, yen 4,345, security, 15 boxes of serge, etc.
8. Oct. 25th, yen 2,625, security, six cases of wool.
9. Oct. 26th, yen 2,100, eight cases of serge.
10. Nov. 11th, yen 950, security, brewery material.
11. Nov. 13th, yen 6,035, security, 18 cases of wool and serge.
12. Nov. 16th, yen 2,595, security, two cases of toilet goods.
13. Nov. 20th, yen 8,192, security, 16 cases flannel and 10 cases serge.
14. Nov. 28th, yen 730, security, 6 cases toilet goods.
15. Nov. 30th, yen 2,905, security, two cases shawls, etc.
16. Dec. 3rd, yen 2,500, three cases manufactured goods.
17. Dec. 9th, yen 720, security, one case leather belts.
18. Dec. 10th, yen 960, security, three cases metal goods.
19. Dec. 11th, yen 1,520, five cases of wool.
20. Eight cases of paper valued at 1,845 marks.
21. Sand paper and other goods valued at 1,378 marks.
22. One case of paper valued at 991 marks.
23. Four cases of India rubber goods valued at £63 11s.
24. One case hemp goods valued at £30 16s.
25. One case manufactured goods value 632 marks.
26. Four bales of drugs value \$244.

Accused borrowed the various sums of money above-mentioned by offering as security goods which did not really exist or took delivery of the various goods for which he did not pay. When payment of the promissory note No. 1 came due on Dec. 16th, 1901, he did not pay it but suspended payment the following day. Accused was adjudged bankrupt by the Yokohama Chiho Saibansho on Dec. 27th, 1901.

The acts of the accused fall under the purview of Art. 1,050 of the Commercial Code and he is hereby committed for trial.

In the course of his evidence the accused, who said he came to Japan in 1888, detailed the circumstances of his starting in business in 1890 with Mr. C. Wagen and the other facts above noted. He first opened an account with the Hongkong and Shanghai Bank in 1891. He had dealings with other banks. The second time he opened an account with the Hongkong and Shanghai Bank in 1895 he had credits opened in Europe to buy goods and the merchants in Europe drew through the Hongkong and Shanghai Bank for goods. He got the bill of lading by filling an application form. He did not understand that he was keeping the goods for the bank. When he could not pay the bill on the due date he asked for a prolongation. He had to fill a form, a promissory note, to obtain prolongation. He had to give a reference to the bill of lading and to mention the kind of goods as a reference to the transaction. He always considered those steps as mere formalities. All the promissory notes were in the same form.

If those steps were mere formalities then it would not be necessary to mention any security at all?—I understood the bank only wanted a reference to the bill of lading and that the promissory note was on my personal credit. When I gave the promissory note I got the original bill of exchange which had fallen due. The bill of lading had gone long ago to get the goods. When I renewed the bill of exchange by giving this promissory note the interest was raised. That was all. After making those arrangements with the bank, they inspected the goods about once a year. They came to see what stock I had. The

bank man, I understood, came to see whether I was good for the debt. He looked where he liked and took what notes he liked. Since I have been in trouble I have studied the matter and find the view which the bank takes is correct, but I am not a lawyer and I did not understand so then. I had in my employ the men now named to me. The drawing of promissory notes was my own business and the buying and selling of goods were under my direction; when I was absent my assistants knew what to do. As to giving goods in security for promissory notes, nobody did that as goods were not given in security. My employees had the key and delivered goods from the godown telling me afterwards that they had done so. Each time a godown order was issued, some times after the goods were delivered. The godown keeper had to have that order to free his responsibility. I very rarely filled in such orders. That was down by Mr. Giese or my son, latterly my son. Mr. Giese put his initials on the order. I knew after each delivery of goods that delivery had been made. (Shown promissory note) I see the conditions attached to that. It is true that on Sept. 16th, 1901, I gave a promissory note for yen 1,490. It may be that the 4 cases of cloth mentioned in that note were sold before, on the 2nd, 12th and 20th of April. (Shown book) I see here that they were so sold on the dates mentioned. I did not bother about it then. (Shown another promissory note referring to the second charge) I admit giving that note, and that 22 tons of steel are mentioned in it. I filled up the note myself. I always did so. I recognise that I filled it. I recognise having mentioned 22 tons of steel as a reference to the former bill of exchange; I did not read the conditions. The goods may have been sold on April 29th. I do not remember seeing the goods at all. I see from the book shown me that such was the case.

The Presiding Judge's interrogations as to the other charges elicited practically the same answers. As to the sixth charge accused admitted selling most of the gloves there mentioned but said he thought some remained in the godown. Similarly in other instances he stated that he thought part of the goods had not been delivered.

At a quarter before twelve o'clock, when the tenth charge had been reached, the Court adjourned for tiffin.

The proceedings were resumed at half-past one o'clock.

Mr. de Becker, Counsel for defendant, said that Mr. Tsuruda, another Counsel for defendant, could not attend the Court that day, as he was engaged in some legal business in Tokyo.

The Judge then proceeded to make inquiries of defendant as to the matter of obtaining loans from the Hongkong and Shanghai Bank on pretended securities.

The defendant replied that he obtained 26 loans in all from the Bank, and admitted that nearly all the goods given as security had already been sold when they were offered to the Bank.

The Judge said that according to the statement made by Mr. Guinness, of the Hongkong and Shanghai Bank, defendant's debts stood at yen 6,710 in March, 1897, at yen 9,830 in January, 1898, at yen 22,860 in January, 1899, at yen 38,160 in January, 1901, and at yen 64,300 in January, 1902.

The defendant admitted the above statement.

The Judge said that some time ago when defendant was declared bankrupt there existed in his go-down about 20 articles only and therefore defendant was in a position that he could neither issue a promissory note or retire a bill of lading.

The defendant replied that there were many more articles than indicated by the Judge, but he could not remember exactly.

The Judge said that defendant's goods were estimated at yen 1,481.86 by an expert who inspected the defendant's goods, together with Mr. Sato Hakuai, Bankruptcy Administrator, when defendant was declared bankrupt.

The defendant said that his own valuation of the goods must have been much higher.

The Judge stated that the total amount of debts which defendant had at the time of the bankruptcy reached yen 114,390, including debts to the Hongkong and Shanghai Bank and other persons. The defendant admitted the above and said that

when he was declared bankrupt there were left only 27 sen in cash in his safe. He added that his business began to decline since 1900.

The Judge said that according to the bills of lading and other documents defendant sold his articles extravagantly cheap.

The defendant replied that as he was hard pressed by his creditors he was obliged to do so and that as the times were bad he saw that he would not succeed in business. Meanwhile he was able to secure contracts with the representative of a firm in Berlin, who came to Yokohama from Vladivostok for that purpose. Thereupon defendant forwarded some time ago a large assortment of cement, oil, etc., to Vladivostok to the amount of some yen 90,000 and realized a profit of over yen 10,000.

Mr. de Becker asked the Court to summon as witnesses Sato Hakuai and forty-three foreign gentlemen of Yokohama who could testify to the general good character of defendant.

The Procurator stated that he recognized that defendant was not a man belonging to the lower class, and that there would be no necessity for summoning so many witnesses as proposed by Counsel for defendant.

It was arranged to examine Sato Hakuai only, he having acted as Bankruptcy Administrator in the present case, and the proceedings were adjourned at 5.30 p.m., to be resumed on July 19th at 9 a.m.

NEWS OF THE WEEK.

Mr. J. B. Rentiers, of the British Consular Service in Japan, was called to the bar at the Middle Temple on June 11th.

A cable to the New York *Sun* from London says:—The daughter of Sir Frederick Treves, the surgeon who performed the operation on the King, died a few days ago of appendicitis.

A Kobe despatch states that the British tank vessel *Geo. Payne*, which arrived at Shanghai on the 4th inst. from Philadelphia with kerosene oil on board, caught fire on the 9th, but she escaped destruction. Three members of the crew are missing.

The Duke of Connaught was on 3rd June installed as Grand Master of English Mark Masonry, in succession to the King. The ceremony took place in the King's Hall of the Holborn Restaurant, in the presence of 1,500 members of the Craft.

The engineering corps belonging to the 1st, 2nd and 4th Divisions of the Imperial Guards will conduct manoeuvres in the neighbourhood of the river Kitakami in the north-eastern districts this autumn. Lieut-General Uyehara will take command of the whole force.

Apparently potato growing in this country is going from bad to worse in consequence of the prevalence of a kind of plague, which made its first appearance several years ago. For instance the potato crop in Kanagawa Prefecture this year is estimated to be less than yen 5,000 in value, whereas the yield of last year amounted to 1,600,000 *kwan*, representing over yen 50,000 in value. This year's loss in Kanagawa Prefecture is roughly estimated at yen 45,000.

The petty officers and men of the Japanese cruiser *Yakumo* when at Wei-hai-wei on Friday, 27th June, were entertained by the petty officers and seamen of the *Glory*, *Goliath*, *Albion*, *Ocean*, *Argonaut*, *Alacrity*, *Rosario*, and *Mutine* to a dinner and smoking concert. The guests, who numbered 300, were met by the band of the *Argonaut* at the pier and were escorted to the place of entertainment. Mr. Frank Roomes, master-at-arms of H.M.S. *Glory*, presided and a very pleasant evening was spent.

The graduation ceremony at the Tokyo Semmon Gakko, Waseda, came off successfully on the afternoon of July 15th in the hall of the institution. Dr. Hatoyama, Principal, handed diplomas to 193 graduates. He also delivered a speech to which a representative of the graduates

responded. Among those present were Count Okuma, founder of the institution, and Countess Okuma, His Excellency Col. Buck, American Minister to Japan, professors and instructors of the Tokyo University and many schools, over 1,000 in all.

A London weekly paper recently unearthed a quaint Army Order. It deals with the machine guns provided for certain Volunteer Corps, and advises that, where possible, "mules should be employed to draw them." "When a mule is not available, however," it goes on, "any intelligent non-commissioned officer will do instead." There are several ways of calling a man an ass.

It is stated that there is on foot a project to amalgamate three Scottish whisky distilleries. Mr. John Dewar has informed a newspaper representative that he does not anticipate any increase in price so far as the consumer is concerned. There was sufficient whisky in Scotland, he added, to supply the world for the next five years even if there was not another drop made during that period.

About 5 p.m. on July 9th a *jirikisha* coolie, of No. 3, Ichome, Yamadacho, Yokohama, was run over at Ogicho by a carriage belonging to Messrs. Durand & Co., No. 83, Yokohama, in which were two foreign ladies. Takemura Kojiro, driver of the carriage, was afterwards summoned to the Kotobukicho Police Station, in whose jurisdiction the affair occurred, and was ordered to pay the coolie's expenses for medical treatment.

The Local Manager of the Hongkong and Shanghai Banking Corporation has received the following telegram from his Head Office:—

"Subject to audit the Bank dividend for the half-year will probably be 30/- \$5 lacs to be added to reserve fund. \$2 lacs to be written off property account. \$14¼ lacs to be carried forward to the next half year."

The new cruiser *Amphitrite*, which left England recently for the China Station to relieve the belted cruiser *Orlando*, now on passage home, is, it is understood, to proceed to the Persian Gulf first of all. The reason for such divergence in the route of this fine four-funnelled cruiser is to make some sort of demonstration in the Gulf, says an exchange. Quite recently there has been a display of Russian naval force in this region, one or two large modern cruisers having been sent there; and so the visit of the *Amphitrite*, which is quite as imposing a vessel as any cruiser that the Russian Navy possesses, is intended as a kind of counter demonstration.

A report from the Japanese commercial agent at Vladivostok says that he has been requested by the Russian Customs Authorities there to send information to Japan that in future addresses on parcels going to Vladivostok and other places in Siberia shall be written in English or Russian, or other foreign language and not in Japanese, and by doing so the articles will be delivered to their destination without delay. The report adds that there have been many Japanese parcels and goods arriving at Vladivostok with their address in Japanese only, to the great annoyance of the Russian authorities.

Prince Boris Vladimir and staff were entertained at dinner on the night of July by Mr. Hara Tomitaro, a rich merchant of Yokohama, who invited the Prince to his villa at Oimatsu-cho, Yokohama. The entertainment was in pure Japanese style and various interesting dances and feats were successfully gone through in His Highness' presence. The party returned to the Grand Hotel the following morning at a little past 2 o'clock. On July 11th the Russian Prince and suite left Yokohama by the 6.15 a.m. train for Nikko, where they will put up at the Kanaya Hotel. His Highness left Yokohama for America on July 16th by the *Coptic*.

Business in figured *habutaye* has been very brisk in Yokohama since the beginning of June. Messrs. Cornes & Co. are reported to have been conspicuous, and as might be supposed quotations

are gradually rising. In Fukui, one of the centres of *habutaye* manufacture, the weavers have long discontinued the manufacture of plain *habutaye* on account of having incurred losses, and are at present turning out figured *habutaye* only. The present market prices are said to be *yen* 8.60 for six *momme*, *yen* 8.40 for seven *momme*, *yen* 8.20 for eight *momme*. The total quantity of figured *habutaye* exported from Yokohama to China, Australia, India, France, England and other countries during the month of June amounted to 10,650 *kin*, representing *yen* 100,443 in value.

The Fourteenth of July was celebrated very quietly by the French residents, and by the majority of foreigners it passed almost unnoticed. Of course the chief reason for this was that, Monday being mail day for no fewer than three steamers, the San Francisco, Seattle and Tacoma mails, most people were absorbed in business. Frenchmen found time, however, to pay a ceremonial call at the Consulate and to toast the Republic when tiffing or dining together. Also national flags were displayed throughout the Bluff and Settlement and lanterns were shown at many premises in the evening.

The blue-jackets belonging to Yokosuka Admiralty recently presented a pair of flower vases to the officers and blue-jackets of the British warship *Eclipse* as a token of friendship. The presents are said to be copper and decorated with gold and silver; cherry flowers and the Union Jack and the Rising Sun crossed together being represented in more than one place. The inscription is as follows:—"Presented to the officers and men of H.M.S. *Eclipse*, on June 1st, 1902, by the blue-jackets of the Yokosuka Admiralty." It may be noted that on June 1st when a banquet was given by the Yokosuka blue-jackets to the members of the crew of the British war-ships some money was left over and with this balance the above articles have been purchased and presented by the Japanese blue-jackets.

Since the enforcement of the new regulations for Stock Exchanges, business has been very dull. Commenting on this affair, the *Jiji* says that at the Tokyo Exchange there has been a loss of *yen* 50 per day since the 1st instant. To speak more minutely, the expenses of the Tokyo Exchange are about *yen* 250 per day as a rule but since the enforcement of the new rules the average receipts of the Exchange did not exceed *yen* 300 daily. Subtracting from the receipts 30.3 per cent. duty on the Exchange there remains a balance of *yen* 200. With regard to other Exchanges the journal publishes the following table showing the average business done on July 1st this year and on the corresponding date during the past six years:—

	Osaka. Yen.	Kyoto. Yen.	Nagoya. Yen.
1896	12,095	3,276	3,499
1897	14,009	5,464	2,227
1898	7,271	5,142	935
1899	12,974	5,017	710
1900	17,672	5,640	618
1901	5,601	2,229	258
1902	2,495	613	69

By the T. K. K. steamer *America Maru* will arrive in Yokohama the Neill-Frawley Dramatic Company, and local theatre-goers will be glad to hear that there is a prospect of at last seeing a good dramatic company playing upon the boards of the Public Hall. The company numbers 21 in all and has been selected with great care, and on the lines of the big Neill-Frawley companies which have won such well deserved reputations in the United States. The company will give one performance in Yokohama, about September 4th or 5th, staging the popular drama "Secret Service." If the stay of the steamer permits, another evening may be spent here. From Yokohama the Company proceeds to Manila, and will play there for some months, and on its return to the States will open seasons at Hongkong, Shanghai and Yokohama, being again in this port during April-May of 1903. The Manager, Mr. Leigh D. Brackardt is at present in Yokohama.

THE A.B.C.F.M.'S ANNUAL MEETING.

[Kobe, July 3-10.]

It is difficult to condense into a few sentences this the largest and most enthusiastic meeting held for many years. There are now in Japan fifty-nine members, occupying the twelve stations, Sapporo, Sendai, Niigata, Maebashi, Tokyo, Kyoto, Osaka, Kobe, Okayama-Tsuyama, Tottori, Matsuyama, Miyazaka.

While the missionaries co-operate with the Japanese Christians in various ways, there is a clear line of separation in the general work. The thirty-four Kumi-ai Churches are not only self-supporting and self-governing, but they have their own self-propagating Missionary Society with an income of about 6,000 *yen*, with which they carry on evangelistic work in nine large cities. The total number of Christians connected with the Kumi-ai body and the twelve Mission Stations is 10,856, and their contributions for the last year amounted to 33,791 *yen*, while the Mission spent only 12,144 *yen*. The Christians own 64 church buildings valued at 125,794 *yen*. The number of baptized was 880, nearly double the average of the preceeding eight years, which shows something of the effects of the Forward Movement. The stability of the work is partly seen from two memorable meetings, one the Twenty-fifth Anniversary of the Naniwa Church in Osaka, which was the first Church in Japan that began as a self-supporting one; and the twentieth anniversary of the Rev. T. Miyagawa's pastorate over the Osaka Church. He is the only man in Japan who has had an unbroken pastorate for this length of time over one Church.

The Educational Work comprises eleven schools with about 1,200 scholars. Of these the largest is the Doshisha, of which the Hon. K. Kataoka is President. The acceptance of this position by this distinguished statesman and earnest Christian, marks a new era in the college. The Faculty has been reinforced by the addition of three Japanese professors who recently graduated from foreign universities.

Of the six Girls' Schools, the Kobe College is the largest, and plans are being made to build new dormitories so as to accommodate 250 pupils, including the day scholars.

There are four Kindergartens. The Glory Kindergarten in Kobe has attracted the attention of educators to such a degree that its graduates are always spoken for in advance. This year fourteen positions were open to the class of six graduates.

As to Publication Work there were very few new books and tracts. Yet the sales were enormous, amounting to 57,556 copies, five times the number of pages sold the previous year.

One marked feature of the meetings was the very valuable addresses by the Rev. T. Miyagawa on "Christianity and Modern Japanese Thought," the Rev. S. L. Gulick on "The Importance to the Missionary of Social Science"; and the annual sermon on "The Art of Seeing God," by the Rev. O. Cary. As these papers will doubtless appear in print, we refrain from outlining them here.

The daily devotional meetings were all upon one subject—"The Kingdom of God." Every meeting was full of hope and rich in spiritual thought. The usual Junior C. E. Society meeting, by the children of the Mission, was given on Sunday and the fame of this meeting is such that even a larger number of Kobe friends than usual attended it.

Our Mission, being with but one exception composed of citizens of the Great Republic, did not overlook the Glorious Fourth. The children celebrated by burning a vast amount of gunpowder all day long, and in the evening the Mission had a most enjoyable sociable with friends residing in Kobe.

It was a pleasure to all to receive a telegram from our honoured Minister, Col. Buck, to the effect that our application to be incorporated into an Association for holding Mission Property had been granted by the Government. Perhaps another should be mentioned that announced the birth of the twelfth grandchild to the Mission,

and, astonishing to relate, every one of the twelve is a boy.

Dr. and Mrs. Scudder, formerly members of this Mission, and now under appointment to Hawaii, were present to the delight of all their numerous friends, and two new members were welcomed—Messrs. Dunning and Bennett. One family and one single lady are under appointment in the States, and requests have been forwarded for two more families and four single ladies.

Amidst all the joy and hope, there were two depressing factors, the lack of evangelists, and the fear of insufficient funds with which to carry on the growing work.

J. H. DE F.

SERMON PREACHED BEFORE THE A.B.C.F.M. AT KOBE.

(By the Rev. Otis Cary.)

2 Chron. 26.5. And he [Uzziah] set himself to seek God in the days of Zechariah, who had understanding in the vision of God.

The marginal readings in the Revised Version suggest two changes. The word "seeing" is presented as an alternative for "vision." This, though little more than the substitution of an Anglo-Saxon word for one of Latin origin, brings out the meaning more clearly and with almost startling vividness. The other change substitutes the words "gave instruction" for "had understanding"—"Zechariah who gave instruction in the seeing of God"—leading us to think of the prophet as one who was not merely possessed of the highest kind of wisdom, but who was also expert, as many wise men are not, in imparting his knowledge unto others. Even though we should not regard the marginal reading as the more correct, it is evident that Zechariah was reputed to have this skill, for otherwise there would have been little reason for mentioning him in connection with Uzziah's search for God. Hence, for the purpose of to-day's discourse, we are justified in reading the text in this suggestive form, "Uzziah set himself to seek God in the days of Zechariah, who gave instruction in the seeing of God."

The time appears to have been the beginning of Uzziah's reign. It is an interesting picture that is brought before us. A young prince, sixteen years old, has just come to his kingdom. What thoughts arise in his mind? We think of how others have been sobered by coming to the throne while still in early life, and yet of sufficient age to appreciate in some degree the great responsibilities that accompany such a position. Let us read Carlyle's description of the announcement to Louis XVI. and Marie Antoinette that they were at the head of the French nation:—"And hark! across the Oeil-de-Boeuf, what sound is that; sound terrible and absolutely like thunder? It is the rush of the whole court, rushing as in eager salute the new sovereigns. Hail to your majesties! The Dauphin and Dauphiness are King and Queen! Overpowered with many emotions, they two fall on their knees together, and with streaming tears exclaim: 'O God, guide us, protect us, we are too young to reign.' Too young, indeed!"

Uzziah was called to be the ruler of a people which believed that it had special relations to God. His throne was one established by Jehovah. The mind of a Jewish lad at such a time could not but be filled with solemn thoughts of his duty towards God and the nation. This would be especially true in view of the circumstances under which Uzziah was suddenly called to the Throne. His father's acts had provoked God's displeasure and had so alienated the hearts of the people that they rose in conspiracy against the king, who thereupon fled from Jerusalem to one of his fortified cities. Thither he was pursued and slain. He had failed as a king of Judah. When the messengers came back with their intelligence, "The King is dead," the people of Jerusalem gathered about the boy Uzziah with shouts of "Long live the King!" for whatever dissatisfaction there had been with the father, there seems to have been unanimous consent that the son should succeed to the throne. In view of his father's failure, the boy might well be sobered at thought of the responsibility so suddenly thrust upon him. Recognizing God as the real Ruler and himself as but the viceroy, he would first of all seek his Over-Lord in order to receive needed guidance, counsel, and strength.

In those days there was a prophet indeed. To be sure, we know nothing of him but what is contained in this one verse; but it seems to be implied that he was skilful in what is here recorded as his work—teaching people to see God. Such a person was well fitted to be Uzziah's instructor, and it was by this teacher that the youthful king was helped to attain the most important kind of knowledge.

Let us from the description that is given of the prophet be led to a consideration of the thought that the great work of the religious teacher is to help men to see God.

1. This statement implies that men are able to see God. In other words, it is possible for men to have a real religion. One of the most influential writers of the present day defines religion as "the personal perception of the Infinite." Replace the philosophical words by those of every-day life, and we come at once to the statement—Religion is a man's own seeing of God. We know that the Bible, using the word in a strictly physical sense, says that no man hath seen God at any time; yet elsewhere it speaks of an experience for which it can find no better word than "seeing." Is it figurative language? Even so, we understand what is meant by it as well as though we should seek out some term that is not figurative. Perhaps it is as little metaphorical as any that could be found. Perhaps it is really less figurative language to speak of seeing God than it is to speak of seeing material objects. It is the spirit which really sees, and it is more a mystery that man's spirit comes into relations with mountains and trees and stones than that it beholds another spirit not itself yet in some degree like itself. The soul's real seeing is when it perceives eternal, spiritual realities, rather than when it looks on perishing material objects through the eye, itself material and about to perish.

There is a real vision of God. This is not the time to consider the philosophical questions about whether God is knowable. Who, even though he himself has not perceived, can doubt that some have done so, when he considers the experiences of the saints. I do not mean merely the saints of whom we read in Holy Writ, nor those whom artists depict with halos about their brows, nor only those whose piety and good works have gained for them a place in the annals of the church; but those whom we ourselves have known sufficiently well to see that they possessed something which came from no mortal source, that their eyes were fixed on the infinite One, that they lived and laboured and endured as seeing Him who is invisible? To take an instance from the land in which we dwell; who that saw Paul Sawayama in his latter days could doubt that there was before his eyes an uplifting vision that almost made his face to shine like that of the martyr Stephen when he looked up stedfastly into heaven and saw the glory of God, and Jesus standing on the right hand of God?

2. The seeing of God is an art which men may learn and in which they may become more and more expert, ever attaining unto more clearly defined vision. In every human being, we believe, is the possibility of seeing, yet how many fail to attain to the reality or to gain it save in a slight degree. In our school-books we used to read the story of "Eyes and No-eyes" in which, of two persons travelling the same road, one saw nothing of moment, while the other brought back a report of the many interesting things that lay all along his pathway. Each of the boys had organs of vision, the rays of light reflected from the various objects and so passing through the pupils of their eyes were practically alike; yet one beheld nothing, while the other was delighted with what he saw. It is the man behind the eye who sees or fails to see.

The failure to see is usually the failure to pay attention. The physical nerves of sensation quiver with innumerable movements of which we are capable of being cognizant, but which we never notice. On a sultry summer day you are on a mountain side far removed from the abodes of men when suddenly the thought occurs that, if you will but stay your footsteps, there must be absolute silence. For a moment it seems as though it were so; but one by one sounds attract your notice. They were audible all the time, yet hearing you heard them not:—the gurgle of the brook a few rods distant, the sound of a locomotive far away, the insects hovering about the flowers, the mill at the foot of the mountain, the shout of children in the distant village, the soft murmur of the breeze in the tree-tops. You thought there was silence, yet all the time the organs of hearing were tingling with these sounds that seem so many and distinct now that you are paying attention to them. All the time since you entered this Church your physical eyes have seen many things that you have not yet perceived. Take this ornament behind the pulpit. Probably you had not noticed it before, yet now you are likely to see it every time your eyes turn in that direction. Those of you who come next Sunday will perhaps see it, though you never did on previous Sundays; for now your attention has been drawn to it. So God is all about us, ever speaking, ever revealing Himself, though men so often fail to hear and see. Having ears they hear not, having eyes they see not, even while the heavens above them declare the glory of God, and the earth on which they tread is full of the goodness of the Lord.

I have said that seeing is an art. As with every other art, practice gives skill. A gentleman with whom many of us are acquainted and who is interest-

ed in biological studies found last summer what has been considered an exceedingly rare animalculum. Hitherto but two or three specimens, occurring in widely separated places, had been discovered. Our friend, however, found several. Then, his attention having been aroused and practice giving skill, the water seemed to abound with them. Their bodies were so transparent that it was very difficult to point them out to others. Some utterly failed to see them. Thus, while there are men who fail to see God, there are others who become expert because, to use a phrase that has lately been revived, they "practice the presence of God." Thus they see him everywhere just as our biologist, who once had been as blind as others, found that the waters swarmed with that little living creature. They who learn the art see God in flaming star, in blooming flower, in microscopic insect, in the stony pages forced open by the geologist's hammer, in the unfolding of human history, in anything and everything to which they direct their thoughts; seeing not merely proofs of God's existence or of what we may call His lower attributes—omniscience, omnipotence, omnipresence—but seeing Him in His higher attributes of righteousness and love, thus knowing Him as the great Father.

We must not think of God as seen only in the outer world. Sometimes those whose physical senses are defective have attained clear views of Him. Those like Laura Rudgman and Helen Keller who constantly sit in the vale of darkness and of silence may behold His face and rejoice in the light of His countenance. As before said, it is the soul and not the eye that sees.

We must remember, too, that real seeing is something much deeper than intellectual perception. There are persons who standing before a great painting can give the mathematical terms that describe the curved lines; others can talk of fore-shortening and chiaroscuro, and can tell whether the artist has used burnt sienna, or raw umber, or Vandyke brown. They do indeed see many things that are on the canvas; yet possibly they may not see the real picture so truly as another who, knowing nothing of external technicalities enters into the real thought of the painter. It may be as true of a botanist as of a country bumpkin that

"A primrose by a river's brim
A yellow primrose is to him,
And it is nothing more,"

except that he can give its Latin name and dissect it into its various parts, while a child may see more clearly than he the flower itself in its beauty. It is not necessarily so, it ought never to be so; but too often our theologies make us blind to the great theophany. Happy he who has both intellectual and spiritual vision, each helping the other.

3. The vision of God is a transforming vision. Paul says (if we follow the translation of 1881) "We all, with unveiled face reflecting as a mirror, the glory of the Lord, are transformed into the same image from glory to glory, even as from the Lord the Spirit." (2 Cor. III. 18.) The metal in the Grecian mirrors, which were similar to those we see in Japan, had no brilliancy of its own; but when the surface was polished and the light fell upon it, the round disk was transformed into the likeness of the sun itself. I have wondered whether the picture in Paul's mind was not that of an artisan working in the open air where he polishes the metal and from time to time tests it in the sunlight. As he proceeds it is transformed from glory to glory, becoming at last so dazzlingly bright that it appears the very image of the sun that shines down upon it. So may we, dull metal in ourselves, turn towards God and be transformed by seeing Him. It is He Himself who not only polishes the metal but, to exchange Paul's figure for that of Malachi, sits as a refiner over the silver, taking away the dross until in the advance from glory unto more perfect glory He sees His face clearly reflected in the purified metal. So shall we be like Him, seeing and reflecting Him as He is.

4. The seeing of God is an art that to some degree is capable of being taught. This instruction is indeed the chief work of the prophet; for the prophet is the man who speaks for God and God would have men shown how to behold Him.

Man's greatest intellectual need is to find God; greater by far is the spiritual need. Sometimes men are deeply conscious of this. They cry out like Job; "Oh, that I knew where I might find Him!" They say with Philip; "Show us the Father and it sufficeth us." In the hearts of all, we may believe, is something of this desire. Though there may not be such an eager thirsting after the living God as is to be likened to the panting of the hart after the water-brooks, though the man may deny having any desire; yet strange would it be if the capacity for seeing did not lead to some reaching out for what is to be seen. When I was coming to Japan for the first time, there were among the passengers some who gave expression to sceptical views, and old Commodore Maury, whom some of you may remember, said to me: "I very

often hear people on my steamer saying, 'There is no God;' but when the wind is blowing great guns, no such talk is ever heard." Fear may reveal to a man what is in his inmost heart, and in the deepest experiences of life when men long for help, comfort, peace, it is God whom they long to see.

Thus the world seeks, or at least needs, instruction in the art of seeing God. Those who claim to be teachers of religion must show their fitness to tell others how to acquire the art. Surely they cannot be successful teachers of what they themselves have not learned. We cannot believe that the young king of Judah would have been much helped by Zechariah unless the prophet had himself seen God. You remember the story told of the German sculptor Dannecker, who, after working zealously for two years upon his statue of Christ, called to his studio a little girl and pointing to the completed work asked her, "Who is that?"—"I do not know; it must be some great and noble man." The artist felt that he had failed. A few months later he called the child once more and bringing her before the statue on which he had been working asked again, "Who is it?" The child looked in solemn awe upon the form before her; then, with tears in her eyes, softly said, "Suffer little children to come unto me." The artist had succeeded. It was ever his firm belief that in those hours of study and labour he had been visited by Christ Himself, and had thus been enabled to represent in marble the form that he had actually seen. When afterwards Napoleon wished him to make a statue of Venus for the Gallery of the Louvre Dannecker refused, saying: "A man who has seen Christ would commit sacrilege if he employed his skill in depicting a pagan goddess. My art is henceforth a consecrated thing." Fanciful though we may regard the sculptor's thought that he had seen Christ in bodily form, shall we not believe that through his study of the Gospels, through prayer, and through meditation, he had been enabled to see Christ in a deeper than a physical sense; yes, and more truly than if his eyes had gazed on the body in which Christ's spirit once tabernacled? He had come to such a personal knowledge of Jesus that he was able to make the lifeless stone express the loving, gracious character of the Lord, and thus he showed to others what he himself had seen.

Dr. Bushnell once said to a friend, "I feel better acquainted with Jesus Christ than I do with any man living in Hartford." Was not that a great source of power to the preacher? The man who has an acquaintance with God is the one fitted to introduce others to Him.

As the seeing must be by each person for himself, so to a great extent must the instruction be to men as individuals. The idea of renovating society in a mass is very popular at the present time. There is much truth in such a thought, but unfortunately it often finds expression in terms and methods that neglect the individual. In Japan we hear considerable said about Christianity as the renovator of society. Young men in our theological schools are talking about the needs of society, how they shall gain power to move society, and so on. Well and good. The country, the world, mankind as a whole, need to receive some powerful influence that shall be renovating and uplifting; but we must remember that He who has done most for society compared Himself to a shepherd who, leaving the ninety and nine, goes to seek the one lost sheep. Some of His greatest discourses (as to Nicodemus and to the Woman of Samaria) were to audiences of one; and His teaching was chiefly given to a company so small that He could come into close personal relations to each, thus giving to individuals such a view of their Lord and Teacher as enabled them to see in Him the Father also. At times He seemed almost indifferent to efforts for society; loving more the country than the crowded city; escaping from the throngs of Israelites into the borders of Tyre and Sidon, yet there speaking graciously to the Syro-Phoenician woman; leaving Jerusalem, the point from which to move the nation, and going to the home in Bethany where he gladly taught the woman who, having chosen the good part, sat at His feet to receive instruction; and after His ascension appearing not in imperial Rome, nor in commercial Corinth, nor in the busy cities of Asia Minor, but to one man who was so transformed by the vision that he spent the rest of his life in preaching the Gospel to the Gentiles.

Thus, to a great extent, must it be with Christ's followers in their work for social betterment. The coming of the kingdom must be by the vision of the King. But society has no eyes, no soul. When the individuals of which it is composed behold, then may it at last be said to see and to be transformed by the vision, even as the dark cloud is made glorious with the bow of promise only when the raindrops, each for itself, catch and reflect the rays of the sun.

There are great social movements that make it easier or harder for men to enter into right relations with God; but such movements start with individuals and their force depends upon how far individuals choose to yield to the influences about them. Society was moved on the Day of Pentecost; but it was only

those who heeded Peter's exhortation, "Repent and be baptized every one of you," who came out from the multitudes and were numbered among the three thousand souls that gave permanence to the movement. Man cannot lose his personal identity in the general mass. There is a sense in which society shall be judged; yet the great judgment is when "everyone of us shall give account of himself to God"; or, as the Japanese version strongly expresses it, "Warera ono ono onore no koto wo Kami ni utou beshi."

And now let us bring the subject a step nearer to ourselves. These multitudes about us in Japan, differing in many respects from those in the lands of our birth, have this in common with all mankind, that their spiritual natures can never be satisfied except as they look upward and see the Father's face. To some extent there is a consciousness of this need. Japan is a nation in search of a religion. Signs of this are to be seen on every hand. There is hardly a newspaper or magazine that does not frequently refer more or less directly to religious matters. The Japanese are too much given to thinking aloud to conceal that which is most constant in the human heart. The religious problem will not down. Taking, like so many subjects, a nationalistic form, the question is asked again and again: "What shall be the religion of Japan? Many write and talk as though the system to be desired were one devoid of theistic and supernatural elements; but perhaps a fuller perception by them and by us of what is implied by their search would show that really they are seeking God, much as they may shun His very name.

You saw the statistics published last year concerning the religious views of students in higher institutions of learning. With much that was sadening there were some encouraging features. Of the 625 young men who were without religion, 491, or over 78 per cent, expressed a wish for it (*Shukyo wo motowuru kokoro-ari*). Only 14 per cent, declared that they were without any such desire. Why was Mr. Mott so enthusiastically received by the young men of Japan? The Buddhists have a saying which signifies that a person cannot receive a doctrine unless he has an affinity for it. There was in the students that which had an affinity for the truths proclaimed by Mr. Mott, or he would not have met with any such response. These young men may not have known the meaning of that unsatisfied feeling in their hearts; but when the light came, they reached forth for it as do the plumules from a seed when the sun's rays are admitted into the cellar where it has been germinating.

It is said that St. Bernard had written upon the walls of his cell words that we may translate, "Bernard, wherefore art thou here?" and often while engaged in his studies he would lift his eyes to those words which deepened his sense of responsibility to do aright that for which he had been sent into the world.

My associates of the Japan Mission of the American Board, does not that question of St. Bernard often arise in our minds? Why are we here? There are multitudes who sneer at the work in which we are engaged. Even among professed followers of Christ, there are some who have little sympathy with foreign missions. Many say that we are not needed in such a land as Japan, whose people are so attractive, intelligent, and progressive. Perhaps sometimes the doubt may momentarily arise in our own minds whether we have chosen well our work in life. Why, then, are we here?

The answer is involved in the simple statement which all can use who have any right to be here,—We have seen God. Not in burning bush, nor seated on a throne high and lifted up; but just as truly has God revealed Himself to us as He did to Moses and Isaiah. We have seen Him and know Him as our Father. But with the vision comes duty. The voice from the burning bush bade Moses go back to Egypt. He before whom the seraphim cry "Holy, holy, holy," bade Isaiah go with his message to men of heavy ears and closed eyes. When the light shone upon Saul, he was told to go to one who should tell him that he was chosen to carry the Gospel to the nations. To us, too, has come a call to service, and we would not be disobedient to the heavenly vision. We wish others to see what we have seen. We are not indifferent to what this nation already possesses, nor to the progress it is making; but what shall it profit a nation if, in addition to keen wit and the power to make beautiful pottery or embroideries, it also gains railroads, extended commerce, parliaments, universities, and yet loses its own soul because its people are not brought to the possession of spiritual life?

Why are we here? It is that, with all due humility for our own imperfect knowledge, we may give instruction in the art of seeing God. For this we stand before audiences, large or small, and tell of the Heavenly Father's love. For this in sabbath schools, Bible classes, and meetings around the *hibachi* we teach this Book which is a lamp to the feet, showing

the way to the mountain of vision. For this we issue our books and papers. For this we have our kindergartens and schools of various grades, believing that all we can do to keep pure the hearts of the young and to increase their intellectual powers will help them to behold Him who in a thousand ways reveals Himself to those whose eyes are quickened to behold. For this we engage in works of healing and philanthropy, desiring indeed to save men from their afflictions and sorrows, but longing most of all to impart that knowledge of God which will enable them to endure hardship and rise above all earthly sorrows.

Nothing less than the accomplishment of this can satisfy us. Without it we may be teachers, philanthropists, social reformers, preachers; but we are not prophets; we are not in the fullest sense missionaries—men sent forth by Christ as He was sent forth to declare the Father.

Our work is not primarily to teach any particular set of dogmas. No description of God can take the place of seeing Him. Creeds have been valuable helps to our own sight, and we think that they may be of use to others; but we care more that people should see what we see than that they should look through our glasses or describe the vision in the same words that we use. The scientist in trying to point out the animalculum in the water may say, "Do you see at that point what appears like a slight change in the tint of the water—a very dim purple hue?"—"No, but I now see what appears like a faint curved line: Yes, I can trace it all around. Now at last I see." One may not detect the purple hue, the other may not be able to trace so clearly the contour; but both are aware of the same being, and rejoice in each other's knowledge. So of the greatest as of the smallest object of man's thought, two persons may see in different ways and yet behold the same divine Being.

Our aim is not to build up churches of a particular kind. We ourselves are not all Congregationalists. We remember that when Mark Hopkins was President of the American Board he said that its aim was to make Christians and then leave them to adopt such forms of church life as they may find best for their spiritual development. This is not denying the value of creeds and forms; it is only insisting that the body is more than raiment, and that the body itself is of less importance than the soul of which it is the tabernacle. Even the strongest Congregationalist among us will not greatly mourn if the churches growing up in connection with our work adopt methods unlike those of Congregationalists in America, provided these methods help the Japanese to see God more clearly. We care but little whether reflecting or refracting telescopes be used, so long as they enable men to look on the sun.

Why are we here? Not for the exaltation of any denomination, society, or school of thought; least of all for our own glory. Much as we should be glad to see the Board that sends us forth crowned with new laurels, pleasant though it would be to know that we had won the esteem and love of those among whom we labour; we can be satisfied if we are as lightly esteemed as was the Samaritan woman by the men of the city when they said to the one who had told of the Prophet, "Now we believe, not because of thy saying; for we have heard him ourselves." Enough for us if the Japanese will hear and see for themselves so that they may say with Job, "I have heard of Thee by the hearing of the ear; but now mine eye seeth Thee." Oh, for clearness of vision that we ourselves may see Him more perfectly: Oh, for power so to tell of our God that others may desire to behold Him!

Who is the man that shall see the Lord;
And who shall behold the King in His glory?
He who hath a pure heart,
And whose soul hath been cleansed from iniquity;
To him shall the Lord unveil His face,
On him shall our God lift up the light of His Countenance.

Come, let us seek after the Lord that we may behold Him,

That we may know Him who is the God of our salvation.

Open Thou our eyes, O God,
Grant us that holiness without which no man can see the Lord.

Hide not Thy face from us,
Let not the clouds come betwixt us and Thee.

Then shall we teach others that they also may behold,

That they with us may know, even as also we are known.

Anent the recent falling-off in the price of Japanese bonds on the London market, the *Asahi* says that this was chiefly owing to transactions in water works-bonds lately effected between Messrs. Samuel Samuel and Co., and the Yokohama Water Works office at a remarkably low price.

PROGRESS OF ROMAN CATHOLIC MISSIONS.

The Roman Catholic "Society for the Propagation of the Faith" has recently issued from Baltimore an interesting history of its work, bearing the imprimatur of Cardinal Gibbons, says the *Literary Digest*. This society, as is explained in the report, should not be confounded with the "Roman Congregation for the Propagation of the Faith," which is a department of the general administration of the church, established in 1622. The society "takes no part in selecting missionaries nor in appointing them their field of work, nor in training them for it," and it does not concern itself with the interior administration of missions. Its aim is "to support missionaries who are chosen, trained, and sent forth on their mission by the usual authorities of the church."

The enterprise has grown out of very humble beginnings. Its organization, which was effected in Lyons in 1822, was due in no small measure to the influence of Bishop Dubourg, of New Orleans. Only twelve persons were present at the first meeting of the Society, and the receipts for the first year amounted to about four thousand dollars. Soon after its foundation a central council was established in Paris, and words of encouragement were received from nearly three hundred bishops in different countries. Finally, Pope Gregory XVI. published an encyclical in the year 1840, recommending the Society to all churches and placing it in the rank of "universal Christian institutions."

The following table shows the contributions made from 1822 to 1900, and gives some idea of the remarkable financial support that the Society has received:—

1822 France, French Colonies	\$42,076,905.00
1825 Belgium	3,701,140.00
1827 Germany and Austria	5,862,666.00
1827 Italy.....	5,260,135.00
1827 Switzerland.....	775,457.00
1827 Balkan States.....	287,943.00
1833 United States	1,120,421.00
1833 Canada, Mexico, West Indies ..	1,143,476.00
1833 Great Britain and Ireland.....	2,301,764.00
1837 Holland	1,167,634.00
1837 Portugal	445,371.00
1837 Russia, Poland	68,754.00
1839 Spain	523,608.00
1840 Central and South America	515,706.00
1843 Oceania	85,875.00
1848 Asia	74,068.00
1857 Africa	256,536.00
Countries not named.....	22,558.00
Total.....	\$65,690,017.00

The money collected was distributed as follows:—

America	\$ 9,973,916.00
Europe	9,799,854.00
Asia	25,932,446.00
Africa	8,815,953.00
Oceania.....	6,011,630.00
Special gifts sent to missions as directed by the donors, transportation, and travelling expenses of missionaries, publications, and management of the Society	5,156,218.00

65,690,017.00

The total sum given to the cause of missions in the United States during the same period was \$5,807,393, though the receipts from this country have been only \$1,120,420.

The missions now assisted number several hundred. Those in the United States are chiefly among the Indians, and Asia has a greater number than any other continent. Regarding the number of missionaries in the field, the report says:

"We may safely assert that there are at least 15,000 priests and religious, 5,000 teaching brothers, and 45,000 sisters labouring as missionaries, not to speak of the priests, brothers, and sisters native to the regions where they work, catechists and others who make up the personnel of a mission, and the labourers among the Oriental Rites. Probably the estimate is much too small, but be it so. At the lowest computation there are, at the opening of the twentieth century, about sixty-five thousand missionaries; sixty-five thousand men and women who have left their country, their brothers and sisters, houses and lands, and all the blessings they hold most dear in this world, to bring the still greater blessing of the faith to those who are as yet deprived of it. Assuredly it is an astonishing number, which may well rejoice our hearts; and all the more because a century ago those missionaries scarcely numbered one thousand, all told.

"Sixty-five thousand missionaries is a noble army; but what victories are yet to be won! Almost fifteen hundred millions of human beings inhabit the earth; and only about four hundred millions are baptized Christians. The immense majority of more than a thousand millions have not yet acknowledged Christ, and are divided among the many sects of Buddhism, Mohammedanism, Fetichism, and infidelity."

THE GRAND HOTEL, LIMITED.

Report of the Directors to be submitted at the Twenty-sixth Semi-Annual Ordinary General Meeting of Shareholders, to be held at the Grand Hotel, Yokohama, on Monday, the 28th day of July, 1902.

The Profit and Loss Account, and Statement of Assets and Liabilities, for the half year ended June 30th, 1902, accompany this Report.

The net profit for the half year, including balance brought forward from December 31st, 1901, and after providing for general expenses, Directors' and Auditor's fees, bonus to Manager, and Sundry Creditors, and after writing off bad or doubtful debts, amounts to Yen. 59,048.85 which it is proposed to apply as follows:—

In payment of a dividend of yen 9.00 per share for the half year..... 22,500.00
For Depreciation 15,120.98
Carried forward to new account 21,427.87
It is proposed that the dividend shall be payable on the 29th day of July, when warrants will be issued.

C. H. H. HALL, }
MARSHALL MARTIN, } Directors.

Yokohama, July 11th, 1902.

THE NAGASAKI HOTEL, LIMITED.

REPORT OF DIRECTORS.

The Directors beg to lay before the Shareholders a Statement of the Company's Accounts for the six months ended 30th June, 1902.

The Receipts show a decrease of yen 18,455.00 from those of the corresponding period of 1901, owing to the generally depressed state of business in Nagasaki, particularly during the first three months of the current year.

It will be noticed that in consequence of the fall in silver exchange the Investment Account has depreciated to the extent of yen 2,375.

The property of the Company has been well maintained and is in excellent condition.

Mr. A. L. Jordan having resigned from the position of Director on leaving the port, the vacancy was offered to Dr. R. I. Bowie, who having accepted same the appointment requires confirmation by the Shareholders.

During the absence of Mr. J. M. Dow through ill-health, the accounts have been audited by Mr. W. M. Wood at the Directors' request.

W. M. WOOD.

Auditor.

Nagasaki, 8th July, 1902.

THE ORIGIN OF COINAGE.

In "A Short History of Coins and Currency," contributed to the "Home and School Library" (J. Murray), Lord Avebury tells an interesting story of the development of the British money and monetary system, which is made yet more attractive by numerous photographic illustrations. Barter, of course, was the earliest method of doing business, and the Chinese appear to have first devised a metallic equivalent, by making, about twelve centuries B.C., metal models of common objects, such as pieces of cloth and knives, the latter being really the ancestor of the coin still current under the name of Cash. The earliest Greek money, about twenty-six centuries old, was a small stamped ingot rather than a true coin, and Lord Avebury shows us the gradual development into those exquisite medals which were struck about 400 B.C. The oldest British coins, after a time superseded by Roman money, were rude copies of Greek models. For the first silver pennies, struck by Offa, those of Pepin served as patterns, 240 going to a Saxon pound of silver. Pounds, shilling, and pence were then in use, though the second, until the reign of Henry VII., was only a money of account. John first struck a silver halfpenny, Edward III. the groat or fourpenny piece, and Henry III. a gold penny, but this metal was not restored to general use till Edward III. Then florins, current for 6s., and afterwards nobles, valued at 6s. 8d., were struck, with their halves and quarters. The sovereign was first coined by Henry VII., and the guinea by Charles II. A copper farthing of James I. first gave the baser metals a place in the regular coinage. Milled, as distinguished from hammered, money was introduced by Elizabeth, but coins of modern aspect were first struck by Oliver Cromwell. An interesting sketch of the origin of banknotes and banking the former in the present sense of the term, dating from 1694 (the foundation of the Bank of England) concludes a very attractive and useful little book.

CORONATION HONOURS.

London, June 25.

The London Gazette contains the list of Coronation honours.

Peerages are conferred on the Right Hon. Wm. Jackson, Conservative member of Parliament for North Leeds, and former Chief Secretary for Ireland, the Right Hon. Sir Ughtred James Kay Shuttleworth, Bart., Liberal member of parliament for the Clitheroe division of Lancashire, and an educational reformer; Sir Francis Knollys, private secretary to King Edward; Arthur Hugh Smith Barry, chairman of the National Union of Conservative associations; Gen. Sir Francis Grenfell, Governor of Malta; Algernon Bertram Mitford, the diplomat and trustee of the Wallace collection.

The Earl of Minto, Governor-General of Canada; Lord Rothschild, Lord Lister, Lord Kelvin, Sir Edward Greer, Liberal, former Under-Secretary of State for Foreign Affairs; Sir Ernest Cassel, the merchant and financier; and Lt-Col Sir Albert Henry Hime, Prime Minister of Natal, are made privy councillors.

Sir George Henry Lewis, the well-known lawyer; the Lord Mayor, Sir Joseph Dimsdale; Sir Andrew Noble, Vice-Chairman of Sir W. C. Armstrong Whitworth & Co.; Col. Sir Edward Bradford, the commissioner of police of London; Sir Francis Henry Evans, Liberal member of parliament and partner in the firm of Donald, Currie & Co.; Sir Francis Henry Laking, physician-in-ordinary to the King; Sir Edward Poynter, President of the Royal Academy, and Sir Charles Hubert Parry, director of the Royal College of Music, are created baronets.

Chas. Wyndham, the actor, Oliver Joseph Lodge, Principal of the University of Birmingham; William Jameson Soulsby, private secretary to the Lord Mayor of London; Hon. Henri E. Taschereau, a Puisse Judge of Canada; John Isaac Thornycroft, Vice-president of the Institute of Naval Architecture; Hon. Robert Boak, President of the Legislative Council of Nova Scotia, and E. D. Shaw, of Newfoundland, are made knights.

The Right Hon. Sir Francis Jeune, Judge Advocate-general; Right Hon. Sir Dighton Probyn, Keeper of the Privy Purse and extra equerry of the King; Hon. Bernard Sieric Barrington, private secretary to Lord Lansdowne; Clinton Edward Dawkins, a partner in the firm of Messrs. J. S. Morgan & Co., and Sir William Selby Church, president of the Royal College of Physicians, are made Knights Commander of the Bath.

Dr. A. Conan Doyle, the novelist; Gilbert Parker, the novelist; Francis C. Burnand, the editor of *Punch*, and Leslie Stephen, President of the Ethical Society, are made knights.

Sir Robert Bond, Premier of Newfoundland, is made a privy councillor.

Sir Frederick Treves, surgeon to the King, and Sir Thomas Leighton, are created baronets.

The Order of the Garter is bestowed on the Duke of Wellington and the Duke of Sutherland.

The Duke of Roxburghe and the Earl of Haddington are made Knights of the Thistle.

The Earl of Enniskillen and Baron De Ros become Knights of St. Patrick.

The Earl of Hopetoun, Governor-general of the Commonwealth of Australia, who recently resigned, is raised to a Marquisate.

Lord Milner is raised to the rank of Viscount.

The King has instituted a new Order of Merit, to which he has appointed Lord Wolseley, Lord Roberts, Lord Kitchener, Lord Kelvin, Lord Lister, the Right Honorable John Morley, the Liberal statesman, and George Watts, the Royal Academician.

His Majesty has also instituted a new order for civil servants, entitled the Imperial Service Order.

Lord Rayleigh, Professor of Natural Philosophy in the Royal Institution; Right Hon. Wm. Edward Lecky, member of parliament for Dublin University, and Admiral Sir Edward Hobart Seymour, who commanded the forces engaged in the first international attempt to relieve Peking in 1900, are appointed to the new Order of Merit.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

AMERICA AND THE TIENTSIN QUESTION.

London, July 10.

The efforts made by Mr. John Hay, U.S. Secretary of State, in accordance with the recent appeal of China that America should use good offices to secure the evacuation of Tientsin, have proved successful. The foreign generals will receive instructions to evacuate the city.

FRESH ERUPTION IN MARTINIQUE.

July 11.

A fresh eruption took place on the evening of yesterday, lasting for four hours, and the population of Fort de France is in a panic. Fears are felt for the safety of a British scientific mission.

THE KING'S HEALTH.

The *Lancet* says the King's general health is satisfactory. The wound is granulating slowly and well.

THE KING'S CONDITION.

London, July 11.

The *Lancet* says that "in view of the cruel rumours now prevalent, it is our duty to say in the clearest possible manner that the King is free from cancer."

COLONIALS IN LONDON.

The Prince and Princess of Wales held a brilliant reception at St. James' Palace on the 10th inst. Nine hundred colonial visitors were present.

THE CORONATION.

London, July 12.

No formal invitations to the Coronation will be sent to foreign courts.

KING EDWARD.

The King is improving in every respect.

THE WEST INDIES.

The British scientific mission to Fort de France is safe.

PROBABLE DATE OF THE CORONATION.

London, July 12.

It has been officially announced that the Coronation will be held on a day between the 8th and the 12th of August. The procession that was to have been held on the day following the Coronation has been cancelled.

BOER SURRENDERS.

On Tuesday last the number of Boers who had surrendered totalled 20,000.

LORD SALISBURY RESIGNS.

London, July 13.

Lord Salisbury resigned office on Friday. Mr. A. J. Balfour has been appointed Premier.

THE KING.

The King is making excellent progress. Bulletins will henceforth be issued only on alternate days.

RETURN OF LORD KITCHENER.

The steamer *Orotava* arrived at Southampton yesterday morning but Viscount Kitchener, General French, General Hamilton and staff were alone allowed to land on account of a case of small-pox on board. These Generals were received with a storm of cheers.

The Mayor of Southampton welcomed them and presented them with the freedom of the city.

The Prince of Wales greeted them warmly at Paddington Station (London) and then drove them to St. James' Palace to luncheon. The Queen viewed the brilliant procession from the balcony of Buckingham Palace. The route through Hyde Park was lined by Indians and Colonials.

Viscount Kitchener afterwards visited the King and Queen.

MARTINIQUE.

An outburst of flames at Mont Pelee, on Wednesday night, set fire to the ruins of St. Pierre. Simultaneously there was renewed activity at the Souffrière in St. Vincent. There was another eruption of Mont Pelee on the 11th inst.

THE KING RECEIVES KITCHENER.

London, July 14.

The King, who was on his couch, received Viscount Kitchener in the warmest manner and offered him his personal thanks for his services. His Majesty also handed the General the decoration of the new Order of Merit.

BOTHA'S OPINIONS.

Louis Botha, interviewed, says that he believes that if justly treated the Boers will speedily settle down.

A RUSSIAN MISSION.

Prince Mertscherski has been sent to investigate the disturbances and grievances in Kharkhoff, Kamerinoslav and Poltava.

THE KING'S IMPROVEMENT.

Later.

The King embarks in his yacht to-morrow and proceeds to Cowes, where the vessel will moor.

MR. CHAMBERLAIN.

Mr. Chamberlain is progressing satisfactorily.

A NATIONAL DISASTER.

London, July 15.

The famous campanile of St. Mark, at Venice, fell in ruins this morning. There were sudden signs of decay yesterday.

NEW ENGLISH PREMIER.

A crowded meeting of Unionists has been held at the Foreign Office. Mr. Balfour was enthusiastically cheered.

SIR MICHAEL HICKS-BEACH.

London, July 14.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, has resigned.

London, July 15.

It is probable that Sir Michael Hicks-Beach will consent to remain in office till the autumn session.

LORD SALISBURY AND THE KING.

The King, at Friday's audience, conferred on Lord Salisbury the Grand Cross of the Victorian Order, the star of which was set in brilliants.

MR. BALFOUR.

Mr. A. J. Balfour had audience of the King this afternoon and was appointed Lord Keeper of the Privy Seal (the office just relinquished by Lord Salisbury).

THE KING'S JOURNEY.

London, July 16.

The King and Queen were conveyed from Victoria Station, London, to Portsmouth yesterday, where they arrived at 47 minutes past 1. The King was conveyed on board his yacht, which then proceeded to Cowes. He bore the journey without being fatigued. He was greatly pleased with the change.

THE NEXT LORD MAYOR OF LONDON.

Sir Marcus Samuel has been nominated (by the Court of Aldermen and the Common Council) Lord Mayor-Elect of the city of London.

DUKE OF DEVONSHIRE.

London, July 16.

The Duke of Devonshire, speaking in the House of Lords, said that Lord Salisbury desired him to undertake the leadership of the party in the House of Lords.

RUSSIA AND ITALY.

The Czar and the King of Italy have reviewed 38,800 troops at Tsar-selo, the Czar leading his own regiments past the King.

MR. CHAMBERLAIN.

London, July 17.

Mr. Chamberlain is progressing favourably.

FRANCE AND SHANGHAI.

Lord Cranborne, speaking in the House of Commons, said that Sir Ernest Satow will report shortly on the whole question relating to the French position in the International Settlement at Shanghai.

(RECEIVED AT THE LEGATION OF FRANCE.)

NEWS FROM PARIS.

Saigon, July 10.

The Chamber of Deputies has adopted the proposition for the conversion of the 3½ per cents into 3 per cents.

FRANCE AND SIAM.

The Prince Royal of Siam has arrived in Paris, where he was received officially. He visited President Loubet, to whom he declared that the good relations between France and Siam would become more and more intimate, and that nothing could disturb them. The President in reply reciprocated these wishes, and he subsequently returned the Prince's visit.

FINANCE.

Saigon, July 11.

The Senate has voted the direct contribution and the conversion of the 3½ per cents.

Saigon, July 12.

The Senate has adopted the proposal relating to peppers coming from Indo-China.

APPOINTMENTS.

The election of M. Deloncle as Deputy for Cochinchina has been confirmed.

M. Dubail, at present Minister of France in Tokyo, replaces M. Beau at Peking.

MARTINIQUE.

Saigon, July 15.

New and violent eruptions have taken place at Mont Pelee. There are no victims.

ITALY AND RUSSIA.

The King of Italy arrived yesterday at Peterhof to pay a visit to the Czar.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

ITALIAN SILK CROP.

Mr. Oyama, Japanese Representative in Rome, telegraphs under date of the 11th instant that the crop of silk this year in Italy is inferior to that of last year. The present price per kilogram is 3.43 lira and the tendency is upward. The best quality commands 4 lira per kilo.

(RECEIVED IN TOKYO.)

TIENTSIN.

The principal changes made in the conditions relating to the restoration of Tientsin are that whereas the former protocol forbade the posting of Chinese troops within 35 kilometres of the city, that distance is now altered to twenty *li* (Chinese); and the veto that no troops must be posted within 30 kilometers along the Peking-Shanhaikwan road, is altered to 2 miles (English). There are other minor alterations. It is expected that the Chinese will soon accept this protocol and that the restoration will be effected.

RISING IN NORTH CHINA.

A telegram received in Tokyo says that the officer commanding in Shingking recently obtained 8000 rounds of ammunition from the Russians, and equipped a force which he despatched against the insurgents in Tung-hwa-hien. The troops were waylaid and driven back with the loss of all the ammunition. It is expected that the rising is of no consequence and that it will be quickly quelled.

(FROM THE "JIJI SHIMPO.")

THE BOILER QUESTION.

London, July 10.

A Committee appointed by the British Admiralty in its report says there are many disadvantages in connection with watertube boilers, and recommends the adoption of cylindrical boilers for general use.

THE QUEEN.

The Queen of England has opened a bazaar for the benefit of children's charity hospitals.

TIENTSIN.

Owing to the successful efforts of the American Government with regard to the transference of the Tientsin administration, only minor points now remain to be solved before the final settlement.

SHIPPING BUSINESS ON THE ATLANTIC.

London, July 11.

The *Pull Mall Gazette* states that Mr. Pierpont Morgan has accomplished a friendly union with the Japan-American Steamship Companies on the Atlantic with a view to avoiding a lowering of freights in the future. The British-German Steamship Companies will also join the union. As to France, it still remains unknown what course her steamship lines will take.

LANCASHIRE COTTON SPINNERS' UNION.

The Lancashire Cotton Spinners' Union was organized to-day. They propose to curtail the output.

LORD KITCHENER.

London, July 12.

Viscount Kitchener has arrived in London and been welcomed with great enthusiasm. Members of the Headquarters Staff and other high officers assembled to welcome him on his return, as also did various Princes and principal personages from India. The Prince of Wales, in place of King Edward, welcomed the Viscount and invited him to a banquet in St. James Palace.

KING EDWARD.

The King's condition is gradually improving.

The Coronation will probably take place within four weeks from now.

LANCASHIRE COTTON SPINNERS.

The cotton spinners of Lancashire have reduced working hours by two-thirds.

ERUPTION IN THE WEST INDIES.

Mont Pelee in Martinique again became active yesterday.

JAPANESE NAVAL OFFICERS AT THE "ZOO."

London, July 14.

A garden party was held at the Botanical Gardens in Regent Park to-day in honour of Admiral Ijuin, Commander-in-Chief of the Japanese Coronation Squadron, and the officers belonging to the *Asama* and *Takasago*. The function was largely attended.

LORD SALISBURY RESIGNS.

Lord Salisbury has resigned office and Mr. A. J. Balfour is appointed Premier. The British House of Commons received the news with satisfaction.

SIR MICHAEL HICKS-BEACH RESIGNS.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, has resigned.

COLLAPSE OF ST. MARK'S CAMPANILE.

The campanile of St. Mark's at Venice, Italy, has collapsed and some persons were crushed to death. The citizens of Venice are much grieved by the loss of the tower.

THE KING.

London, July 15.

The King has left London for the Solent where His Majesty embarked in the royal yacht. He was in excellent spirits during the trip.

CORONATION NAVAL REVIEW.

The Japanese warship *Asama* and *Takasago* have decided to remain in England to take part in the Coronation naval review to be held at Spithead in the beginning of August.

(FROM THE "JAPAN HERALD.")

MANCHURIA.

London, July 10.

A Russian Edict excludes Russian Jews from Manchuria. It admits foreign Jews only when their national passports are supplemented by permits from the Russian Ministers for Foreign Affairs, Finance and the Interior.

The Cossack settlements along the Manchurian railway are receiving free grants of land, with exemption from taxes for twenty years.

THE CORONATION.

London, July 10.

It is expected that the coronation will take place in August.

THE CORONATION.

London, July 11.

It is expected that the coronation will take place on August 9th.

THE PHILIPPINES.

London, July 12.

Regarding the negotiations between the United States and the Vatican concerning the Friars' lands, it appears that the trouble relates to Art. 9 of the treaty with Spain, preventing the Friars from being ousted from the Islands.

PRINCE KOMATSU.

Prince Komatsu has visited San Sebastian, taking with him the Order of the Chrysanthemum for presentation to King Alfonso.

FRANCE AND GERMANY.

M. Waldeck-Rousseau, the French ex-Premier, and the Kaiser have exchanged visits at Odde (?).

THE NEW GOVERNMENT.

London, July 14.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, has resigned, and other changes are possible.

Mr. Chamberlain Colonial Secretary, has sent a message to a meeting of the party, highly eulogising Mr. Balfour's services and assuring the new Premier of the loyal support of himself and the party to which he belongs in the House of Commons.

MARCUS ISLAND.

A New York despatch states that the United States Government has granted a title to Marcus Island (south-east of the Bonin Islands) to Capt. Rosehill, who organised an expedition to take possession. On arrival of the transport *Sheridan* at San Francisco it was reported that the expedition had been stopped, the Captain reporting that he touched at Marcus Island, but that the Japanese soldiers ordered him off. The officer commanding showed the Government orders to take possession. Secretary of State Hay has cabled to the U.S. Minister in Tokyo to report.

[The foregoing message is obscure in several places in the original, and it is uncertain, among other things, whether the words "officer commanding" refer to the American expedition or to the Japanese troops.—Ed. J.M.]

(FROM THE "DEUTSCHE JAPANPOST.")

KAISER WILHELM.

Berlin, July 10.

The German Emperor started to-day on his annual trip to Norway.

HAÏTI.

The leader of the northern party in Haïti has been proclaimed President of the republic.

RUSSIA IN MANCHURIA.

The St. Petersburg Telegraph Agency wires that the evacuation of Manchuria by the Russian troops has not yet commenced.

THE EVACUATION OF TIENTSIN.

Berlin, July 12.

The Foreign Ministers in China have come to an agreement about the conditions concerning the evacuation of Tientsin by the foreign troops, the German Minister also assenting.

PLAGUE.

The plague at Constantinople is extinguished.

WEST INDIAN HORRORS.

In the neighbourhood of Fort de France (Martinique) new volcanic eruptions have taken place. The town is in great danger.

MACAO.

The report stating that Macao had been sold to Germany is unfounded.

MINING ACCIDENT.

In Pennsylvania a great mining accident has occurred: 300 men are missing.

GERMAN NEWS.

Berlin, July 15.

The famous campanile of St. Mark's at Venice has collapsed. Fortunately there are no fatalities.

The King of Italy has been received by the Tsar at St. Petersburg with great splendour and cordiality.

Berlin, July 16.

The whole German press speaks most sympathetically about Balfour's being appointed Minister of Foreign Affairs (? Prime Minister; Lord Lansdowne is Foreign Secretary.)

During the military review held on the Champs Elysées at Paris on the 14th instant in honour of the national festival, hundreds of men were sunstruck.

(FROM THE "N.-C. DAILY NEWS.")

SANDHURST.

London, via Bombay, July 11.

In a debate in the House of Lords on certain incidents that had taken place at Sandhurst, Lord Roberts defended the punishments that had been inflicted on the military students, and said there had been a series of misdemeanours showing a relaxed state of discipline, which necessitated measures to put an end to an intolerable state of affairs, but he promised to examine individual cases.

(FROM THE "CHINA MAIL.")

MURDER AT SINGAPORE.

Singapore, July 7.

On Saturday, about midnight, a Frenchman engaged a ricksha to go to the Docks, and, it is alleged, murdered the ricksha puller. The Frenchman has been arrested.

(FROM THE "SHANGHAI MERCURY.")

AFFAIRS IN THE PHILIPPINES.

Manila, June 12.

The Vatican in replying to Governor Taft's proposals with regard to the disposal of the Friars' lands, refuses to recall the priests within the period fixed by Gov. Taft, declaring that such a recall would be unjustified and contrary to the stipulations of the Treaty of Paris, and would be placing the Holy See in conflict with Spain. The Vatican, however, promises to introduce clergy of other nationalities into the islands and agrees to the sale of the Ecclesiastical lands.

(FROM THE "OSTASIATISCHE LLOYD.")
BASUTOLAND.

Berlin, July 10.
An insurrection of the natives is reported to have taken place on the frontier of Basutoland.

DEATH OF A DUCHESS.

H.H. the Duchess Friederike of Anhalt, the widow of the last member of the house of Anhalt-Bernburg, died at Ballenstedt aged 91 years.

THE CALAMITY AT CHEFOO.

The following telegrams from the *Shanghai Mercury* and *N.C. Daily News* describe the sad affair at Chefoo, already briefly reported:—

Chefoo, July 8, 9.15 a.m.

Ten schoolboys belonging to the China Inland Mission School at this port have died of ptomaine poisoning. It appears that one of the courses served to the boys and teachers at the school at tiffin on Sunday was chicken pie. There were several pies cooked and one of them was evidently bad. A number of the boys were taken ill afterwards, and it was thought that cholera had broken out in the school, but it turned out to be ptomaine poisoning, and as soon as it was found out proper remedies were applied. The names of the poor little fellows who succumbed are as follows:—

Gershom Broomhall, son of Mr. and Mrs. A. Hudson Broomhall of the China Inland Mission, home on leave.

Ellsworth R. Fitch, son of Rev. J. A. Fitch, American Presbyterian Mission, Weihien.

Nicholas Gray, the son of a Russian merchant in Japan. He has a brother at the school.

Marit Sandstedt, son of Mr. E. W. Sandstedt, captain of the C.M.S.N. Co. hulk at Hankow.

Stewart Kay, youngest son of the late Mr. and Mrs. Duncan Kay, who were massacred in Shensi during the late troubles.

Norman Gray Owen, son of Mr. and Mrs. Owen of the China Inland Mission.

Norman Whitfield, the only son of Mr. and Mrs. Whitfield, late of Messrs. Liddell Bros. The father has been home some time and the mother left for home lately.

Howard Fische, the youngest son of Mr. C. T. Fische, of the China Inland Mission.

Claude Hartwell, son of Rev. J. B. Hartwell, D.D., American Southern Baptist Mission, Tengchowfu, near Chefoo.

Herbert Parry, son of Dr. H. Parry, China Inland Mission.

There are two other boys who are still seriously ill, viz:—

Hugh Gray Owen and Frank Parry, brothers of the boys mentioned above.

TWO MORE DEATHS.

Chefoo, 1 p.m.

Two more deaths have taken place at the school through poisoning. They are

F. W. H. Momen, son of Mrs. (Capt.) Muir, stepfather at Chefoo, mother in Shanghai.

Hugh Gray Owen, son of Mr. and Mrs. Owen, of the China Inland Mission.

ANOTHER ACCOUNT.

Shanghai, July 8.

The following information has reached the China Inland Mission, from Chefoo;

On Sunday, all the teachers and scholars in the Boys' School partook of chicken-pie at tiffin. One pie appears to have been bad, which resulted in twelve cases of ptomaine poisoning. The teachers again partook of one of the same pies in the evening without any bad result. It is with the most profound sorrow we learn that, up to 9 o'clock this morning, ten boys had succumbed. Their names are as follows:—

Gershom Broomhall, Nicholas Gray, Norman Gray Owen, Stewart Kay, Claude Hartwell, Ellsworth R. Fitch, Marit Sandstedt, Howard Fische, Herbert Parry, Norman Whitfield.

Other two boys are now seriously ill, viz., Frank Parry and Hugh Gray Owen.

Chefoo, 1.10 p.m.

F. W. H. Momen and Hugh Gray Owen passed away.

Chefoo, Wednesday, July 9, 9.16 a.m.

The body of Hugh Gray Owen, who died at noon on Tuesday, has been sent to Shanghai for post-mortem examination, the official enquiry having been postponed until the result is known. The doctors and nurses of the U.S. Navy are rendering valuable assistance at Chefoo. Another boy, Cyril Molloy, the son of Mr. E. Molloy, of the Customs, Chinkiang, is seriously ill.

Chefoo, July 10, 9 a.m.

Cyril Molloy, aged nine years, who was taken ill with the other boys, died at 10 o'clock last night.

Young Parry is progressing favourably.

Chefoo, July 10, 8.56 a.m.

Molloy died yesterday at 10 p.m. Parry and Newcomb are progressing favourably. Three other boys, Ewing, Squire, and Davault, who had been slightly ill, are now quite well.

6.30 p.m.

Molloy's case does not negative ptomaine. His symptoms identical with those of eighteen others who were ill.

The following telegram has been received by the China Inland Mission from Chefoo, dated 11th July, 8.05 a.m.:—

"Parry convalescent; others well, all moving to hospital to-day. Doctor considers the crisis safely over."

Pig Iron, No. 3	2.00 to 2.50
Hoop Iron (¾ to 1½ inch)	5.10 to 5.60

KEROSENE.

The market is dull.

American	\$2.56
Russian	2.35
Langkat	2.35

SUGAR.

There has been a fair business and prices are practically unchanged.

	PER PICUL.
Brown Takao	Y. 4.90 to 5.50
Brown Manila	5.25 to 6.45
Brown Daitong	4.30 to 6.50
Brown Canton	6.00 to 6.60
White Java and Penang	6.00 to 6.80
White Refined	8.20 to 10.10

EXPORTS.

RAW SILK.

Supplies are now coming in more freely and there has been some buying during the week, more especially for America. Lyons is still dull, and there is very little enquiry for that market. Holders are firm, anticipating still better news from New York before long. In the meantime prices for best Re-reels are strong, and maintained at a level equal to good Shinshu Filatures. Kakedas have appeared on the market but prices are too high to admit of much business.

QUOTATIONS.

Filatures—Extra, Fine	Y.
Filatures—Extra, Coarse	990 to 1,030
Filatures—No. 1, Fine	990 to 1,000

TEA.

Settlements to the 15th amount to 21,210 piculs and the market has been kept well supplied with most grades. Total settlements for the season are 116,067 piculs to July 15th as against 127,623 for the same period last year.

QUOTATIONS.

Choicest	46 & upwards
Choice	43 to 45
Finest	41 to 42
Fine	36 to 40
Good Medium	33 to 35
Medium	30 to 32
Good Common	27 to 29
Common	24 to 26

FISH OIL.

During the last fortnight some 10,000 piculs changed figures, but demand then fell off and the market is now weaker.

COPPER.

There is nothing to report in copper, holders being firm and disinclined to consider home prices.

SORE HANDS

Red, Rough Hands, Itching
Burning Palms and Painful
Finger Ends

ONE NIGHT TREATMENT

Soak the hands on retiring in a strong, hot, creamy lather of CUTICURA SOAP. Dry, and anoint freely with CUTICURA, the great skin cure and purest of emollients. Wear, during the night, old, loose kid gloves, with the finger ends cut off and air holes cut in the palms. For red, rough, chapped hands, dry, fissured, itching, feverish palms, with shapeless nails and painful finger ends, this treatment is simply wonderful.

Millions of Women Use Cuticura Soap

Exclusively, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations, inflammations, and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sanative antiseptic purposes which readily suggest themselves to women, and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour, Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching and irritation and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. Aust. Depot: R. TOWNS & Co., Sydney, N. S. W. So. African Depot: LENNON LTD., Cape Town.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 2ND, 1902.

DEATH.

At Yumoto on July 29, JULIUS WITKOWSKI, for many years a resident of Japan.

SUMMARY OF NEWS.

THE will of the late Earl Fitzwilliam has been been sworn at over three millions sterling.

PRINCE KOMATSU has wired home that he and his party left Berlin on July 27th for St. Petersburg.

MR. INOUE KATSUNOSUKE, Japanese Minister in Paris, will return to Japan shortly on leave of absence.

It is estimated that the English railways lost over one million sterling by the postponement of the Coronation.

VICE-ADMIRAL S. HIDAKA has been appointed Commander-in-Chief of the Japanese Standing Squadron in place of Vice-Admiral Tsunoda.

THE trustees appointed by the late Mr. Cecil

Rhodes to administer his will desire that the colonial scholars under the special scholarships should go into residence at Oxford in October, 1903.

ON July 28th two passenger trains came into collision at Omuda station on the Kyushu railway and over ten persons were injured more or less seriously.

PRINCESSES TSUNE AND KANE will start for Nikko on the 28th, leaving Uyeno Station by the 11.45 a.m. train. Their Highnesses will remain at Nikko during the hot season.

THE *Manila Times* of the 7th inst. states that Aguinaldo was set at liberty at 11.30 a.m. on the 5th inst., and, immediately after packing up his effects, left for parts unknown.

VISCOUNT HAYASHI, Japanese Minister to the Court of St. James, has been ordered to represent Japan at the Coronation in place of Prince Komatsu, who is now on his way home.

THE Chinese Envoy to the Coronation of King Edward, who is now on his way home, is expected to arrive in Yokohama shortly. His Excellency will remain in Japan for about ten days.

GEORGE READ, of the East Sydney Swimming Club, recently won the half-mile race in the Thames at Surbiton by 50 yards, the time being 9min. 12¾sec. This is the local record.

MR. KIMURA RIVEMON, a rich merchant of Yokohama, was appointed on July 29th a member of the House of Peers as representing the highest taxpayers of Kanagawa Prefecture, in accordance with Art. I. of the Rules relating to the Upper House.

MOUNT Shirane, a dormant volcano on the boundary line between Shinshu and Kotsuke, began to emit smoke on July 19th. On the 23rd the volcano emitted lava and earth to a height of over 30 feet and is still sending out dense columns of smoke.

A TYPHOON which burst over Hongkong on the morning of the 18th July, and raged all day, did considerable damage. Fortunately the Observatory gave ample warning and the shipping escaped to places of safety in time. Some 20 lives were lost on shore and afloat.

MR. IJIMA WAICHI, teacher of the Yokohama Commercial School, accompanied by Messrs. Shibuka Kumazo and Takahashi Korefuku, students of the third year course of the institution, left Yokohama on July 24th for Vladivostok via Tsuruga on a tour of commercial inspection. They will visit various ports of Korea on their way home.

THE Han-Shin (Osaka-Kobe) Electric Railway Company, at a special general meeting held on July 29th, passed a resolution to prolong the term of the Company's business from 30 to 99 years and to present a petition to the Government for sanction. This step has been rendered necessary for the purpose of obtaining funds from the capitalist (Mr. Brady) with whom the company has been in negotiation.

Two steamers, the *Portland* and *Jeanie*, bound from Puget Sound to Nome and having on board between them some 200 passengers the non-arrival of which at their destination had caused much anxiety, have been found locked up in the ice some eighty miles north of Cape Prince of Wales. The vessels were discovered by the U.S. revenue cutter *Thetis*, which had gone out to search for them, and which was reported at Nome

by a whaler to be standing by the imprisoned ships. Both were within 50 miles of Nome on May 21st but were caught and carried northward through Behring Straits. All were well on board.

THERE will be manoeuvres in Kyushu their autumn on a large scale. The operations will be taken part in by troops of the Sixth Army Division and soldiers from various barracks in the neighbouring districts. Several days ago, an official of the Imperial Household Department accompanied by staff officers proceeded to Kumamoto to make arrangements for the sojourn of the Emperor, who will inspect the manoeuvres.

MR. YOKOYAMA TORAICHIRO, Mayor of Nagasaki, sent in his resignation on July 29th in connection with the work of repairing the Nagasaki harbour. It is alleged that some dishonesty charged against certain of the commissioners in charge of the undertaking has caused the Mayor to retire from office. Messrs. Yamamoto Shikanosuke and Watanabe Ko, as representatives of the commissioners, are now in Tokyo relative to the affair.

A TRAGEDY involving the death of one man and injuries to four other persons is reported from Osaka. On the night of July 25th a man named Fujimoto Kakichi, of Nishiku, armed with a sword entered the house of Tatsuno Nakazo, in the same place, and killed the latter on the spot. The unfortunate man's wife, her daughter and one other person were also severely cut, though not fatally. The murderer was at once arrested.

THE first shots in the Boer campaign were fired on the night of Oct. 12, 1899, 30 hours or so after the expiry of the Boer ultimatum, at Kraaipan, a station on the railway 40 miles south of Mafeking. The last shots of the war appear to have been discharged at Vereeniging on June 4, 1902. Lieut. McKeich, of the 2nd Brigade 9th New Zealand Contingent, was killed, and Lieut. Payne, of the same corps, was slightly wounded.

FEARS are entertained by the Yokosuka Naval Authorities that the workmen belonging to the Shipbuilding Yard there may follow the example of the strikers at Kure. A Japanese paper says that signs are not wanting that the Yokosuka workmen are very likely to go on strike sooner or later, and in consequence the Authorities are keeping vigilant watch over the doings of the ringleaders. It appears that the exchange of communications is at present busily going on between the workmen of Yokosuka and Kure.

THE third children's picnic projected by the *Fiji Shimpō* has just been concluded. A party of over 50 poor girls, ranging in age from about eight to thirteen, were taken by train from Shimbashi to Kugenuma, Shoshu, early on the morning of July 21st. After spending four enjoyable days, during which period the juvenile party visited various places under conductors who volunteered their services, they came back to Tokyo on the evening of the 24th. The expense of the excursion is said to have been yen 226.

AMONG various objects to be erected in the compound of the Fifth Domestic Exhibition at Osaka will be a Mount Fuji which is to be entirely made of Formosan salt under the direction of Mr. Oguri Tomijiro, a Japanese salt merchant in Formosa, who intends thereby to make Formosan salt known to the world. The spot where the mountain is to be erected will be converted into a garden representing the banks of the River Fuji, the material to be employed being also salt. The Formosan Government will also exhibit various kinds of salt obtained on the island.

CHINESE NEWS.

Saturday, July 26.

It has been a subject of speculation ever since the China Japan war whether the Peking Government would take any steps to provide another fleet for the country. Before that war China ranked as a formidable naval Power in the Far East, but after the battles of the Yalu and of Wei-hai-wei, she became practically shipless, and during the seven years that have elapsed since that time, she seems to have been contented to leave her seas at the mercy of any Power. Last spring she decided to appropriate a sum of $1\frac{1}{4}$ million taels annually to the rehabilitation of her navy, but that was obviously a ludicrous resolve which like the proverbial Manx cat's tail, might be regarded as a futile superfluity. So thinks Viceroy Yuan, evidently. On the 11th instant he is said to have addressed to the throne a strong memorial, urging that proper and adequate steps should be at once taken to reconstitute the Navy; that there should be a standing squadron and a reserve; that the dockyards should be subjected to regulations calculated to develop their usefulness for naval purposes, and that there should be naval stations at Chefoo, Shanghai, Nanking, Kiangyung and Kwanchow. It is not yet known what reception this memorial received at court, but if China decides to appropriate any adequate sum—say 200 million taels—to the resuscitation of her navy, she will find some of the foreign Powers difficult to persuade of her inability to pay the Indemnity in full.

Monday, July 28.

There is a good deal of talk about the Hang-yang mine. This is the mine from which the Japanese Government hopes to obtain cheap supplies of ore for the purposes of the Wakamatsu Foundry. Obviously it would be most desirable that the mine should be in Japanese hands. Some of our Tokyo contemporaries allege that the possibility of effecting an arrangement in that sense has been discussed officially, and that the views of the Chinese Government have been informally sounded. But a difficulty is presented by the fact that some other Power—the name is not mentioned—has long had an eye on the mine, and that an application for a lease of it was made and refused some years ago. To grant now to Japan what has been withheld from a third party might cause complications. How the matter is likely to end there is no prediction. It appears that Mr. Tokura also has been employing experts to make a report on the mine. Mr. Tokura is the capitalist who put up 2 million yen some time ago for the purpose of working a coal mine at Sienching in Anhui, in conjunction with Taotai Sheng.

According to news telegraphed to London on June 17th by *The Times'* correspondent, Russia's objections to the arrangement for the restoration of the Peking-Shanhaikwan Railway had been removed, and a document in that sense had been signed by the Russian, Chinese and English authorities. But Japanese newspapers now allege that the matter has not been settled. Russia resolutely maintains her objection to the power that England would thus acquire, and declares that if she and England are not placed on an equal footing in this matter, she will not restore either the Shanhaikwan-Newchwang line or Manchuria. The officials who negotiated the agreement to which Russia objects were Viceroy Yuan and Mr. Ku Hung-ki.

Both were punished, *more sinico*, for their share in the transaction. But Yuan, it is said, insists that he was right, and that however many times he be punished his opinion will not change. On the other side are Yung Lu and Kong Kang, who show equal obstinacy. According to the same authority, Belgium and France are ranged on Russia's side, whereas America and Japan side with England. The rest are neutral. We hesitate to comment on this news, pending confirmation.

Reuter's brief telegram that the Chinese Government had agreed to abolish *likin* throughout the empire in consideration of an increase of tariff on imports and exports, is supplemented by a cablegram to the *Asahi Shimbun*, which says that import duties are to be increased to $12\frac{1}{2}$ per cent., that export duties are to be revised, and that salt and opium are to be excluded from the *likin* exemption. The only internal dues levied on goods will therefore be transit and terminal taxes. It may be presumed that some agreement will be come to about these also, for evidently the local officials will otherwise have no difficulty in compensating themselves for the loss of *likin* by making an addition to the transit dues or the terminal taxes.

The *Asahi's* Peking correspondent sends a strange telegram saying that Russia, much discontented with Viceroy Yuan's attitude of reliance on Japan, is hesitating whether to inspire leading Chinamen to impeach him, or to take steps for purchasing him. Not much imagination is needed to concoct a tale of that kind.

The *Nippon* publishes a bitter complaint against the methods of Russian Custom House officials at Vladivostock. It amounts to this, that our contemporary charges them with being arbitrary, irregular and corrupt. Instances are given, but they are all more or less vague. The *Nippon* alleges, *inter alia*, that outward cargo from Vladivostock has become virtually unprocurable in consequence of the imposts.

The *Hochi Shimbun* observes that earnest and zealous as the Chinese visitors, Messrs. Wu and Yu, are showing themselves in conducting investigations, it can not be hoped that they alone will effect much in pushing China into the path of progress. What China wants is to employ a number of foreigners, Japanese, English, German and so on. She will learn more in that way than in any other. That was Japan's method and it succeeded.

Tuesday, July 29.

Particulars as to the *likin* abolition arrangement show that it is not to go into operation until January 1st, 1905. Thereafter all imports will pay $12\frac{1}{2}$ per cent. duty, and will receive from the Custom House at the place of importation a certificate franking them to every part of the empire without being liable to *likin* at any point. As to exports, they will pay $7\frac{1}{2}$ per cent. *ad-valorem* duty at the first tax-station they pass and will thenceforth be free of all further charges. There will not be any removal of the present *likin*-collecting offices, but neither will there be any increase of their number. Salt and opium will be treated independently, paying *likin* at special stations. Another condition is that machine-made cotton yarn and cotton fabrics will pay an *ad-valorem* duty of 10 per cent., and that raw cotton from abroad will pay $2\frac{1}{2}$ per cent., Chinese cotton being untaxed. With regard to silk, silk-works and tea, the arrangements have still to be made. One

point is somewhat obscure as explained by the telegraph. The statement wired is that Chinese goods will pay provincial and city transit-dues, from which source the loss to the local revenues by the abolition of *likin* will be compensated. That sounds like robbing Peter to pay Paul. *Likin* is not in itself more objectionable than transit dues; and nothing would be gained by increasing the latter *pari passu* with the former's reduction. But it may confidently be assumed that this ambiguity is due to defective transmission only. The commissioners have surely given full attention to these matters.

There has been an explosion of a powder factory at Fuchow, but the number of casualties is not stated.

The telegraph says that an Anglo-French syndicate has obtained a charter for working all the mines in Yunnan, the conditions being, payment of 5 per cent. terminal tax; 25 per cent. royalty to the State, and 10 per cent. provincial tax, or 40 per cent. in all. That sounds very heavy, but, on the other hand, unless tourists and explorers are greatly mistaken, the mineral wealth of Yunnan is enormous. Transportation will be the great difficulty.

Mr. John Barrett has reached Peking and has been received in audience by the Emperor, the United States Representative introducing him.

It is now stated that some slight changes having been effected in the conditions for the restoration of the Peking-Shanhaikwan Railway, the line will be given back shortly. We are inclined to think that the conditions were arranged some time ago.

Mr. Wu Yu-lun is said to have sent a report from Tokyo to the Peking Government, describing the extremely cordial reception given to him in Japan, and saying that the Chinese students in this country are leading very quiet, orderly lives, and have shown no signs of becoming imbued with democratic sentiments.

The telegraph has given so much perplexing information lately about appointments of Chinese Ministers Plenipotentiary that the following note from the leading Shanghai paper will be welcomed as an elucidation:—

In a recent paragraph in these "Notes" it was stated that reactionaries in Peking were trying to obstruct the appointment of Sir Chên-tung Liang Chêng, K.C.M.G., as Chinese Minister to the United States, Spain and Peru, and that it would be an exceeding pity and a loss to the country if those bigots got their way. It is a pleasure therefore to state now that official confirmation has been received regarding the news that has been published by the "Universal Gazette," to the effect that at the special recommendation of Prince Ching and the Ministers of the Chinese Foreign Office—Waiwa Pu—the "Emperor," *i.e.*, Empress Dowager, had been "pleased to appoint H. E. Sir Chen-tung Liang Chêng, K.C.M.G., at present on tour abroad with Prince Tsai Chen, Special Ambassador to King Edward's Coronation, as First Secretary and Chief Adviser of the Embassy, to succeed H. E. Wu Ting-fang, whose term as Chinese Minister to the U.S., Spain and Peru expired in June last. Besides the appointment of Sir Chên-tung to the three countries named above, the appointment of the son of the enlightened Grand Secretary, Sun Chia-nai, the expectant Taotai, Sun Pao-ch'î, to succeed Minister Yü Kêng (Manchu) in Paris, and the expectant Taotai, Hu Wei-tê, to be Minister at St. Petersburg, vice Yang Ju, deceased, is also announced. Apropos, there is not much to record concerning the latter named two new Ministers except that the official appointed to Russia is supposed to be a Russophile and was recommended by a Russophile to the Empress Dowager. All of the three new Ministers have been further specially bestowed the brevet button of a 3rd grade Court Officer which

places them on an equality with the Governor of a province.

Wednesday, July 30.

Extensive official changes and appointments are telegraphed to have taken place in Peking, but the meaning of them is difficult to decipher, the telegram being in a very abbreviated form. They do not appear to have much significance.

Apparently England and America are the only two Powers that were disposed to agree to the payment of the Indemnity in silver. The proposal has therefore been abandoned.

Mr. Hwang King, chief of the agricultural bureau of Chili, has left Peking for Japan. He was to embark in the *Sagami Maru* at Taku on the 28th instant. This official's purpose in coming to Japan is to investigate matters relating to agriculture.

The Chinese commander in Kirin telegraphs—according to the *Jiji*—that the Russians are apparently making preparations for evacuation. Their troops are assembling at Harbin, preparatory to leaving the country.

The German Representative in Peking is now on a visit to Japan. His Excellency was received in audience by the Emperor on the 28th instant.

Friday, August 1.

The Boxers in Szchuan do not seem to be quelled by any means. The latest telegram says that an engagement has occurred at a place 3 miles from Chengtu, and that 200 of the Imperial troops have been killed. Of course if the Government's troops are really fighting, the Boxers can not effect everything serious. The trouble in 1900 was that the troops only made a pretence of fighting and often not even that.

The Shanghai Branch of the China Association was to hold a meeting on the 30th ultimo, for the purpose of discussing the proposed arrangement with regard to *likin*.

Viceroy Yuan is reported to have expressed unbounded admiration of the manner in which the civil government of Tientsin has been carried on by the foreign board of officials. He avows his intention of following this excellent example. Perhaps the object lesson may prove really useful.

WAR BONDS.

Japanese War bonds are now quoted on the London market at a price 10 *yen* higher than the selling figure in Japan. The bonds offered in London, however, are specially endorsed by the Government, whereas those circulating in Japan have no such endorsement. The *Shogyo Shimpō* says that some Japanese capitalists, discerning an opportunity to reap a considerable profit, asked the Treasury whether the Government would endorse any bonds sent to London from Japan by private individuals, but that the Treasury, after consideration, replied in the negative. It is easy to understand the reasons influencing the Treasury, but inasmuch as, endorsement or no endorsement, the bonds are State securities, all equally valid, we are disposed to think that if the mere fact of endorsement unlocks the foreign money market, every one of the bonds ought to be endorsed at once. The Treasury incurs no additional liability whatever by endorsing, and we do not suppose that there is any pledge to the original purchasers of the bonds now selling in London.

KOREA.

Admiral Grenfell in the *Albion*, with three other ships, arrived at Chemulpo on the 23rd instant and proceeded to Sōul on the 24th, accompanied by the captains of all the vessels.

Eight cholera patients are reported in Wiju. It is supposed that the disease has come from China.

According to a telegram to the *Jiji Shimpō* from London the *Novoye Vremya* expresses dissatisfaction because many Japanese are settling in Korea and gradually converting it into a Japanese colony, and because the procedure of the Japanese there is so active as to give them a leading position. Such things appear to us to be inevitable. We have often pointed out—and indeed the fact must be apparent to every one—that Korea, owing to its position and to the relations that have always existed between it and Japan, is bound to be a receptacle for the latter's surplus population. Indeed it is partly because the peninsula offers such an opportunity for emigration that Japan could not suffer it to fall into the hands of a Power which would inaugurate a restrictive policy. One can easily comprehend that the advantage enjoyed by Japan, an advantage incidental to geographical situation, can not be viewed with absolute equanimity by Russian journals, but, after all, it must be remembered that whereas the preservation of Korean independence is essential to Japan's national security, Russia's interest in the peninsular empire is that it forms an important link in her programme of Far-Eastern expansion. Whatever Japan can accomplish by peaceful and legitimate means to secure the preservation of her interests in Korea, she is bound to accomplish. Russia is not so happily situated, and the complaints of the *Novoye Vremya* constantly sound querulous rather than reasonable.

Mr. Kato Masuo's position in Korea is becoming an interesting topic for correspondents. The latest story was that he had been appointed adviser to the Water Facilities Bureau, a curious nomination which no one seemed to comprehend clearly. Now comes news that he is to be adviser to the Department of Agriculture and Commerce with a salary of 600 *yen* per month and an engagement for 30 years. The thing is beginning to assume a farcical character, and Mr. Kato has just reason to complain of the Korean Government's vacillation. Evidently there are wheels within wheels.

Admiral Grenfell and the officers that accompanied him to Sōul left that city on the 26th instant. Several Korean officials proceeded with them to Chemulpo and visited the *Albion*.

The *Kokumin Shimbun* has a telegram from Sōul, saying that the military and civil elements in Pyong-yang have combined against the Japanese residents, and are disposed to drive them out of the place. It is a brief statement considering the nature of the news. The correspondent might have indulged in some further particulars.

The Japanese company formed for reclaiming the foreshore at Fusan held a celebration on the 28th instant in connection with the commencement of work. There were present the Consul, Mr. Narahara, and several guests, and the usual banquet and speechifying took place. One of these fine mornings we shall wake up in Yokohama to

hear that a foreshore reclamation company is about to inaugurate its opening operations here also. The bund is not a perennial luxury. It will disappear whenever its disappearance promises to be sufficiently profitable.

THE BOXERS IN SZCHUAN.

The following account of the last Boxer rising in Szchuan is given by the *N.-C. Daily News* correspondent in that province:—

On June 20th I wrote you something of the beginnings of the Boxer movement in this region, and of the attack on the peaceful Christian community of T'ienkuch'iao. Since then further heart-sickening details have come to hand from day to day. The chapel was built in the country two or three miles from a village. There were forty members and seventy-five probationers, together with a large number of enquirers, a part of them living in the immediate vicinity and others in several surrounding villages. The preacher, a bachelor of about sixty, much loved and respected, lived in a room adjoining the chapel. Rev. W. E. Manly, the missionary in charge, had spent the Sunday with them two days before the attack, ministering to a full house. The assailants, with faces blackened as a disguise, approached from three sides at once, and the sleepers, awakened by the blood-curdling Boxer yell, found themselves already completely surrounded. Springing from their beds in wild terror they rushed forth, some of them to a violent death. The preacher was killed before he had gotten out of the chapel door. Head, hands and feet were cut off and the trunk disembowelled and mangled most fiendishly.

The chapel and its furniture were set on fire, but only partially burned and the homes of eighty-nine people, with all their contents, completely consumed. The survivors fled in all directions, homeless and penniless. The officials have provided money for temporary necessities, but it is difficult to find shelter, since even friends and relatives, through fear of the Boxers, often refuse to receive them. Considerable numbers of converts from other villages have fled from their homes, and in some cases looting and burning have occurred. The Boxers have been watching the roads, seeking especially to catch and behead the leading Christians of each place. The village nearest the place to which the Boxers retreated would have met the same fate as T'ienkuch'iao on the night, had not they been seen and a messenger sent to give the alarm. The converts are not the only sufferers. Crowds of non-believers have been pouring into this city, abandoning all but what was most valuable and could be most easily removed.

For the last few days the Boxers have been increasing in number daily, while the soldiers have been hurried on from Ch'engtu in several detachments. The telegraph wires were cut, but have been repaired. The few soldiers have not only been unable to afford protection to refugees, but have had to exercise caution lest they be cut off. The Boxers want the two foreigners here and threaten the life of the official himself. A defeat at this juncture would greatly intensify the danger, and might result in the capture of the city. A day or two ago some of the first soldiers to arrive from Ch'engtu, over 300 li away, marched, some sixty in number, to the village nearest the Boxers, intending to take up their quarters in a temple. But while their guns were stacked and they off their guard, they suddenly found themselves surrounded and fiercely attacked. Being soldiers who had seen fighting, they fought their way out, killing and wounding several, and losing only one killed and wounded, being compelled to retreat in the direction from which they had come.

Late to-day has come news of the anticipated battle fought this morning. The arrival of so many soldiers had alarmed the Boxers, so that nearly all had fled when their fortified rendezvous was surrounded. There was no battle. A score or more of the Boxers were killed and a few captured, the remainder dispersing or fleeing to two other hills of refuge. The one death among the soldiers was due to a quarrel over the spoils. It is likely that the Boxer depredations will be somewhat checked, but we fear that the victory will be followed up with so little energy that the fire, smothered for a time, will burst forth again more fiercely than ever. It would have been stamped out before if the officials had done their duty. But from the Viceroy down there is a disposition to temporise, and in some cases covert sympathy with the Boxers. Village elders, if not in sympathy, risk their lives if they show any friendliness to Christians. One such was accused of being a Christian because he had no ancestral tablet in his home, and being commanded to burn incense and bow down before an idol, had his head struck off in the very act.

THE LABOUR QUESTION IN JAPAN.

In order to show the full scope of Mr. Consul-General Bellows' remarks on the labour question in Japan, our contemporary, the *Japan Gazette*, publishes the remainder of Mr. Bellows' article by way of supplement to the extract which evoked some criticism from us in a recent number. As a matter of much interest and also of justice, we too reproduce this remainder:—

For more than two years political economists have been concerned to find the cause of the business depression prevailing in Japan, and various diagnoses of her case have been made by Japanese statesmen and by foreign merchants doing business in her ports. The dullness which has been a noticeable feature in trade circles has been ascribed to the disparity between exports and imports, to want of capital, to lack of faith in the business integrity of native dealers, to the law prohibiting alien ownership of land, to the natural reaction after a period of extraordinary activity, and to various combinations of these causes with each other and with others more remote, but one contributory cause of great importance has been quite generally overlooked. The weight which is holding Japan down, hindering her attempts to expand her commerce, preventing her from taking the place she covets among the foremost ranks of civilized nations, is her cheap labour.

The Japanese labourer does not receive an average of fifty sen, or twenty-five cents American gold, a day. A native of good education, well qualified to form an accurate estimate, said that from six to eight dollars per month would be about the average of the combined earnings of a man and wife. This exceedingly low price does not mean that the employers are enriching themselves by grinding down the toiling masses. The low prices are in part a survival of the different standards of value which ruled while Japan was isolated from the rest of the world, but labour is cheap mainly because its productive power is small.

A foreigner going about the streets, visiting the workshops, the wharves and docks, or passing along the county roads, is continually impressed by the waste of human force. A pile is to be driven, and eight or ten men are employed to lift a weight by means of a primitive pulley, and let it fall on the head of the pile. A ship is to be coaled, and a swarm of men, boys, women, and girls appear to carry the coal in baskets from the coal sheds to the ship's hold. Men take the place of horses for drawing loads; the former uses only the simplest implements, and does work with the greatest expenditure of labour for the least return. Everywhere, one sees the same careless disregard of the conservation of human energy. Besides this misapplication of strength, the Japanese is not usually a hard worker; he stops to talk or to smoke, he wastes his time in studying some unimportant detail, so that it frequently takes four or five men to do the work which one American would easily finish.

The difference in productive capacity is strikingly and yet fairly shown by a comparison of the exports of Japan and the United States. In 1900, Japan, with a population of 41,089,940, exported goods to the value of \$107,035,100, or an average of \$2.60 to each inhabitant. The same year, the exports of the United States, which has a population of 76,304,799, amounted to \$1,478,050,000, an average of \$19.37 for each person, or more than seven times the average for Japan. This cannot be taken to mean that Japanese labour is only one-seventh as productive as American, for we have no means of ascertaining what proportion of the product of labour was retained at home, but the standard of living among the labouring classes of the Island Empire being necessarily very low, it is very conservative to place the productive capacity of one American as equal to that of four Japanese.

This indicates that nearly all the energy the people are capable of putting forth is needed for mere existence, and very little can be utilized for making progress along industrial and commercial lines, or for education and culture. While the nation continues able to produce only so small an amount for export, and all except a few of the higher classes are too poor to buy more than the bare necessities, commerce cannot increase, foreign investors are unlikely to place their funds where so low a rate of production prevails, and progress along every line of development is hindered.

As to the comparison instituted by Mr. Bellows between the exports of the United States and those of Japan, and his inference that the productive capacity of one American is equal to that of four Japanese, it appears to us that the cardinal difference of conditions between the two countries must be more carefully considered. The great

staples of American exports are food stuffs and raw cotton. Japan has very little of the former and practically none of the latter to place in foreign markets. By and by, when manufacturing processes in Japan become better developed, her exports will doubtless make a very different showing, but at present since she can offer to other nations virtually none of the raw products which America sends abroad in such immense quantities, it seems misleading to make a comparison of exports the basis of a conclusion as to the productive capacity of labour in each country. At the same time, we do not by any means seek to traverse Consul-General Bellows' views in their entirety. His analysis is valuable and, we venture to think, correct on the whole. For our own part, what we should be disposed to criticise in this country is defective appliances for utilizing labour and defective organization. The former point must strike every foreign observer. Many of the implements in common use in America and Europe are not available to the labouring classes in Japan. As Mr. Bellows justly says, what would be effected easily and quickly by a mechanical contrivance in the West is accomplished here, in many cases, by sheer force of manual toil. But there have been marked improvements of late years. Where heavy works of excavation or levelling have to be accomplished, we no longer see two men carrying between them a load of earth in a rope net, when three times the same quantity might be transported by one man on a wheeled vehicle by the simple expedient of making the ground carry the weight. What we now see is a Decauville railway and a string of capacious trucks. The rope net does still exist, and will always exist, for its usefulness under certain circumstances can not be equalled by any Occidental contrivance. Then again, in slinging heavy weights on waggons or in prising the latter out of ruts, the labourer is no longer limited to a troublesome arrangement of free levers and brick-box pillows. He uses a lifting jack, and even a crane. But it must be admitted that these improvements have not yet come into wide use. They are in the possession of big contractors only. The smaller contractors and all individual labourers have still to be content with their primitive tools. The results they attain with them are wonderful, but that is a matter of contrivance and long practice. The waste of labour remains. What is the root trouble in this case? Want of capital, we think. The ordinary Japanese can not possibly afford to procure expensive "tools of trade": he must continue to toil with the old cheap but uneconomical implements. Organization alone can correct that. The individual labourer working independently is a thing no longer known in the West except for household or agricultural purposes. Everything is accomplished by organized coöperation, and when a labourer is employed he finds himself an unit in a big combination with all its parts adjusted so as to give the maximum of efficacy to the whole. That has to come in Japan, but it is coming, slowly indeed yet surely.

As to the question of strenuousness in labour, what Mr. Consul-General Bellows says will be endorsed by most observers. But it is well to note the very marked difference between day labour and task labour in Japan. A day labourer at this time of year begins to work at 8 a.m. and knocks off at 6 p.m.; having rested 2 hours in the interval, namely, one hour for dinner and 30

minutes—the maximum—on two occasions for a smoke. He therefore does 8 hours' actual work, for which he receives about 56 sen, or 7 sen (13½d.) per hour. If the same man is on task work where his earnings depend upon his diligence, he will commence work at 6 a.m., at latest, and he will not knock off until 6.30 p.m., at earliest, his periods of rest in the interval being 30 minutes for dinner and two "smokes" of 10 or 15 minutes' duration each. In short, he rests one hour out of 12½, and for the 11½ hours' toil he probably receives 90 sen, or about 8 sen (2d.) per hour. There is not much fault to be found with the task-worker, nor do we think for a moment that an American labourer could accomplish a result four times as great in the same time with the same appliances. Be that as it may, however, where we differ from Consul-General Bellows in his estimate of Japanese industry and Japanese thrift. We are very far from thinking that there is any lack of labour-loving energy among the bread-winning classes in Japan, or any lack of the spirit of thrift. We may add one point which we omitted to mention when speaking on this subject in a previous issue, namely, that according to the present Civil Code of Japan, a man is not allowed to become *inkyo* before attaining his sixtieth year. We may also add that men like Consul-General Bellows are rendering most valuable service to this country when they invite public attention to subjects of such vital importance.

MARCUS ISLAND.

Saturday, July 26.

Japanese journals say that Minamitori-shima lies south-east of Yokohama at a distance of about 1,000 nautical miles, and east by south of the Bonins, at a distance of 650 miles. It is triangular in shape, some 6 miles in circumference and not more than 60 feet above the sea. There is no harbour worthy of the name, nor is there any supply of spring water. At present the lessee of the island, Mr. Mizutani, is living there with about 50 other Japanese subjects—some authorities say 15 or 16, which seems more likely—, including two or three women. Their principal employment is catching birds and exporting the plumage or the stuffed carcases. Two schooners are owned by Mr. Mizutani, the *Eisho Maru* and the *Motoya Maru*. Each is about 100 tons. They ply regularly to the Bonins, carrying thither cargoes of plumage and of birds for transshipment by the Nippon Yusen Kaisha's lines. Last month the *Eisho Maru* brought 8,000 yen worth in 40 cases. Minamitori-shima lies to the south of the Sulphur Islands, which consist of Iwo-jima (originally St. Alexander), Naka-iwo-jima (originally Sulphur Island) and Kita-iwo-jima (originally St. Augustine). These three islands were annexed by Japan in the year 1891, having been discovered in 1882. The Governor of Tokyo, Mr. Takasaki, proceeded thither in person and planted posts on the coast, which posts, it may be mentioned, are now at some distance inland. The annexation of Marcus Island followed in 1898, as already stated. Mr. Koizuka Kyo was Governor of Tokyo at the time, and his public announcement of the fact was made on the 24th of July in that year. The Government does not take any rent from the lessee of the island. He is merely required to furnish a report every half year. These reports show that the production totalled 13,864 yen in 1898-9;

22,593 yen in 1899-1900; and a smaller amount (which is not stated) in 1900-01.

Monday, July 28.

The telegraph says that the United States Government seems disposed to tacitly admit Japan's claim to Marcus Island. That might have been anticipated. It would be a very remarkable departure from the policy of the United States if its Government attempted to annex a far-off island under such circumstances. Far-Eastern countries have learned to expect not only just, but also moderate and sympathetic treatment from the Washington Authorities in all questions, and we do not imagine that there is to be any departure from that fine record on the present occasion.

Wednesday, July 30.

News from Honolulu, received by the *Asahi*, shows that Captain Rosehill left that place on the 10th instant in a schooner the name of which we can not decipher in its transliterated form. It appears that the Captain had succeeded in enlisting the aid of a capitalist of Hawaii, Mr. Peacock, by whom money was put up to procure and equip a vessel and form a company called the Marcus Island Guano Company. The ship carried 5 sailors, 5 guano-diggers, 1 navigator, 1 cook, Captain Rosehill, and two experts, Messrs. Bryan and Sedgwick. Apparently it was well understood by the projectors of the enterprise that a number of Japanese had settled on the island, and that any attempt to oust them or to interfere with their property might create an international complication; but Captain Rosehill claimed that the island had been discovered by him; that he held a grant duly made by the United States Government, and that all the right was on his side. Of course he is persuaded of the validity of his title, but the facts, as known in Japan, do not support his claim. The *Asahi's* correspondent avers that the captain and his companions declared their intention of asserting their rights unflinchingly. That, however, is incredible. They will be fully justified in subsequently preferring a claim against the grantors of an invalid title, but there is not the least probability of their proving so rash as to resort to force, especially in presence of the *Kasagi*. The *Asahi* adds that the island has an area of 1,867,905 *tsubo* (1,556 acres). There are three roads, all crossing the island, and from all of them access can be obtained to a hamlet called Mizutanimura, on the west coast. Our contemporary says that the building land measures 3,403 *tsubo*, the arable land 2,625 *tsubo* and the hill land 51,765 *tsubo*, the remainder being moor and forest. The island was leased to Mr. Mizutani for 10 years from December 6th, 1898, having been included in the Bonins by official announcement on the 12th of July of the same year.

INSURANCE IN TOKYO.

At a meeting held on the 23rd ultimo in the Uyeno Seiyoken to celebrate the 15th anniversary of the Tokyo Fire Insurance Company, Mr. Hirata, Minister of Agriculture and Commerce, made an interesting speech. The question of fires in Tokyo and of insurance against the terrible losses that the people suffered in consequence, began to engage official attention in 1876, when Count Okuma was Minister of Finance. It led to many discussions. Mr. Paul Mayet was then in the employment of the Government, and as he was thoroughly familiar with insurance business, his services were

engaged by the Finance Department as adviser. The first fact to be faced was the endless succession of conflagrations in Tokyo. How did they happen, what was their origin, and could any system of insurance be successfully inaugurated in the face of such calamities? These were the questions that had to be answered, and there were no data available for answering them. The first thing then was to collect statistics, a work which occupied several years. These statistics, when examined in 1884, showed that the scale of danger from fire had in its lowest place thatched houses; then came shingled buildings; then tiled, and finally godowns. Within the limits of the city proper there were virtually no thatched houses, but forty per cent. of the buildings had shingled roofs. The investigations showed that Kanda was the centre of conflagrations in Tokyo, and that in the Kanda district the part called Otama-ga-ike was the most liable to such calamities, but why such should be the case it seemed impossible to discover. Extensive plans were elaborated for improving the nature of buildings and providing methods of segregation. The subject was under constant investigation or discussion. As to insurance, it seemed impossible to hope for any rapid development of private enterprise in that line. Capital was not forthcoming and security for borrowing purposes was not available. After much thought it was proposed that the work should be officially undertaken, and that insurance should be made compulsory, every house in the city being required to pay a *pro-rata* premium. (That, it will be remembered by all old residents, was Professor Mayet's plan. He believed firmly in universality of effort and in State supervision, and he published some admirable essays in support of his thesis). The scheme was actually drafted in all its details, but it encountered strong opposition and had to be abandoned. Thus things remained in *statu quo* until 1887, when the Tokyo Fire Insurance Company came into existence, entering upon a prosperous career which has now reached its fifteenth year.

JAPAN AND THE "LIKIN" QUESTION.

Some comments appearing in Tokyo journals suggest that the *likin* question is variously and not quite correctly interpreted in this country. Nor indeed can that be wondered at, for the telegrams reaching Japan on the subject are conflicting and confusing. An article in the *Fiji Shimpō* takes the line that according to the Treaty of Commerce and Navigation between China and Japan signed in Peking in 1896, a commutation payment of one half of the import duty chargeable on any article frees that article from all transport charges *en route* to an inland market, and our contemporary, evidently including *likin* among transport charges, argues that with a 5 per cent. tariff it would therefore be reasonable to fix the total duty at 7½ per cent., *likin* being included in that sum, and to add another 2½ per cent. on account of "terminal tax" or other charge, thus making the total 10 per cent. From that point of view the sum fixed by the British negotiators, namely 12½ per cent., seems too high. The *Fiji* further remarks that the imposition of a duty of 12½ per cent. would tell very hardly on such an article as Japanese coal, which does not go to inland markets, and which, under the new arrangement, would suddenly be required to pay 12½ per cent. *ad-valorem*

duty. Now in the first place, it can scarcely be admitted that "transit dues" include *likin*. The word *likin* signifies "thousandth money," or "thousandth contribution." It was a tax originally of one cash per tael upon all sales, and it was voluntarily imposed on themselves by the Chinese people for the purpose of making up the deficiency in the land tax resulting from the Taiping and Nienfei troubles. In fact, it had nothing whatever to do with transport duties, and although subsequently, for the sake of fiscal convenience, it came to be collected at the same stations and by the same officials as transport taxes, the Chinese would assuredly not agree to its inclusion in the latter category. Practically speaking, however, the point is of minor importance so far as concerns the treaty of 1896, for the eleventh Article of that treaty provides that on payment of a commutation tax equal to one half of the import duty, "a certificate shall be issued, which shall exempt the goods from all further inland charges whatsoever." *Likin* may not be included in transit dues, but it certainly is included in "all inland charges whatsoever." In fact, Japan's treaty of 1896 entitles her to claim exemption from *likin*, transport dues and all internal imposts, for goods *en route* to an inland market, on payment of a commutation tax equal to one half of the customs duty. The treaty was framed with that intent. But Japan has never attempted to enforce it. Apparently it has not been her desire to take the lead in subjecting China to any financial embarrassment. However, she has a strong position now if she chooses to occupy it. One important point remains to be observed, namely, that the treaty speaks of the conveyance of imported articles "to an inland market," and the Chinese Government have always argued, with much show of reason, that the goods are not thus exempted from taxes after reaching that market. "Had it been intended," they say, "to exempt the goods from every impost in the interior of China, nothing would have been said about their conveyance to an inland market." On the strength of that contention they claim that the treaties do not preclude the imposition of a consumer's tax or a producer's tax, and their present purpose—to which the British commissioners seem to have assented—is to impose a consumer's tax of 7½ per cent. on imports, and a producer's tax—of still unsettled magnitude—on exports. Hence, an imported article would have to pay 20 per cent. in all before it went into consumption. On the other hand, it would then be freed from every other duty, impost or tax of any kind whatsoever. Certainly the measure may be called drastic. If there was any absolute certainty that 20 per cent. would cover every payment, foreign merchants would doubtless view the project with more equanimity. But they do not trust the Chinese. We observe that Mr. Soyeda, President of the Industrial Bank, welcomes the change as an undoubted step of progress on the ground that it will tend materially to check the system of squeezing, which is China's bane.

THE EAST-CAROLINE ISLANDS.

The *Niroku Shimpō* is devoting its columns to a protest against the action of the German Authorities in expelling from Truck Island a party of nine Japanese who were engaged in trade there. The story told by the *Niroku* is that these men belonged to the *Nanyo Boyeki Heki Kabu-*

shiki Kaisha, which was the sole surviving business concern among several Japanese enterprises established in that part of the world during the past 12 years. On the 4th of last January a German ship suddenly came down upon these people, and the commander, having arrested them, proceeded to search the premises, making seizure of a small quantity of powder and some sporting guns. The Japanese were all carried off to the vessel, but subsequently two of them were allowed to return to the island, the other seven being taken to another island, the seat of German jurisdiction. There they were arraigned on a charge of supplying weapons and munitions of war to the natives, who were in revolt against the Germans, and the charge having been proved to the satisfaction of the judge, he imposed fines varying in amount from a thousand marks to ten, and ordered all the Japanese on Truck Island to dispose of their belongings and clear out within a brief period. The *Niroku* claims that the Heki firm had not really committed any offense, and that the sole reason actuating the Germans was a desire to secure the monopoly of the trade of the East Carolines for a company which enjoys the protection of the Berlin Government. The Heki firm is represented as having attained considerable dimensions at the time of this raid. Such is the *Niroku's* story. Doubtless there is another side, which will become known by and by. Our own information is that the Japanese were selling arms and munitions of war to men in revolt against the Germans.

THE WAKAMATSU FOUNDRY.

An explanation is furnished of the stoppage of the smelting furnace at Wakamatsu. It appears that the only section of the works really completed is the smelting section. The steel manufacturing and the forging sections are not yet in working order, nor can they be put into working order without a further expenditure of money which is unprocurable until the next section of the Diet. Hence no use exists at the Foundry for the pig iron produced at the smelting furnace, and as twenty thousand tons have accumulated, the authorities propose to stop the furnace, sell the iron, and apply the proceeds to the equipment of the steel-making and forging sections. This Wakamatsu Foundry has been a costly affair, but now that it has been brought within sight of the "one more hodful" of Mencius, it would be a great economical blunder to withhold the necessary funds.

FORMOSA.

Fighting is evidently in progress in Formosa. The recently announced disturbances have had an aftermath. It is announced by telegram that the Japanese troops, with a loss of six wounded, have captured a very strong position held by the rebels near Nansho.

It would seem that there has been some unrest in Taich. Seventeen Japanese subjects have been ordered to quit that place for three years, under the provisions of the Peace Preservation Regulations. One forgets that there is any such law in the statute book as the Peace Preservation Regulations. Indeed they no longer exist in Japan proper, though in Formosa they are still liable to be put into operation.

THE CHINESE STUDENTS.

Thursday, July 31.

There has been some trouble between the Chinese students in Tokyo and the Chinese Minister. On the 28th ultimo a party of students numbering about 26, proceeded to the Legation at 3 p.m. and asked for an interview with the Minister. The students were under the leadership of Mr. Wu, who appears to have much influence. The Minister declined to receive so many visitors, but as the students showed no sign of withdrawing, a message was sent by telephone warning the police that their services might be required. Ultimately at 5 o'clock the Minister gave audience to the students. It would seem that what they wanted was to have the Minister go security for them in order that they might obtain admittance to the *Seijo Gakko* (a military school), but doubtless they had also some grievances to complain of. The Minister retired without giving any reply which they considered satisfactory, and as they declined to leave the Legation without a definite answer, the assistance of the police had to be sought when the lads dispersed. The police, however, asked Mr. Wu to accompany them to the station in order to explain the facts, an operation which took several hours, for no interpreter was immediately procurable, and it became necessary to communicate in writing only. This incident seems to have been misconstrued by Wu's comrades. They imagined that he had been arrested at the Minister's instance, and 56 of them repaired to the Legation on the 29th to seek redress. They do not appear to have behaved in any disorderly manner, but it was ultimately found necessary to send for the Principal and some of the faculty of the *Seijo Gakko* in order to induce them to retire. Apparently the present Chinese Representative is not a *persona grata* with the students.

Friday, August 1.

The Chinese students do not seem to be yet satisfied. They invaded the Legation again on the 30th ultimo, and had to be "admonished" by the police before they consented to disperse. The Minister has issued a statement, explaining that the whole question in dispute is the admission of certain students to the *Keijo Gakko*. These students arrived in May. They applied to the Minister to go security for them in order to get them into the school, and he answered that he would see to the matter. Before he had time to make the necessary arrangements, the students, headed by a lad named Wu, came to the Legation, behaved with great rudeness, and refused to listen to the remonstrances of either the Minister or Mr. Wu Ju-lung, the eminent educationist who is now in Tokyo. Thus it became necessary to appeal to the police. The students' story, however, is that when they asked the Minister to go security for them, as is usual, Mr. Tsai required them to furnish a sworn bond signed by five of their number. This they did, but no result ensued. Then they went to the Head Quarter Staff to make inquiries, and found that their bond had been sent there by the Minister without any engagement of his own. Such procedure could not, of course, be endorsed by the Head Quarter Staff, and the students came to the conclusion that the Minister had broken his word. Apparently the whole thing is a misunderstanding. Probably the arrangements which proved sufficient when the students were few will not bear the strain of the greatly increased number now coming to Japan.

CHOLERA.

July 26.

Moji seems to be suffering badly. Nine new cases were reported on the 24th inst. and seventeen on the 25th.

Shimonoseki had 3 cases on the 24th and 1 on the 25th.

Up to the 24th instant the number of patients in Fukuoka prefecture had been 196 and the number of deaths 115. If we add the returns for the 25th, at Moji, the total number of cases becomes 213.

There are reports of sporadic cases in Oita, Nagasaki, Hiroshima and Tokushima. Tokyo has had one fresh case in the Kyobashi district, a boatman.

There has been an outbreak of dysentery in the Normal School of Yamanashi Prefecture. The School has been closed.

Arrangements have been made for supplying boiled and filtered water to the floating and shore population at Moji.

July 27.

There has been another case of cholera in Tokyo, but whether it should be classed as belonging to the Shiba or to the Kyobashi district is difficult to determine. The man was attacked in the latter district but belonged to the former.

Cases are also reported from Saitama and Ehime, one each.

Fukuoka's record is now said to be a total of 320. The places that suffer most are Moji and Wakamatsu.

July 28.

Cholera continues bad at Moji. There were 10 new cases on the 26th instant. Strenuous sanitary measures are being taken.

There have been 2 cases at Shimonoseki. All public meetings, theatricals, &c., have been suspended. Other cases are reported from rural districts in the same prefecture (Yamaguchi).

No fresh cases are reported in Tokyo.

August, 1.

The commander of the *Kokura Maru*, which has just reached Moji, says that cholera is raging at Harbin, and that fully a thousand deaths have occurred there. It is most unfortunate that this terrible disease should prevail just as Russia is concentrating her troops for purposes of evacuation. There will probably be much suffering.

Moji had eleven new cases on the 30th ultimo and Shimonoseki two cases.

There have also been two new cases in Tokyo, but one of them, though said to be in Tokyo, occurred really in the Hachioji suburb.

THE HOUSE TAX.

The *Kokumin Shimbun* says that it has now been officially agreed that the basis of arbitration in the house-tax question shall be the house-tax uniquely. Hitherto the agreement on the subject had been preliminary only, but now the protocol has been definitely accepted by England, France and Germany, the only problem included being whether the treaties between those three Powers and Japan exempt the holders of perpetual leases from paying taxes on the buildings standing on the land held under the leases. This is somewhat stale news, except in so far as the official character of the agreement is concerned.

It is reported from Utsunomiya that about 3 p.m. on July 27th the bridge near the Urami Cataract, Nikko, fell with the result that one foreigner and a Japanese were injured.

TIENTSIN.

The Tientsin question seems to be now virtually settled. But who knows? Meanwhile it is well to put on record a phase of it represented by *The Times'* Peking correspondent on June 16th—a phase to which we also drew attention briefly at the same time:—

The six Ministers represented on the Tientsin foreign Government have not yet submitted to their colleagues nor to the Chinese the conditions upon which they will consent to restore to the Chinese Tientsin city. Our attitude on the question seems difficult to defend and deserves reconsideration.

On September 7, 1901, the final protocol was signed with China. By this England and the other Powers formally agreed that, China having complied to their satisfaction with the conditions laid down by them, all the international troops would, with the exception of certain localities the occupation of which by foreign troops was permitted in order to ensure communication between Peking and the sea, withdraw from Chi-li province by September 22nd. To-day, nine months later, we admit that the chief city of North China, the city which is the seat of government, a city larger than Liverpool, and an extensive area including the most thickly-peopled portion of the metropolitan province, are still in foreign possession.

During February and March the British Minister repeatedly informed the Chinese that we would agree to restore Tientsin city on May 1st, provided that the other Powers acquiesced. On April 12th the six allied commanders, under the presidency of the British general, looking at the question from a purely military point of view, unanimously decided not to restore the city until four weeks after China had agreed to a whole set of new conditions. These conditions, with some unimportant modifications, have been accepted by the British and the five other Ministers, including the Japanese Minister, who is reasonably supposed to have been influenced in his decision by his British colleague. One of these conditions is that no Chinese troops shall be permitted within 30 kilometres of Tientsin city, though foreign troops shall pass freely over this area. At a meeting of the Ministers the British Minister protested against the injustice of this condition, but voted for it because his colleagues did. Another stipulates that within this area, covering more than a thousand square miles and containing a population numbered by millions, with a large boat population and much river piracy, the Viceroy is forbidden to employ more than 2,500 police and a personal bodyguard of 300 soldiers. With this inadequate force he is expected to maintain order to the satisfaction of the foreign Powers.

Among the conditions one clause, no doubt unintentionally, may mislead the home Governments—namely, that the Chinese garrisons within this area shall not be increased beyond the strength maintained on April 1, 1902. But this is an unreal concession, inasmuch as at that date there were no Chinese garrisons within the area nor any Chinese soldiers. Unfortunately, the blame for action that seems inconsistent with her protestations falls somewhat heavily upon England, whose general, as senior general, is held chiefly responsible for devising the new conditions, and whose Minister, while expressing both to his colleagues and to the Chinese his disapproval of them, yet voted for them because, presumably, we must never act independently in China, but must subordinate our interests to the wishes of Germany and other Powers.

The Viceroy had reason to hope for our assistance in strengthening his authority. Can one wonder if he distrusts our resolution? His belief now is that America will insist on a modification of the conditions and will expedite the return of Tientsin city to the Chinese in accordance with the explicit promise signed in the protocol. She will gain thereby the credit which we are willing to lose. If she cannot do so, it is suggested, in order to prevent misunderstanding in the future, that final protocols between China and foreign Powers should contain a clause stating that protocols are binding on China only.

THE ELECTRIC LIGHT COMPANIES.

The arrangements for the purchase of the Shinagawa Electric Light Company's plant and business by the Tokyo Company have been completed. The price to be paid is 225,000 yen. It will be handed over in installments, the first, 66,000 yen, being paid on the 1st of August, and the second, 160,000 yen, on the 25th of December.

NOTES ON CURRENT EVENTS.

As we anticipated, the story about a wholesale stoppage of Hawaiian emigrants in Yokohama turns out to be a misstatement. What happened was that 26 persons were obliged to land, it being found that they were leaving the country without having taken the precaution of placing themselves under the protection of an emigration society. The Government does not actually forbid emigration which lacks the above arrangement. But experience has shown that persons going independently fall into trouble and ultimately become a charge to the State. The only way to prevent such mishaps is to insist that the emigration companies shall be utilized, and, at the same time, to limit each company's number of emigrants. At present the limit is 30 emigrants per company and 600 per steamer. Those that do not comply with the requirements of this system but go independently, are necessarily found to be in excess of the steamer's complement, and are consequently liable to be turned back. That is what happened in the case of the 26.

Sir Henry Thompson, who contributes a chapter on "Motor-cars and Health" to the new "Badminton" volume, and treats the subject at greater length in his very interesting little book on *The Motor-Car* built round the framework of the correspondence in the *Times* which he initiated last autumn on the question of automobilism in relation to horses, assures his readers that the "easy jolting" which results when a motor-car is driven at a fair speed has the same advantages in "acting on the liver" as a trotting horse. The actual physical benefit of motor-driving, apart from its facilities for seeing the country and making long or short journeys, he thus expresses:—

"The exhilaration which accompanies driving in a motor is particularly helpful to people who are somewhat enervated. I have known instances of ladies suffering from defective nerve-power who have derived great benefit from the invigorating and refreshing effect of meeting a current of air caused by driving in an automobile. Veils of varying thickness, according to the temperature, should, of course, be worn by ladies, but much of the benefit to nervous patients is caused by the air blowing on the face. The facial nerves are acted upon with beneficial results, well known to have a restorative influence on weak and so-called nervous individuals. Furthermore, the action of the air on the face, and the continual inspiration of fresh air, tend to promote sleep, and I should have no hesitation, speaking generally, in regarding daily exercise in a motor-car as aiding towards the prevention of insomnia."

Of course, there could be no higher authority on these subjects than Sir Henry Thompson, and as his own experience is wholly derived from the use of a petrol motor, it seems possible to admit that the ill-effects of vibration have been exaggerated. The use of the automobile is gradually extending in Japan, though the progress here is necessarily very slow. The Army have taken the vehicle up experimentally, but the general public finds them far too expensive at present.

On the 29th July a fire broke out in the Itabashi Powder Mills. It had its origin in friction engendered when cutting cubes of smokeless powder. Under the influence of a strong wind the flames spread rapidly, and the ordinary powder magazine ultimately became involved. At half-past eleven a.m. it blew up with a tremendous explosion. Six men were killed and 4 seriously injured.

Apparently the Government has decided to make a naval station at Ominato in Awomori. There has been talk of this for some time, and we now observe from the

Official Gazette that a torpedo corps is to be posted there, and that a slip for repairing ships will be at once built. These are doubtless preliminary measures.

On June 10th the honorary degree of LL.D. was conferred on Viscount Hayashi at Cambridge University. *The Times* makes the following reference to the event:—

In presenting Viscount Hayashi, the Orator described the recent treaty between England and Japan as a happy alliance between "the land of the rising sun" and the land on whose widely-extended Empire the sun never sets." His Excellency's father had been among the first to prompt the opening of Japan to foreign nations. He had himself been educated in London, and had accompanied the Japanese Envoys when they visited the principal Courts of Europe on a tour of general inquiry. In the internal affairs of Japan he had been mainly interested in the promotion of the new school of engineering and in education in general.

There are now ten Japanese students at Cambridge University.

Mr. Tanaka Shozo emerged from prison on the morning of the 26th July at daybreak, having expiated his offence of yawning in court. He was received by quite a crowd of friends outside the prison gates, and there was a general jollification. It is to be hoped that prison life has improved his faculty of discretion.

Mr. Yamakawa, an assistant teacher of the Imperial University, has instituted legal proceedings against Major-General Sato, the ground of complaint being that whereas Mr. Yamakawa entrusted to the Major-General for revision a biography of the late Lieut-General Yamaji, the Major-General published the work on his own account and is pocketing the profits. Major-General Sato is one of the heroes of Pyong-yang. It will be difficult to persuade the public that he has been guilty of any such act.

The *Official Gazette* publishes the names of twenty-one Japanese who are permitted to receive Orders from foreign States. Among the names we observe those of Count Inouye (a Korean Order), Viscount Aoki (a Danish Order), Mr. Uchida (a Chinese Order), Mr. Motono (a Belgian Order), and Major-General Arisaka (a French Order). Two nurses who served at the Hiroshima Hospital receive French Orders.

It is stated that Prince Sü, who is at the head of the Police Department in Peking, has finally resolved to employ a Japanese in the capacity of adviser. That measure had been contemplated by him for some time, but it is said to have encountered Russian opposition, which we think very unlikely.

H. I. H. Prince Komatsu will not attend the Coronation of King Edward, inasmuch as foreign States are not to be represented by special envoys. H. E. Viscount Hayashi has been instructed to act for Japan.

The Prince was received by the Emperor and Empress of Germany on the 25th instant.

Baron Shibusawa, according to a telegram sent to the *Fiji Shimpō*, has been entertained by the London Chamber of Commerce under the presidency of Mr. William Keswick, M.P. The Baron seems to have dwelt upon the inspiring effect that the alliance should have upon the trade between England and Japan, and to have expressed a strong hope that English capital and English enterprise would be freely utilized for the development of Japanese resources. A member of the Chamber appears to have pointed out that the Anglo-Japanese trade shows signs of decline. Baron Shibusawa did not under-

take to discuss that point immediately, but expressed his intention of considering it.

We find the following translation from the *Kölnische Zeitung* in a recent copy of the *Globe* :—

It must be said of the British forces, that they have been thoroughly and completely changed since the outbreak of the war, and that they bear but a slight resemblance to the army which landed on the coast of South Africa in 1899. The mobile columns are only a very little, or even not at all, behind the Boers in mobility, and the forced marches made by the mounted columns in recent times are simply without parallel in the history of the war. Thus, the Rawlinson troop covered recently 79 miles in 25 hours. Of course, such efforts caused an immense loss of horses. Is it not foolish to deny, as so many Continental journals have done, any possibility of reorganising the British Army on a new system? Let us beware of being dazzled by our own self-conceit, for we have seen how much money and blood this war has cost Great Britain."

The report for 1901, published by the Rhenish Missions, says, in speaking of its activity in South Africa, that it has been astonishing to observe the prejudiced admiration expressed by the Germans for the Boers during the war. "If the British burned the farms they deemed it necessary in the interests of war. Germany has waged no war for 32 years, otherwise we should have heard fewer condemnatory judgements passed upon Great Britain. The highly-coloured German criticism upon the conduct of the war has done us Germans no good either in the eyes of the British or in the eyes of the Boers. In our interests we ought to have attached greater value to our criticism, for the passionate attitude of the German Press strengthened the Boers in the foolish delusion that Germany would go to their aid."

There has occurred an interruption on the Sanyo Railway owing to an inundation. The point affected is between Wake and Mafu.

It has been decided, we learn from the *Nichi Nichi Shimbun*, that the next general meeting of the Red Cross Society is to be held in Tokyo. The last meeting—recently concluded—was in Russia. It was attended by Mr. Ariga, as Japan's representative. Next year being the year for the Osaka Exhibition, the convening of the Red Cross meeting in Tokyo will fall very opportunely.

Prince Komatsu left Berlin on the 27th July for St. Petersburg. It appears that His Imperial Highness was not received in audience by the Emperor. He conveyed to the Empress the First Class Order of the Sacred Treasure.

The *Nichi Nichi* publishes a telegram saying that the principal smelting furnace at the Wakamatsu Foundry has been stopped, owing to the accumulation of twenty thousand tons of metal for which no sale has yet been found. This decision seems to have been arrived at by the director of the Foundry and the Minister of State for Agriculture and Commerce. It means, apparently, that the Foundry is doing more work than the country wants, which is a state of affairs that was fully anticipated by onlookers.

M. Dubail having been appointed to represent France in Peking, where he will doubtless make a fine record, will probably be replaced at the Court of Japan by M. Harmand, whose return has always been a possibility. Japanese newspapers announce that M. Dubail received formal notice of his appointment on the 25th instant, but of course the news had been known telegraphically for some time.

It is stated that Baron d'Anethan's return to Japan may be looked for this autumn.

We learn that His Imperial and Royal Apostolic Majesty has been graciously pleased to confer the following decorations in connection with the Chinese troubles:

To Lieutenant-General Baron Yamaguchi the 1st class of the Order of the Iron Crown; to Major-General Fukushima the 1st class of the Order of the Iron Crown with the Decoration of War of the 1st class; to Rear Admiral Dewa the 2nd class of the Iron Crown with the War Decoration of the 2nd class; to Colonel Harada the 2nd class of the Iron Crown; to Lieutenant-Colonel Shiba the 2nd class of the Iron Crown with the War Decoration of the 2nd class; to Major Samoto the Knight Commandership of the Order of Francis Joseph; to Lieutenant Yoshimura and to Regimental Surgeon Dr. Nagano the Order of Knight of Francis Joseph; to Governor Sufu, of Kanagawa Ken, the Grand Cross of Francis Joseph; to Marquis C. de Nembrini Gonzaga, of Kanagawa Ken, the Knight Commandership of Francis Joseph; to Mr. Tsukahara, President of the Uraga Dock Co., the Cross of Officer of Francis Joseph, and to Mr. Sakurai, Manager of the Uraga Dock, the Cross of Knight of Francis Joseph.

The Russo-Japanese Society declares that it has no political motive whatever. What it aims at is, (1) to make the peoples of the two countries known to each other; (2) to promote the study of the Japanese and Russian languages; (3) to conduct investigations into commercial and industrial affairs connected with the two countries; and (4) to render every possible assistance to the development of trade and manufacture. Among the promoters of the Society we observe the names of Marquis Ito, Count Inouye, Count Okuma, Baron Kaneko, Viscount Yenomoto, Mr. Tsuzuki Keiroku, Mr. Murota, Mr. Ariga, Mr. Komuchi, Mr. Tokutomi, Mr. Okura, Mr. Shimomura and other notables. With such support the Society must be regarded as a highly important institution. Its projectors are Mr. Asahina, Mr. Nakada, Mr. Uchida and others.

While at Moji *en route* for Tokyo, M. Pavlov is said to have explained—according to an *Asahi* correspondent—that he is going home on four months' leave of absence. He intends to spend two days in Tokyo, visiting his friends, and he will then return to Nagasaki, taking ship thence to Vladivostok, and proceeding by the Siberian Railway. There are no clouds at present, he says, in the political firmament of Korea, nor is there any probability that clouds will arise in the near future. The usual intrigues and quarrels are taking place among rival families, but that is neither strange nor disquieting. M. Pavlov concluded by saying that he would return to his post immediately on the expiration of his leave.

Prince Tsai, who went to England for the purpose of representing China at the Coronation Ceremony, is to call at Japan on his return journey. There appears to be some uncertainty as to the date of his arrival. The *Nichi Nichi* does not mention any date; the *Nippon* names the 2nd of September, and the *Asahi* and *Jiji* say "in a few days." All agree, however, that the Prince will be a guest of the nation and that he will remain in Japan about 10 days.

Prince Tsai is a son of Prince Ching.

The first general meeting of the Industrial Bank was held on the 28th instant in the Bank's Assembly Building, Sakamoto-cho. There was a good attendance of shareholders, although, the bank having been established as recently as the 27th of March, no feature of special interest was to be looked for in the report. Mr. Soyeda, the President, addressed the meeting. He explained

that the Bank had been actually working for only 81 days, and that no transactions of any consequence had been undertaken. Things were quiet in industrial circles, and there had not been any considerable applications for accommodation. The report showed that the gross earnings of the Bank had been 74,205 yen, and the gross expenditure 62,727 yen, leaving a net profit of 11,478 yen, which, together with the Government's subsidy, enables the Directors to declare a dividend of 5 per cent. for the half year. Concerning the large ratio which the outlay bore to the income, the President explained that such a result was unavoidable at the beginning of the Bank's career, but that future reports would bear a different complexion in that respect. The accounts and report were passed unanimously

Four and a half millions out of the 10 millions which the Government recently placed on the market in the form of Exchange bonds, have been subscribed by the general public, the remainder being taken by the Bank of Japan. The Government had determined that 1.8 sen should be the highest rate of daily interest (6.57 per cent. annually), but it does not appear that any subscriptions were offered below that figure. Some were above it, but the majority were exactly 1.8. The Osaka Savings Bank was the largest applicant; it took a million yen. Of course the Government can not reasonably hope to get money at rates lower than those ruling in the market. The best banks are paying 6½ per cent. now on fixed deposits, and there is no difficulty in getting 7 per cent. by special arrangement. It is only when a sum is too large to be conveniently dealt with in that manner that the Treasury is likely to receive it.

Last year the Diet refused to grant an increase of salaries for judicial officials. But the question will have to be reconsidered. It appears that the ranks of the judges and public procurators are undergoing a process of thinning, which, if it continued unabated, would totally deprive the country of a judiciary in 64 years. The average annual deficiency is 144, and even by recourse to expedients which involve more respect for quality than for quantity, the Government has not been able to fill more than 122 of the vacancies. Thus there is a steady diminution of 22 per annum, and as the total establishment of judges and procurators is only 1400, it is a matter of simple arithmetic to discover that 64 years will see the country without any judicial officials at all. On the other hand, the number of cases that come forward for hearing shows a marked increase, so that the situation is very disquieting. The Government is said to have decided to enlist the services of the whole 35 students who recently graduated in law at the Imperial University. It is singular that the Diet should show so much reluctance to be wisely liberal in this matter. But, after all, the Diet never showed any promptitude of generosity except when it increased the salaries of its own members from 800 yen to 2,000.

The *Official Gazette* announces that from the 1st of August traffic will be opened on the Nojiro-Gojonome line. This is a branch of the main trunk line, now in course of construction, from Awomori along the Western side of Japan *via* Echigo to Fukushima, where it joins the Nakasendo road. The distance to be opened on the 1st instant is between 17 and 18 miles.

ABUSE OF PRIVILEGE.

PERIODICALLY, though happily at long intervals, the Hongkong and Shanghai Banking Corporation is obliged to invoke the assistance of the law for the purpose of protecting against abuse the large measure of credit it habitually gives to its European and American customers. A great financial authority has said that in the true theory of banking far more importance attaches to the character of the man seeking accommodation than to the nature of the security he is able to offer. That is the principle upon which all first-class banks proceed, and it has invariably been the principle governing the Hongkong and Shanghai Bank's procedure. When transactions conducted in accordance with such a system are carefully analysed, they inevitably display an appearance of looseness. That is in the very nature of the thing. For if a merchant be assisted by a bank because his integrity is trusted, the whole of the business between him and the bank naturally takes on a complexion of mutual confidence. Did one of two parties insist on scrutinizing every detail of an operation based originally on the trust that each reposes in the other, it is plain that the whole character of the operation would be changed. On the other hand, if the Bank finds that its confidence is abused and that the liberty it grants is perverted into licence, then it is imperatively bound to make an example of the defaulter. It is bound to do so, not merely in the interests of its own business, which would be at once dislocated were breaches of trust inferentially condoned by immunity, but also in the interests of its honest clients who have a right to expect that the facilities granted to their integrity shall not suffer by any undue leniency on the Bank's part to others.

We are referring of course to the HERB case, in which judgment has just been delivered by a Court of first instance. Whether Mr. HERB deserved to forfeit the confidence of the Hongkong and Shanghai Bank, and whether he in particular deserved to be prosecuted for fraud—these are questions better left undiscussed. But as to the motive of the Bank's action and as to the method of its transactions with Mr. HERB, there is nothing difficult of apprehension. Counsel for the defence, however, seems to have found considerable difficulty in apprehending. He allowed himself to speak of the Bank's "happy-go-lucky" manner of doing business; of its "lax and loose methods"; of its "carelessness" and of its "ill-advised, spiteful and heartless action in prosecuting the accused." A great deal of license—a great deal too much—is permitted to barristers when conducting the defense of a person criminally accused. But Mr. DE BECKER altogether exceeded any legitimate measure of latitude, however elastic, when he adopted such language. That he should have conceived the idea of basing his client's innocence on the fact of

his accuser being equally guilty, may have seemed to him a sound line of argument. That is a matter of opinion. But that he should accuse the Bank of lax and loose methods and of ill-advised, spiteful and heartless action, showed either that he did not understand the situation or that he deliberately fell back upon the resource proverbial under certain circumstances, abuse. Still more unpardonable was his reference to the Manager of the Bank, Mr. DAVID JACKSON, whom he denounced as a Judas Iscariot because Mr. JACKSON bade a friendly farewell to the accused shortly before the latter's apprehension on a charge of fraud at Mr. JACKSON's instance. It would not have been unreasonable to infer that Mr. JACKSON did not at that moment believe in Mr. HERB's guilt, or that he had not at that moment resolved to prosecute. But even if he did believe or had resolved, he was under no moral obligation to make a public display of resentment or condemnation pending the decision of a legal tribunal. Probably if the law absolved Mr. HERB of guilt, Mr. JACKSON would be among the first to shake hands with him, for while a banker is bound by official duty to draw the line at certain *laches*, he may have his own private opinion about the degree of guilt attaching to them in special cases. The effect of such gratuitously insulting comments as those of the counsel for the defense in this instance, is to provoke public indignation against himself, to deprive his client of public sympathy, and to narrow the range of the Bank's public usefulness. Mr. DE BECKER's speech was in many respects an admirable forensic effort. His arguments were well marshalled and his points were driven home forcibly and clearly. Under any circumstances such a speech would have merited praise, but it becomes doubly laudable when we remember the limited opportunities that the speaker had enjoyed for delivering addresses before courts of law. It is therefore the more regrettable that an otherwise fine essay should have been disfigured by indiscretions.

THE CORONATION.

The telegraph says that King Edward has declared that the 9th August shall be a bank holiday. We presume that it will be a bank holiday here also. Since the foreign residents passed under Japanese jurisdiction, permission for a bank holiday has to be obtained, we believe, from the Finance Department, and there appears to be an idea that the British Consulate is the proper channel through which to apply for such permission. It should not be necessary to point out that no such channel is required. Japanese banks make their applications direct without employing the services of any official intermediary. Foreign banks are entitled to do the same. The celebration on the 9th can not be a very grand affair, but at least it should be a holiday for every British subject.

Kobe comes out very strong on the subject of postponement. It will have none of it. The *Kobe Herald* very justly remarks that we do not abandon our labours in

August because of the heat—at least those of us that have to toil do not—and there is consequently no valid reason why we should abandon our celebrations, with the exception of the children's fete, which could not safely be held under a hot August sun. There has been, in short, quite a revolt of the British community against the idea of postponement, and, as is not unusual under such circumstances, people have been found to discuss the matter somewhat bitterly, and to hint that the authors of the suggestion were influenced by purely selfish motives, being unwilling to return from their cool retreats among the hills for the purpose of attending a sweltering ceremonial. It is a pity that such silliness should be imported into the business. Yokohama residents, at all events, ought to know from experience that questions of distance or personal inconvenience do not weigh with British officials where duty or the interests of the community are in the other side of the scale. There are many obvious arguments in favour of the November proposition, and the whole trouble has been, so far as we can see, want of tact in not consulting the community before announcing the project of postponement. It seems extravagant to talk as some commentators have allowed themselves to talk. Two thoughts alone have influenced any official, we venture to say, namely, the convenience of the community itself and the success of the fete. If one half only of Yokohama could be expected to be present, the celebration must fall flat, and that was doubtless the apprehension entertained by the proposers of postponement, for they probably think—and who will venture to contradict them?—that those who clamour loudest about the selfish pleasures of mountain resorts are precisely the persons that will seek those pleasures in preference to shouting under a flag or viewing fire-works on a steamy August evening in Yokohama.

The *Takasago* and the *Asama* are not to make a tour of European ports as was at first contemplated. They will attend the naval review, which is to take place on the 16th instant, and will then return immediately to Japan. Apparently the original forecast was that the Coronation would be postponed until the autumn, perhaps the end of September, in which event the two ships would have had ample time to visit various European ports in the meanwhile.

YOKOHAMA.

We have been favoured with the following by Mr. E. Flint Kilby, Hon. Secretary and Hon. Treasurer of the Coronation Festival Committee:—The Coronation Festival Committee, representing the British Communities of Tokyo and Yokohama, at a meeting held on Friday afternoon, decided to celebrate His Britannic Majesty's Coronation on Coronation Day, Saturday, the 9th August. The Festival will necessarily be curtailed and only British Subjects will participate. It will comprise a Church Service in the morning, Decoration of the Bund, Yacht Races and an Evening Fete with Fire-works. It is proposed to hold an Afternoon Fete for Children later in the Year when the weather will be more suitable.

KOBE.

The following letter was received by the *Kobe Herald* from Sir Claude MacDonald, through the courtesy of the British Consul, Mr. J. Carey Hall:—

SIR,—I have to inform you that the ceremony of the coronation of H.M. King Edward VII. has now been fixed to take place on August 9th.

As, however, the date falls in a period in which the climatic condition of Japan are unsuited for public celebrations, His Majesty has graciously been pleased

to allow the celebration of the Coronation to coincide with that of his birthday.

In view of the fact that November 9th of this year will fall upon a Sunday the two auspicious events will be celebrated on the preceding Saturday, November 8th.

I am etc., (Sd.) CLAUDE MACDONALD.
J. C. HALL, Esq.,
H.M. Consul, Kobe.
Tokyo, July 21st.

At a meeting of the Coronation Celebration Committee, which was held at the British Consulate, said the *Kobe Herald* of July 25th, a motion was brought forward in favour of postponing all festivities to the King's Birthday, that is the 8th of November, the birthday falling on a Sunday this year. The proposal, which subsequently proved to have the countenance of His Ex. Sir Claude MacDonald, was rejected, and despite protracted argument on the part of the Chairman, Mr. J. C. Hall, H.M.'s Consul, for the purpose of inducing the meeting to be content with a request to Bishop Foss to hold a religious service on Coronation Day, postponing the celebration proper to the 8th November, it was finally resolved by a vote of 11 to 3 to hold the celebration on Coronation Day, August 9th. The intention is to have the official religious service in the morning and a fête and concert in the evening, leaving the Children's Fête for the King's Birthday, when the weather is not likely to be too hot for young people to play about out of doors during the afternoon. The decision resulted in Mr. Hall resigning the Chairmanship, but in deference to the unanimous and earnest wish of the Committee he subsequently consented to continue in office.

NAGASAKI.

A meeting of British residents was held at H.B.M.'s Consulate, Nagasaki, on July 23rd in connection with the celebration of the Coronation of H. M. King Edward VII. The Committee appointed to carry out the local festivities on the original date handed in their resignation, and with it a statement of the money which had been expended in the course of their work. Mr. R. G. E. Forster, British Consul, who was in the chair, mentioned the three courses which lay open to the meeting—to hold the celebration on August 9th, to abandon it altogether, or to defer it until such a date as (say) November 9th, the King's Birthday. It was unanimously decided that the celebration should be deferred to Nov. 9th. It was resolved to call another meeting for the election of a new committee.

Unkind persons have written to our Nagasaki contemporary calling attention in terms of sarcasm to the fact that the 9th of November falls upon a Sunday.

WEI-HEI-WEI.

Coronation festivities were held at Wei-hei-wei on the 25th June and the following three days, the British Navy and the crew of the Japanese cruiser *Yakumo* providing sports and entertainment galore.

HONGKONG.

Even in sultry Hongkong the residents intend to celebrate the King's Coronation on the proper date. According to the plans of Gen. Gascoigne, who is administering the Government of Hongkong during the absence of Sir Henry Blake, on August 9th there will be a torch-light procession and a garden party at Government House; on Sunday, the 10th, the ordinary service in the Cathedral is to be turned into a service of thanksgiving for the recovery of the King. On Monday, the 11th, the fireworks that were originally purchased by the Coronation committee are to be let off, and something of the original programme will that same day take place on the Cricket Ground, with the Chinese fish procession to close the function.

SHANGHAI.

A meeting of the General Committee appointed to arrange for the celebration of the Coronation of King Edward, to consider what action should be taken in Shanghai to commemorate the event, which is now fixed to take place on 9th August, was held at the British Consulate recently, says the *Shanghai Mercury*. After some discussion, the

following provisional programme was drawn up:—A service will be held at the Cathedral at 9 a.m.; a salute will be fired by the volunteers at noon; at 6 p.m. there will be a general parade of the volunteers and troops, at which the sailors on the warships will be asked to join, and at 9 p.m. the members of the fire brigade will hold a torchlight procession. It was decided only to decorate and illuminate the foreshore, but it is expected that all the hongs on the Bund will decorate for the occasion. The Garden party has been abandoned. The children's fête is postponed till some date approximate to the 9th September. The Chamber of Commerce will ask the Banks to close on the 9th August, so that the day will be observed as a public holiday.

YACHTING.

The 21-raters raced over the Lightship—Widow Buoy Course in excellent if rather light weather, with the result that Mr. Averill's new boat showed her heels to the rest of the fleet. Following were the times:—

	Finish. h.m.s.	Corrected. h.m.s.
<i>Winsome</i>	4.52.10	4.52.10
<i>Pele</i>	5.03.35	5.03.35
<i>Edna</i>	5.00.13	5.00.13
<i>Stella</i>	5.04.25	5.02.49
<i>Vixen</i>	5.04.20	4.59.22
<i>Sodeska</i>	5.07.15	5.02.17
<i>Wettinge</i>	5.02.45	4.54.05
<i>Bonito</i>	5.11.10	4.59.46

The first prize and two record points were taken by *Winsome*, *Wettinge* being second with one point, *Vixen* third and *Bonito* fourth.

The 12-raters also raced over their usual course, with the result that *Thelma* finished first at 3.42.40 and *Madeline* at 3.45.55.

CRICKET.

K. F. CRAWFORD'S XI. v. E. B. S. EDWARDS' XI.

Summer-weather has been so long delayed this year that the sudden setting in of something like seasonable heat on Friday seemed to militate against the possibility of a decent match on Saturday. But 'tis the unexpected that always happens, and so cricketers who signed the list earlier in the week were rewarded for their loyalty to the best of out-door summer sports by the thermometer tumbling down several degrees, and the game was played amid the most favourable conditions for the end of a Japanese July, a cloudy sky and an intermittent breeze. To the casual onlooker there may not have been much to distinguish the game from the usual ruck, save that the scoring was unusually fast for Yokohama, and that F. E. White seemed to have recovered the form of two or three years ago. But the match may not be dismissed so easily. Kingdon bowled splendidly, better in fact than the figures seem to show, and often he had White and Crawford in difficulties: if only his field had played up to him!

Crawford's team went first to bat, sending out F. E. White and P. B. Clarke to face the bowling of Stuart and E. W. Kilby. Both men started with a single and their next hits were 4's, then they settled down to work and 39 was reached ere Clarke's balls were sent flying by Kingdon. Clarke, by-the-way, was not in good form, never seeming at ease during the whole of his innings. Dr. Martin filled the vacancy, but after breaking his duck with a modest single he was bowled by Edwards. W. S. Moss joined White and the score rose to 60, when Edwards dismissed the new comer—60-3-3. Then Crawford partnered White and a stand was made, the bowlers being knocked about in all directions. At 162 White was capitalily caught by E. W. Kilby, the veteran, though completely tired, stepping out to a wide ball which he skied. His score included seven 4's; six 3's; and twelve 2's, and with the exception of his very last hit he gave no chances. The Rev. W. P. G. Field made a very short stay, being stumped by Allcock, off Stuart, before scoring, and then Lammert went to the wicket. He had knocked up 11 by half past four, when the side

declared their innings closed, Crawford carrying out his bat for 43, including two 4's, four 3's, five 2's, and a 6, which he made through the wild over-throwing of E. W. Kilby. Score:—

MR. CRAWFORD'S ELEVEN.

F. E. White, c. E. W. Kilby, b. F. O. Stuart	89
P. B. Clarke, b. A. Kingdon	19
Dr. Martin, b. Edwards	1
W. S. Moss, b. Edwards	3
K. F. Crawford, not out	43
Rev. W. P. G. Field, st. Allcock, b. F. O. Stuart	0
F. Lammert, not out	11
H. Goddard	
C. E. Libeaud	} Did not bat, innings declared closed.
F. Pollard	
W. Graham	
b. 8, l.b. 3	11

BOWLING ANALYSIS.

	B.	R.	N.	W.
F. O. Stuart	54	37	1	2
E. W. Kilby	54	28	—	—
A. Kingdon	72	33	1	1
E. B. S. Edwards	48	16	3	2
H. W. Kilby	12	13	—	—
Capt. Krickenback	30	18	1	—
G. G. Brady	30	13	1	—
O. Strome	12	8	—	—

With two hours of play before them Edwards' Eleven had an easy task to win. It was soon seen that the fielding of Crawford's side was of the weakest, while the bowling had little or no sting in it. A curious feature of the game, indeed, was that out of seven bowlers engaged, five were left handed. H. W. Kilby and G. C. Allcock began the batting, both opening with a boundary hit for 4, the first off P. B. Clarke, the other off Lammert. Then they settled down to run getting and the score had been taken to 137 ere a separation was effected, though Allcock had no less than five lives given him, the first when he had only reached 15, by Clarke, who, later in the game, caught E. W. Kilby brilliantly. H. W. Kilby's century was a very meritorious piece of work, displaying fine cricket from the very start; not a chance was missed, or given, which is saying a lot. By the time stumps were drawn 211 had been knocked up by the side and only three wickets had fallen. Score:—

MR. EDWARDS' ELEVEN.

H. W. Kilby, not out	100
G. C. Allcock, b. Lammert	68
E. W. Kilby, c. Clarke, b. Libeaud	21
Capt. Krickenback, b. Clarke	16
E. B. S. Edwards, not out	1
A. Kingdon	
F. O. Stuart	} to bat.

THE MAKADO CONCERT.

A capital concert was given on Saturday evening at the Makado Hotel. The Imperial Guards Band was in attendance and played from 5 till 10 p.m., with a brief interval during the dinner hour. The house and lawn were beautifully decorated with lanterns, etc., and the music was greatly appreciated by the large number of guests. Also it should be said that though several diners had, in expectation of a crush, taken their own servants, these, in consequence of the excellent attendance provided, were found to be quite unnecessary. With the assistance of fine weather the Makado concerts should be quite a feature in the social life of the foreign community, and so far Mrs. Hahn is to be congratulated on the success of her arrangements.

AFRICAN SPHERES OF INFLUENCE.

The amount of land-grabbing that has gone on in Africa since 1875 is vividly illustrated in an article on the recent history of Africa in the new volumes of the *Encyclopædia Britannica*, now in course of issue in England. Here are the figures, showing the "Spheres of Influence" in 1875 and 1900:—

	1875. Square Miles.	1900. Square Miles.
British Africa	241,461	2,713,910
French "	168,250	3,804,974
Portuguese "	34,387	790,120
Spanish "	853	169,150
German "	—	933,380
Italian "	—	188,500

Independent Africa figures with 1,491,000 square miles, and out of this the Congo Free State counts 900,000, but the freedom of the Congolese if only half the tales be true that are told of their Belgian administrators is a doubtful quantity. The French total is enormous, but it includes nearly two million square miles for the Sahara. On the other hand, Egypt and the Soudan are counted under the head of Turkish Africa. They amount together to a little more than a million. This territory may be reckoned to Britain at least as legitimately as Tunis is reckoned to France. The general aspect of the matter is not unsatisfactory; if British readers were to go into details, and compare the relative values of the British, French, and German spheres, they should find still less to complain of.

DEATH OF MR. WITKOWSKI.

It is with regret that we announce the death of Mr. Julius Witkowski, the sad event occurring at Yumoto on Tuesday. The deceased had for long occupied a prominent position in the mercantile world of Yokohama and for many years was the virtual leader among the Jewish community here. His acute knowledge of affairs and men, his fine scholarship and breadth of view made him many friends, while his philanthropy was as wide as it was unostentatious. Mr. Witkowski's unexpected demise will cause much sorrow among an extended circle.

The mortal remains of the late Mr. Julius Witkowski were laid to rest in Yokohama Cemetery on Thursday afternoon amid many expressions of sincere grief. There was a large attendance and the floral offerings were very numerous, particularly from Japanese friends. The last sad rites were impressively conducted in accordance with the ancient Hebrew ritual, and when the coffin had been lowered into the grave, Mr. Jas. Walter delivered a short funeral oration. He said:—

We have met here to-day to render the last service of respect that we can on this earth to our dear friend Julius Witkowski, one of my Hebrew friends, whom we have now laid to rest here in God's acre. As a leader of your own people you have naturally had a much closer relationship with the man we mourn than I could possibly have, but it has been my privilege to have had his personal friendship for a great many years. On many occasions having had to seek his advice and assistance for charitable objects he was always found foremost in giving up his time to investigate matters of that kind brought before him and ever ready with an open hand to aid in alleviating distress. The widow and fatherless children never appealed to him in vain. Quiet and unostentatious only Jehovah in whom he trusted can ever know all the good he did on earth. He has his reward, we feel sure, and now we place him to rest with his people whom he loved and ministered to. Assuredly we can all say of him, "Here lies a Benefactor, may he rest in peace and we will ever respect his memory."

PRINCE CYRIL.

Prince Cyril of Russia arrived in Yokohama shortly after 10 a.m. on July 30th by the Russian cruiser *Admiral Nachimoff* from Vladivostock via Hakodate. Among those who went on board to welcome His Highness were Mr. Sufu, Governor of Kanagawa, Mr. Iwasa, Superintendent of the Yokohama Water Police, Mr. Ikariyama, Chief of the Kagacho Police, the Russian Consul in Yokohama and others. The Imperial visitor was expected to land in the evening. The cruiser is anchored inside the breakwaters.

THE BOOKSHELF.

Geschichte des Christentums in Japan, von Pfarrer HANS HAAS. I. Erste Einführung des Christentums in Japan durch Franz Xavier. Tokyo, 1892. Rikkyo Gakuin Press.

THIS handsome volume of over 300 pages, embellished by a good reproduction of an old portrait of Xavier, is the latest publication of the German Asiatic Society in Tokyo. It is a most painstaking investigation based throughout on primary sources and critical study. By way of introduction the author has given special attention to the history of the discovery of Japan by the Portuguese, a subject closely connected with the biography and literary labours of the famous adventurer, Jesuit and "liar," Mendez Pinto. By comparing Japanese and European sources with the extant letters referring to this event a satisfactory solution of the complicated problem is arrived at. In future the 23rd of September, 1543, will be generally accepted as the date of the first arrival of Europeans at the shores of Japan, and the distinction of being the "discoverer" of the wonderland of the Far East will not, in critical historical works, any more be connected with Pinto's name. The 49 pages devoted to this enquiry form a valuable monograph in themselves. The fourth chapter leads us to the baptism of three Japanese at Goa in India, which became the stepping-stone for Xavier's heroic resolution to plant the seeds of Christianity in Japan. The restless activity of the great Jesuit Missionary at Kagoshima, Hirado, Kyoto, Yamaguchi and in Bungo is carefully traced in all its interesting detail, and the judicious handling of the material still preserved to us deserves special praise. The author enlivens his critical reproduction of the old rhetorical accounts by depicting the political, religious, moral and social condition of Western Japan as far as it formed the background from which the figure of the foreign missionary stands out in bold relief. Although a great deal has already been written about the beginnings of Christianity in Japan, we have never met with such a laudable combination of comprehensive knowledge and cheerful laboriousness with so much open-minded sympathy with, and insight into, the actual circumstances of life in that memorable phase of Japanese History. The continuation of a work so well inaugurated promises to fill a much-felt gap in our historical literature about Japan. We hope that the author will find sufficient leisure to bring the narrative down to 1651. His hardest task is, of course, the period from 1552 to 1598; after that year the valuable annalistic work by Léon Pagès will greatly facilitate his labour of collecting materials. The bibliographical hints given throughout the seventeen chapters of the work and the commentary notes in the Appendices Nos. II. and III. are especially

commendable. We may also be permitted to say that the German Asiatic Society deserves credit for its enterprise in publishing a work of such monumental proportions as a "Supplement" to the "Mittheilungen." The volume sells at 3 yen at Messrs. Kelly and Walsh, Yokohama, or at the Library of the Society in Tokyo, Kanda Imagawakoji, Ichome, 8.

Flashes from the Far East by HOWARD SWAN. Tokyo, the Hakubunkwan.

THE author of this work, who is a professor in the Tokyo Higher Commercial College, lays stress on the fact that these "Flashes" are merely "first impressions and passing incidents of the journey from England across Canada to Japan;" and one of his objects is "to give to Japanese readers an insight into the English visitor's thoughts and impressions of this country." Mr. Swan announces that in pursuit of this object he has chosen a simple and colloquial style of English with the express desire of giving to the students of Japan a book which while it perhaps may interest and amuse, will at the same time supply useful idiomatic phrases and current words of all descriptions in common everyday use in scenes and situations which most travellers abroad, wherever they go, will usually have to encounter. In short the volume is a text-book of a new pattern, furnishing students of English with a vocabulary of familiar words and idioms.

We trust Japanese students of English will appreciate and largely avail themselves of the provision made for their advancement in that language. But though it cannot be denied that the book is largely written in an easy colloquial style, we must confess that we have some doubts as to its reception. What will a Japanese, studying this work to improve his English, think when he reads of huge upstanding towers quarrying the sky? And will not he be inclined to regard the style as a bit too easy when the author says that at Shimbashi station he asked for information about the gentleman with whom he intended to board, in these words: "Water cooshy warno coo-coo-ra Chickweed San, Skeegee—is this address enough Kaa?" And that the reply to this was "Go see my sign." On the whole we are afraid Mr. Swan's style will not appeal to Japanese students. But there are, we think, many American and English people who will read with interest his account of the trip to this country; who will value the missionary's account of the Chinese in general and the Boxers in particular; who will roar over the author's rendering of Japanese words—especially his "go an see my sign" for *gozaimasen* (we presume)—or who will have fits over the reply made to him by a soldier whom also he accosted. To such the book may safely be recommended.

THE SUMMER SCHOOL AT HAKONE.

The annual session of the summer school at Hakone began on Friday, July 18th. The Committee on arrangements had engaged rooms for the European guests in two Japanese hotels, where board, served in European style, was provided. The first day was spent in getting the guests settled, but by Saturday, the conference was in good running order. The general order of exercises was a short devotional service, immediately after breakfast, followed by a lecture. At half-past one in the afternoon, another lecture was given, and occasionally there was a third lecture in the evening.

During the conference, Mr. Gauntlett spoke

four times on "The Teaching of English;" Mr. Gleason spoke twice on "Personal Work for Young Men;" and four lectures on the "Self-consciousness of Jesus" were delivered by Dr. Albrecht. Mr. Fisher spoke three times about the best way to conduct Bible classes for Japanese students and Mr. De Haviland gave an hour's talk on teaching English. Mr. Harada, of Kobe, gave a very useful talk to the English-speaking members of the school, on certain Japanese customs, which foreigners are likely not to observe. And the lecture by Professor Chamberlain, on the study of Japanese, given at some personal inconvenience, was greatly appreciated. Simultaneously with the English lectures, lectures in Japanese were delivered to the Japanese members of the Summer School. Lectures on the following subjects were given:—"Turning points in the life of Christ" by Professor Kashiwae, "The Self-consciousness of Jesus" by Dr. Aoki, "Christian Charity" by Mr. Motoda, "Real Christianity" by Mr. Miyagawa, "The Christian Association Secretaryship" by Mr. Niwa, "The Christian Ministry" by Mr. Kyama, and "The Council of Nice" by Mr. Ibaka. Mr. Wada and Mr. Sasao also spoke on "Some Intellectual Problems of the Christian Faith."

These lectures were well attended by the Japanese students, and apparently were much enjoyed. Both the Japanese and the European guests spent a part of one day together, on an excursion to Ojigoku. On Sunday morning, July 27, Mr. Axeling conducted the church service, and Sunday night a closing prayer meeting was held.

The meetings were distinguished from those of previous years, by an unusual promptness in coming together, by the pre-eminence given to personal work, and by the introduction of Association conferences. And for the first time, an attempt was made to bring about a union between the student and city departments of the Association work. The conference, as a whole, was well planned, and the Committee on Arrangements is to be congratulated over the successful way in which the plans were carried out.

THE GRAND HOTEL, LIMITED.

The twenty-sixth semi-annual ordinary general meeting of the shareholders of the Grand Hotel, Limited, took place on Monday at 4 p.m. in the Grand Hotel. Dr. C. H. Hall was in the chair, and there were also present Messrs. C. K. M. Martin, L. Mottet, and M. Kaufmann, Paymaster M. McDonald, Mr. A. M. Knapp, Mr. B. C. Howard, and Mr. C. F. Heinlein.

The notice convening the meeting having been read by the Secretary (Mr. G. Booth),

The CHAIRMAN remarked that as the shareholders had had ample time for the examination of the report and accounts the reading of these would be dispensed with unless there was any objection to that course. You will note, he continued, with gratification the evidence presented therein of the company's prosperity. A large part of this been derived from increase of travel but in nearly equal proportion it was due to greater efficiency of administration. The directors hope to further increase this efficiency by measures now preparing. The new wing is now virtually completed and, but for disappointing defects in some of the lavatory pipes, would be ready for use. The required changes are now making there and the rooms will be ready for occupation in a few days. Since our last meeting a new office lobby has been completed and put into use. I think you will agree that it is a handsome room, and its construction timely. For convenience in accounting, the various disbursements for the new wing, the office lobby, the verandah terrace and the banquet room are grouped temporarily in the item "New Buildings accounts" but when all the payments for the new wing have been made the whole will be distributed among the proper items of the assets. The method of making payment for the work—that is to say out of Working Account—explains the comparatively small overdraft at bank notwithstanding the rather large operations. If expected conditions are realised the final

overdraft on account of this work will be wiped out at an earlier date than was originally estimated. The directors have to report the resignation of Mr. Guinness as auditor and the appointment of Mr. J. F. Cox Edwards of the Hongkong and Shanghai Bank to fill the vacancy. You will be pleased to know that our veteran Manager, Mr. Eppinger, who was made seriously ill by a hasty journey half round the world, is now regaining strength and will be able to resume his duties in a few days. Mr. Sanford resigned in April, and Mr. Jovansen was appointed to discharge the same duties. As Acting Manager for the past three months Mr. Jovansen has shown commendable zeal and efficiency in a position which tries the abilities of the best. These are all the matters we have to lay before you to-day and I will now move the adoption of the report and accounts.

Paymaster McDONALD seconded.

Mr. HEINLEIN asked whether it was necessary to have Mr. Jovansen there as assistant manager.

The CHAIRMAN had some difficulty at first in understanding the question but on his requesting that it should be put in another form,

Mr. HEINLEIN asked whether Mr. Jovansen was capable of filling the position.

The CHAIRMAN—I have just stated the fact that he does so with zeal and efficiency.

Mr. HEINLEIN—As a shareholder I don't think he does.

The report and accounts were then put to the meeting and adopted.

This concluded the proceedings.

YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

The fifteenth annual general meeting of shareholders of the Yokohama Engine and Iron Works, Limited, was held on Thursday at 4 p.m. in the offices of the company. Among those present were Messrs. B. C. Howard, C. B. Bernard, E. Frazar, C. K. M. Martin, E. Berger, B. Gillett, W. K. Tresize and J. W. Weaver.

In the absence of Mr. J. Johnstone, Chairman of the company, Mr. C. B. Bernard was, on the motion of Mr. B. Gillett, voted to the chair.

The CHAIRMAN said:—As Mr. Johnstone our chairman, is at present absent from Yokohama, I have been requested to take the chair in his stead, and will now do so, with your permission. Before proceeding to the business of the meeting, I desire to express our sense of the loss we have experienced in the death of Mr. Swan, who for a few months filled the post of Secretary to the Company. Mr. Swan, although not having had a strictly business education, proved his aptitude and ability during the short time he was with us, and there is no doubt that had he lived he would have been of exceptional value and assistance to the Company. Mr. Bell has been engaged as Secretary, and enters on his duties from to-morrow.

The notice calling the meeting having been read by Mr. Gillett,

The CHAIRMAN suggested that the minutes of last meeting and the report and accounts be taken as read.

REPORT.

The Directors beg to submit to the Shareholders the Statement of Accounts for the Year which ended 31st May, 1902.

The amount of the balance brought forward from 31st May, 1901, was Yen. 98,434.63
Out of which amount an interim dividend was paid on 30th August last of yen 50 per share on 1,300 shares Yen. 65,000.00

33,434.63

The net Profit on the Company's Working for the Year, which ended 31st May, 1902, after writing off for depreciation of Buildings; Plant; Machinery and making provision for bad debts; and payment of Directors' and Auditors' fees, amounted to Yen. 10,646.62

Leaving a balance to credit of Profit and Loss Account of Yen. 44,081.25

The Directors now propose to deal with this amount of yen 44,081.25 as follows, viz.:—

By the payment of a dividend of yen 10 per share, which will absorb Yen. 26,000.00

By the payment of a Bonus to Employees of Yen. 701.00

By carrying forward the balance to credit of 1903 account, viz. Yen. 17,380.25

44,081.25

Board of Directors.—Messrs. C. B. Bernard and B. Gillett retire by rotation in accordance with the "Articles of Association" but offer themselves for re-election.

Auditors.—Messrs. Fearon and Guinness having left Yokohama, the Board of Directors have appointed Mr. F. J. Hall and Mr. J. F. Cox-Edwards in their stead; said appointments require confirmation by the shareholders present at the yearly General Meeting.

JAMES JOHNSTONE,

Chairman of the Board of Directors.

Yokohama, 23rd July, 1902.

THE YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

JAMES JOHNSTONE,

Chairman of the Board of Directors.

We have examined the foregoing accounts and compared them with the books and vouchers of the Company, and certify them to be correct.

C. GUINNESS, } Auditors.

F. J. HALL, }

Yokohama, July 19th, 1902.

On the motion of Mr. Martin seconded by Mr. Frazar this was agreed to.

The Chairman then said: I think that there is very little for me to say at this meeting, as the somewhat difficult points connected with the readjustment of Capital Account, which occupied our attention last meeting have now all be satisfactorily arranged. The business of the company is progressing favourably, but owing to the dullness of business generally, during the past twelve months, the volume of work has not been so large as in previous years. We are, however, getting our fair share of what is going, which will increase as the business of the port improves. I shall be glad to answer any question with regard to the accounts.

Mr. MARTIN proposed the adoption of the report and accounts.

Mr. FRAZAR seconded and the proposal was agreed to.

On the motion of Mr. Martin, seconded by Mr. Tresize, the retiring directors, Messrs. C. B. Bernard and B. Gillett, were re-elected.

In place of Messrs. Fearon and Guinness, who have left Yokohama, Messrs. F. J. Hall and J. F. Cox-Edwards had been appointed as auditors by the directors, and on the motion of Mr. Martin seconded by Mr. Frazar this was confirmed.

The next business was to settle the amount of the directors' fees which, on the motion of Mr. Frazar seconded by Mr. Martin, were fixed at the same figure as before—yen 1,500 per annum.

The fees of the auditors for the same period were, on the motion of Mr. Frazar seconded by Mr. Martin, fixed at yen 400.

The CHAIRMAN intimated that dividend warrants would be issued the following day.

A vote of thanks to the Chairman on the call of Mr. Howard concluded the proceedings.

LAW CASES.

Legal proceedings have been instituted, says a Japanese paper, by Mr. James Johnstone, a British resident of Yokohama, against Mr. Yoshida Sadakichi, owner of a gold mine in Fukuoka Prefecture, Kyushu, claiming recovery of some yen 60,000. It appears that in November last year an arrangement was effected between the parties under which the foreigner was to buy the mine for yen 80,000, and as a result Mr. Johnstone dispatched a foreign expert to inspect the condition of the mine. The expert brought back to Yokohama a favourable report of the mine and accordingly the plaintiff paid yen 60,000 to Mr. Nakamura on condition that should the mining business be conducted with success the remaining sum would be handed over. It has been lately discovered, however, that a certain quantity of gold had been placed in the mine when the inspection was made by the expert. The owner of the mine, Mr. Nakamura, and a few others concerned have been arrested by order of the Yokohama Chiho Saibansho at Negishi, Yokohama, where they had been staying.

HIOKI v. SPECIE BANK.

In the Yokohama Chiho Saibansho on Tuesday afternoon, before Judge Danno, was heard an action brought by Mr. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., No. 35, Yokohama, against the Yokohama Specie Bank claiming yen 15,871.74.

The plaintiff appeared in person and the defendants were represented by Mr. S. Takahashi.

The plaintiff stated that prior to the foreign firm being declared bankrupt the firm exported 780 boxes of tea to New York through the Yokohama Specie Bank, for which the firm obtained a bill of lading. On February 1st this year, the firm's debts to the Specie Bank stood at some yen 110,000, but the greater portion of the debt was refunded in several instalments afterwards. In January this year, the firm obtained from the Bank a loan of yen 60,000 by offering the firm's property as security and with this sum they repaid to the Bank debts amounting to yen 36,125.11. Afterwards the firm also repaid the remaining debts to a certain extent, leaving a balance of yen 15,871.74, in which is included the price of the sale of the 780 boxes of tea exported.

Counsel for defendants contended that whenever the foreign firm intended to purchase and export tea abroad the Specie Bank offered every possible convenience, by purchasing, for instance, the tea on behalf of the firm which then exported the article. It had been therefore arranged between the parties that the receipts obtained by the foreign firm should be handed to the Bank so far as the latter was concerned in the transactions. Under the circumstances, the Bank had no money which ought to be refunded to the firm. The proceedings were adjourned until August 21st.

HIOKI v. PIGOTT.

Judgment was given in the Yokohama Chiho

Saibansho on Wednesday morning, by Judge Kano, in the case brought by Mr. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., No. 35, Yokohama, against Mr. H. C. Pigott, claiming recovery of yen 1,250 from the latter. The defendant was ordered to refund the money to plaintiff and to pay the costs of the case.

HIOKI v. BECKER.

Judgment was also rendered in the Court the same morning, by Judge Kano, in the case brought by Mr. Hioki, Bankruptcy Administrator in in estate of Messrs. Mourilyan, Heimann & Co., Yokohama, against Mr. J. de Becker claiming recovery of yen 300. The defendant was ordered to pay plaintiff the sum claimed, costs of the case to be borne by defendant.

Particulars of the above cases appeared in the *Japan Mail* of July 24th.

Concerning the report that a police-inspector of Kobe and a resident of Tokyo were arrested in Osaka several days ago, on a charge of fraud, the *Asahi* says that further arrests were made in Tokyo on July 27th in the cases of Matsumoto Shozaburo of No. 1, Nichome, Minami-sakumacho, Shiba, Tokyo, and of Tsukamoto Jin-yemon of No. 313, Kita-nakadori, Kobe. The latter was at once escorted to Osaka for trial.

An action brought by Mr. M. Raspe against Mr. Yamashina Tsunekichi of Onoyecho, Yokohama, which was expected to be heard in the Yokohama Chiho Saibansho on Monday morning, has been postponed indefinitely. The plaintiff claimed yen 240 from the defendant.

On July 29th Sha Fuku, a Chinese employé of Messrs. Otto Reimer & Co., No. 108, Yokohama, and two Japanese coolies named Ishizuka Takuzo and Nishiyama Tsunejiro, were arrested by the Kagacho Police on a charge of having stolen 300 bags of sugar, valued at about yen 3,000, from the godown of the firm during the past few months. They were at once sent to the Yokohama Chiho Saibansho for trial.

Yoshida Fusanosuke, a native of Minami-Tsugaru district, Iwate Prefecture, was arrested in Tokyo on July 26th by a detective of the Central Police Office charged with having counterfeited ten yen notes of the Bank of Japan. He is now undergoing trial at the Tokyo Chiho Saibansho. Meanwhile news comes from Kyushu that Suyematsu Kiichi, of Oita Prefecture, and 14 others were arrested several days ago by the Oita Police on a charge of having forged ten yen notes of the Bank of Japan to the amount of over yen 100,000. The Tokyo Police are of opinion that Yoshida Fusanosuke must be an accomplice of the Kyushu forgers.

On July 25th two police constables, Shinowara Takeichiro and Sakayori Chiyokane, belonging to the Shiba Police, Tokyo, were taken into custody on a charge of fraud. The following day six other policemen of the Shiba Police were suddenly dismissed in connection with the matter. The origin of the affair seems to be that in March this year a native of Chiba Prefecture was robbed of yen 950 by several gamblers in a tea-house called Unagiya, Hongo, Tokyo, where the countryman had been staying for some time. The unfortunate rustic, through some person, applied to Shinowara Takeichiro to trace the gamblers and recover the money from them. Shinowara finally succeeded in finding the gamblers, from whom he privately obtained some money. In order to keep the matter secret, he distributed the money among his fellow-officers. The matter was, however, brought to light several days ago with the result stated above.

Quite a sensation was caused in Osaka a few days ago when two persons were arrested by the Osaka Police on a charge of fraud. One of the accused, says the *Asahi*, is a local police-inspector named Taura Sadaji, belonging to the Kobe Police, and the other is a resident of Tokyo named Yamaguchi Tanekichi of No. 13, Inaicho, Azabu. It appears that the accused, together

with several others, have been canvassing through Tokyo, Hyogo, Okayama, Hiroshima, Moji and other places since April this year on the plea that they were officially directed to raise a number of emigrants for Manila and they fraudulently obtained commission at the rate of yen 25 per person. The money collected by this means amounts to over yen 20,000 altogether. Of course the canvassers in disguise soon concealed themselves and the money, to the great consternation of the intended emigrants. The local police in the western districts have since been searching for the offenders and after some months have been successful in arresting two. It is stated that among others involved are two more police-inspectors.

COMMERCIAL NEWS.

The Osaka Gas Company have decided to issue 29,200 shares for subscription in Japan, in accordance with its recent resolution to increase the capital. So far as we know, applications for subscriptions must be made from August 1st to the 23th of that month, and yen 2.52 must be paid as guarantee per share when sending in applications.

The semi-annual general meeting of shareholders of the Nippon Kangyo Ginko (Industrial Bank of Japan) took place in the Company's hall, Tokyo, on July 24th. The chair was occupied by Mr. Takahashi, President. After reading various reports dealing with the first half of this year the following accounts were presented and passed:—

	Yen.
Total receipts	741,796
Total expenses.....	536,018
Net profit	205,777
Brought from last account	46,198
Total	251,976
To reserve.....	32,000
Reserve for equalization of dividend	8,000
First dividend (five per cent. per annum)	62,500
Second dividend (ditto)	62,500
Bonus	18,500
Carried to next account	68,476

Negotiations for amalgamation are in progress among representatives of the Okayama, Kasaoka, Kibe and Chugoku Cotton Spinning Companies in western Japan. In this connection, they have applied to Mr. Yasuda Zenjiro for a loan of yen 480,000, and it is stated that should the application be acceded to the negotiations will be brought to a successful issue.

During the month of June yen 160,664 worth of silk known as kai-kinu were exported from Yokohama, as will be seen from the following table:—

	KIN.	YEN.
United States	343,250	134,431
Germany	58,100	19,785
Egypt	6,377	1,889
France	2,900	1,164

An Osaka report says that at a special general meeting of shareholders of the Osaka Club Hotel Joint-stock Company held on July 26th it was resolved to wind up the concern and to dispose of the Company's property. A committee was then appointed to adjust the accounts with a view to refunding the money to the shareholders.

The Sobu Railway Company, at the half-yearly general meeting of shareholders held on July 26th passed the following accounts for the first-half of this year:—

	Yen.
Net profit	210,225
To reserve.....	10,200
Dividend (nine per cent.).....	189,000
Bonus	8,500
Carried to next account	2,525

The Yokohama Juzen Hospital had a microscope stolen between June 19th and July 26th. The thief has not yet been arrested. The article is valued at yen 195.

THE HERB CASE.

SIX MONTHS' MAJOR IMPRISONMENT.

Franz Carl Herb, a well known merchant of Yokohama, appeared on Tuesday in the Yokohama Chiho Saibansho, to hear judgment given in the criminal proceedings instituted against him. The accused sat at the lawyers' table, as also did his Counsel, Mr. J. de Becker, and the Court Interpreter, Mr. Hattori.

The President of the Court, Judge Danno, his Associates, Judges Kobayashi and Mabuchi, and Procurator Midzutani who appeared instead of Procurator Honda, took their seats on the bench about twenty minutes to two o'clock, at which time there was a very small audience, including one foreigner, apart from the local reporters. The President at once began to read the judgment of the Court, which was afterwards rendered into English by the interpreter for accused's benefit. Five days are allowed in which Mr. Herb may appeal.

Below we give a translation of the judgment:—

Franz Herb,

aged 53 years,

Swiss citizen engaged in import and export business in sundry goods at No. 177, Yamashita-cho, Yokohama City.

The case in which the above-mentioned person has been accused of having committed fraudulent bankruptcy is heard and judgment given as follows:—

FORMAL ADJUDICATION.

The accused is sentenced to six months major imprisonment. The articles which have been taken will be returned to the respective producers.

REASONS.

The accused Herb had been engaged since 1890 in import and export business at Yamashita-cho, Yokohama, jointly with Conrad Wagen under the name of F. Herb & Co., the greater part of the capital of the Company being paid by the said Wagen. In 1894 Wagen died and the amount of capital invested by him was drawn out by the executor of his estate. By this time the capital advanced by the accused had been already expended and the business capital was entirely gone. Consequently the accused consulted Kawagita Naozo of No. 60, Bentendori Sancho, Yokohama, and obtained from him a loan of six thousand yen and with this he continued doing business alone. However, shortly after this out of the loan thus made, two thousand yen were caused to be returned and as to the remaining four thousand yen merchandise corresponding in value to that amount was always being taken delivery of. On this account the accused could not make use of the loan by turning it into business capital. In 1896 the accused opened transactions with the Hongkong & Shanghai Banking Corporation of Yokohama relating to bills of exchange and promissory notes thus obtaining pecuniary means. However, little profit only was realised out of business and the accused sustained losses and increased his debts year by year. In January, 1900, his debts came up to yen 38,160. Moreover about June or July of the same year the Hongkong & Shanghai Bank cut down the amount of advances generally, circulation of money being thereby again disturbed. In January of the following year (1901) he was indebted to the Bank only to the amount of yen 64,300. Being in such business adversity the accused fell into such a position as to compel him to suspend payment. In order to postpone the time of suspending payment he sold to Iwasaki and other customers between about the 3rd of September, 1900, and about the 7th of November, 1901, the goods which were imported from Boye and Lembecke and other firms and which were in his hands, at prices cheaper than the market value by which he obtained means of making payment and responded to urgent needs. In spite of this, however, the wheel of fortune the accused had expected to turn in his direction did not do so and at last he failed to make payment on due date of a promissory note for yen 1,490 drawn payable three months after date on the H. & S. Bank under date of Sept. 16th, 1901, and on Dec. 27th of the same year he was adjudged bankrupt at the First Civil Division of this District Court, which adjudication has been confirmed.

The above-mentioned facts are confirmed by,

The admissions made by the accused to the same effect before the Court,

No. 2 of Public Trial Exhibit No. 1 and of Public Trial Exhibit No. 19 which has been taken and admitted by accused.

The facts relating to business transactions given on pages 50-74 of Public Trial Exhibit No. 27 (Stock Book) which had been taken and recognized to be the business books of the accused which correspond to admissions made by the accused.

The evidence given by Kawagita Naozo, witness, mentioned in the Record of Preliminary Examination which says "since the time the accused was doing business together with Wagen I undertook the exclusive sale of watches; Wagen died in 1894 and the funds invested by him were drawn out. I was on this account requested by the accused to lend him money. He said he thought of continuing business but that he was short of capital. About the winter of the year in which Wagen died I lent the accused yen 6,000. At this time the son of R. Schmid came out here from home and was engaged jointly with the accused in the sale of watches but soon after this it came to pass that that man alone was to engage in the watch business. On this account the sum of yen 2,000 deposited with the accused as guarantee money was received from him out of the yen 6,000 lent to him and given to Schmid. The remaining yen 4,000 was deducted by the cost of merchandize and the loan disappeared since April 15th, 1901."

The evidence given by Cecil Guinness, witness, mentioned in the Record of Preliminary Examination, which says "The accused has had current account with the Bank. When the accused ordered goods from abroad a bill of exchange was drawn through the Bank. The term of payment was commonly 90 days sight and it was usual for the accused to deposit with the Bank, before the bill fell due, a contract (letter of hypothecation) and take delivery of the goods. If the goods were not sold before the bill became due the accused drew a promissory note on the Bank. The accused was indebted to the Bank in March, 1897, to the amount of yen 6,710; in January, 1898, yen 9830; in January, 1899, yen 22,860; in January, 1900, yen 38,160; and in January, 1901, yen 64,390. The Bank cut down the advances generally about June or July, 1900, owing to stagnation of trade."

The evidence of Sato Hakuai, witness, given at the public trial was to the effect that the accused Herb was adjudged bankrupt on the 27th of December, 1901, and that the witness became bankruptcy administrator, the accused failing to meet a promissory note for yen 1,490 drawn on the Hongkong and Shanghai Bank on the 16th of September, 1901, and made payable three months after date.

In considering the case the Court does not find in the defendant any act of fraudulent bankruptcy but in the face of the facts already explained examination must be made with regard to the accused's responsibilities in connection with them. Probably what the Procurator has prosecuted against the accused would be for the fundamental facts of the case and not for the mere name of the offence on which the accused was charged.

In applying the law to the case the act of the accused falls under the scope of Art. 1031 of the Commercial Code which says "If a debtor who has been adjudged bankrupt committed any of the following acts before or after suspension of payments or adjudication of bankruptcy he shall be punished by a penalty relating to bankruptcy by negligence," also the provision in clause 2 which says "When funds for payment are obtained by making transactions which bring losses for the purpose of postponing suspension of payment," &c., and also provision 2 in Law No. 101 issued in October, 1890, which says "Persons who become bankrupt by negligence shall be punished by major imprisonment from two months to four years." The offence should be punished within the term stipulated in this provision and as to the articles seized Art. 202 of the Code of Criminal Procedure should be applied. Judgment is therefore delivered as stated in the formal adjudication.

Given in the presence of Procurator Honda Goroku at the vacation session of the Yokohama District Court this 29th day of July, 1902.

DANNO YOSHIYUGI,

Presiding Judge.

We learn that the Public Procurator has appealed against the sentence pronounced by the Judges of the Yokohama Chiho Saibansho upon Mr. F. C. Herb (six months' major imprisonment), and that Mr. J. de Becker on behalf of the accused has likewise lodged an appeal.

THE "HAMBURG" CASE.

TEXT OF JUDGMENT.

We (*Kobe Herald*) learn that an appeal has been taken against the judgment of the Kobe Chiho Saibansho in the *Hamburg* case, by which L. H. Petersen, captain of the vessel, who was fined yen 200 and confiscation of the vessel ordered in respect of a contravention of the Shipping Law, committed when the vessel was taken into an unopened port in the Inland Sea.

The full text is now to hand of the judgment delivered by the Kobe Chiho Saibansho on the 23rd inst. in this case. The judgment reads as follows:

L. H. Petersen, German subject, the master of the

steamship *Hamburg*, the defendant in this case, is ordered to pay a fine of yen 200; and the steamship *Hamburg*, in the possession of C. Nickel, Kaigan-dori Nichome, Kobe, is confiscated.

The following are the reasons for the above judgment:—

On the 17th May last, the defendant, while in charge as master of the steamship *Hamburg* which, is registered as a German ship, not having its register in Japan, in the employ of C. Nickel, also a German subject, resident at Kaigan-dori, 2-chome, Kobe, received an order from his employer to tow the British ship *Dumfriesshire* to Innoshima, in Hiroshima prefecture. On the following day, the defendant (in the *Hamburg*) left Kobe, towing the British ship, and arrived at the destination on the 20th of the same month. On the following day he entered the port of Habu, Innoshima, which is not open to foreign vessels, without obtaining a special permit from the Minister of the Department concerned not having experienced distress at sea, and not with the purpose of escaping capture by an enemy and there the vessel was docked at the yard of the Innoshima Dock Company.

Of the facts so far cited, all with the exception of the statement that "the vessel did not experience distress at sea," were admitted by the representative of the defendant in this Court. In the minutes of the proceedings of the preliminary examination of this case, it is mentioned that C. Nickel, a witness, stated that he was the owner of the steamship *Hamburg* and that she was registered at Hamburg in Germany. He engaged the defendant, Petersen, about a year ago as the captain of the vessel. As the time the steamer was docked at Habu, Innoshima, in May last year, the defendant had charge of the vessel as captain. In the records of the case of infraction of the Shipping Law, preferred in this Court last year against Takeda Tokichi (then alleged to be the captain of the *Hamburg*), H. Zapf, witness in the preliminary examination, stated that he had left Kobe in the *Hamburg* towing the British ship *Dumfriesshire*, and three days afterwards arrived at Innoshima, on the 20th May, 1901; and on the following day the *Hamburg* was docked till the 21st of the same month, undergoing repairs. In the same record, Matsutani Sakaye stated that the *Dumfriesshire* reported the fact to the Itosaki Marine Office on the 21st May, 1901, and entered the dock at Innoshima, but he did not remember whether the *Hamburg* made such a report or not. The latter vessel, however, was docked at Innoshima.

The defendant pleaded that shortly after he got under weigh at Yokoya the rope by which the *Dumfriesshire* was towed became entangled with the propeller of the *Hamburg*, and her starboard engine got out of order which rendered the navigation of the vessel extremely dangerous. In consequence, he put into the port of Habu, for the purpose of examining the damage done, this being the duty of the master of a vessel in such a case. He was thus compelled to put into the port in consequence of "distress at sea." In the first examination of the defendant in the preliminary examination of the case, however, he stated that the reason the *Hamburg* was docked at Habu, on the 21st May, 1901, was because the towing rope had become entangled with one of the propellers off Yokoya, and in consequence the motion of the propeller shaft ceased and the vessel was docked to be repaired. But (the witness continued) as the *Hamburg* was a twin-screw steamer, if one propeller got out of order, the voyage could be continued, though with some difficulty, in fine weather by the other propeller. On the day in question the weather was fortunately calm, and the voyage was made by one propeller. The propeller got out of order from time to time, but the voyage was continued. The rope which was entangled with the propeller off Yokoya was taken off by a sailor of the steamer, and he (witness) left Kobe with the conviction that the steamer would be safe. The minutes of the preliminary examination of witness Takeda Tokichi contain the statements that on the 17th May, 1901, the *Hamburg* left Kobe towing the *Dumfriesshire*, for Innoshima. The witness was on the *Hamburg*, and owing to a strong wind and current the vessel proceeded stern first for a time. The boiler got out of order, the sounds made by the engines became acute, and a rope was entangled with the propeller; but the vessel did not experience such danger as to threaten the safety of the crew or the vessel itself. In the records of the case against Takeda Tokichi (the original defendant), it is mentioned that the witness, H. Zapf, stated that he was the engineer of the *Hamburg*. She towed the *Dumfriesshire* from Kobe to Innoshima. Off Yokoya the towing rope became entangled with the propeller of the steamer, but the rope was at once taken off and no damage was done. The engine was heated, however, and a fire was made (*Kikuanbu ni netsu wo okoshi hi wo dashitaru ni tsuki*). It was considered dangerous and the steamer was docked at Innoshima to be examined. But the damage caused by the fire and the damage done to the propeller were so slight

that repairs could be effected by the men on the steamer. Again, in the record of the trial of first instance of the same case (against Takeda), the 17th May, 1901, the *Hamburg* left Kobe towing a British ship for Innoshima. On the way the towing rope became entangled with the propeller of the *Hamburg*, but it was taken off by a sailor, and upon examination no damage was found to have been done to the propeller. When the steamer reached the west of Hyakkah Island, Holstein and another German ordered it to be put into the port of Habu, and the steamer entered there accordingly.

All the evidence heretofore cited agrees in showing that a rope was entangled with the propeller of the *Hamburg* in the course of the voyage, but that the accident was not so serious as to warrant the description of "distress at sea." Furthermore, the witness Sugitani in the preliminary examination replied that on inspecting the *Hamburg* in the dock at Habu, he found no mark of the vessel having been in "distress," only the *navator* (rope catcher) was damaged. From this evidence, the plea of the defendant referred to in this document is a mere subterfuge, and it is rejected. The evidence is sufficient to convince the Court of the illegal action before referred to.

Referring to the law, the action of the defendant is in violation of Article III. of the Shipping Law, and renders him liable to a fine of from yen 200 to yen 2,000, and the confiscation of the vessel which entered a port not open to foreign trade, according to Article XXIII. of the same Law. The articles seized in connection with the case shall be disposed of according to Article 202 of the Code of Criminal Procedure; and the costs of the Court shall be determined according to Article 45 of the Criminal Code and Clause 1 of Article 201 of the Code of Criminal Procedure.

The judgment is signed by Judge Tanaka Seiju, presiding, and Judges Ota Chise and Watanabe Hoken.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Kyōiku Kōhō*, Dr. Murakami Sensei institutes a comparison between the nature and the objects of education and religion in the following terms:—(1) Education has principally to do with this world; religion with the next. (2) Education aims at the development of intelligence; religion at the creation of faith in supernatural beings of some kind. (3) Education has the interests of the State as its main object and its principles are determined accordingly. Religion is essentially cosmopolitan and is more or less connected with the whole creation. But Buddhism has in several countries served political purposes in a striking manner, and it may be said to be one of the functions of the creed to support and assist the State in various ways. In the Nara and Heian eras the political power of Buddhism was very great. When Buddhism was first introduced into this country it was known as the religion that "protects the country and gives solace to the people" (*Gokoku-ammin*, 護國安民). From the titles borne by numerous books that appeared in ancient times it is evident that the connection of Buddhism with the control and management of the State was universally recognised. But nobody pretends that it is the chief function of either Christianity or Buddhism to influence politics. (4) Education has to do with children; religion with adults. Japanese Buddhism has become to a large extent the plaything of old men and old women. (5) Education treats men as men; religion considers them as something more, as possessing divine elements, or as capable of partaking of the divine nature. It is, moreover, an instrument for developing a superior kind of intelligence, —a knowledge of things spiritual. Having enumerated the points in which education and religion differ, let us pass on to consider the particulars in which they agree. (1) The principal work of both the educationist and the religious teacher is with the poor. The middle and upper classes obtain education for themselves and are sufficiently intelligent to do without religion to a large extent. Religion and education alike are for the bad rather than the good, for the ignorant rather than for the enlightened. "Towards the lower classes! Towards the lower classes!" must ever be the motto of both religion and education. (2) The object of both religion and education is mind development

and enlightenment. It is not the chief object of education to impart information only, but to train the minds of the young. So a religion that seeks by gorgeous ceremony to impress the senses of the ignorant only is deceiving its votaries by giving them forms instead of realities. (3) In both education and religion knowledge and practice must accord with each other. The importance of this has been insisted on by both Christ and Shaka as well as by Wang Yangming. (4) A spirit of benevolence should actuate both the school teacher and the teacher of religion. Knowledge is like the morning sun shining in the distant heavens. Kindness is like water that finds its way to the lower places, giving new life to all with which it comes in contact. The unkind, the impolite, the insolent, the wicked—those are the proper objects to be dealt with by the educator and the religious teacher alike. (5) Both education and religion aim at developing and adjusting the various parts of man's complex nature, at determining what are the laws that should govern his actions. Thus it is seen that education and religion have much in common, and it would be greatly to the interest of the community at large were they to work together in this country as they have done elsewhere. But since the beginning of the *Meiji* era not a few have laboured to keep them apart and excite hostility between them. Educationists seem only to note the drawbacks connected with religion and to overlook its advantages. Religious teachers are to a certain extent guilty of the same want of discernment. Each party seems to dwell on the defects and weaknesses of the other. The educationist says that religion is mere superstition and that in education its moral effect is *nil*. The religious teacher denounces the teaching carried on in ordinary schools as secular, godless, and productive of scepticism, and so mutual recrimination never ceases. It would be almost impossible to find in any Western country school teachers who know so little about religion as those employed in our Japanese schools. * * *

In the *Kyōiku Kōhō* appears a long report of a speech made by Mr. Darmapala on "The present State of Indian Society." Much of what Mr. Darmapala said need not be reproduced here, as it was a statement of well-known historical events. Mr. Darmapala told his audience that though a native of Ceylon he had spent many years in India and as the result of long investigation had come to the conclusion that as regards progressive thought Ceylon is ahead of India, the reason of this being that this island has not suffered from the Brahman caste system and the pernicious effects of Mohammedanism in the same way as India. Mr. Darmapala is of opinion that many of the superstitions prevailing in India owe their influence largely to the countenance given to them by the Brahmans, whose object it is to keep the lower orders in a state of profound ignorance and servility. Christianity in India has, Mr. Darmapala says, proved a failure, the reason being the great contrast that exists between the teaching of the Missionaries and the lives of professing English Christians resident in the country. Mr. Darmapala represents the masses as oppressed and as no better than slaves and calls upon Japanese Buddhists to effect their rescue. Exactly to what class of slaves he refers is not clear. If the slavery be of a political kind it is difficult to see how Japanese Buddhists can afford any assistance. We observe that Mr. Darmapala gives the number of Brahmans as 20 million. He says that they are the real rulers of India. On the beneficent work of the English Government for nearly half a century he had nothing to tell his audience, and by his silence left the impression that if India is to become enlightened the work of reform must be effected by Japanese Buddhists. Much of what Mr. Darmapala said at the meeting referred to was new to the Japanese, who are as a rule remarkably ignorant of Indian affairs, but whether he will succeed in founding a Japanese Buddhist Society for carrying on permanent mission work in India, from all accounts seems to be very doubtful. * * *

According to the *Tōkyō Maishū Shinshi*, Mr. Kataoka Kenkichi, formerly President of the

House of Representatives, was duly installed as President of the *Dōshisha* on June 27th last. The following account of the ceremony we take from the columns of this paper:—The visitors present on the occasion, numbering about 200, included the Governor of Kyōtō, Mr. Omori, and the President of the Kyōtō University, Mr. Kinoshita. In addressing the meeting Mr. Kataoka said that he considered it a great honour to have been chosen for the post. He recognised that both in learning and educational experience he was deficient. What led to his appointment was, he believed, the desire of the trustees to obtain a good business manager of the affairs of the Association. He believed that he had a call from God to fill the office and he looked for the cooperation of all who were interested in the welfare of the institution.

Mr. Yuasa Kichirō said that in his opinion since Mr. Nijima's death no such suitable president as Mr. Kataoka had been appointed and that much was expected from him. The work which for years past the *Dōshisha* had set itself to do consisted of two parts; one being the teaching of English, the other the propagation of religion. For the teaching of English many other schools existed, but the exact function performed by the *Dōshisha* in the spread of Christianity was not fulfilled by any existing body. In reference to the question of whether it is desirable to make religion the basis of the ethics to be taught in schools there was great difference of opinion, and he did not think that an immediate answer could be given to that question. There were not a few who looked to the *Dōshisha* for light on that subject and he hoped that it would be thoroughly investigated by the new President and his fellow-workers.

Mr. Kinoshita said that all interested in education could not but welcome Mr. Kataoka's appointment to the Presidency of the *Dōshisha*. It was recognised that his predecessors in the office had failed. There were causes for this, and if they were not careful these causes would make Mr. Kataoka's success impossible. It was one of the defects of the Japanese that they were slow in yielding for the sake of union. At the same time they expected great things from individuals holding positions of trust. Mr. Kataoka had spoken very humbly of his attainments and his ability, but it was a fact that he had filled an important and a difficult post in the political world efficiently, and the troubles which he had gone through and overcome had qualified him to undertake the guidance of the *Dōshisha* at a critical time in her history. Mr. Kataoka was in earnest and he was sincere, and if he were to give his undivided attention to his new work he would succeed. What Mr. Kinoshita feared, however, was that party exigencies might again sweep Mr. Kataoka into the sea of politics. Then addressing the meeting as the head of the Kyōto Education Society, Mr. Kinoshita said:—Throughout the whole country the insufficiency of Middle and High Schools has been felt, and hence I regard with great satisfaction the establishment of Middle and High Schools by the *Dōshisha*, which will help considerably in meeting demands which the Government schools are quite unable to cope with. It is not necessary that *Dōshisha* principles should in any way be compromised in these schools. By such a compromise you would be parting with the very qualities which render your Association valuable. (*Dōshisha no shugi wo suteyo to iu ni arazu. Shugi, kōrei (綱領) wo sareba, Dōshisha no Dōshisha taru atai naki ni itaru.*)

Commenting on the above, the *Fukuin Shinbō* observes that while congratulating the *Dōshisha* on obtaining such a suitable President, it would remind the Association that the development of Christian faith is its chief object, and how far this object will be realised under the new management is a question to which no very decided answer can be given.

* * *

The *Tōkyō Maishū Shinshi* has a good deal to say on the views of Mr. Ebina Danjō and his followers, under the title of *Kinji no Kirisutokyō Shisō* (Recent Christian Thought), of which the

following is the purport. In the June number of the 新入, *Shinjin*, Mr. Ebina's organ, he states his views in a most unmistakable manner, and with considerable earnestness of tone. He says that before very long the Kumiai Churches will all be self-supporting, but that as regards independence of thought, that is far more difficult of attainment. He recognises that in some respects it is quite impossible for Japanese Christians to be independent. The faith which they possess has been received from foreign countries and has been developing itself elsewhere for nearly nineteen hundred years. But Mr. Ebina tries to show that while the orthodox have no independence of thought his party possesses it. To us it seems that he and the orthodox are all in the same boat. Both he and they have adopted trains of thought that have come from the West. Mr. Ebina tells us that in religious feeling he agrees with the orthodox and the German Church, but that his intellectual leanings are all in the direction of Unitarianism and Liberalism. Thus it is seen that like the image that Nebuchadnezzar saw in his dream the material with which Mr. Ebina constructs his creed is by no means of equal value, and hence his structure is likely to fall to pieces before very long. Men holding such views as those of Mr. Ebina cannot possibly keep in touch with orthodoxy and free thought at the same time for very long. What there is of orthodoxy in Mr. Ebina's religious sentiments is the relic of past experience and teaching. His liberalism is new. Mr. Ebina seems to us like a man trying to ride two horses that are going in different directions. The feat is impossible. Mr. Ebina condemns orthodoxy as a whole in an unfair manner. We grant that there are some orthodox Christians that are cumberers of the ground, whose Christianity is a mere form, but there are others whose belief is sincere and whose lives are perpetually influenced by their religious convictions. Mr. Ebina seems to assume that the liberty of thought for which he contends has the invariable tendency to deepen faith. But is this so? Do the Unitarians, for instance, show any remarkable Christian devotion and zeal? "Is it not a fact that liberal views and the decline of religious fervour too often go together?" asks the *Maishū Shinshi*.

The *Maishū Shinshi* is glad to observe that there are many signs that Buddhists no longer regard Christians and Christian doctrine with the enmity that used to be displayed. As an illustration of this, this organ quotes from the 政教時報, *Seikyō-jihō*, the views of Mr. Chikazumi Jōkan, who has lately returned from a foreign tour undertaken with the object of finding out what is the actual state of the religious world in the West. Under the title of *Eikoku oyobi sono Shukyō-sekai* (England and its Religious World), Mr. Chikazumi gives his impressions of English society in general and of Christians in particular. The English, he says, are a serious-minded people and no flippancy is to be observed in English national life. As regards religion; while the country is studded with non-conformist churches, the Church of England commands the respect of everybody. Notwithstanding the general progress of thought in England, it shows no signs of decay. Wherever the British flag flies, all over that empire on which the sun never sets, the Church of England has her ministers and her sacred edifices and the religious element in her national life contributes in no small degree to the stability of her empire. Though in Germany thought is more advanced and organization more complete, the Germans have failed to get rid of many unseemly practices. In England no sooner is an abuse discovered than the nation insists on its being reformed, but the same earnest spirit does not actuate the Germans. That Mr. Chikazumi should, though a Buddhist, write in such eulogistic terms of a Christian country is an indication, says the *Maishū Shinshi*, that at last Japanese Buddhists are getting rid of the narrow-mindedness and prejudice which have clung to them so long.

* * *

Count Otani, the Chief-Abbot of the Hongwanji, wields enormous power in this country, but for many years past he has not succeeded in keeping his subordinates in order, and the altercations

among the Hongwanji Buddhists seem never to cease. The chief control of the affairs of the Otani-ha is in the hands of the *Shitsuji*, or manager. It will be remembered that some years ago, as recorded in the Summaries written at the time, Atsumi Keiyeu occupied this post, but that, owing to the various mal-practices of which he was guilty, he was dismissed from office, and one Ishikawa Shuntai was appointed to succeed him. Mr. Ishikawa disgraced himself in connection with the rejection of the Religions' Bill in the House of Representatives. He spent large sums of money in bribing members to vote against the bill and mortgaged the property of the sect to such an extent that the most serious financial embarrassment ensued. Whether as a result of this misconduct of Mr. Ishikawa or for some other reason, Mr. Ishikawa has been dismissed and, wonderful to say, Mr. Atsumi has been appointed to succeed him. The whole sect is, there is no doubt, honey-combed with corruption. Among the priests who belong to the Otani-ha there are a number of unscrupulous speculators who use the sect as a *dashi* whereby to obtain money, who under pretence of collecting money for this object and that manage to fill their purses with the pence of the poor and the unwary. But it seems, according to various Tōkyō newspapers, that the reappointment of Atsumi has aroused the greatest opposition. A short time ago, armed with a letter written by the Chief-Abbot himself, Atsumi called a large meeting in Nagoya and began to plead for subscriptions, but he encountered unlooked-for hostility. He was constantly interrupted and eventually was dragged from the platform and had to flee from the town. Certain questions were put to him at the meeting which he refused to answer. These referred to the debt of 2,481,757 yen contracted by the Hongwanji. The feeling of those present at the meeting was that nobody knew what had become of the money that had poured into the coffers of the sect during the past ten years. There was no confidence in the management of such men as Atsumi and Ishikawa. They had lied to their supporters again and again and the latter were not in the mood to entrust any more money to their hands. "First clear up the accounts, and then read the Chief-Abbot's autographic epistle," said the Nagoya audience. These and other particulars, published in the *Yamato Shimbun*, show the sect to be in a great state of disorder. It is hardly to be wondered at that devout souls like Doctors Inoue Enryō and Murakami Sensei should be ashamed of the body to which they have hitherto belonged.

* * *

Mr. Sakuma Hideo is the author of a Japanese work entitled *Shukyō Igai no Dōtoku* (Morality without Religion), which is founded on a book lately brought out in America by a Mr. Gilman on the same subject. It seems that a Society exists in the United States whose chief object it is to discuss and further non-religious morality, and that a short time ago it offered a prize of \$1,000 for the best essay on the subject. Mr. Gilman's essay was awarded the prize, and it is this essay that forms the substance of Mr. Sakuma's Japanese work. A writer in the *Fukuin Shimpō* who signs himself "T. Tom" expresses the following opinions on the feasibility of possessing effective morality without reliance on religion:—Though in theory it is possible to separate religion and morality, in practice they are joined to each other. Though the late Matthew Arnold and Mr. John Morley among others have rejected Christianity, these men breathed Christian air long enough to be Christian in spirit, and the high position which they hold as moral teachers is largely owing to the fact that they were born and educated in a Christian country. It is quite true that at the present time morality can get on without religion in the West, but this is the effect of the teaching of Christianity during many centuries. Though Christianity may be dropped out of a moral creed, it leaves behind it distinct effects. But it is a question whether a system of morality that has been divested of religious elements can last any length of time in a state of efficiency. What about the non-Christian systems of civilisation of Greece, Rome,

India, and China? Morality robbed of its Christian basis is like a house without a solid foundation. Though in all human beings there are moral roots and buds, they need the Christian sun to enable them to bear fruit. Take an illustration of what I mean, though in both Buddhism and Confucianism kindness to animals is encouraged, it was not till Christianity had come to this country that a society was formed for preventing cruelty to animals. Since the arrival of Christianity Buddhism has dressed itself in new fashions and has figured as having always insisted on certain doctrines taught by Christianity, but whatever life she has succeeded in putting into her system has been largely derived from the Christianity which is being taught in this country. Professor Goldwin Smith said a short time ago that, though he could not foresee what would be the fate of Japanese modern civilisation, "the fire of the Japanese civilisation had come from the Christian furnace." "T. Tom" concludes with the assertion that no existing morality is of much value unless Christianity forms its basis—a view that is not likely to be endorsed by widely-read men anywhere, least of all in this country.

"T. Tom" protests in the *Fukuin Shimpō* against the claptrap methods (so they are described) adopted by the Taikyo Dendō evangelists; whose mountebank proceedings are, according to "T. Tom" and other writers, creating a strong prejudice against Christianity in the minds of sober people. "T. Tom" does not object to special evangelistic efforts, but he condemns the imitation of Salvation Army tactics. He represents the evangelists spoken of as acting in a crazy manner and as violating all the rules of Christian propriety and sobriety. Such proceedings, he asserts, will produce more scepticism than already exists, but will never lead to genuine Christian belief.

* * *

Discussing the present state of Shintō under the title of 還原力改善力, *Kwangen ka, Kaizen ka?* "Shall we return to primitivism? Or shall we reform?" The *Taiyo* says:—Under the auspices of the Home Department Bureau that controls Shintō temples and shrines the Jinja Kyōkai has lately started a new magazine. In the opening number the chief objects of the Association are said to be (1) "To make clear in what the chief value of Shintō shrines consists; (2) to strengthen and render permanent ancestor-worship and the ideas associated therewith; (3) to investigate the history of various shrines; (4) to attend to the organisation of the priesthood and thus to make the nation's worship of the gods to be something real and true." Under the first heading we have a Shintō shrine defined in the following manner:—*Jinja wa ōyake no matsuri ni shite, sosen wo sōkei suru no basho nari*. "Shintō shrines are places where the gods and ancestors are publicly worshipped." *Kami* (上) *wa daidai no tenshi, kōsoku yori, shimo* (下) *jimmin no oi naru legara aru sosen wo matsureru. Yuye ni sono matsuri wo tsutsushimu wa hōhon, hanshi* (報本反始) *no makoto wo itashite, sono Kami no on wo haisha suru yuyen nari*. According to this the proper objects of worship at Shintō Shrines are Emperors, deceased members of the Imperial family, and ancestors whose merits are universally acknowledged. But in reality at a large number of shrines a great variety of less worthy objects are worshipped. There are shrines where nature is worshipped; shrines for the worship of animals, plants, bodily organs, relics, spirits. As regards ancestor-worship, as Dr. Hozumi has shown, it has prevailed in this country as elsewhere from time immemorial. Dr. Hozumi says that he believes in the real existence of the spirits of the departed and that he obtains comfort and encouragement from the thought that they take an interest in his life. The shrines that exist for the purpose of keeping alive the spirit of reverence for the dead resemble those sacred Egyptian edifices where in ancient times the devout assembled and poured forth their supplications. Now this ancestor-worship is certainly a most important part of what is known as Japanese religion. So that it is absurd to exclude the Shintoists who

superintend and control this worship from the pale of religious sects. If ancestor-worship is not religious, then the Japanese have no religion. Is it possible, moreover, to disconnect Shintô from those various accretions which in the course of ages have been embodied in the creed? Does not the Bureau which has charge of Shintô Shrines show great ignorance of the whole question in attempting to return to pure primitive ancestor-worship and to ignore all else that goes by the name of Shintô in this 35th year of Meiji? asks the *Taiyô*. Can the authorities, moreover, afford to ignore all the abuses that exist under the above name? To shirk reform and pretend to return to primitiveness, what is this but a make-shift that only reveals the ignorance of those who resort to it? How can development be ignored in religion more than in anything else? It is not by such devices that the cause of Japanese religion is to be furthered. The attempt to place Shintô outside the pale of religion was a blunder that only those would commit who failed to see the logical consequences of the adoption of such a course. If worship be one of the principal practices of religious people, then Japanese ancient and modern worship must be so designated, and to say that a sect whose sole object it is to encourage and further this worship is not a religious sect is a contradiction in terms.

* * *

The *Tetsugaku Zasshi* has the following comments on the Second Edition of Dr. Christlieb's book entitled *Kirisutokyô Yoryô Kôgi*. The material of which this work is composed is derived from a series of lectures delivered to University students and others by Dr. Christlieb before his departure for Europe. It consists of a very calm and impartial exposition of historical Christianity, and of an account of the points of difference between the orthodox and the unorthodox. The book has the merit of being thoroughly rational and lucid from cover to cover, and though it is not calculated perhaps to produce faith in Christianity where it does not exist, as a history of Christian thought and teaching it has few if any equals in the Japanese language. In that controversy over the nature of Christ which has caused such a stir in certain Japanese churches of late, Dr. Christlieb takes the side of those rationalists who contend that Christ was only the son of God in the sense that all men are God's sons. The orthodox doctrine of the Trinity Dr. Christlieb rejects as an outgrowth of Greek speculation among the early Christian writers. In the last chapter entitled "Christianity is an ethical Religion" Dr. Christlieb disappoints us, observes the *Tetsugaku Zasshi*, and shows conclusively that he has not succeeded in getting rid of the prejudices and association of his early education. Instead of basing morality on man's universal nature, he deduces his system of ethics from Christian doctrine only, which from a philosophical point of view is most unsatisfactory. To argue that there has been and can be no ethical development apart from Christianity is to ignore facts and plainly shows that the learned author of the treatise on Christianity which we are reviewing, though free in so many other respects, in his ethical views is still the slave of tradition.

* * *

Mr. Yamaguchi Kinsaku is the author of a lengthy review of the late Dr. Morita Kumato's *Shûkyô Shiron* (History of Religion) published in the *Tôkyô Maishû Shinshi*. Dr. Morita was Professor of Philosophy in the Dôshisha for some little time. He was one of the most brilliant of the scholars who took part in the work of the institution in its palmy days. He did not live to see the whole of his history published, but we are told by Mr. Yamaguchi that Dr. Morita completed the manuscript and that the latter part will appear later on. We extract from Mr. Yamaguchi's review an account of the contents of the book, which is designated *joron* (introductory). In Chap. I Dr. Morita defines religion and shows that its history resembles ordinary secular history in many respects. What it is most important to record is the manner in which the same religion has developed itself in various countries. The study of comparative religion

is of great assistance to the ecclesiastical historian. In Chap. II. the connection between the history of religion and the history of religious psychology is discussed. In Chap. III. the distinction between the history of religion and philosophy is carefully drawn. According to Dr. Morita they have quite different objects. The former has only to record facts; the latter is concerned with the investigation of principles, of causes and effects, of the relations of various principles and events to each other. For philosophical investigation special powers of mind are necessary, consisting chiefly of analysing and generalizing power. In Chap. IV. the various definitions of religion are discussed. Kant's definition is represented as erring in the direction of laying too much stress on justice and righteousness; Hegel's as doing the same in regard to truth, and Schleiermacher's as attaching too much importance to comfort of mind. Kant's definition is pronounced to be narrow, Hegel's to be illogical and Schleiermacher's to be vague. According to Dr. Morita "Religion is the life of faith and conduct produced by a feeling of union between mankind and the supernatural unknown." Chap. V. deals with the origin of religion considered ethnologically, historically, philosophically and psychologically. There are those who say that religion proceeds from superstition, those who say that it proceeds from intuition, and others who say that it originates in the germs with which Heaven has endowed us. Chap. VI. deals with the development of religion and with its relation to civilisation, science, philosophy, the intellectual powers of races, and such like. Chap. VII. discusses differences of opinion in reference to religion, the views of Hegel, Hartmann and Schelling. Chap. VIII. deals with objects of worship, which are classified under the following headings: (1) The Greater Nature; (2) the Lesser Nature (*chô-shizen*); (3) Ancestors; (4) Spirits; (5) Idols; (6) the Great Spirit. Chap. IX. traces the progress made in the character of the objects worshipped. Chap. X. treats of religious rites and ceremonies. Dr. Morita was a most polished writer and the numerous articles he contributed to magazines were a model of conciseness, lucidity and gracefulness of style. His death was a great loss to Christian literature.

* * *

We take this occasion for stating that any religious publications whatever sent to the Writer of the "Monthly Summary of the Religious Press"; care of *Japan Mail*, will be noticed in our review.

NEWS OF THE WEEK.

The Transvaal Boers forwarded a telegram expressive of sympathy with His Majesty the King.

Traffic on the Shinyetsu railway which has been interrupted for some time in consequence of the recent heavy rainfall, was resumed on July 24th.

The thorough-bred chestnut stallion, "Imp. Mistral II." was sold by Mr. Jno. W. Hall by public auction yesterday at No. 61 Main street and fetched twelve hundred yen.

News comes from Sakai that Mr. Fujimoto Shotaro, the inventor of the well-known Sakai *dantsu* (rug), died at his residence in Sakai on July 28th. The deceased was 54 years old.

Mr. Tanaka Shozo, the eccentric ex-M.P., who emerged from the Sugamo prison on July 26th, has received yen 30 from sympathizers in Gumma Prefecture and yen 35 from farmers in Tochigi Prefecture.

Operations with the view of raising the despatch-boat *Yaeyama* are going on in the north. Owing to the difficulty of the work at least one month must elapse before the vessel can be floated.

The Yokohama Hanjoki Hensanjo write us that having received influential support in Tokyo and Yokohama, they are going to compile "A History of Yokohama," which under its Japanese title will be known as the "Yokohama Hanjoki."

The promoters seek the aid of foreign institutions and firms to render their history accurate and full.

It is reported that four Japanese doctors who had been engaged by the Hongkong authorities to attend the pest patients there will return to Japan about October this year in view of the possibility of the malady being stamped out by the autumn.

On the afternoon of July 23rd, when the Toyo Kisen Kaisha's steamer *America Maru* was about to leave Yokohama for America, seven stowaways were found in her bunkers by the Water Police and sent at once to the Yokohama Chiho Saiban-sho for trial. All are natives of Kyushu.

Yet another member of the Shanghai Foreign community has fallen a victim to cholera (says the *Mercury*). Dr. Sarah Kerr, of the Margaret Williamson Hospital at West Gate was suddenly seized by the dread disease on the morning of July 15th and passed away at 4 o'clock in the afternoon.

The British steamer *Yiksang*, of which Messrs. Jardine, Matheson & Co. are the local agents, ran aground near the No. 1 fort, Yokohama, about 9 a.m. on July 25th when coming to Yokohama from Kobe. The steamer was, however, floated shortly afterwards and entered the port at 4 p.m. the same day. No damage was sustained.

A golfing magazine tells a story of man who applied for the secretaryship of a club. "You understand," said the captain, "we want a secretary who is thoroughly accustomed to managing men." "In that case," answered the applicant, "I'm afraid it's not me you want, but my wife." He was bunkered.

On the supposition that the rice crop in Japan will not be large this year Mr. Abe Hikotaro, of Osaka, is reported to have made arrangements with Messrs. Samuel Samuel & Co., of Yokohama, for the supply of 18,000 bags of Saigon and Rangoon rice. The grain is expected to be delivered at Yokohama either toward the end of August or early in September.

Two yachts have changed hands during the last few days. The well-known *Spray*, belonging to Mr. C. S. Averill, has, we learn, been purchased by Mr. A. Groener, of the Russo-Chinese Bank, and the *Ideal*, built by Mr. Boyes and since owned by different people, has gone into the hands of Mr. Belts, who is a yachtsman of considerable enthusiasm and intends to name his purchase *Virginia*.

A dispatch from Otsu reports that a united regatta will take place on Lake Biwa on August 4th under the auspices of the Butoku-kai (Association for promoting Physics and Morality). There will be fireworks and various other amusements. The races will be rowed by crews selected from students of the First High School and other institutions in the country.

Many letters, says the *Asahi*, are received by Admiral Baron Yamamoto, Minister of the Navy, from patriotic people who earnestly advise him to apply the proposed third naval expansion programme as soon as possible. The Minister of the Navy, who is also in favour of expansion, has consequently held a consultation with the Minister of Finance on the subject with a view to obtaining fresh funds for the purpose. It is stated that the subject will be brought up for discussion at a Cabinet Council shortly.

On the night of July 24th (says the *N.-C. Daily News*) a collision occurred on the river, outside the lightship, between the M. B. K. S. *Atagosan Maru* and the C. N. S. *Wuhu*, but fortunately little damage was done. Both ships were proceeding outward, and the *Atagosan Maru* had six or seven plates bulged on the starboard side. The *Wuhu* proceeded on her voyage, but the Japanese vessel returned to port and is now anchored opposite the *New York*.

The tramp steamer *Ness*, Captain Peart, carrying coal from Moji to Hongkong for the Mitsui Bussan Kaisha, has established a good record by

bringing down in six months no less than twelve cargoes, remarks the *Daily Press*. A fair average for the trip is considered to be sixteen days. Her average is about a day less than that, a very creditable feat considering that she has had to run up in ballast against the prevailing monsoon. The *Ness* belongs to the Mercantile Shipping Co. of London.

Mr. Masujima, on behalf Mr. Th. de Berigny, on Tuesday instituted an action in the Kobe Chihō Saibansho against Mr. Yamada Keisuke of that city. Mr. Masujima claims the cancellation of the decision given by the Kobe Chamber of Commerce in the arbitration of the railway sleepers case. Mr. Masujima alleges that the judgment of the arbitration is unjust and that he cannot accept it.

There is a proposal to issue pictorial post cards in connection with the opening of the Fifth Domestic Exhibition at Osaka next year. The plan was first conceived by the commissioners in charge of the coming Exhibition and the Government seems to have endorsed the proposal. It is stated that cards posted in Osaka will be specially designed as on the occasion of the recent celebration of the 25th anniversary of Japan's adhesion to the International Postal Union.

About 8 a.m. on July 26th a fire occurred in a lodging-house called Daikoku-ya at No. 75, Shichome, Ishikawa Nakamachi, Yokohama. Fanned by a stiff breeze the flames spread to the adjoining buildings before the fire brigades arrived on the scene. As a result six houses, including the building in which the fire originated, were destroyed and nine others damaged before the flames could be extinguished. In the fire, Police-inspector Yamazaki and two constables of the Kotobukicho Police received injuries, the former somewhat badly. The fire was accidental.

There is some talk, says the *Fiji*, that changes in the diplomatic service will take place in the near future. Mr. Inouye, Japanese Minister to Germany, who had represented Japan for many years, will return home shortly. Mr. Makino, Japanese Minister to Austria-Hungary, will also be recalled. Mr. Takahira, Japanese Representative to the United States, will return home on account of ill-health. As to Viscount Hayashi, Japanese Minister to England, Mr. Kurino, Japanese Minister to Russia, and Mr. Motono, Japanese Minister to France, there will be no change in their cases for the time being.

Mr. Ernest Hamilton Sharp, barrister-at-law, Hongkong, has been appointed King's Counsel. Mr. Sharp is a son of Professor Sharp of Japan and a nephew of the late Mr. Granville Sharp, well-known in Hongkong. He was admitted a member of the Inner Temple in November, 1887; was called to the Bar on 22nd April, 1891; and was admitted to practice as a barrister in the Supreme Court of Hongkong on 2nd April, 1894. During his term of practice in the Colony Mr. Sharp has made himself known as a clever, painstaking lawyer, a keen debater and an able pleader.

Dr. Morrison, the Peking correspondent of the *Times*, reports that M. Rocher, the French Consul-General at Yunnan city, representing an Anglo-French syndicate registered in London, has secured a concession for 60 years of 85 coal, copper, nickel, quicksilver, petroleum, tin, and other mines, covering one-third of the surface of the province of Yunnan. The syndicate has also secured the right to build branch railways for the carriage of minerals, and to build roads and construct canals for the same purpose. An Imperial edict has been issued approving of the concessions granted.

The plan of cutting a tunnel through the Bluff, Yokohama, which was much spoken about a year or so ago, seems likely to become an accomplished fact in the near future. It is now confidently stated by Japanese papers that as a result of investigations made in connection with the scheme it has been decided to cut a tunnel between Daikan-zaka and Ueno-machi, and so to effect speedy communication between Yokohama and

Negishi. The expenditure is put at yen 50,000. Among the promoters are Messrs. Miwa Saburo, Ishikawa Tokuyemon, Ishikawa Seiyemon, Tanaka Rikizo and others.

Prince Cyril of Russia, who arrived in Yokohama on the morning of July 30th by the *Admiral Nachimoff*, landed on the evening of the same day and attended a banquet given in his honour by the Russian Consul in Yokohama. After dinner, His Highness returned to his ship.

With a view to encouraging the marine products industry the Department of Agriculture and Commerce has been making investigations in Hokkaido, especially with regard to herring, salmon and *masu*, as well as the artificial rearing of fish. The plan proposed is said to be that the authorities should establish a number of stations in Hokkaido, where the system of artificially rearing fish is to be adopted. As to fish-curing a good method has been devised and will be put in practice at once. The undertaking will be spread over five years and the total expenditure is estimated at about yen 120,000. The authorities will also establish hatcheries in Mutsu and Echigo provinces next year.

Messrs. Wu and Yu, Chinese visitors, were entertained at dinner by Prince Konoye in the Botanical Garden, Tokyo, on the afternoon of July 26th. There were present many persons of note, including Viscount Nagaoka, President of the To-a Dobun-kai, Viscount Enomoto, the Chinese Representative in Tokyo, Baron Hanabusa and others. During the proceedings, Prince Konoye addressed the assembly in a brief but well chosen speech expressing the hope that the two countries may remain friends forever and that they will do their best to proceed along the path of progress. Viscount Nagaoka next spoke. The guests responded and thanked their host for his hospitality, adding that the kind treatment they everywhere received in Japan would be inscribed on their memories.

According to investigations made by the authorities, 3,547 emigrants, including 460 contract labourers, left Japan for Queensland, Hawaii and other foreign lands during last year. Below is a table showing the names of the emigration companies, and the number of emigrants collected by them:—The Kaigai Toko Kabushiki Kaisha, 629 free emigrants; the Toyo Imin Goshi Kaisha, 343 contract emigrants; Mr. Morioka Shin, 193 free emigrants; the Kumamoto Imin Goshi Kaisha, 244 emigrants, both free and contract; the Teikoku Shokumin Goshi Kaisha, 323 free emigrants; the Nippon Imin Goshi Kaisha, 162 free emigrants; the Aioi Imin Goshi Kaisha, 518 free and contract emigrants; the Tokyo Imin Goshi Kaisha, 263 free emigrants; the Chugoku Imin Goshi Kaisha, 231 free emigrants; Mr. Takata Heibei, 223 free emigrants; the Kobe Toko Goshi Kaisha, 219 free emigrants; and the Hiroshima Imin Goshi Kaisha, 199 free labourers.

A cable has been received at Auckland, New Zealand, dated Suva, July 18, and containing the following information:—"The steamer *Wanaka*, which passed Hunter Island, reports that the latter is in a state of eruption. Cracks were observed on the east side of the island, and sulphur and smoke were seen issuing from the crater. A slight shock of earthquake was felt at Fiji at 1.35 this morning." Hunter Island is uninhabited. It is directly in the track of the steamers from Sydney to Fiji, and, being volcanic in character, has often been observed to be active by passing vessels. It is described as a volcanic block, 975 ft. high, at its base half a mile, north by south, by one-third of a mile across. From the abrupt wooded slopes jets of sulphurous vapour issue, but it is evident from the cable news that there has been some fresh outbreak. There are 40 fathoms of water within half a cable of its base, and no outlying dangers. It is situated in latitude 22deg. 24min. south, longitude 172deg. 5min. east.

AMERICAN TOITICS.

The Kansas City *Star* says that one of the largest cotton mills in the world is to be built within twenty miles of Kansas City. Ten million dollars is to be invested, \$3,100,000 of which has already been subscribed by eastern and western men. The mill will have 500,000 spindles and 12,000 looms.

In March last the total resources of banks of deposit and discount in New York state amounted to \$395,324,626, or \$32,285,915 more than on June 10. On March 12 the amount due depositors was \$282,176,068, and from that amount there has been a decrease during the past three months of \$28,764,071. The surplus of the institutions has during that period \$723,973.

The world's fair at St. Louis will have an exhibit of special interest to Biblical antiquarians in the series of models of the Temple of the Jews prepared by the German scholar, Dr. Schick, who made the temple area his life study. The models have been secured through Mr. Walter Williams, a representative of the exposition, from Dr. Schick's son-in-law, Dr. Schoenecke. They are laborious reconstructions, in wood, of the three Jewish temples, the pagan temple, the two Christian, and the two Mohammedan churches that have successively occupied this holy place.

"A remarkable phenomenon," remarks *Knowledge*, "was recently observed on the Californian coast. One day last July a streak of 'red water' was noticed some distance off the mouth of San Pedro harbour, which subsequently broke up into a number of patches, each of several acres in extent. In the course of a few days these patches reached the shore, when the red colour was found to be due to the presence of countless myriads of animalcules belonging to the 'flagellate' group. At night the sea was brilliantly phosphorescent over the red area. The most extraordinary fact connected with the visitation was the death of a large number of marine animals, including rays, sharks, and sea-cucumbers, which were apparently poisoned by the animalcules. The bodies of these creatures when cast upon the beach exhaled a most pestiferous odour. At least two hundred miles of coast came under the influence of the 'red water.'"

The *Age of Steel* recalls that twelve years ago a notable statistical event occurred. For the first time in history the production of pig iron in the United States exceeded that of Great Britain, the figures being 9,202,703 and 7,904,214 tons respectively. For several years the U.S. had been a very respectable second, then in 1890 took the lead which it has since maintained continuously except on two occasions—in 1894 and in 1896. In 1901 a statistical event even more notable than that referred to above occurred. The production of pig iron in the United States exceeded that of Great Britain and Germany combined. The output in the United States was 15,878,354 gross tons; that of Great Britain, as recently reported by the secretary of the British Iron Trade Association, 7,761,830 gross tons; that of Germany, as reported by the statistician of the Association of German Iron and Steel Manufacturers, 7,860,893 metric tons, or 7,736,663 gross tons; a total of 15,498,493 gross tons for Great Britain and Germany, or 379,861 tons less than the production of the United States.

According to the *Railway Age* the railway mileage of the United States has passed the 200,000 mile mark. The figures at the close of 1901 were approximately 199,525 miles, and the construction for the first six months of 1902 brings the total up to 201,839 miles, the track laid during the first half of this year on 155 lines aggregating 2,314 miles. This is nearly 500 miles in excess of the new mileage for the first six months of 1901, when 1,817 miles were built. The total for the twelve months last year was 5,222 miles, and if the same ratio is maintained this year it will readily be seen that the construction for the year 1902 will easily exceed 6,000 miles. Track-laying thus far this year has been distributed throughout forty-one states and

territories, the following states reporting no new mileage, although lines are under construction in all of these, with the exception of two or three New England states: New Hampshire, Massachusetts, Rhode Island, New Jersey, Delaware, Wyoming, Nevada and Idaho.

Few of the people who go up and down the streets of the great city of New York realize, says *Bradstreets*, the progress that has been made with the rapid-transit subway. As a matter of fact, the great work is now half done. Already the city has paid one-half of the contract price to the contractor, and, as the payments are based on quantities of work actually done and measured, the advance the work has made may be easily understood. So far, it appears, about fourth-fifths of the earth required to be removed has been displaced, and about half the rock excavation has been completed. The work is required to be completed by September, 1904, but the indications are that it will be finished before that time. So far the undertaking has been in progress nominally since February, but actually since June of the year 1900, so that two years have actually rolled over since the work began. There is no doubt whatever that the work will be completed within the time set; some people think that the subway will be in operation long before the expiration of the time limit.

According to the *National Provisioner* there is killed in the United States about as much hog meat as of both beef and mutton. Official and unofficial abattoirs and farmers kill about 10,000,000 cattle and calves annually. Placing the average of the dressed carcasses of all at 600 pounds, the States kill annually 6,000,000,000 pounds of beef per year. We also slaughter about 40,000,000 sheep and lambs per year. Averaging their carcasses at 65 pounds each, it gives an annual kill of 2,600,000,000 pounds of mutton. The same slaughterers kill fully 40,000,000 head of hogs each twelve months. Averaging these carcasses at 200 pounds, dressed, the yield is 8,000,000,000 pounds of pork as the annual kill. The hog differs from the steer or the sheep in that the feet and head are also eaten. Taking the above as a fair average of the heavy and light carcasses, it will be seen that we kill 8,600,000,000 pounds of beef and mutton, and 8,000,000,000 pounds of pork per year. The hog is popular with the table.

"What is bird's-eye maple?" asks *The Scientific American*. "That is a question which just now seems to be baffling not only people who use furniture made of this particular wood, but even woodworkers themselves. In a recent number of a woodworking magazine an article was published which stated that bird's-eye maple was not a peculiar maple, but simply ordinary maple cut in a certain way. In a recent issue of the New York *Sun* that statement is refuted. It is there stated, on the authority of a woodworker, that bird's-eye maple and curly maple are both cut only from the logs of the rock maple-tree, *Acer saccharinum*, in which a beautiful lustrous grain is produced by the sinuous course of the fibres. This tree is not at all the common hard maple. It is a hard maple, but it is full of little gnarls called eyes. Men looking for bird's-eye maple logs go through the standing timber and pick out the bird's-eye maple-trees, paying for them from \$30 to \$50 a thousand feet in the woods. Ordinary hard maple logs are worth only from \$6 to \$7 a thousand feet. It would be impossible to cut a piece of veneer with eyes in it from a common hard maple log, and would be equally impossible to cut a bird's-eye maple log, no matter how you cut it, so that it would not show the eyes."

The rice-cleaning and polishing industry is being transferred from the south Atlantic states to Louisiana and Texas. In 1900 there were eighty establishments engaged in this industry, and they employed \$2,401,352 capital, while the value of their output amounted to \$8,723,725. Since 1880 the number of establishments increased 261 per cent., capital 363 per cent. and value of products 178 per cent. The eighty establish-

ments cleaned 398,602,018 pounds of rough rice. From this were obtained 243,031,200 pounds of clean rice and 155,570,818 pounds of by-products. Included in the quantity of rice milled are 39,414,459 pounds of foreign rice, received principally from China and Japan, and handled by mills on the Pacific coast, in New York city and in New Orleans. The large production of 1899 reduced the net imports for the fiscal year ending June 30, 1900, to the very low figure of 75,380,764 pounds, which was only 24 per cent. of the consumption. Besides furnishing 76 per cent. of its total consumption in 1899, the U.S. exported 12,947,009 pounds of clean rice, or 5 per cent. of the total production.

Massachusetts has an executive secretary who has been in office twenty-five years. Edwin F. Hamlin has served in that capacity under eleven Governors. There is no other State in the Union where a similar record has been made.

Dr. Charles Kendall Adams, former president of the University of Wisconsin, is very ill at his new residence in Redlands, Cal., and there is said to be little hope for his recovery. He is afflicted with kidney trouble, from which specialists told him before he left Madison that he could never recover.

The tricentennial of the discovery of the Hudson river by the entrance of Hendrick Hudson into New York harbour falls on the 11th of September, 1909, and arrangements are being made to celebrate the event, although it is yet seven years off. A board of governors has already been formed to manage the affair.

Francis MacMillan, the sixteen-year-old violinist from Marietta, Ohio, who won the first prize at the annual contest for the Brussels Royal Conservatory of Music, also secured the Van Hall prize of 528 francs. The jury added that MacMillan showed the greatest distinction. The critics frankly characterize the boy as an exceptional player.

San Francisco has the reputation of being the most cosmopolitan city in the world, but it will surprise most people to learn that the census reports of 1900 show that New York, Boston and Chicago have, each in the order named, a larger proportion of foreign-born inhabitants. New York's proportion is 37 per cent, Boston's 35.1 per cent, Chicago 34.6 per cent, and San Francisco 31.2 per cent.

At Secretary Moody's suggestion, the American Cabinet has adopted names for the six new ships of war authorized by the naval appropriation bill. The four large ships, two battle-ships and two armoured cruisers, will be named *Louisiana*, *Connecticut*, *Tennessee* and *Washington*, but it is not settled which state shall be chosen for the battle-ships, and *vice versa*. The two gunboats provided for in the act will be named the *Puducuh* and the *Dubuque*.

The Rev. Max Halpern, cantor of the Hebrew Congregation of Beth Israel, of Boston, has just unearthed a number of sacred tunes and airs of ancient Jewish composition, known as "The Lost Chords of Solomon." They are contained in some very aged manuscripts and have remained hidden because of the profound learning necessary to recognize and translate them. These newly discovered hymns, which, says an American contemporary, are unquestionably of Solomon's time, exceed in excellence any more recent compositions and furnish evidence of the high attainments of the Jews of old. The key to the songs consists of the arrangement of accents above the letters of the text, and its discovery is a highly important one.

There is probably no American railroad which can boast of so many stock-holders of royal blood as can the Great Northern Railway. In the offices of this road are the signatures of the Duke of Connaught, the Prince of Wales, the Princess Beatrice, the Duke of Fife, the Marquis of Lorne, and of most of the other dukes and duchesses, princes and princesses, marquises and marchion-

esses in whose veins runs the traditional blue blood. The only one who holds no stock in this road is the head of the family—King Edward VII. Another distinguished stockholder is "Bobs," Field Marshal Lord Roberts. Most of these people were induced to invest in Great Northern stock through the efforts of Lord Strathcona and Mount Royal.—*New York Times*.

For the comfort of Uncle Sam's sailors when they are in New York a fine hotel is building and is nearly finished. It is another expression of the magnificent philanthropy of Miss Helen Gould, and it is on Sands street, in Brooklyn, near the Brooklyn Navy Yard. The building belongs technically to the naval branch of the Young Men's Christian Association, and Miss Gould made her gift through the Women's Auxiliary of the association. She erected the hotel as a memorial to her father and mother. The structure alone has cost \$415,000, which was provided by Miss Gould, and its furnishings will cost about \$40,000 more. The work has been done under the joint auspices of the international committee of the Young Men's Christian Association and the Brooklyn association.

An underground theatre is proposed by some New York capitalists and is thought to be a great novelty, and maybe it is for Gotham. But Boston has had a "touch" of the underground theatre in Keith's, for an interesting part of that beautiful play-house is "down below." I cannot say, however, that a real subterranean auditorium wouldn't make the nervous more so, and if all this scraping the skies and digging into the earth's bowels is not unnecessarily venturesome. When Father Knickerbocker started the village that is now second to none he made a dreadful mistake to locate on a narrow island. New York must go up or down before long, and this scheme of subterranean theatres may involve hotels and churches in the near future. Once begin to burrow and where will the ambitious magnates stop?—*Boston Herald*.

According to the Massachusetts *Ploughman* the high price of cattle is leading many New England farmers to raise their calves and to use more steers and oxen on the farm; and, in fact, to be in line to have more cattle to sell year by year. "This is a healthy sign for New England agriculture, as nothing seems to be such clear gain as turning off a pair or two of fat cattle every year. Cattle raising has been too much neglected in the New England states during the past twenty years, and it is a pleasure to note that on many farms cattle husbandry is again coming to the front. No better beef in the world is raised than that which is pastured on New England hillsides, even if it is topped off with western corn, though we believe that cattle husbandry will lead to larger areas of corn fodder and corn to be harvested in the grain. Nothing seems to improve the farm faster than increased attention to the producing of beef and raising the necessary fodder crops and grain crops."

The total iron-ore production of the United States in 1901 is given by the Geological Survey at 28,887,479 tons, a gain of 5 per cent. over 1900 and a gain of 49 per cent. over 1898. The total value of this ore at the mines was \$49,256,245, a mean value of \$1.71 per ton, and a decrease of 29 per cent. from 1900 price. Twenty-five states and one territory contributed to the above total, but Minnesota produced 11,109,537 tons, or 38 per cent. of the whole. Michigan, which held first place for twenty years, fell to second place in 1901, having produced 9,654,067 tons, or 3 per cent. less than in 1900. Alabama occupied third place, with a production of 10 per cent. of the total. The greater part of the iron ore, of course, was produced in the Lake Superior region, the proportion of the whole output being 74 per cent., and of this the Mesaba range produced 9,303,541 tons, or nearly one-third of the whole. Of the Lake Superior output 18,090,618 tons passed through the "Soo" canal, and the ports of Ashtabula, Cleveland and Conneaut received over 3,000,000 tons each. The total stock of ore in the country on hand

December 31, 1901, was 4,239,823 tons, an increase of 14 per cent. over the year before. The imports of iron ore in 1901 were 966,250 tons, of which 552,248 tons came from Cuba, while there were 64,703 tons exported, nearly all of which went to Canada.

On July 10th it was reported from New York that Mr. John W. Gates had cornered the July corn market. In Chicago the price had risen twenty-eight cents and corn is now selling at ninety. It is estimated that Mr. Gates controls the visible supply of ten million bushels.

A terrible outrage has just been perpetrated by a body of miners out on strike in America. The mine was being worked by non-unionists. The strikers threw several charges of dynamite down the shaft, the explosion of which killed five men and maimed others. They then opened fire upon the survivors as they emerged from the shaft, killing and wounding several.

Cholera is raging with alarming virulence throughout the Philippine Islands, and in Manila and several of the towns in Luzon many Americans have succumbed to the disease. In Manila on the 5th inst., there were 42 cases and 28 deaths; on the 6th, 50 cases and 36 deaths. At Dagupan on the 7th inst., 44 cases and 35 deaths. At Dagupan on the 7th inst., there were 102 cases and 64 deaths.

A new 1,000-barrel per day sugar refinery will be completed shortly. It is located on the Hudson river, a short distance south of Yonkers. The feature of the new refinery is that it will be operated under a patented process, which eliminates bone dust as a purifier and very materially reduces the cost of building refineries. The new process is to mix the sugar or sugar solution with a defecating or cleansing composition produced by the action of sulphuric acid upon bodies such as resins, resin oil, essential oils, fats, fatty oils and fatty acids in such proportions that there are no injurious effects upon the sugar from the sulphuric acid. Sulphonated bodies such as sulphonic acid or sulphonic acid bodies are produced which have greater affinity or absorbent properties for the earthy or metallic salts and for the invert sugar and caramel ordinarily found associated with sugar or sugar-bearing bodies than has the sugar itself. Subsequently the sugar is easily separated from the defecating or cleansing composition containing the absorbed impurities.

A new scientific institution, known as the Sharon Biological Observatory, has been founded at Sharon, Mass., by Dr. George W. Field, instructor in economic biology at the Massachusetts Institute of Technology, and a number of Boston men, for the study of biology on the broadest scale. An extensive tract has been acquired, partly virgin forest and partly covered with a young growth of trees; dry uplands; rocky hillsides, exposed and protected; fields, pastures and moist valleys; orchards, old and young; springs, brooks, meadows, swamps and ponds, and some arable land under cultivation. The lands will be used as a preserve for native trees, wild flowers and plants, wild animals, such as insectivorous and game birds, rabbits, squirrels, fishes and frogs, for experimental and field investigation in natural history, biology, etc., on the methods employed by Darwin. Associated with it will be a summer school for the benefit of teachers and others. The teaching staff of the observatory are all members of the faculty of the Massachusetts Institute of Technology, and it is likewise provided with an advisory board of distinguished New England naturalists.

It is understood that plans that were first taken into consideration about a year ago have been developed in the last few months to the point where some of the great packing establishments in Chicago have begun experiments on what may prove a revolution of the cattle industry of the country. The project involves the settlement of several hundred thousand acres of what is at present nearly valueless land in northern and northwestern Florida and southern Alabama, the cultivation on a large scale of the cassava root

and its use in feeding cattle and hogs. If the plan develops, as it is now in the minds of the leading packers, the southern states will become a great cattle-raising center. It is stated that arrangements are now being made for the accommodation of a considerable number of cattle to be shipped from the stock yards in Chicago to northern Florida to be fed on cassava root. The results of the fattening process will be compared with similar work in the west, regarding which the conditions and the cost are already definitely known. The result obtained will determine the future of the cassava experiment.

CORRESPONDENCE.

CORONATION FETE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I read, in your issue of the 26th instant, an announcement that the Committee in charge of the Yokohama celebration have decreed that it shall be held on the 9th August, but that "only British subjects will participate." From that I gather that no guests—either official or private—of other nationality than British, are to be invited, or admitted, to Christ Church, or the Navy Yard, on this auspicious occasion. Can this be true? After sending out invitations to our fellow-residents for the 26th June, are we coolly and insolently to snub our guests, by telling them that they are not wanted on the 9th August? John Bull is not such a curmudgeon as that, and against any such invidious exclusion I most emphatically protest. To take one branch of the case: what will our friendly and hospitable Japanese allies (whose invitations to Garden-parties, Birthday-ball and other functions are so freely extended and so readily accepted) think of us if on this unique occasion, we deliberately flout them?

I feel sure that the generous motives and intentions of the subscribers, are thoroughly misrepresented by such miserly and mean action of the Committee. As for myself, I decline to go near the fête, if it is to be a hole-and-corner affair of the kind indicated. I will ask some of my friends to dine with me, and spend the evening at home; rather than pose as a stingy Briton who takes drinks at his neighbours' expense, but who refuses to reciprocate in his turn, when he has such a chance.

Yours faithfully,
JOHN GRIFFIN.
Yokohama, 30th July, 1902.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the letter from Mr. John Griffin in this morning's issue, with reference to the Coronation Festival, it may assist your readers, British and others, to assess the same at its true value if I mention that Mr. John Griffin is not a subscriber to the Coronation Festival Funds.

Yours faithfully,
E. FLINT KILBY.
Hon. Treasurer, Coronation Festival.
Yokohama, July 31st, 1902.

CECIL.

Ye little elves, who haunt sweet dells,
Where flowers with the dew commune,
I pray you hush the child, Cecil,
With windlike song.

O little elves, so white she lieth,
Each eyelid gentler than the flow'r
Of the bramble, and her fleecy hair
Like smoke of gold.

O little elves, her hands and feet
The angels muse upon, and God
Hath shut a glimpse of Paradise
In each blue eye.

O little elves, her tiny body
Like a white flake of snow it is,
Drooping upon the pale green hood
Of the chill snowdrop.

O little elves, with elder flower,
And pimpernel, and the white hawthorn,
Sprinkle the journey of her dreams:
And, little elves,

Call to her magically sweet
Lest of her very tenderness
She do forsake this rough brown earth
And return to us no more.

WALTER RAMAL.

THE CHINESE TROPHY.

A TRUE NAVAL YARN.

How that gun was originally captured, and to whom it rightly belonged after its capture, deponent knoweth not; nor would he care to have to adjudicate in the matter. Let it suffice that this true story of the gun's subsequent career is going the rounds of naval circles in the Far East. To-day the subject is a sore one for the officers and men of a certain cruiser lately home from Chinese waters, and the matter of it is as follows.

A beautiful brass cannon was commandeered by the Naval Brigade during the recent fighting about Tientsin and successfully convoyed down to the place of embarkation. Then the trouble began. Which ship was to have the honour of mounting it as an ornament on her quarter-deck? Two cruisers, sister ships too, claimed the trophy as peculiarly their own, and, after an acrimonious dispute, one of them succeeded, either by force, fraud, or superior diplomacy, in carrying it off in triumph. The other ship lay low; not that the claim was abandoned by any means, for at frequent intervals representatives from the ship that deemed herself to have been robbed boarded the robber in a friendly way to inspect the fine brass piece that shone so brilliantly on her quarter-deck. "Ah!" they would say, "keeping our gun nice and bright, I see. Hope you fellows will turn it over to us in really good condition when you leave the station next month." "Yes," the robbers would reply, "our gun certainly does begin to look nice. How it will be admired this summer at Spithead. Come down and drink to our speedy passage." Then there came a night—a nasty, cold, drizzly rain fell and a damp mist hung about the harbour.

On board the robber all was peace. The officer of the watch had just been his rounds, and had retired to the charthouse that he might consume a cup of comforting cocoa with which to fortify himself against the remaining hours of his watch. The petty officers on duty had taken, against the weather, shelter behind the screen bulkhead. The sentry on the forebridge marched sleepily up and down on his interminable sentry-go, and thought of comforts to come when paying-off day arrived. In fact, the whole ship dozed as ships will on a wet calm night in a friendly harbour. Presently a clatter of voices arose, and a boat full of gesticulating humans grew out of the mist and made for the bows of the ship. "Boat ahoy!" roared the sentry, galvanized into life at a proceeding so completely at variance with his instructions. "Boat ahoy! Sheer off at once." No notice did the boat take, not the least, but calmly laying hold of a bolt just under the bed of the starboard anchor lay there, its occupants quarrelling among themselves. Between the distracted shouts of the sentry and the internecine strife below, a row was made that speedily brought first the quartermaster, then the corporal and signalman, and finally the officer of the watch himself forward to see what was the matter. Then they all talked and hailed and threatened without avail. The boat remained, and its occupants gibbered. At last a hose was rigged, and after some delay brought to bear—then only did the chattering cease, and the boat with wonderful alacrity sheered off and slipped into the vagueness of the night.

So after ten minutes' excitement, the watch-keepers returned to their stations, and the ship sank back into repose. But, alas! the bright brass howitzer was gone. That ten minutes excitement on the fo'c'sle had been fatal to the reputation of the ship. For as the row swelled under the bows and curiosity took all the ship's guardians forward to investigate, a small sampan crept up astern, and made fast to the Jacob's ladder under the counter. Up the side then swiftly climbed four men, who, with bare feet and in dead silence, made for the treasured trophy. It was not heavy—only a few hundredweight altogether and in less than a minute it was dismounted from its carriage, and lowered over the side into the sampan. The mounting followed in pieces, and in less than five minutes the robbers were on their way back whence they had come.

Over the scene next day let us draw a veil. Merely hinting at the dismay and chagrin of the robbers, now the robbed, and the triumphant surprise of the erstwhile robbed when next day it was found that a Spirit of the Night had wafted the beautiful brass gun from one quarter-deck to another, where, they say, is still remains, the treasured trophy of a war, and monument so long as the commission lasts to the enterprise of certain daring and unscrupulous youths.—*The Globe*.

TYPHOON IN HONGKONG.

The typhoon which passed to the eastward of Hongkong on July 18th caused considerable loss of life and damage to property in the colony. The first typhoon gun was fired at 5.30 a.m. and early in the forenoon steamers and other and smaller craft took refuge in Typhoon, Causeway and Kowloon Bays. Shortly before 3 p.m. it became evident that the centre was passing to seaward of the colony, and soon after the Kowloon ferry service was stopped with the result that more than half the European business population were storm-stayed in Hongkong. During the night the wind blew with full typhoon force and rain fell heavily. The *China Mail* of July 21st said:—The estimated loss of life by Friday's typhoon is about 20. Indeed, almost this number has already been accounted for, and, if the fatalities that must have occurred inland and on the waters of the Colony and are not reported to the police are also counted, the number mentioned may be a little less than the actual death-roll.

"CANALS" ON THE MOON.

Professor W. H. Pickering, of the Harvard College Observatory, U.S.A., has found astronomers and that still larger section of the public which nowadays takes an interest in everything celestial a new topic to talk about. "Canals" on the planet Mars we have heard a good deal of, and on their undoubted existence—whatever they may imply—as proved at the telescope by numerous independent observers, many fanciful ideas of the condition of our neighbouring world have been built. Mr. Pickering detects markings very much of the same nature on the moon, respecting which everything that has been noted hitherto has only strengthened the conviction that it is a dead world. Applying to these the same deductions which have been drawn from a study of the observations of Mars, he reaches some rather startling conclusions. He makes some large demands on our credulity, but coming from so painstaking and conscientious an astronomer, his theories, apart from the charm of novelty they possess, are sure of consideration and discussion.

The first matter to cause surprise is that there should be anything new to be found concerning the moon. Thanks to its near proximity to the earth, it has been mapped with a minuteness of detail which it is impossible to bestow upon any other orb in the skies. A century of the closest observation has not shown that one of its volcanic vents is active, but exactly the reverse. As it was when Galileo turned the first telescope upon its round face, and discovered to his amazement the mountains of the moon, so it is to-day. Every crater, every isolated peak, every crack in its rugged surface, every desolate plain, so far as we are able to tell, has remained unchanged. It has seemed the personification of death and solitude. But knowledge concerning the conditions at the moon's surface has not remained still. So far from its long day being characterised by a fearful scorching from the sun, while its night is passed in the grip of an icy coldness more intense than anything which can be experienced beneath our earth's atmosphere, it is now pretty well assured that the temperature at the moon's surface at no time is higher than that of freezing water. It has always been denied an atmosphere, because air of anything like the density that we know it could not possibly exist on the moon. Of late years, however, since finer methods of research have been employed, it has become a generally accepted belief that air in an extremely rarefied condition may yet linger within the deep recesses of the huge crater rings.

In the clear skies of Jamaica last year, Professor Pickering enjoyed the opportunity of examining very closely the spaces enclosed within the crater walls. Particularly he paid attention to a large crater known as Eratosthenes, favourably situated near the centre of the moon's disc, and a little north of its equator. Spots or markings within this crater had been detected by other observers. Professor Pickering's drawings of them are given with an explanatory article from his pen in the June number of the "Century Magazine," and their similarity with the so-called "canals" on Mars is strikingly apparent. There are the same darkened lines, both curved and straight, radiating from various centres in much the same manner—alike, but differing in this, that the lines within the lunar crater are shorter and thicker proportionally than the Martian "canals." An explanation that at once suggests itself is that they are merely shadows caused by the formation of the ground within the volcanic crater. This will not do, however, because from full moon until lunar mid-day at the crater, or seven days after sunrise, it is geometrically impossible for any shadows to be visible, and

for a day or two before and after that, the shadows would be too small to be recognisable. Yet the markings were plainly seen at all these epochs, so we are bound to accept the conclusion that they are due to some surface discolouration, whose intensity and shape varies with the interval during which it has been exposed to the sun.

Satisfied by his observations that our moon possesses features which are like, though on a much smaller scale, the mysterious "canals" on Mars, Professor Pickering applies to them the same reasoning that has been applied to the Martian phenomena. On good and sufficient grounds, the early idea that the "canals" on Mars are great excavations to carry water for irrigation, dug by a race of gifted human beings, has long since been abandoned, if ever it was entertained seriously. It is considered much more likely that neither the "seas" nor "canals" that we see on the planet are the actual water, but that the former mark the larger areas where vegetation flourishes, and the latter the banks on either side of streams on which plant-life grows, a vast part of the planet being arid desert. But in endeavouring to explain on the same lines the "canals" on the moon, we are at once driven on to a paradox, for one thing certain is that the moon has no free water—air it may have in a minute quantity, but water can only exist, if at all, in a frozen or gaseous state.

Yet inquiry is not necessarily stopped by this difficulty. Carbonic acid gas is to plants what oxygen is to animals. It exists in very small proportions in our atmosphere in which the supply is chiefly maintained by volcanic craters and springs. In the rare atmosphere in the recesses of the lunar craters, in which places the gas exuding through vents and cracks would collect, its proportion may be much larger. Botanists are aware that certain forms of desert vegetation can survive for several years without water, though it is problematical if they would continue to exist were the supply absolutely cut off. On the Antarctic continent, however, a lichen grows where the temperature rarely, if ever, reaches the melting point of ice. This probably represents pretty closely the condition of affairs upon the moon, where it is possible that water vapour, or hoar-frost, deposited upon the vegetation, would be sufficient to supply all its needs.

A way has been shown in which the numerous observers who devote their chief attention to close study of the moon may assist in attacking an old problem. It is curious, to say the least, that the similarity in the "canals" which Professor Pickering finds on the moon and those of Mars has not been previously noticed and discussed, and inquirers into lunar things may be expected to say that the American astronomer is a little too positive in his assertions and similarities. Still, no line of investigation that offers any promise of results can afford to be neglected now-a-days, and it will be interesting to find if the Professor's deductions receive any support from independent observers. They do not disprove that intelligent life may exist, either on Mars or anywhere else in the universe. That consolation, at least, is left to us, though they weaken the argument for that highly gifted race of Martians. Most interesting of all, if the "canals" as evidence of vegetable growth both on Mars and our moon are accepted, is the conclusion to which we are forced, that the moon is not the dead, cheerless world that we have been taught to believe, but in its desolation is yet, in its gloomy recesses, the support of life in one of its lower forms.—*The Globe*.

AGUINALDO LIBERATED.

A Manila telegram of July 6th said:—As a result of the proclamation of amnesty of July 4th the guard of American soldiers has been withdrawn from the house in which Aguinaldo lived in Manila, and Lieutenant Johnson, Aguinaldo's custodian, brought the Filipino to-day to see General Chaffee. It was the first meeting between the American General and the leader of the Filipino revolution. Lieutenant William E. W. McKinlay of the Ninth Cavalry acted as interpreter.

Aguinaldo was told that he was free to go anywhere he pleased, and General Chaffee asked him if he had any complaint to make of American discourtesy or harshness. Aguinaldo replied that he had no such complaint to make. He told General Chaffee that he was going to visit friends at his home in Cavite Viejo, in Cavite province, and inquired what protection the American authorities would afford him. He seemed to be afraid to venture out. General Chaffee replied that Aguinaldo would get the same protection as any other citizen.

The former Filipino leader then asked General Chaffee to prevent the courts from requiring him to testify in civil suits. General Chaffee replied that he had no authority to grant this request, and advised Aguinaldo to make a social call upon Acting Civil Governor Wright. This Aguinaldo said he would

do, but that he would go at night, as he was timid about appearing on the streets in daylight.

The release of the former Filipino leader has renewed speculation as to possible vengeance upon him by friends of General Luna, who was a Filipino leader whom Aguinaldo caused to be killed in 1899.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

COURTS MARTIAL IN SOUTH AFRICA.

London, July 24.

A Royal Commission proceeds to South Africa on August 9th, composed of Lord Alverstone, G. C. M. G. (Lord Chief Justice of England); the Hon. Sir John C. Bigham (a Justice of the Queen's Bench Division); and Major-General Sir John Ardagh, to enquire into the sentences imposed by the military courts under martial law, and to report whether it will be expedient that those sentences should be remitted or reduced.

ANTI-CLERICAL MEASURES IN FRANCE.

There is growing agitation in France owing to anti-clerical measures. Riotous demonstrations have taken place in Paris. Francois Coppée and Deputy Legrolle have been temporarily arrested.

THE COLONIAL CONFERENCE.

July 25.

The Colonial Conference concludes early in August, though there will be subsequent informal conferences of the Premiers and the Admiralty and War Office officials on details of imperial defence.

FRENCH POLITICS.

A sharp fall has taken place in French Funds on the Paris Bourse, in consequence of apprehensions of disturbances in connection with the anti-clerical measures.

AFFAIRS IN CHINA.

London, July 25.

The Peking correspondent of *The Times* says that China has agreed to abolish the *Likin* dues throughout the Empire in return for an increase in the import and export duties.

Lord Cranborne, British Under Secretary of State for Foreign Affairs, says that he shall certainly insist on equality of treatment for British, French and German postal packages to China.

THE AGITATION IN FRANCE.

The (clerical) agitation continues throughout France.

MARCUS ISLAND.

It is considered improbable at Washington that the United States will interfere in the matter of Marcus Island if Japanese are found working the guano deposits there as reported.

KING EDWARD.

London, July 26.

The King circumnavigated the Isle of Wight to-day and returned to Cowes.

CHOLERA IN EGYPT.

There is a serious cholera epidemic in Cairo. The British regiments are going into camps in the desert. A devastating epidemic in Egypt is predicted.

THE NEXT BUDGET.

London, July 26.

Sir Michael Hicks-Beach speaking at the Mansion House, said that the next Budget should bring a very considerable remission of taxation. The first tax to be considered would unquestionably be the Income Tax.

CHOLERA AT CAIRO.

There were 118 cholera cases at Cairo on Thursday.

THE CORONATION.

July 27.

The King has held a Privy Council on the Royal yacht and signed a proclamation fixing the Coronation for August 9th, and making the day a bank holiday.

THE KING'S PRIZE AT BISLEY.

Lieutenant Johnson, of the London Rifle Brigade, is the winner of the King's Prize at Bisley (£250 and gold medal).

CRICKET.

Australia has won the fourth test match by three runs.

ITALY AND SWITZERLAND.

London, July 28

The relations between Italy and Switzerland are about to be resumed, through the mediation of Germany.

THE DISTURBANCES IN PARIS.

The demonstrations yesterday in Paris were mostly confined to shouting. Some stones were thrown and blows were exchanged.

THE KING'S CONDITION.

London, July 28.

The King is not yet upon his feet, nor is the wound healed. The prospects of his going through the Coronation on the 9th August are much more assured, but only as an invalid.

London, July 29.

The King is able to leave his couch and sit in a wheeled chair. He propels himself.

UNQUIET RUSSIA.

Prince Merstcherski, who was reported in Reuter's message of the 14th as having been sent to investigate the disturbances and grievances in Kharkhoff, Kamerinoslav and Poltava, reports that secret agents disguised as friars and pilgrims are inciting the peasantry to revolt by representing that a new partition of the land would result.

COUNT MATSUKATA AND PRINCE KOMATSU.

Count Matsukata has arrived at St. Petersburg; Prince Komatsu arrives there to-morrow.

THE FRENCH DISTURBANCES.

London, July 29.

The agitation in France is subsiding.

MR. CHAMBERLAIN ON SOUTH AFRICA.

The Rt. Hon. Joseph Chamberlain, Secretary of State for the Colonies, speaking in the House of Commons on the occasion of the debate on the Colonial vote, said, in the course of a long speech, that he believed the Conference of Colonial Premiers would mark an important step towards the entire union of the Empire. The British Government intended to observe both the spirit and the letter of the peace terms and they desired the Boers to preserve their old traditions and unite with us in securing South Africa. Full self-government for the new colonies would not be delayed a moment longer than necessary.

CHINESE CUSTOMS DUTIES.

London, July 30.

At a conference held at the Foreign Office, Lord Lansdowne and Mr. Gerald Balfour were the leading official representatives of the Foreign Office and the Board of Trade respectively. The representatives discussed the proposed revisions in the Chinese Customs duties and Lord Lansdowne sub-

mitted communications received from the British Representative at Shanghai, Sir James McKay.

(RECEIVED AT THE LEGATION OF FRANCE.)

SERIOUS EXPLOSION IN FRANCE.

Saigon, July 25.

During some gunpowder experiments at Sacory, near Versailles, an explosion occurred, killing a sub-lieutenant, an adjutant, and three non-commissioned officers, and wounding five others.

AFFAIRS IN FRANCE.

Saigon, July 26.

A decree has ordered the closing of the offices of 26 congregational establishments of the Seine which have not conformed with the law.

FRENCH INDO-CHINA.

Saigon, July 29.

A decree authorizing a loan of 70,000,000 francs for Indo-China has been issued.

FRENCH DISTURBANCES.

There been several demonstrations in the Place de la Concorde, Paris, organized on behalf of the Catholic women, and counter demonstrations by the Socialists. The police maintain calm.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

PORT ARTHUR INFECTED.

The Japanese Consul at Chefoo telegraphs that the Russian Consul at that port announces that the Russian Government has declared Port Arthur a cholera-infected place. The authorities at Chefoo have made a similar declaration.

KOREAN NEWS.

The Japanese Consul at Fusan telegraphs under date of the 30th instant that all vessels arriving at Fusan from Japan are to be medically inspected.

The following forecast of the Korean crops is officially published:—

Pyongyang—Rice, a fine crop; other cereals good.

Masan district—Barley, average; autumn beans, full crop; rice, full crop.

Fusan—Rice, full crop; summer beans, more or less indifferent.

Söul—Rice and barley, full crops.

Wönsan—All crops full.

Songching—Millet and sorghum, half crop; beans and barley, average; rice, 80 per cent.

Chinnampo—Rice, full crop.

Mokpo—Rice and barley, full crop.

(RECEIVED IN TOKYO.)

CHINESE REBELS.

The rebels of Tunghwa, in the province of Moukden, are increasing in strength. Since the force sent against them lost its ammunition no effort has been made to quell them. The reason of this is that, Manchuria not having been restored to the Chinese Government, the latter has no power to take active measures, while on the other hand as the Russians are on the eve of evacuating the place they do not feel bound to take any military steps.

THE RESTORATION OF MANCHURIA.

With reference to the statement that Russia would not restore Newchwang until Tientsin was given up, it appears that since the restoration of Tientsin has now been decided upon Russia will give up Newchwang about October 1st, when she completes the first part of her evacuation programme.

Accident to an American Mail Liner.**"CITY OF PEKING" BREAKS DOWN IN THE INLAND SEA.**

(FROM OUR OWN CORRESPONDENT.)

Kobe, July 28, 10.05 a.m.

The P.M. steamer *City of Peking* has broken down in the Inland Sea. She has anchored near Imaharu (Shikoku). Her thrust shaft for one length, and the main shaft thrust block are broken.

There is little information at the disposal of the local agency of the Pacific Mail. The steamer is anchored about a hundred and twenty-five miles from Kobe and there she must remain till assistance reaches her. How long she may be delayed by this accident it is at present impossible to say.

The *Peking* was on her last trip to the Far East, being about to be relieved by the new steamer *Korea*.

Kobe, July 29, 9.20 p.m.

The *Glenroy* is leaving at midnight to tow the *City of Peking* to port.

Kobe, July 31, 8.31 a.m.

The steamer *Glenroy* and the steamer *City of Peking* have just arrived.

There is a little additional information that may be given in connection with the disabled Pacific Mail liner, said the *Kobe Herald* of July 29th. The Company have decided, in the first place, not to divert the *China*, which will accordingly leave here at 10 o'clock to-night for Hongkong with the mails. Efforts are being made to secure the services of the Glen Line steamer *Glenroy* and if they are successful she will leave here for the neighbourhood of Imabaru in the Inland Sea to night, Mr. Tilden, the Company's agent, proceeding with her. Much depends on the Agent's ability to obtain a steel hawser from the tug-boat *Hamburg*, which vessel appears to be the only one here with suitable gear for the towage of so large a vessel as the *City of Peking*. It was not known at a late hour this afternoon whether this hawser could be obtained or not. In this connection we are sorry to have to record an instance of strange illiberality on the part of the local Marine Office (Kaimusho), which, on being applied to for permission to despatch the *Hamburg* to the assistance of the disabled mail steamer, refused on the ground that the *Hamburg's* permit provided for her use as a pleasure boat merely. But for this obstructiveness—for such we must be permitted to term the Marine Office's action—Mr. Tilden would have been on the scene by this time as every preparation was made for a departure last night. It is passing strange that a steamer fitted up at much expense in order to be able to render prompt assistance to vessels should be prevented from leaving the harbour owing to the obstructiveness of officials.

(RECEIVED BY THE DEPARTMENT OF WAR.)

FORMOSA.

According to a telegram from the Governor-General of Formosa, dated the 27th instant, the casualties on the Japanese side in the engagement at Nansho, where a detachment of our troops encountered the insurgents, were one private killed, one dangerously wounded, five severely wounded, and three slightly wounded—ten in all. The insurgents were badly defeated, but as the Japanese troops have been working for several days among precipitous mountains in the malarial season, they are much tired and have several cases of sickness. Therefore a half-battalion of infantry, a battery of mountain artillery (without horses), and a company of engineers have been sent to relieve them.

(FROM THE "JIJI SHIMPO.")

THE PROTECTION OF COMMERCE.

London, July 23.

The British Government is considering the Russian proposal for adjusting the trust system and also of restricting influences upon international commerce.

NORTHERN ATLANTIC S.S. COMPANY.

Negotiations for the purchase by Mr. Pierpont Morgan of the British North Atlantic Transport Company have been suddenly postponed. The Company has declared a dividend conditionally.

JAPAN IN KOREA.

London, July 24.

The *Novoe Vremya* states that in consequence of the increasing number of Japanese immigrants into Korea, the latter will ultimately be made a protectorate of Japan, and adds that the Koreans have been taken by surprise at the energetic movements of the Japanese.

KOREA.

London, July 26.

The *Cologne Gazette*, in its issue of yesterday, reported that a treaty has been concluded between England and Japan with regard to the protection of Korea. The statement was withdrawn to-day by order of the Authorities.

THE CORONATION.

The Naval Review has been fixed to take place on August 16th. Preparations for the Coronation are in progress and all kinds of decorations have again been started. There has been a rehearsal of the procession.

ITALY AND SWITZERLAND.

The diplomatic complication between Italy and Switzerland has been amicably settled through the mediation of Germany.

BARON SHIBUSAWA.

Baron Shibusawa delivered a speech yesterday at the London Chamber of Commerce. Mr. William Keswick, M.P., occupied the chair. The Baron expressed the earnest hope that by virtue of the Anglo-Japanese alliance the trade between Great Britain and Japan will attain further development and that the knowledge, experience and capital of civilized western countries may be introduced into Japan in order to develop the latter. After this, opinions were exchanged relative to the falling off in the volume of trade between the two countries. Baron Shibusawa finally said that he would consider the question.

THE "ASAMA" AND "TAKASAGO."

London, July 28.

The *Asama* and *Takasago* have left Antwerp for England to take part in the Naval Review.

KOREA.

It is believed that the rumour recently circulated in St. Petersburg as to the conclusion of an Anglo-Japanese agreement for the protection of Korea was simply intended to divert attention from French designs in Siam.

PRINCE KOMATSU AND COUNT MATSUKATA.

Prince Komatsu has started for Mecklenburg. Count Matsukata is at St. Petersburg.

MARCUS ISLAND.

The New York *Tribune* and the *Sun* discuss unfavourably Captain Rosehill's claim to Marcus Island. There is a plain disposition on the part of the United States Government to avoid contention with Japan.

KOREA.

London, July 29.

The *Novoe Vremya*, discussing the Korean situation in a strong article, deeply regrets the diminution of Russian influence in Korea and insists on the adoption of some immediate step to oppose Japan's influence. The paper advocates the opening of Russian banks in Söul and the establishment of Russian Consulates in various Korean ports with a view to demonstrating the naval strength of Russia. In conclusion, the journal expresses regret, on behalf of Russia, over the fact that Great Britain and Japan are about to establish a naval station on the southern coast of the peninsula.

PRINCE KOMATSU.

Prince Komatsu has arrived in St. Petersburg.

BRITISH CHAMBERS OF COMMERCE.

A conference of Chambers of Commerce in England discussed Sir James Mackay's proposals and the treaties between Great Britain, Japan and China.

(FROM THE "JAPAN HERALD.")

VISCOUNT WATANABE.

London, July 24.

Viscount Watanabe, having visited the greater part of Europe, has arrived in London. Being interviewed, he said that he had no special mission, but had closely studied financial and commercial questions.

MARCUS ISLAND.

London, July 25.

It appears that America has acquiesced in Japan's claims to the possession of Marcus Island.

FIRE ON THE "SATSUMA."

The steamer *Satsuma*, bound from Yokohama to New York, has arrived at Aden with her cargo on fire; the outbreak, however, is confined to the third hold.

[The *Satsuma* is an English steamer belonging to the Barber Line, for which Messrs. Dodwell & Co., are the local agents. Her tonnage is 2,690 tons, and she is commanded by Capt. W. Chubb.]

THE FAR EAST.

London, July 28.

M. Doumer, formerly Governor of Indo-China, and now a member of the French Cabinet, is visiting Russia to submit to the Emperor and the heads of the Naval and Military Departments his views on the Franco-Russian situation in the Far East.

MARCUS ISLAND.

The *Tribune* and the *Sun* discuss unfavourably Captain Rosehill's claim to Marcus Island.

The *Standard's* New York correspondent says there is a plain disposition on the part of the United States Government to avoid contention with Japan.

COUNT MATSUKATA.

Count Matsukata has visited Count Lamsdorff, Russian Minister for Foreign Affairs.

PRINCE CHEN.

Prince Chen, the Chinese Ambassador to the Coronation, has departed via America.

RUSSIA IN KOREA.

London, July 30.

The *Novoe Vremya* declares that it is now time for Russia to act in Korea. She has studied the peninsula quite enough and possesses more information than Japan.

(FROM THE "DEUTSCHE JAPANPOST.")

THE "PRIMUS" DISASTER.

Berlin, July 25.

The excursion boat *Primus* has been raised. Result of the inquiries—112 people are missing, 26 bodies have been recovered, 46 people are saved.

KING OF SAXONY.

King George of Saxony is suffering from bronchial catarrh.

PRINCE KOMATSU.

Prince Komatsu has arrived at Berlin.

THE LEIPZIGER BANK CASE.

The Leipziger Bank trial is finished. The Directors are convicted, Exner to 5, and Gentzsch to 3 years of hard labour. The other defendants to pay fines. Director Exner has lodged an appeal against the sentence.

RED CROSS ASSOCIATION.

Berlin, July 26.

The next meeting of the Red Cross Association will be held at Tokyo.

THE KAISER.

Emperor Wilhelm curtailed his Norway journey on account of the bad weather.

RISE IN WEST AFRICA.

In Portuguese West Africa—it is not said, whether in Guinea or in Angola—a rising of the natives is reported. 400 foreigners were murdered.

TRIPLE ALLIANCE.

From Vienna details of the new Triple Alliance are reported which prove to be utterly false and bearing a marked tendency.

KIAUTSCHOU.

The Kiautschou Government has engaged Professor Paul Tucek as head-master of a German Higher School at Tsingtau. Mr. Tucek leaves Germany on the 10th of October.

ITALY, GERMANY AND SWITZERLAND.

Berlin, July 29.

The Italian press welcomes the end of the conflict existing for some time past between Italy and Switzerland, and expresses sincere thanks to Germany for having assisted in overcoming the difficulties by friendly intervention.

DISASTROUS STORM.

In Rhenish Prussia a heavy storm has caused much damage. At Aix-la-Chapelle signs of an earthquake have been observed.

BUSINESS DEPRESSION.

The balance sheet of the Elektrizitäts-Aktien-Gesellschaft vormals Schuckert & Co. at Nürnberg for the current year shows a loss of 15½ million marks, which is however, covered by the reserve fund.

THE EMPEROR AND THE ELBE ACCIDENT.

Berlin, July 30.

The Emperor has returned from his annual trip to Norway. In Hamburg he expressed to the Mayor his deepest regrets on account of the Elbe accident.

ECCLESIASTICAL.

The English Cardinal John Gott, former bishop of Truro, has been appointed General of the Cardinals' Congregation of the Roman Propaganda of Faith.

FRENCH ADMIRALS RETIRE.

The French Admirals Servais (? Gervais) and Beaumont have left the service.

ADMIRAL BENDEMANN.

The Emperor Francis Josef bestowed the first class of the order of the Iron Crown on the German Admiral Bendemann.

EMPLOYMENT FOR GERMAN SOLDIERS.

The Prussian Minister of War is instituting enquiries about the employment which the German soldiers returning from China have found.

(FROM THE "N.-C. DAILY NEWS.")

THE ECLIPSE STAKES.

London via Bombay, July 19.

The result of the Eclipse Stakes of 10,000 sovs., run at Sandown on the 18th instant, was as follows:
The Duke of Devonshire's br. c, Cheers, by Per-simmon—Applause II. 1
Colonel H. McCalmont's ch. c. Rising Glass, by Isinglass—Hautesse 2
Sir J. Blundell Maple's b. c. Royal Lancer, by Royal Hampton—Lightfoot 3

GORDON'S STATUE FOR KHARTOUM.

The Duke of Cambridge unveiled a statue of General Gordon, which will be removed shortly to Khartoum to be erected on the spot where Gordon fell.

THE BISLEY MEETING.

London via Bombay, July 20.

The English team won the Elcho Shield at Bisley.

THE WAIMA INCIDENT.

London via Bombay, July 22.

Lord Cranborne, in the House of Commons, said that the arbitrator in the case between Great Britain and France arising out of the incident at Waima, had awarded to Great Britain £9,000.

THE LATIN LEAGUE.

Lord Cranborne, in the House of Commons, said that he had no knowledge of any so-called Latin League between Italy, France, and Spain for regulating the political situation in the Mediterranean and in Morocco.

THE CORK REGATTA.

London via Bombay, July 24.

The Leander crew defeated the Berlin crew of oarsmen in the final heat for the Challenge Cup at Cork Regatta.

VISCOUNT WATANABE IN LONDON.

London, July 24.

Viscount Watanabe, formerly Japanese Minister of Finance, having visited the greater part of Europe has arrived in London. When interviewed he said that he had no special mission, but intended to closely study European financial and commercial questions. [This differs somewhat from the version published here.]

ADVICE FROM BOER LEADERS.

London via Bombay, July 24.

At a reception held at the Dutch Church, Cape Town, General Botha said that he wished to impress upon Africans the necessity of working hand in hand with their fellow residents, as South Africa was the only country they could call their home.

General Delarey also said that they had buried their Mausers and their flag, but not their traditions.

CHOLERA IN THE PHILIPPINES.

Manila, July 18.

The cholera situation here is becoming more critical. Reports from the provinces state that the epidemic is increasing, the death-rate being alarming. Every effort is being put forth towards stamping out the dread disease. Thousands of dollars are being expended by the health authorities. Strict quarantine against the provinces is being maintained.

SHIPPING ACCIDENT AT KIUKIANG.

Kiukiang, July 22.

The current caught the Indo-China steamer *Suiwo* as she was leaving for Shanghai this afternoon at 1.30, and she collided with H.M.S. *Pique* and H.M.S. *Mutine*. Her damage was slight, but the *Mutine's* head gear was demolished. The British gunboats *Rosario* and *Britomart* had narrow escapes.

HENLEY REGATTA.

London, July 10.

All foreign and Colonial competitors at Henley have been defeated.

In the Diamond Sculls final Mr. Kelly beat Mr. Etherington Smith.

ITALY AND ENGLAND.

London, July 23.

The *Times* Rome Correspondent telegraphs that Lord Lansdowne's recent speech has not pleased the Italian official world. King Victor Emanuel's statesmen consider that the speech indicates disapproval in Great Britain of Italian ambitions in Tripoli.

WEATHER AT HOME.

After a spell of oppressive heat the weather has again become cold and wet.

CHOLERA AT PORT ARTHUR.

Port Arthur, July 23,

Owing to the rigid sanitary measures enforced by the authorities, this port has hitherto enjoyed an immunity from the scourge now visiting Shanghai and other places in China. Unhappily one or two suspicious cases have come to light and while no official announcement has been made, it is feared and currently reported that cholera has broken out. If these reports are confirmed there will be considerable delay and inconvenience in regard to mails and steamers.

ATLANTIC SHIPPING COMBINE.

London, July 25.

Rumours are circulated to-day in the city that the tide of events is not flowing so smoothly with the Shipping Trust as those interested would have the public believe. Such rumours have received a large measure of credence. It is stated that news has leaked out from an authoritative source that a hitch has occurred in certain negotiations with outside concerns whose aloofness and independent policy must be inimical to the interests of Morgan and his friends. The British combination is mentioned in this connection. The utmost secrecy is being observed, but the matter is being followed with the keenest interest in commercial circles.

SOUTH AFRICA.

The New York *Sun*, one of the most prominent of American journals, in its issue of yesterday, voices the sentiment of the thinking section of the commercial world in recognising the potentialities of South Africa under the new order of things.

It warns Americans that they may look for a great agricultural and industrial development. The British Government may be relied on to foster the growth of the country. Every aid will be given to the British, Dutch and new settlers, and no long time will elapse before the United States will find its supremacy challenged by a most formidable rival.

SOCIAL EVENT OF THE SEASON.

Mundane matters have been forgotten for the moment. The interest of London has been focussed on St. Margaret's, Westminster, where a fashionable company assembled to witness the marriage of Alice, youngest daughter of the Right Hon. William Court Gully, K.C., Speaker of the House of Commons, with Lieut. Carleton Salkeld (of the 10th Prince of Wales' Own) Royal Hussars, of which H.M. the King is Colonel-in-Chief. The presents numbered over 600 including a superb opal and a diamond tiara necklace presented by 250 Members of Parliament.

EXPLOSION IN FOOCHOW.

Foochow, July 25.

There has been a tremendous explosion in the powder magazine outside the West Gate of the City of Foochow. There is great excitement. The number of casualties has not yet been ascertained.

WATER TUBE BOILERS.

Especial interest attaches, says *Engineering*, to a return giving the number of ships and power of the various types of water-tube boilers in alphabetical order. There are nineteen navy vessels fitted with the Babcock and Wilcox type. The greater number are American ships. Fourteen ships belong to the United States Navy and five to the Royal Navy, no other country having taken up this design. There are 144 Belleville boiler ships, nearly one-half, or 58, being British. The French fleet comes next with thirty-four vessels, then Russia twenty-seven ships, Japan ten, Austria, Italy, and Chili four each, Germany two, and Argentina one ship. The majority of these Belleville boiler ships are important vessels, 103 of them having horse-power running into five figures. The Bleckyn den boiler is allotted to eight vessels, and the White boiler to four. None are large craft. The Dürr boiler, which possesses a good deal of interest for us at the present time, has only been included in the design of eight naval ships—six German and two Austrian. Two ships just reach five figures in the indicated horse-power, and one goes up to 15,000. The Guyot-Du-Temple boiler has been allotted to four French vessels; one, the armoured cruiser *Jeanne d'Arc*, being an important ship of 28,500 indicated horse power. The Lagrafel D'Allest boiler has 22 ships to its credit; all French, excepting two Brazilians and one Bulgarian. The most important vessel is the *Guichen*, of 24,000 indicated horse-power. The Laird boiler accounts for five vessels, and the Niclausse for 34. In view of the fact that it was recently said in public that no one knew anything about the Niclausse boiler, it is interesting to note that vessels of the French, Russian, Italian, Spanish, American, German, Argentine, and, finally, of our Navy, have had the Niclausse boiler included in their design. The majority of these vessels are of high power. The Normand boiler has been given to 35 ships and eight torpedo-boats; the Normand-Sigaudy boiler to five vessels. The Reed boiler has been included in the designs of 22 vessels, all for the British Navy, the greater number being destroyers. The Schichau boiler has but one ship—a Russian protected cruiser;

the Oriolle boiler has been allotted to four French torpedo craft, and the Schultz boiler to six German ships and one Russian vessel. The Thornycroft boiler has been installed in 56 vessels, the majority being British. They are chiefly torpedo-boat destroyers and torpedo-boats, but there are two German battleships and two American battleships, the latter of 15,000 and 16,000 indicated horse-power respectively. There are also two protected cruisers. The Yarrow boiler has been included in the design of 44 vessels of different nationalities, and ranging from the size of a battleship to destroyers and gunboats, and with machinery from 14,000 indicated horse-power downwards. Eight of these are of 10,000 indicated horse-power or upwards.

THE "SHELL" TRANSPORT AND TRADING COMPANY LIMITED.

The following is the report of the "Shell" Transport and Trading Co., Ltd., for the year to 31st December last:—

The Chairman and Directors have the pleasure to present to the Shareholders herewith Profit and Loss Account and Balance Sheet for the year ended 31st December, 1901.

Including the amount brought forward from 1900 there stands at the credit of Profit and Loss £370,125 14. 7d.

After payment of Income Tax to the amount of £10,905 os. 10d. (as against £8,650 in the year 1900), Management Commission (including office rent, salary and expenses) and Directors' and Auditors' Fees to the extent of £23,579 15s. 10d., Interest to the extent of £16,138 1s. 0d., and providing £92,770 18s. for depreciation of Steamers and Installations, there remains to be carried to the Balance Sheet the sum of £226,731 18s. 11d. Deducting the interim dividend declared in June, and after payment of the dividend distributed on the 1st January of this year (in all £200,000, being at the rate of 10 per cent. per annum), there remains to be carried forward the sum of £26,731 18s. 11d.

No credit has been taken for Interest (namely, £35,534 10s. 2d.) on cash advanced to the Nederlandsch-Indische Industrie en Handelsmaatschappij.

During the year the properties held by the Nederlandsch-Indische Industrie en Handelsmaatschappij in Borneo have been further developed, but are by no means yet complete. The Accounts of that Company as received do not show a sufficiently clear distinction between Capital and Trading expenditure; and therefore the profit shewn thereby has not been taken into this Company's Accounts.

Nevertheless, the products therefrom bought and marketed by the "Shell" Company have contributed to its profits.

In view of the continued fall in the value of Illuminating Oil and of the freights current during the year, the Directors consider the volume of profit shown as satisfactory.

The Alliance of Eastern producers referred to at the last General Meeting has recently been finally concluded, and will materially strengthen the Company's position.

LEO XIII.'S PONTIFICATE.

A Rome dispatch of July 6th said:—Fetes were held at the Vatican in celebration of the twenty-fourth anniversary of the coronation of the Pope. The entire papal court and boards of members of all the Catholic societies represented in Rome assembled at 6 o'clock that evening in the great Belvidere court of the Vatican and paid homage to His Holiness. The court was beautifully adorned with tapestries and a profusion of plants and flowers.

The Pope occupied an especially constructed and richly decorated gallery. When His Holiness entered the library, he was greeted with enthusiastic acclamations and the band played the pontifical march. A chorus, composed for the occasion, was sung by a choir of several hundred pupils from all the clerical schools in Rome, who filed by the Pope carrying banners. The Vatican officials, a number of ladies and the members of the diplomatic corps witnessed the court.

The fete was brought to a close by the Pope pronouncing a pontifical blessing, after which he was again acclaimed. A great flock of pigeons sent to Rome from all the chief towns in Italy was then released. The pigeons flew off to their homes, each one bearing an announcement that the ceremonies had taken place.

The Pope, who was delighted with the fete, was in excellent health, and his physician announced that he has improved both in health and spirits in the past year.

A dinner in celebration of the anniversary was given in the Vatican at noon to-day to 150 of the poor of Rome.

White Java and Penang	6.00 to 6.80
White Refined	8.20 to 10.10

EXPORTS.

RAW SILK.

The week has been lively, and although telegrams continue to report dull markets in New York and Lyons, yet exporters appear to have the courage of their opinions and are hard at work. We revise quotations and the market closes strong at those prices.

QUOTATIONS.

Filatures—Extra, Fine	Y. 1,020 to 1,030

BOVRIL ISN'T DEAR,

in fact, value for value, it is one of the cheapest drinks and one of the most economical foods that can be obtained. A cup of hot Bovril costs less than a drink of whisky, and while giving a more genuine and lasting warmth than the latter, contains, in addition, the nutritive principles of beef worth many times its cost.

Old fashioned beef teas and meat extracts, whether known as such, or disguised under more pretentious modern names contain none of the NUTRITIVE properties of beef. Baron Liebig himself admitted this fact; there is not a doctor to day disputes it. Used as a nourishment Meat Extract is probably the most expensive article one can buy. Bovril one of the cheapest.

SAVE YOUR SKIN

How to Preserve Purify and Beautify the Skin and Complexion.

To preserve, purify, and beautify the skin, and prevent pimples, blotches, blackheads, redness, roughness, yellow, oily, mothy skin, chapping, and many other forms of skin blemishes, no other skin or complexion soap is for a moment to be compared with CUTICURA SOAP, because no other soap reaches the cause, viz., the clogged, irritated, or inflamed condition of the PORES

SAVE YOUR HAIR

How to Prevent Falling Hair Scalp Humours and Dandruff.

Cleanse the scalp and hair thoroughly with a warm shampoo of CUTICURA SOAP, rinse with warm water, dry carefully, and apply a light dressing of CUTICURA, purest of emollients, gently rubbed into the scalp. This simple, refreshing, and inexpensive treatment will clear the scalp and hair of crusts, scales, and dandruff, soothe inflamed, itching surfaces, stimulate the hair follicles, supply the roots with energy and nourishment, and make the hair grow upon a sweet, wholesome, and healthy scalp, when all else fails.

SAVE YOUR HANDS

How to Make the Hands Soft and White in a Single Night.

Bathe and soak the hands on retiring in a strong, hot lather of CUTICURA SOAP. Dry thoroughly and anoint freely with CUTICURA Ointment, the great skin cure and purest of emollients. Wear during the night old, loose kid gloves with the finger ends cut off. For red, rough, chapped hands, dry, fissured, itching, feverish palms, shapeless nails, with painful finger ends, this one night treatment is simply wonderful and a blessing to all afflicted with sore, chapped, rough, or tender hands.

Cuticura Complete External and Internal Treatment for Every Humour,

The Set Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the most stubborn, dangerous, and humiliating skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Aust. Depot: R. Towns & Co., Sydney, N. S. W. So. Africa Depot: L. S. J. & Co., Cap. Town. "All about the Skin, Scalp, and Hair," post free. POTTER DRUG AND CHEM. CO., Sole Props., Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 9TH, 1902.

BIRTH.

On the 5th inst., at 84, Bluff, Yokohama, to Mr. and Mrs. FRANK S. SHAW, a Daughter.

SUMMARY OF NEWS.

M. PAVLOV, Russian Minister to Korea, has been spending a few days in Tokyo.

It is stated in Home papers that Sir Thomas Lipton will have another try at the "America" Cup next year.

PRINCESS KAN-IN gave birth to a son on the morning of August 3rd. Both mother and child are reported to be doing well.

THE Wake-Matomi section on the Sanyo Railway has been interrupted since the evening of August 5th in consequence of heavy rainfall.

CONCERNING the fall of the bridge near the Urami Cataract, Nikko, on July 27th, in which one foreigner and a Japanese rolled into the

stream below, it is now stated that the accident was apparently due to the rottenness of the timbers that supported the bridge.

THE Crown Princess, now in Aoyama Palace, will leave Tokyo about August 15th for Hayama, where Her Highness will remain for some time.

MR. CHO GI-TO, new Chinese Consul for Yokohama, arrived at Yokohama station on the afternoon of July 31st and drove at once to the Chinese Consulate.

MAJOR VON ETZEL, who two years ago was attached to the general staff of the German chief command in East Asia, has been appointed military attaché in Tokyo.

THE Crown Prince, accompanied by his Chamberlains, left Uyeno Station on the morning of July 31st for Shiobara where His Highness will remain for over a month.

VISCOUNT WATANABE, former Minister of Finance, wires that he will leave San Francisco on August 26th for home. He is expected to arrive at Yokohama on September 15th.

OWING to the heavy rain-storm of August 4th, a report from Ikuno says traffic on the Bantan Railway has been interrupted since that morning on account of damage to the line at several places.

TRADE returns for Yokohama during the month of July show that there has been an excess of exports over imports by over yen 1,700,000. The value of exports and imports amounted to yen 8,907,683 and yen 7,110,441 respectively.

By winning the public school cricket match this year, Harrow has increased its lead, the figures now standing—Harrow 33 wins; Eton 28; drawn 16. In 1900 Harrow won by one wicket; 1901 by ten wickets; and in 1902 by eight wickets.

RAIN began to fall soon after the baseball match began on the Yokohama Cricket-ground on Saturday, but despite this it was played out, eighteen runs being scored by each side. Needless to say there was plenty of fun for the few on-lookers.

IN consequence of the heavy rainfall of August 3rd No. 8 tunnel on the Yokosuka railway collapsed on the afternoon of the 14th to the extent of about 60 feet, thereby interrupting the traffic. Business on the line was expected to be resumed during the 5th.

A FAREWELL banquet will be given in honour of the German Minister to China, now in Tokyo, by Baron Komura, Minister of Foreign Affairs, at 7.30 p.m. on August 4th at the latter's official residence in Kasumigaseki. The function will be largely attended.

THE usual river fete, better known as the *kawa-biraki*, at Ryogoku, Tokyo, which was expected to take place on the evening of August 3rd has been postponed until the 14th in consequence of the fire-work makers having failed to execute their orders in time.

MESSRS. ANSAI TOKUBEI and Takeoka Zenshichi, Board of Auditors of the Yokohama Sanshi (Silk) Bank have resigned owing to the difficulty of adjusting its finances. The Bank will therefore convene a special general meeting in a few days to elect new Auditors.

NEWS from Ozawa, Saitama Prefecture, says that early on the morning of July 29th an engagement occurred between two parties of butterflies in the rice fields there with the result that nearly

all were either killed or injured. This peculiar incident is generally regarded in the locality as a bad omen. A similar occurrence was witnessed in the 23rd year of *Meiji*, 1890, when a poor rice crop was recorded.

IN consequence of the interruption of the submarine cable between Tsushima Island and Fusan the Communications Department have issued a notice that telegrams between Korea and Japan as well as other countries will be carried by vessels for the time being.

STATISTICS compiled by the Sanitary Bureau on July 31st relative to cholera show that the number of cases and deaths from June 1st to the end of July totalled 508 and 274 respectively. Fukuoka Prefecture stands at the head of the list, with 341 cases and 193 deaths.

OWING to the death of Marquis Saigo, says the *Asahi*, Count Kabayama will shortly be raised to the rank of Field-Marshal. It is further stated that Marquis Tokudaiji, Counts Matsutaka and Inouye will receive the Order of the Grand Cordon in recognition of their meritorious services to the State.

A PORTION of the Enoshima Electric Railway, namely the Fujisawa-Katase section, will be opened to traffic on August 5th. The fare on the section is 15 *sen* for first class and 10 *sen* for ordinary passengers. Return tickets will be issued at the rate of 25 *sen* for first class and 17 *sen* for ordinary seats.

MR. R. MASUJIMA, barrister-at-law, of No. 14, Yamashitacho, Yokohama, is reported to have been invited by the Lawyers' Association of New York, U.S.A., to deliver a speech on certain subjects at the coming meeting of the Society to be held there some time next year. Mr. Masujima has accepted the invitation.

ON the morning of August 4th the corpse of a lad was washed up on the beach of Ishikawa, Yokohama. Upon examination, it was identified as the remains of Mr. Torii Kyo, a student of the Hibiya Middle School in Tokyo. The unfortunate lad, while rowing in Shinagawa Bay, on July 30th, fell overboard and was drowned.

A TOKYO journal reports that a special dispatch has been received in Tokyo from Honolulu to the effect that as the result of inquiries conducted by the Hawaiian Courts, the Island Authorities have agreed to pay compensation of \$370,000 in gold to Japanese residents in Hawaii, who had property destroyed during the pest scare there.

MONDAY, August 4th, being the birthday of the Empress Dowager of Russia a dinner was given by Prince Cyril on board the Russian cruiser *Nakhimoff* at noon in honour of the event. Among the *invites* were the Russian Minister to Japan, the Russian Consul-General for Yokohama, Mr. Rinoye, Secretary of the Kanagawa Prefectural Office, and others, foreign and Japanese.

FRIDAY, August 1st, being the birthday of the Chinese Emperor the occasion was duly celebrated by the Chinese residents of Yokohama. Chinese and Japanese flags were hoisted at most Chinese houses in the former Settlement and elsewhere in honour of the event. During the morning, the members of the Consular Body and Mr. Rinoye, Secretary of the Kanagawa Kencho, representing the Governor, visited the Chinese Consulate to offer congratulations. In the evening China Town was brilliantly illuminated.

THE CHINESE RAILWAY QUESTION.

Monday, Aug. 4.

Great Britain seems to have yielded to Russia's objections with regard to the Peking-Shanhaikwan Railway. The conditions to which Russia took exception are understood to have been two: first, that the line should be superintended by a British military officer, assisted by German and Japanese officers, and that without the consent of these three no foreign troops should ever travel by the road; secondly, that any extension of the line to the Great Wall should be effected either with Chinese or British capital, and that if such extension had to be mortgaged to a foreign Power, England should be the mortgagee. On learning these conditions Russia is said to have intimated that unless they were changed she would not restore the extra-mural line—Shanhaikwan-Newchwang—and, further, the indirect effect of the dispute was to prevent any agreement with reference to the city of Tientsin. The question is reported to have been complicated by China's action, for she sang one song to England and quite another song to Russia, promising each that it alone should be the favoured one both as to the appointment of railway superintendents and the furnishing of capital for extensions. This latter part of the story may be mere newsmonger's embroidery, but the other details appear to be accurate. The sequel is that England finally agreed to waive the claim of superintendence altogether, and to modify the other conditions in the sense that China should pledge herself to build any extension of the line with her own capital and to refrain from hypothecating such extension to any foreign Power whatsoever. Russia having signified her acquiescence in these altered conditions, it is now understood that the restoration of the extra-mural and inter-mural lines and of the city of Tientsin will all be effected on the same day, but whether that day is to be the 14th, the 15th or the 16th of August there appears to be some uncertainty. There will of course be some display of chagrin in certain quarters over this apparent yielding on England's part, but truly we do not see that she had any right to demand the monopoly of capital-furnishing for extensions of the inter-mural road. It should be enough for her purpose that China is pledged not to have recourse to any foreign Power whatsoever. The superintendence question also does not seem to be cardinal. There are at present only two ways by which the road could be used for the transport of foreign troops: one is *via* Manchuria; the other, from the Chili sea-board. The former route will be as much under the control of England as under that of any other Power after the Newchwang-Shanhaikwan line is restored to China; and as for the latter route, it does not enter the field of programmes practicable for States which England and Japan might desire to restrain. Thus the modified arrangement accomplishes everything necessary and has the further advantage of not wounding any national susceptibilities.

But what an object lesson all this is for China! If she ever entertained any doubt about the political significance of railway concessions and foreign loans, that doubt must be completely dispelled now. She has been taught in the least mistakeable manner that the Powers which importune her for railway concessions and press their money upon her acceptance, are not merely industrial and financial speculators. If hereafter

she shows herself obdurate in refusing concessions, will foreign critics still have the assurance to construe her reluctance as a proof of blind-eyed conservatism?

In partial contradiction to the above, the *Jiji* publishes a telegram dated the 2nd instant at Peking, to the effect that no preparations for the restoration of Tientsin are yet visible. The Foreign Representatives in Peking and the foreign commanding officers in Tientsin are still at issue. It would seem that the sequence of events has been this:—In the first place the commanding officers were invited to submit a programme such as, in their opinion, would justify the restoration of the city. They therefore drew up a list of 29 conditions effectually tying China's hands, and rendering it impossible for her to subject Tientsin to perils such as it suffered in 1900, but, at the same time, rendering it also virtually impossible for her to protect the place against perils from other quarters or to control its population. The Foreign Representatives amended this programme radically and re-submitted it to the commanding officers, who, on their side, restored the elided clauses with verbal alterations and sent up the document once again. This time, however, the Representatives changed the conditions according to their own views without re-consulting the commanding officers, and came to an agreement with the Chinese Government on the new basis. Therefore the commanding officers are now dissentient, and agreement appears to be problematical.

It will probably occur to most people, as it does with us, that this arrangement about Tientsin resembles an attempt to mix oil and water. The military commanders and the Representatives have diametrically different points of view. With the former the sole and paramount consideration is to frame conditions such as shall effectually paralyse China's military action in the region surrounding the city. The commanding officers have no business to think of anything else, and as a matter of course, they will not accept the responsibility of endorsing a programme which, from a strategical point of view, is plainly defective. But the Representatives have to think of the Chinese Government's capacity to administer and protect the region. One side, in short, wants to tie China's hands; the other has to see that they are not tied. How can the two be reconciled? The incident seems to us to be an accentuated illustration of the general problem that has been harrassing the Powers for several years—how to preserve China's independence while depriving her of the means to defend it.

With reference to this Tientsin question, we quote the following from *The Times'* correspondence:—

Peking, June 20.

Russia announces that she withdraws from the Tientsin foreign Government, that she will take no further part in the discussion of the terms for the restitution of Tientsin city and district to the Chinese, and that she will not be a party to imposing upon the Chinese the new conditions drawn up by the British General and the allied commanders as a preliminary to permitting a friendly Viceroy to resume the government of his own *yamên*.

By this clever move Russia once more shows her dexterity in dealing with the Chinese, obtains a material advantage, gains credit for assisting China in a difficulty, and casts odium upon the British, whom she does not fail to represent as mainly responsible for the continued retention of the chief city of the province.

Last Saturday General Wogack, the Russian representative on the Tien-tsin provisional Government and one of the commanders who drafted the conditions to which Russia, now takes credit for refusing to assent, though her Minister, at the meeting of Ministers, did assent to them, left Tientsin on his

return to Russia, and his place will not be filled. This leaves the Tientsin Government composed of the representatives of England, France, Germany, Italy, and Japan. Surely our duty is clear; we should withdraw our representative and inform China of our intention. Italy and Japan would assuredly do likewise, since their policy is avowedly guided by friendship for China. France, all of whose recent dealings with the Chinese in North China have been characterized by a firmness and justice which have greatly added to her prestige and given much satisfaction to the Chinese, will follow Russia. Then Germany, watched by all the other Powers, will be left to cope with the situation alone.

We have repeatedly promised the Viceroy to do everything possible to strengthen his authority. The way we do it is to retain possession of his chief city, exclude him from the government of the most important portion of his province, and forbid him to employ sufficient men to maintain order, yet hold him responsible for its maintenance. Further to gain the Viceroy's confidence and will, our Government instructs the British General at Tientsin to draw up, with the assistance of his foreign colleagues, conditions equivalent to a supplementary protocol, then instructs the British Minister in Peking to express disapproval but to join his colleagues in agreeing to them, and afterwards instructs him again to join his colleagues in presenting the conditions to a friendly Viceroy and compelling his acceptance of them.

Tuesday, Aug. 5.

One of the difficulties connected with arrangements for the restoration of the inter-mural railway to China is that there is reserved to the foreign Powers by the Peking Protocol the right to move troops and munitions of war by the line so as to maintain communications between the garrison in Peking and the sea coast. It was doubtless with the object of safeguarding that right that a clause was inserted in the conditions of rendition, providing that the line should have a British superintendent and two foreign assistant-superintendents, one a German and one a Japanese. China no doubt would prefer to have the line entirely in her own hands. That is quite natural, and as Russia's game at present is to placate the Chinese, St. Petersburg has objected to the foreign-superintendent clause. Russia is admirably skilled at what may be called gathering up the fragments of the diplomatic feast. She manages to step in and find some nutritious crumbs when the banquet seems to have ended completely. We recall in this context a forecast made by Sir Rutherford Alcock—then plain Consul Alcock—, writing from Shanghai in 1849. He said:—"Powers having no such great interests as England's to jeopardise are without this beneficial and needful check, and may therefore be induced to repeat at a semi-barbarian court the intrigues and counter-projects for the destruction of our influence and the injury of our trade in the East which are at work in our own times in every capital in Europe, as formerly in India and the Eastern Archipelago." If Sir Rutherford, when he penned that sentence, had already perused the confidential despatches sent by High Commissioner Lin to Peking in 1840,—which is, however, most unlikely,—the perspicacity of his statesmanship would be less remarkable. To him certainly belongs the credit of having foreseen exactly in 1849 what was destined to take place continuously at the Chinese Court from 1860 to the twentieth century.

Wednesday, Aug. 6.

The telegram sent eastward by the Special Service with regard to the Trans-Asian Railway is perplexing. According to the original programme the line was to have followed the course of the Amur which, from a place called Kaïdaloyo, makes a sharp turn northward, flowing thereafter by Blagoveshchensk and Khabarovsk—where it again turns sharply northward—into the Sea of Okhotsk at Nikolaievsk. The road

would have been deflected southward from Khabarovsk to Vladivostock, but at any rate by following the Amur it would have described a big loop. Already the line had been constructed beyond Kaidalayo as far as Stretensk when the idea of running it straight through Manchuria was conceived—pace the believers in the Cassini Construction,—and thereafter, the necessary arrangements having been made with China, it was carried direct from Kaidalayo through Manchuria to Vladivostock via Tsitsikhar and Kharbin. Apparently the Russian Authorities have decided that the prosecution of the original enterprise is necessary for the development of Siberia, and they will therefore continue the building of the road beyond Stretensk along the Amur, ultimately carrying it, doubtless, to Khabarovsk and Nikolaievsk. But the statement that 16½ millions sterling has been granted for the purpose is scarcely credible. Such a sum ought not to be required, the distance between Stretensk and Blagovechtchensk not being more than 750 kilometres.

Friday, Aug. 8.

It is our business to record the course of events so far as they fall within range of our observation, and we therefore revert to the terribly hackneyed subject of the railways in North-China. The latest story is that France has entered the lists with a cartel to the effect that unless the construction of the Tientsin-Paoting line be given to the syndicate which already holds the Lu-Han concession, she will decline to be a party to the restoration of the Peking-Shanhaikwan road, which would mean, of course, that the Shanhaikwan-Newchwang line also must not be restored; i.e. must remain in Russia's hands. How are all these conflicting claims to be adjusted? Is it even certain that their adjustment is an object to all those concerned?

TORTURE IN JAPAN.

There are some things to which experience ought to have made us accustomed, and one of them is the extraordinary tenacity of life that error shows. Certain instances of the phenomenon are, however, so singular that they can not fail to excite surprise. An example is furnished by the *Kobe Chronicle* which, at this eleventh hour of the day, says:—"M. Boissonade de Fontarabie, engaged by the Government for the purpose of drawing up the criminal code of Japan, protested against the infliction of torture and threatened to resign if it were not abolished. His protest eventually had its effect, and torture was rendered illegal by a notification dated 10th June, 1876." Considering how thoroughly this subject was threshed out a few years ago, in connection with an erroneous statement published in "Things Japanese," it is really remarkable that a newspaper editor who was in his editorial chair at the time of the discussion, should now deliberately repeat the blunder. And even though the *Kobe Chronicle* had no immediate access to sources of information, might not the idea have occurred to it that when the Japanese Government engaged the services of a French jurist to compile a new criminal code on European lines, the continuance of the torture system had already been recognised as impossible? A little intelligence brought to bear on these questions would save publicists from blunders into which their ignorance might otherwise betray them.

THE ELECTIONS.

The Committee of the *Seiyu-kai* have found it necessary to issue an injunction urging the Party's candidates to abstain from suicidal competition. It is claimed that the election prospects are excellent, and that the Party is quite sure of returning a majority of members to the Lower House, but apparently disputes among rival candidates threaten to become so acute as to create an opportunity for the Party's opponents, and the Committee point out the foolishness of such a tactical mistake. Liberty of thought and opinion is all very well, they say, but party organization demands some measure of subordination.

Gradually the number of candidates for election has been reduced. There were originally over three thousand in the field. Then they dwindled to 1,200, then to 750, and now they aggregate only 594. Divided according to parties the numbers stand thus:—

<i>Seiyu-kai</i>	316 candidates
Progressists	160
National Unionists	35
Independents	83

Only 155 old members offer themselves for re-election.

The *Asahi Shimbun* undertakes to give a positive forecast of the result of the pending elections. It considers that the *Seiyu-kai* will carry from 180 to 190 seats. There is a good deal of want of discipline in the procedure of the *Seiyu-kai*, some election districts being the scene of vehement contests among rival candidates calling themselves *Seiyu-kai* representatives. But as these things are occurring in places where the *Seiyu-kai* people have the field entirely to themselves, the effect upon their representation in the House will not be apparent. The Progressists will carry from 85 to 95 seats. If they are rejoined by the Niigata seceders and the *Sanshi* Club, they may command about 110 votes in the House. Then come the Imperialists. They will carry from 15 to 25 seats, and that is all there is to be said about them. They have never been an appreciable force in the field of politics. To the Independents our contemporary assigns 65 to 75 seats. The *Seiyu-kai*, therefore, will have a working majority, supposing that they obtain a moiety of the Independents, which they will doubtless succeed in doing.

Mr. Kato Takaaki is still spoken of as sure to be returned for Kochi. He has not offered himself as a candidate: on the contrary he has not shown the smallest disposition to enter the arena and is living quietly in Tokyo entirely outside the range of the excitement. But the Kochi people seem determined to have him. They justly consider Kochi to be the seed-plot of constitutional government in Japan, and they want a model representative, which they certainly would have if Mr. Kato agreed to accept their mandate. The expectation is that they will unanimously elect him, and that it will then be difficult for him to refuse the honour. Of course if he enters the House he will be a great power there. We presume that he would be at once chosen President.

Mr. Mochizuki Kotaro, Mr. Shiga Choko, and Mr. Yokoi Tokiwo are also spoken of as certain to be returned. Mr. Yokoi was President of the Doshi-sha.

Dr. Eastlake, of Tokyo, is reported to have delivered a speech, in Japanese, at a political meeting held on Aug. 5th in Kuragano, Gunma

Prefecture, in connection with the coming general elections. Apparently the professor spoke on behalf of Mr. Hinata Terutake, who offered himself as a candidate representing the *Seiyu-kai*. This is the first instance of a foreigner taking part in the elections in Japan.

FIRE IN FUKUOKA BARRACKS.

Monday, Aug. 4.

News from Fukuoka (Chikuzen) is to the effect that a disastrous fire occurred on the 1st instant at 4 p.m. in the barracks at that place. The conflagration broke out in a room where a detachment of men had been quartered, in readiness to start the following day for Formosa.

Later particulars of the show that it was a very terrible affair. Fifty-eight men, all chosen for service in Formosa, had been quartered temporarily in a tower of the old castle, and on the 1st instant they were enjoying their afternoon rest when an explosion suddenly occurred near the entrance of the building, followed by a fierce outbreak of flame. The cause of the explosion remains a mystery. One conjecture is that a quantity of powder, stored underground by the former feudal chief, was ignited by the electric light or by fire from a pipe; but that seems a fanciful explanation. At all events the fire enveloped the only point of exit, and when the men attempted to tear out a window, it defied their efforts. The result was that out of the 58 men no less than 47 were either killed or injured. Four died within the building either from the effects of the shock or from suffocation; nine were so badly hurt that seven of them expired almost immediately after being carried to hospital, and thirty-four received lesser injuries.

Tuesday, 5th Aug.

Eight deaths had resulted from the Shizuoka fire at the date of latest advices and other soldiers were in a critical condition. It has been suggested that the fire had its origin in a flash of lightning, but the *Asahi* gives a circumstantial account pointing to a different cause. That journal alleges that the catastrophe resulted from powder mixed with the earth under the floor of the building. It appears that in 1873 a revolt of peasants took place in Chikuzen, and the rustics having been subsequently joined by a party of *samurai*, the governor of the province summoned troops from Saga, and made arrangements to blow up the castle at Shizuoka in the event of its becoming untenable. The powder and other explosives laid for that purpose were never completely removed in the confusion that ensued, and the hypothesis now is that a quantity of this powder, strewn under the floor of the *yagura* where the detachment was quartered, became ignited from contact with tobacco ashes. The *Asahi* alleges that careful examination has disclosed the existence of gunpowder and fuzes similarly strewn under the floor of another building occupied by troops, and that the men have been placed under canvas. It is a most singular tale. That gunpowder should retain its destructive vitality during a period of 29 years when lying without being protected and in contact with damp earth under the floor of a building, seems scarcely credible.

CHINESE NEWS.

It was supposed that when Sir James Mackay and Consul-General Warren recently visited Nanking and Wuchang, they obtained the consent of the two Yangtse Viceroy to a large extension of the privilege of navigating China's inland waters, the Chinese Commissioners at Shanghai having already agreed. But a statement now comes by telegraph to the effect that though Taotai Shêng and Viceroy Chang Chih-tung gave their endorsement, Viceroy Liu Kun-yi dissents, his contention being that if foreign vessels are allowed free access to China's inland waters Chinese ships are likely to make fraudulent use of foreign flags, and foreigners themselves are not unlikely to cause disturbances. The Viceroy does not want to have another Lorcha-Arrow business on his hands, and he probably thinks also—as most reflecting persons, will agree—that so long as the extraterritorial system of jurisdiction continues, some precautions should be taken to limit foreign trade operations to an area within reasonable range of the consulates. It is very well to allow missionaries and men carrying passports to visit the interior; they can be trusted to behave themselves. But when merchant sea-men have to be included in the category, a very different situation is created. It was by the crews of trading vessels that so many disgraceful disturbances were created on the coasts of China and Japan in the old days—disturbances which contributed materially to the anti-foreign feeling in both countries. Things have changed greatly for the better since then, it is true; but have they changed sufficiently to warrant any country in allowing that class of men to visit its riverine cities without making any adequate provision for their control? Suppose that half-a-dozen “jolly tars,” after a *samslui* carouse in some far-away Chinese town, set about the operation of painting the place red, and that objections on the part of the populace led to acts of violence and even of killing and wounding? Then we should witness the restoration of a state of affairs such as existed in the Pearl River and on the Fuhkien coast in the days before the opium war. Viceroy Liu has read his country's history, no doubt.

The perplexing question of Tientsin is now complicated by a surprise in the shape of a telegram to the effect that the operation of transferring the civil government commenced on the 4th instant. Nothing of that kind was looked for by outsiders until the 15th of this month at soonest. As to Newchwang, the conditions for its restoration are said to have been agreed to and it will be handed over at the beginning of September, the extra-mural railway being restored on the 7th of October, which is the day when the first-evacuation periods expires. There have been such varied and contradictory rumours about all these things that one can not yet believe in anything like finality.

A Saigon telegram told us a few days ago that three hundred rebels had been killed in Szchuan, and that the disturbance there was effectually quelled. But yesterday's telegrams to the *Jiji Shimpō* from Peking convey a very different impression. They say that the Government is urging the new Governor-General to hasten to his post; that the rebels have burned more Christian places of worship and murdered more Christians, and that the Imperial

troops have been worsted. Szchuan has been one of the principal arenas of Christian propagandism in China ever since the 18th century; the days when Didier Saint-Martin was taken away from his mission to be cast into prison and Pottier escaped by concealing himself for a month in such a small house that he “scarcely dared to cough or spit for fear of being discovered.” So the story repeats itself. Canton, which enjoyed the privilege of oldest acquaintance with foreigners, became so notorious for anti-foreign feeling that other places which subsequently grew inimical were spoken of as “Cantonized,” and Szchuan, the chief field of the propaganda, is now entitled to furnish an epithet on its own account, “Szchuanized.”

Here is an item of news which will have much interest for our Japanese readers:—

It is reported from Peking that certain French and Russian capitalists have lately been trying to obtain from the Department of Railways and Mines in the capital, a concession to construct a railway between Foochow, the capital of Fuhkien province, and Hankow. The proposed railway on leaving the Fuhkien frontiers will enter and pass through Kiangsi and thence into the Hupeh provincial boundaries. The Foochow-Hankow (Min-Han) Railway will not touch the proposed Canton-Hankow, or Yuê-Han Railway, which will pass through Hunan province and thence into Hupeh.

Some hitch seems to have occurred in the negotiations at Shanghai. The Chinese Commissioners are said to have asked Sir James Mackay to re-open the discussion of two subjects supposed to have been disposed of at the Wuchang conference, namely, the questions of foreign residence in the interior and of the navigation of inland waters. These negotiations threaten to be never-ending, but considering their importance a considerable measure of deliberation is natural.

That exceedingly naughty Power, Russia, is at it again. She is now engaged supplying arms and munitions of war to the Boxer leader, Prince Tuan. The latter is in Kansuh, where he and General Tung Fuh-hsiang seem to be leading a sufficiently tranquil existence, safe, apparently, from the execution of the sentences pronounced against them by their Government. But Russia will not let them rest in peace. She is putting arms into their hands, clapping them on the back and telling them to go in and win. That is the latest story telegraphed to Tokyo by the *Asahi's* Peking correspondent, and he assigns as his source of information a despatch from the Governor-General of Kansuh and Shensi to the Central Government, asking for instructions. Russia is a veritable Briareus in the eyes of some news-collectors. The world is far too small to contain her. But how greatly the materials for interesting and exciting the public would be reduced if the romances of which she is the constant heroine were brought down to the level of common sense.

Very varied accounts reach Tokyo with regard to the *likin* question. Apparently an agreement has been reached, so far as England and China are concerned, but it is now said that America and France object, on the ground that the rate of import duty conceded to China in consideration of the abolition of *likin* is excessive. We can only repeat the opinion often previously expressed in these columns that it will be difficult, if not impossible, to bring the Powers into line with regard to this matter. The fact that England's convenience might be consulted and her trade encouraged by abolishing *likin* even at a heavy expense in

the form of increased customs duties, would not constitute any inducement to all the other Powers: quite the contrary perhaps. What suits England must undoubtedly be most conducive to the benefit of commerce in general, but it is conceivable that the convenience of a thing to England might seem in some quarters a strong argument against it.

Meanwhile Sir James Mackay's projected departure for England seems to have been postponed. He at first attempted to peremptorily reject the proposal of the Chinese Commissioners that the questions of mixed residence and navigation of inland waters should be reconsidered, but he appears to have allowed himself to be persuaded.

THE CHINESE STUDENTS.

Saturday, Aug. 2.

Tokyo is much interested, not to say excited, about the affair of the Chinese students. The latter continue to prefer applications in person to the Legation, but their admission is now prevented by the police. What the students want is that the Minister should go security for them in order that they may be able to enter the *Seijo Gakko*. What the Minister replies is that without making due inquiries he can not consent to become security. That is the gist of the matter. It will probably occur to our readers, as it certainly occurs to us, that there must have been some very flagrant mismanagement somewhere or this matter would never have become a topic of public discussion and police intervention. These Chinese students are not the first that have come to Japan for purposes of education. It must, or at any rate it should, have been perfectly well known that in order to gain admittance to Japanese public schools, security has to be given. If, in the first place, the great blunder was committed of sending the students to Tokyo without making due provision for that requirement, then surely the Chinese Representative should have used the telegraph freely in order to correct the omission without a moment's delay. It is intolerable that the students should be kept waiting month after month instead of being placed in a position to pursue their studies without delay. That is the light in which the matter presents itself to us. We are further disposed to think that Chinese students who incur the heavy expense of coming to Japan for educational purposes can not be regarded as waifs and strays on whose account there should be any difficulty in finding security or any hesitation in furnishing it. There are 600 Chinese students now in Japan and others are likely to arrive soon. It is most unfortunate that a movement of such national value to China should suffer any check, especially through easily avoidable blundering. This very *Seijo Gakko* to which the nine disappointed students seek admission, has already 50 Chinese among its pupils. Mr. Wu, who leads the students and acts as their mouth-piece, is said to be a “bachelor”; that is, he has passed the first of the public examinations held in China. He is also on his second visit to Japan, having gone back from Tokyo last spring and subsequently returned thither in charge of several younger students. It is really strange that such a man should be unable to find security for admission to a public school in Tokyo. Some arrangement should be possible, and in the absence of accurate evidence whereon to base a judg-

ment, we can only fall back on the general proposition that if the Chinese Legation can not contrive to prevent these scandals, it must expect to be condemned by public opinion. The students are manifestly unreasonable when they claim that if the Minister can not make the necessary arrangements he ought to resign. They have nothing to do with the Minister's resignation. What they can do and are entitled to do is to submit their complaint to Peking, and that they are said to have done.

Tuesday, Aug. 5.

His Excellency Mr. Tsai is undergoing some severe criticism at the hands of certain Tokyo journals, of which the *Nippon* and the *Chiuo* are the leaders. The position assumed by his critics is that at heart he is opposed to progress, being one of the Yung Lu party. Therefore he does everything in his power to obstruct the aims of the students arriving in Japan. The *Chiuo* says that Mr. Tsai obtained his present office by contributing a sum of a hundred thousand taels towards the expenses of the Court during the flight from Peking to Hsian, the money being sent through the hands of Yung Lu. That incident is related as though some reproach attached to it, but truly no such line of reasoning will commend itself to rational folks. If a conspicuous act of loyalty at a crisis in his country's history brought Mr. Tsai prominently into official notice, that is no discredit either to Mr. Tsai or to the officials that noticed him. But it is not to be questioned that he has been somewhat unsuccessful as a Minister. To prevent "incidents" from occurring is just as important a function of diplomacy as to deal with them when they do occur. Mr. Tsai can not be surprised that the old affair of the secret despatch is now again brought upon the *tapis*. The sentiments attributed to him, falsely or truly, in that document are in remarkable unison with the demeanour he seems to have shown towards these students. What the difficulty is so far as concerns the students' scholastic career, we are now somewhat puzzled to say, since it appears that no surety is required for lads entering the *Seijo-gakko*, that being a private school. But there is some difficulty, and Mr. Tsai either has the power to remove it or ought at once to take steps for getting the power to remove it. Zeal on behalf of the students is unquestionably not one of his virtues. No one has any right to doubt that His Excellency is acting in accordance with a policy which he believes to be conducive to his country's interests, but that can not be altogether a wise policy, we think, which exposes him to suspicion and unpopularity in the country to which he is accredited.

Friday, Aug. 8.

The agitation among the Chinese students with reference to the Minister's procedure has had an ending which is likely to provoke much criticism. Our readers are familiar with the details of the deputations sent by students to wait on Mr. Tsai, and with the fact that the latter deemed it necessary to invoke the aid of the police. Undoubtedly the students pushed matters to an extreme point when they refused to leave the Legation and when they demanded that the Minister should resign unless he agreed to comply with their wishes. But where is the responsibility to be placed for allowing things to culminate in such a complication? However, the sequel of the story is that the Minister of State for Home Affairs, having considered the whole circumstances

of the case and having doubtless received a strong representation from the Chinese Minister, decided that the two leaders of the students, namely, Messrs. Wu and Sun, must be required to leave Japan, as their conduct was likely to prove prejudicial to the maintenance of peace and good order.

The Department's decision was conveyed to the two gentlemen on Tuesday afternoon, and they were required to proceed at once to the Kajibashi Police Station, where they were lodged in the "Peace-preservation Section" of the building, the intention being to convey them to Kobe by the six o'clock train on Wednesday morning. This decision seems to have taken the students by surprise. They immediately held a meeting, and 140 of them signed a petition to the Home Department on behalf of the incriminated men. Mr. Wu Ju-lun, the renowned educationist, is also said to have used his good offices but naturally the Department declined to cancel its decision. Accordingly, the two gentlemen were placed in *jinrikishas* to be conducted to Shimbashi station. On the way, Mr. Wu asked to be permitted to buy some bread for use in the train. The police allowed him to alight, whereupon he immediately precipitated himself in the moat. The water was not deep enough to drown him and he was speedily rescued. Indeed the place and the time were so ill-chosen that some doubts are thrown on the sincerity of his purpose, but it will probably be concluded by thinking persons that such doubts are baseless. Wu can not be supposed to have known anything about the depth of the water, and it is evident that had the depth been such as he might reasonably have expected, death must in all probability have occurred before the police could procure a boat. However, the water being only waist-deep, the police, assisted by the *jinrikisha* coolies, had no difficulty in rescuing him. On his person is said to have been found a document setting forth the reasons that had induced him to die.

It showed much literary skill being cleverly composed in rhymed couplets after the most approved Chinese style. That might have been expected, for both Wu and Sun have obtained the degree of *Chü-jen*; that is to say, they have passed all the examinations preliminary to the final test for entering the civil service. The testament set out by recalling the saying of Confucius that if the cry of a dying bird is sad, much more so the words of a man on the brink of the grave. If then went on to declare that the writer's thoughts were only for his country; that the power and liberty of the people are the only firm bases for a nation; that the writer, profoundly grieved for his country, offered his life by way of remonstrance; that his sorrow was on Minister Tsai's head; that Confucius had counselled men to sacrifice their lives on the altar of benevolence, and Mencius had counselled them to make the sacrifice on the altar of duty; that the prospect of the downfall of one's country was an occasion such as these sages contemplated; and that if his comrades worked to achieve his purpose, his death would not be in vain. This versified statement was followed by an explanation in prose to the effect that the salvation of China lies in sending her youth abroad to study; that it was to be sincerely hoped that the Japanese Government would not in any way check the movement, but would help China with neighbourly kindness; that never at any time had Chinese officialdom reached such a depth of corruption as when the Court fled from Peking two years ago; that

if the Japanese Government worked hand in hand with these corrupt officials, not only would its own moral tone be lowered, but also the oppression of the yellow race by the white would be assured; and finally that the writer having given his life by way of expiation, he earnestly hoped that all proceedings against his comrades would be suspended.

The police having taken steps to have Mr. Wu medically examined, and finding that he was in no manner mentally deranged, it was decided that he and Mr. Sun should be sent to Kobe by an afternoon train for embarkation in the *Kobe Maru*, which vessel is now in that port. Their departure from Shimbashi is said to have been a very sad scene, and no wonder, for when we think what these unhappy men may have before them in their own country, we are tempted to wish that they could both have committed suicide in Japan. Mr. Wu leaves his wife and children in Tokyo; Mr. Sun takes with him his twelve-year old boy. We presume that the Japanese Government will feel itself compelled by the dictates of humanity to take some interest in the fate of these two men after they reach China. The educationist, Mr. Wu Ju-lun, is said to have telegraphed to Taotai Shêng and to Mr. Chan, Minister of Education in Peking, declaring that the deported men are in no sense dangerous characters. But will that save them from the vengeance of the Government in Peking if they are tainted with any suspicion of sympathising with the extreme reform party?

There is a possibility, if not a probability, that the testament said to have been found on the person of Mr. Wu is not what its publishers would have the public believe it to be. The *Nippon* is the only paper that inserts it. Of course that fact alone would not discredit the document. But is it conceivable that the police, finding such a paper on Mr. Wu's persons, communicated its contents at once to a newspaper, and would they have communicated it to the *Nippon* alone of all papers? If they did, they regarded their duty from a point of view which is beyond our comprehension. As for the document itself, it is, we believe, a Chinese composition. A Japanese might have written it, but he would have to possess remarkable knowledge of Chinese. That does not prove, however, that it was written by Mr. Wu.

Since writing the above we have ascertained that the document published *in extenso* by the *Nippon* and purporting to be Wu's last testament, his "farewell to the world," is an unblushing forgery. No such paper was found on Wu's person.

As for the reasons of the deportation, it is unquestionable that these students behaved with great violence. They forced their way into the Legation, they smashed a window, they burst open a door, and they addressed to the Minister threats of personal violence. Their continued presence in Tokyo would have constituted a menace to the peace, and might also have led to the demoralization of the younger students, over whom they had much influence.

A STORM COMING.

The storm which had been lingering for some time about the coast of Formosa, seems to have reached Kinshiu on the 6th instant, and its passage up the main island is feared. It is an exceptionally low depression, the barometer reading 755 m.m. as a point which is not the centre of the disturbance.

PRINCE CYRIL.

H.I.H. Prince Cyril landed at Yokohama on the 1st instant and proceeded to Tokyo by the 9.30 a.m. train. He was met in Yokohama by officials from the Household Department and by Governor Sufu, and in Tokyo by T.I.H. Princes Fushimi and Kacho, as well as by Count Tanaka, the Governor of Tokyo, the Chief of Police and the officer commanding the Gendarmes. At noon the Prince proceeded to the Palace and was received by the Emperor, but not by the Empress, who is indisposed. Luncheon was subsequently served, among those present being Princes Fushimi and Kacho, the Minister of the Household, Viscount Kagawa and the Russian Representative. On the 2nd instant the Prince lunched with Prince Fushimi at the latter's residence in Kioicho, and then H.I. Highness returned to Yokohama.

On the 2nd instant at 10.20 a.m. the Emperor proceeded to the Detached Palace at Shiba to visit Prince Cyril. His Majesty presented to the Prince an embroidered screen, which is said to be an object of great beauty. Various orders were conferred on the Prince's suite.

JAPANESE RAILWAYS.

Keen competition seems to have been inaugurated between the Government and the private railways in central Japan; that is to say, between the lines which establish communications from Nagoya to Kyoto or Osaka. The State road runs inland from Nagoya, and skirting the eastern shore of Lake Biwa, proceeds thence direct to Kyoto and Osaka. The Kwansei road, on the contrary, runs at first along the Gulf of Ise and then strikes inland, passing through many places of note and communicating at several points with the Government road. There is traffic enough for both lines, but of late the managers of the Kwansei line are said to have organized a system of touts at the various inns, and by that means are drawing off a great deal of the custom from the rival road. They have also made large reductions of fares, and on that ground the Government has met them. The result is striking. Our Tokyo contemporaries publish the following table:—

KWANSAI (PRIVATE) RAILWAY.			
Return Fares between Nagoya & Kyoto (or Osaka).			
	Former Fares.	Reduced Fares.	
First class	5.88 yen	4 yen	
Second class	4.42 "	3 "	
Third class.....	2.94 "	2 "	
GOVERNMENT LINE.			
First class	10.62 yen	5 yen	
Second class	6.20 "	3 "	
Third class.....	3.54 "	1.50 "	

The Welcome Society, which does not desist from its little appreciated efforts to promote the convenience of foreign tourists, has now contrived that its system of reduced railway fares shall be extended to the Sanyo, Kakuhan and Nippon roads. Formerly the arrangement held good for State Railways only, but its scope has now been largely increased. The reduction is 20 per cent. A holder of one of the Society's vouchers can travel by first or second class for 80 sen where he would have to pay a yen under ordinary circumstances.

We may mention in this context that the Japan Railway Company has effected an improvement in its system of season tickets. Hitherto these have been issued for 50 days, the holder being entitled to make 30 journeys in that time, and to receive a rebate

of 10 per cent. Henceforth they will be issued for 90 days and fifty journeys, the rebate being 20 per cent.

The Tokaido Railway authorities have posted a notice that persons desiring to ascend Fuji-yama can obtain tickets at a reduction of 20 per cent. The language in which this notice is couched elicits much praise from the *Nichi Nichi Shimbun*. Our contemporary observes that now for the first time have the authorities in charge of State railways descended from their eminence of official magnificence and consented to address their customers in polite phraseology. But they have not yet risen to the idea of advertising. They still deem it sufficient to post a notice in an obscure corner of a railway station on the off-chance that some one may see it.

The Kansei Railway Company have made a further reduction of fares in competition with the Government line. Our readers will remember that the Government had put down its Nagoya-Osaka return fares to 5 yen, 3 yen and 1½ yen for the 1st, 2nd, and 3rd classes respectively. The Kansei have now announced that their corresponding figures will be 4 yen, 2½ yen and 1½ yen. It is a novelty in the history of Japanese industrial enterprise to find a private firm competing with the Government.

CHOLERA.

Saturday, Aug. 2.

On the 26th ultimo 4 cases of cholera occurred in Kyoto. The victims had taken part in a ceremony organized by the *Kinko-kyo*, a Shinto sect, and had eaten some fish which is supposed to have conveyed the bacillus as it had come from an infected district.

Okayama sends a very disquieting report. On the 30th ultimo no less than 70 persons were attacked by cholera suddenly and almost simultaneously and the disease is said to be spreading.

Nagasaki reports 13 new cases during the night of the 30th.

Fukuoka has hitherto suffered most. Up to the present it has had 303 cases with 180 deaths.

There are no new cases in Tokyo.

Monday, Aug. 4.

There have been two fresh cases of cholera in Tokyo, one on the 1st and one on the 2nd instant.

Yamaguchi prefecture had 10 new cases on the 2nd, and in Kobe also there was a fresh patient.

The following extract from Kuelin (Kuangsi) correspondence in the columns of the *N.-C. Daily News* suggests a remarkable contrast between the state of things in a Chinese town and a Japanese when an epidemic of cholera makes its appearance:—

I write from a city stricken with a violent epidemic of cholera. In my last communication I mentioned that there was cholera. Since then it has increased to such an extent that people are dying by hundreds daily. Two days ago I heard that 405 corpses were carried out of the West Gate alone. Another report says that over a thousand have died outside the North Gate, where the suburb is not particularly extensive. There are no reliable statistics, but the mortality is certainly very heavy. Whole families are reported to have died. The beggars are by this time extinct. Among such people few can have survived. They are to be seen dying everywhere, and numbers more are put out to die. The top of the wall is a favourite place for such, as is also the King City Square in front of the Examination Halls. There, any day, numbers can be seen in all stages, dying and dead. It is most pitiable to see and to be powerless to do anything to

help. The supply of coffins has long since been exhausted. Now all the tub and bucket makers and the carpenters are making any sort of coffins to try to meet the great demand. But still this is not enough, for I hear that numbers are being buried, merely wrapped up in matting, often two and three together.

The state of affairs in the Philippines is thus described by the *Critic*:—

"The aggregate number of cases and deaths, up to this writing, are worthy of serious consideration. Read them and remember that the first case was reported on March 21st. There have been reported from the city 2,157 cases and 1,690 deaths, equal to the full strength of sixteen companies of infantry, or a regiment and one battalion. From the provinces there have been reported 11,705 cases and 8,809 deaths. The aggregate figures, therefore, are 13,862 cases and 10,479 deaths, which is the full strength of a division of infantry. These figures are appalling, especially when the new cases and deaths are increasing from week to week. There is every reason to believe that not anything like all the cases have been officially reported, and that from the every nature of things. In remote barrios, even in many pueblos, the principals are ignorant, superstitious, and woefully devoid of a true appreciation of their duties. So gradual and insidious has been the spread of the epidemic that many people seem to have failed to observe or appreciate the growth in the extent of its ravages. The worst feature of the situation is that the cholera seems to have spread to nearly all the provinces of Luzon, and in the barrios and sitios of the provinces. With all the filth and ignorance which characterise their inhabitants, it is impossible to eradicate the pest without an army of doctors and sanitary employes. In Manila the epidemic was held well in hand until it was found necessary to discharge a large number of inspectors because of lack of funds. The Board of Health has done its full duty and no just criticism can be made of its actions. On the contrary it deserves much praise from the citizens here."

Tuesday, Aug. 5.

There have been three cases of cholera in Osaka between the 29th ultimo, and the 3rd instant. This is the first invasion of Osaka on the present occasion, and vigorous measures of sanitation are being taken.

It seems to have been a great exaggeration to say that 70 new cases of cholera had occurred in one day in Fukuoka. The truth is that there were 41 cases—11 of them ending fatally—in 3 days, the 29th, 30th and 31st ultimo.

There have been four deaths from cholera among prominent Japanese residents of Tientsin. The last sufferer was Mr. Oi Masujiro, an expert sent by the Department of Agriculture and Commerce to study in China. He was regarded as a man of great promise and much regret is expressed that he should have perished on the threshold of his career. Steps have now been taken to procure a supply of Dr. Kitasato's cholera-prevention serum. The medicine seems to be largely used in Japan, and some people are disposed to think that the success which has hitherto attended Tokyo's efforts to hold the malady at bay, may be attributed to the serum.

Wednesday, Aug. 6.

Okayama continues to suffer badly. There were 224 new cases between the 29th ultimo and the 3rd instant. It is stated that the disease is terribly deadly and rapid in its operation, many of the victims dying without vomiting even once.

Osaka has had 4 cases in the town and eleven in the suburbs.

Yamaguchi reports 12 fresh seizures on the 4th instant, and Moji had 11 cases on the same day.

Friday, Aug. 8.

A case of cholera—the first this year—occurred in Sakuragi-cho, Yokohama, on the 5th instant. The sufferer was a stoker lodging at that place.

The disease continues its ravages in Okayama. There were 70 new cases on the 3rd instant, of which 27 proved fatal. On the 14th there were 61 cases and 21 deaths. There is much anxiety owing to the malady having effected an entry into the Okayama and Bizen Cotton Factories and into the jail. Steps have been taken to inoculate the 1,300 prisoners.

From Takamatsu (Sanuki) comes news that there have been 6 cases.

FORMOSA.

The insurgents in Formosa, according to a report from the Governor-General dated the 30th ultimo, seem to have adopted a new device. Under pretense of a religious celebration some forty of them came together evidently with the object of committing depredations. The gendarmes and police were too much on the alert, however. Before the insurgents could accomplish anything they were dispersed, three of their number killed and twenty apprehended. One first-class Japanese soldier was shot in the affair.

The *Fiji Shimpō's* information is to the effect that these recent disturbances are not due solely to a rebellious spirit on the part of the insurgents. They are caused primarily by misconduct on the part of the camphor-collectors, who have failed to pay the monies invariably given by way of fees to the natives, and have also trespassed beyond the proper limits of their concessions. If that be true no punishment would be too severe to inflict on these unscrupulous adventurers who, for the sake of a few yen, cause serious disturbances and loss of life.

A violent storm visited Anping and Takao in Formosa on the 2nd instant at daybreak. Seventy fishermen are reported missing, and 14 corpses have been washed ashore.

There has been a bad flood in the south of Formosa owing to a violent gale of wind and rain which visited the island on the 1st instant. We reported in a recent issue that 70 boatsmen were missing. That was in connexion with this storm, and it is now stated that 14 corpses have been washed on shore.

THE "KASAGI."

The *Kasagi* returned on the 3rd instant, from her trip to Marcus Island. She had remained there three days, burning coal all the while, since there is no anchorage, and a vessel is obliged to keep constantly under weigh. During the period of her stay, Captain Rosehill's schooner did not put in an appearance, and the *Kasagi* ultimately left the place, having landed a small detachment of marines and an officer. The party was provided with a statement, written in English, to the effect that the island is a Japanese possession, having been duly annexed by the Government of this country in 1898. Captain Rosehill's people will of course make no effort to take possession of the place under such circumstances, and the question of ownership will then have to be discussed between the two governments. The *Kasagi* reports that the island is of coral formation, in shape an equilateral triangle, $4\frac{1}{2}$ miles in periphery. The sides are precipitous, with deep water up to the very foot of the crags, and there is nothing like an anchorage. Twenty-nine Japanese including three women are now living on the island. It appears that Mr. Mizutani, the lessee, left the place some time ago and has not since been heard

of. He is reported to have been drifted a thousand miles southward, but what that means we do not understand.

TEA.

A curious discussion has been going on in New Zealand about the teas of various countries. The nature of the discussion will be gathered from the following letter, which appears in the *Manawatu Daily Times*, a well known "old resident" of Japan, Mr. A. S. Aldrich, being the writer, and we need scarcely add that, in our opinion, Mr. Aldrich is right in all his points:—

Messrs the Castle Tea Co.,
Wellington.

Dear Sirs,—I am much obliged for the sample of Java tea you were so good as to send me, and have duly tried it, and found it to much resemble a mild flavoured Ceylon tea, and to my taste preferable to much of the tea sold here as Ceylon. Ceylon tea is to me absolutely repulsive, and I import my own tea from Hongkong every year. I have the pleasure to send you a sample of same, which please try, made in an earthenware teapot with freshly-boiled soft water. You probably sent me the Java tea because of having seen some correspondence in the *New Zealand Times*, and perhaps Mr. Lucas is a member of your house. In his first communication, Mr. Lucas said:—"The Chinese and Russians drink China tea." As regards China this is as if he had said: "The New Zealanders eat New Zealand mutton;" but, of course, it is quite correct. Then he said: "The Americans consume Ceylon and Indian teas." Perhaps they do some, but I am quite sure that the bulk of the tea consumed in America is Japanese tea. For the past 30 or 35 years there has been an immense export of Japanese tea to the United States and Canada, going into thousands of tons; in fact, they took nearly all the export, very little going elsewhere. Not only did (and I believe still do) the several lines of mail steamers load largely with tea for San Francisco, Seattle, Tacoma, and Vancouver, but British steamers came and loaded whole cargoes for transport to New York, via Suez Canal. I have before me the official statistics of the production of tea in Japan for the year 1899, and it amounted to 62,950,000 lbs, or say, 28,102 tons; the value of the quantity exported was declared to be yen 7,699,625, and of this there went to the United States a portion to the value of yen 6,326,806, or say £632,680 sterling; to Canada, yen 1,203,962, or say £129,396 sterling; to England, yen 18,115, or £1,811 sterling; to other countries, yen 60,742, of £6,074, total yen 7,699,624, or £796,962 sterling. From these figures you can form an opinion as to the probable quantity of other tea imported into America. Mr. Lucas then proceeded to state that "the Japanese take Java and China teas," which is palpably foolish, and although he calls himself an "expert," it is apparent that he knew nothing about Japanese tea, or that tea was a staple product of that country. I had not heard of Java tea, and I think I am correct in saying that the production and export of tea from Java is a comparatively recent thing, and I (not being a tea expert) may be excused for not having previously heard of it. Mr. Lucas, however, seems to think that my ignorance of Java tea is far more discreditable than his ignorance (being an expert) of Japanese tea, and as to the tea chiefly consumed in Canada and the United States. In his latter communication Mr. Lucas states that "Canada consumes more Ceylon tea than any other foreign country except Russia," which implies that Russia consumes a very large quantity of Ceylon tea, although he had previously said that "Russians drink China tea;" and this latter statement (first made by him) is, I believe, correct. There are several steamers of the Russian volunteer fleet largely employed in transporting tea from China to Odessa, and the Russians have a large establishment in Hankow for the manufacture of brick tea, which I have personally visited about six years ago. It is quite possible that Canada is the fourth largest Ceylon importing country, and Russia the next highest in the scale above Canada and yet they may take but little compared with their total consumption; and it may be borne in mind that after Great Britain, Australasia, and the United States there are no large consumers of tea, other than Russia and Canada; so that these countries might import very little Ceylon tea and yet occupy the positions assigned to them by Mr. Lucas. I had no desire to enter into any controversy about tea generally, but I could scarcely pass over such a gross mis-statement regarding the tea consumed in Japan as that put forth by Mr. Lucas.—I am etc.,

Yours faithfully,

A. S. ALDRICH.
Palmerston North, June 15th, 1902.

"INTELLIGENT ANTICIPATION."

It is only natural we suppose that a great deal of "intelligent anticipation of events" was practised by the London press with regard to the Coronation festivities. The feverish, head-long rush of modern life is nowhere more strikingly illustrated than in the mad endeavours of the daily and weekly newspapers to be thoroughly up-to-date. Now many of the weekly papers of London are printed on Wednesday and Thursday, though dated Saturday, and monthly journals go to press well in advance of publication day, and this leads to a lot of "enterprise" on the part of their editorial staffs. It is all right if the thing described comes off, but when, as in the case of the Coronation, the great event is postponed on the very eve of the stated day, then the result is somewhat direful. The London correspondent of the *New York Tribune* says that there is talk of a libel action arising out of an article which appears in the July number of *The Lady's Realm*. This magazine contains a thrilling account of the coronation in the Abbey on June 26! There is also a fine word-picture of the next day's procession! But what is specially objected to—and no wonder—is the description of the gala performance at the Opera on June 30th, which likewise never came off. The critic had risen nobly to the occasion, as witness the following gem from her article:—

Seldom have we had a worse chorus and even the stars of song must shine less brilliantly as the years go on. The unrivalled Jean has not the wonderful power he had once, and if Melba is delicious as ever she is no better. As for Caruso, he is a distinct disappointment.

This spiteful criticism of events that never took place is signed by "A Peer's Daughter." She must regret as much as her enterprising editor, that she ever put pen to paper the day she accomplished this.

THE HERB CASE.

The Herb case has naturally provoked some comments, but among them is one that certainly can not, by any stretch of complacency, be called natural. We refer to the comment of a local contemporary, which denounces the "extraordinary reasoning whereby a court asked to decide whether an individual is guilty or not guilty of a certain offence, declares that he is guilty of another and totally different offence, and sentences him accordingly." This remarkable dictum is accompanied by a scrap of that fringe of fine phrenzy which enables so many sillinesses to assume a brave appearance. Western communities and the practice of their law courts are referred to, and the judgment of the Yokohama tribunal is declared to be "dangerously lax." "If a man is to be tried for murder and sentenced for manslaughter on the mere say-so or authority of the bench, what security have the people?" inquires the *Japan Gazette*, and, truly, we can imagine that the momentous question was accompanied by the striking of an equally impressive attitude on the editorial stool. But is it not wonderful that people can live in this world of ours for 20 or 30 years and yet remain so delightfully ignorant of the events that happen there. "Tried for murder and sentenced for manslaughter!" Why the thing is as common as blackberries. The Court in Herb's case was asked to consider whether he had been guilty of "fraudulent bankruptcy," and its judgment, delivered on the strength of the evidence submitted, not on the strength of

its own "say-so," was that fraud had not been proved but that negligence had, and it passed sentence accordingly. The *Japan Gazette* might as well affirm that a court of law has no competence to reduce the degree of an offence in consideration of the circumstances under which it was committed.

NOTES ON CURRENT EVENTS.

The *Yomiuri Shimbun* has followed the example set by the *Fiji Shimpō* with so much success. It has organized a party of 150 students to visit Fuji. They started from Tokyo by the first train on Friday morning, it being considered that the weather is now definitely propitious. Of course the *Yomiuri* does not pay the expenses of the party. It merely arranges cheap means of transport and cheap lodging.

In a recent issue we alluded briefly to the fact that action at law had been brought by Mr. Yamakawa, formerly an assistant teacher in the Imperial University, against Major-General Sato, the ground of complaint being that the Major-General had appropriated and published in his own name a memoir compiled by Mr. Yamakawa. We now learn from Tokyo journals that the public procurator has rejected Mr. Yamakawa's suit, and that the whole business was a species of black-mailing. Major-General Sato, who served under Lieut.-General Yamaji and was on terms of the closest intimacy with that remarkable officer, desired to publish a memoir of him, and with that object dictated the matter to Mr. Yamakawa. The latter being a member of the *Gembun Itchi* Society, drafted the volume in colloquial and submitted it for the Major-General's inspection, but the Major-General, not liking the style, re-wrote the volume himself and decided to publish it in his own name. He suitably recompensed Yamakawa's work, but the latter, being, it is said, in embarrassed circumstances, pressed for a further payment, and when refused, instituted proceedings, not with any intention of actually carrying the case into court but merely in the hope of getting money. He accordingly sent an intermediary to the Major-General offering to come to an understanding, whereupon the Pyōng-yang veteran intimated in the roundest terms that the sort of understanding he contemplated was to put Yamakawa into prison for false accusation. At this stage the public procurator announced that the case was rejected, and now the public is laughing at Mr. Yamakawa.

The explosion in the Mount Kembla colliery, at Wollongong, near Sydney, New South Wales, must evidently have been due to fire-damp. The coal mining industry of New South Wales is now carried on by 100 mines employing 11,333 men, and the quantity of coal raised in 1900 was 5,507,497 tons, valued at £1,668,911.

In spite of Lord Cranborne's explicit denial in the House of Commons, persistent rumours come from Macao, says the *Asahi Shimbun's* Shanghai correspondent, that France has made a purchase of land at Macao. This is a perplexing rumour. As for the sale of the whole of Macao to any other Power, that is an act from which Portugal is precluded by her treaty with China. As for the sale, however, of a plot of land in Macao to any one desirous of buying, we fail to see what objection can be made. The original rumour referred to a place not included in the Portuguese section, whereas the latest report points to a part of

Macao itself. On the principle that there is no smoke without fire, we presume that the tale has a certain significance, but time must be trusted to unravel the perplexity.

Tokyo journals allege that there is much difficulty in collecting the taxes this year and that a severe injunction has been issued by the Government to the local authorities, directing that more stringent methods of collection shall be adopted, and that the cost of applications by post or of messengers shall be charged to the defaulting tax-payer, distraint also being resorted to with less hesitation than hitherto. No news of this nature had been published previously. It will doubtless serve as a handle to anti-tax-increase politicians.

The *Shinonome* has at length reached Saseho, escorted by the *Akashi* and the *Tsai-yen*. Nothing is publicly stated as to the amount of damage she is found to have sustained. The *Yayeyama* alone now remains to be floated off. Were she saved, the three catastrophes which recently befell the Japanese navy in such rapid succession, would soon be forgotten.

Prince Komatsu has given a certain *éclair* to his return journey by choosing the Trans-Asian route. His Imperial Highness is expected to reach Port Arthur by the 20th or the 21st. The *Yakumo* and the *Tokizwa* are to proceed thither to meet him.

Hongkong seems to have been visited by a severe typhoon on Tuesday, the 5th inst. The Observatory gave ample warning and the northern-bound P. & O. steamers secured shelter in time, but the N. P. steamer *Duke of Fife*, which evidently left harbour too late, got caught by the storm and had to put back to Hongkong to repair damages. Her departure from Yokohama is therefore indefinitely postponed.

There is intelligence that the Yokohama Water-works loan of 900,000 *yen*, guaranteed by Messrs. Samuel Samuel & Co., produced offers aggregating 4 million *yen* in London, and that the scrip was sold considerably above 90, which was the price at which Messrs. Samuel Samuel & Co. took it.

A London telegram to the *Asahi* says that Siam has been included in the sphere of Franco-Russian politics, and that questions relating to it are about to be discussed in St. Petersburg. There has been of late some inflammatory and, as we venture to think, very foolish writing about Siamese affairs in French Far-Eastern papers, but it is difficult to imagine that any serious differences are likely to arise on such a subject. Moderation and fairness are the key-notes of French foreign policy at present, and peace is the aim of Russia. Siam will scarcely suffice to deflect either Power from its path. At all events the telegraph suggests that M. Doumer, the former Governor-General of French Indo-China, has some plan about Siam, which is to be submitted to the Russian Government, and that if it is approved, the French Representative in Bangkok will be summoned home for consultation. Meanwhile Siam is said to be consulting with England as to the preservation of the neutral zone on the Meikong.

A Correspondent writes:—"I have only just returned from a country trip and therefore have only just read your Monday's telegram relating the news of the Liberal victory at Leeds. The Liberals are quite entitled to their jubilation at the result, for

undoubtedly, though I notice you do not mention it, the parliamentary Division involved is that which the Rt. Hon William Lawless Jackson has vacated on his elevation to the ranks of the peerage. Mr. Jackson is one of the most popular Conservative statesmen ever bred in Leeds and the Yorkshire Tykes think great things of him by reason of his great administrative ability as Chairman of the Great Northern Railway, and his financial powers, which were once recognised by the Treasury in a signal manner while acting as Financial Secretary. But after his retirement from the thorny post of Irish Secretary in 1892, he fell out of the ranks of the Administration, to the great disappointment of his northern followers. At his last election, in 1890, he was returned at the head of the poll, receiving 7,512 votes to 4,995 cast for Mr. J. C. Hamilton. The Conservatives evidently thought the seat secure, but the Liberals this time put forward their strongest man, Sir John Barran, a former Mayor of Leeds, who was created a Baronet in 1895. Sir John has represented Leeds in Parliament before—in 1876-85, and after that he sat for the Otley Division of the West Riding from 1886 to 1895. No doubt the fight was a stiff one, but I can easily see that the Liberals left no stone unturned, while their opponents undoubtedly trusted too much in Providence—a weakly reed in political warfare."

Professor Ariga does not seem to have found the Trans-Asian Railway a remarkably rapid means of transit. Perhaps he journeyed leisurely. At any rate he left St. Petersburg on the 7th of July and reached Tsuruga on the 3rd of August, a trip of 28 days. His visit to Europe was for the purpose of attending the general meeting of the Red Cross Society. The Professor is accompanied by a Russian gentleman who is to serve in the Tokyo School of Languages. We interpret the transliterated name to be Yosehovitch, but it may be something quite different.

THE JAPANESE DIFFICULTY.

We have now an expression of opinion from the *Fiji Shimpō* and the *Nichi Nichi Shimbun* as to the Japanese attitude towards the *likin* question. Evidently Japan's position differs somewhat from the position of other Powers. She is vitally interested in her exports of coal and cotton yarns to China. As to coal, it would be obviously unfair to impose upon it a heavy import duty by way of compensation for the abolition of *likin*, inasmuch as coal is consumed chiefly at the place of import and does not pass into the interior at all. Should the foreign mineral be required to pay an import duty of 7½ per cent. in lieu of *likin* from which it is already exempt in the nature of things, then native coal mined in Shantung and elsewhere will enjoy an overwhelming advantage. The same argument applies to cotton yarns. Unless some steps are taken to equalise the imposts on yarns manufactured in China and yarns obtained from Japan or elsewhere, the domestic manufactures will be unduly favoured.

These are obvious considerations and they will of course be duly taken into account when Japan comes to negotiate her new tariff with China. Every Power will look out for its own interests. Whether, after that process has been completed, there will remain a large increment of import duties to China, is another story.

The Crowning of the King.

Within the time-worn walls of Peter's hal-
lowed fane,

The ancient Abbey Church at Westminster,
Speaking to all of the Confessor's faith,
And now the great Valhalla of our cherish-
ed dead,

A King is crowned to-day.

Fair is the prospect spread before his gaze,
As he looks forth beyond the borders of his
sea-girt isle,

For after weary years his wide-flung lands
know peace,

The sword is sheathed, that bitter wounds
may heal,

And Janus fast hath closed his ill-starred
doors.

Yet greater cause have we this happy day
For goodly thankfulness.

Quite suddenly a cloud of evil portent hovered
low,

O'ershadowing the Throne,

Threatening the life of him we hoped to
crown as King.

To-day, in God's great providence,

Our fears have passed away

And Edward, guerdoned with his people's
love,

Made doubly manifest through those hours
of pain,

Advanceth to his crowning.

The storied walls of hoary Westminster,

Wherein our Kings are crowned,

Tell of tumultuous days,

Of Kings, and Lords, and Councillors,

With many a one of lowlier degree,

Who fill the bead-roll of the nation's fame

But take their last long sleep in undisturbed
sanctuary.

Many the names emblazoned in this Shrine,
Speak of Worthies who nobly played the man

And ventured all, whate'er the cost,

To make our Empire what it is;

While others, holding high the charter of
our liberties,

In dying left a legacy full, deep, and con-
secrate.

Thus Free-men are we all to-day because
our fathers made us so;

Free-men to make our laws and choose our
Kings;

Free-men to come and go where'er we list,

Free-men to pledge our faith 'twixt man
and man,

Free-men to swear fealty to our Sovereign
Over-lord.

Upon King Edward's brow to-day

Is set the circlet of the British Crown,

With all its burdens and its lonely state;

While in his hands most Sacred Things are
placed—

Emblems of Mercy, Justice, Power and
Equity.

And in this solemn hour,

In lands spread wide beneath the sun,

With loyal hearts the myriad millions pray:

That God will grant him length of days,

A faithful people and unbroken peace.

A.B.B.

Yokohama, August 9th, 1902.

EDUCATIONAL.

IT is pointed out by a Tokyo contemporary that the number of punishments inflicted on students in the public schools of Japan proves conclusively that there is something unsatisfactory about the schools. Thus from April 1900 to March 1902, the records of the schools show 6,037 pupils reprimanded, 1,909 rusticated or expelled, and 1,232 removed from the books. The last figure has no significance in this context, but the two first are certainly suggestive. The newspaper from which we take the returns is disposed to think that the Educational Department declines to see any fault in the teachers, who are persons appointed by itself, and lays all the blame on the pupils. If the opinion of an outsider be of any value we would suggest that the fault does lie very largely with the teachers. In many cases they are not competent to discharge the duties they undertake. No one is quicker than a school-boy to detect whether his teacher is qualified to teach. It is obvious that competent teachers can not possibly be obtained for the wretched salaries which the Educational Department has to offer. There have come under our own personal observation several examples of Japanese school-teachers who could not, by any stretch of complaisance, be termed competent. That is especially true when applied to teachers of foreign languages. Japan enjoys the distinction of being the only country in the world where the teaching of foreign languages is entrusted to natives. In England and America a native is never employed for such a purpose unless the circumstances are altogether exceptional. There are Englishmen—few and far between—who by long residence in France or Germany and by years of careful study and close intercourse with Frenchmen and Germans, have acquired the French and German languages so thoroughly as to be quite capable of teaching them. But such men are not in the market offering themselves as school teachers. The same is true of other nationals. It may therefore be confidently asserted that in Europe and America alike teachers of foreign languages are invariably natives of the countries whose languages they undertake to teach. But in Japan it is different. In Japan the teachers of English, of French and of German in the Government schools are nearly all Japanese. That is a sufficiently defective state of affairs. Yet there is more to be said. These Japanese employed as teachers have not, in a majority of cases, more than a rudimentary knowledge of the languages they teach. Their pronunciation is execrable and they are not able to write a single sentence correctly and idiomatically in the foreign tongue they profess. There are many Japanese who speak English, German or French with considerably fluency; there are a few who speak these languages idiomatically and correctly, and there are still fewer—a very small number indeed—who can write them without

committing blunders. We do not intend to suggest that the standard of Japanese acquirement in this respect is beneath the opportunities lying within reach of students or the facilities they enjoy. On the contrary we profoundly admire the earnest diligence of the Japanese student, and having watched him for many years in his toilsome, unflinching efforts, we have learned to entertain strong faith in the future of the country to which he belongs. But the point is that his opportunities are lamentably few and his facilities unfortunately restricted. The first thought of English parents who desire that their son shall be able to speak French or German is to send the lad to France or Germany. In Germany there seems to be another and a very excellent device in vogue: those that can not afford to send their children to England, provide English nurses for them. How many Japanese youths enjoy the advantage of going to Europe or America to learn a foreign language, or how many enjoy the advantage of having their young ears trained to the true sounds of a foreign language by the companionship of a foreign nurse? There are some, it is true, but in making that admission a further qualification is necessary, namely, that youths thus equipped never for one moment think of becoming ordinary school-teachers in Japan. The miserable pittance earned by the school-teacher and the inferior social position accorded to him effectually stifle any such aspiration. Thus it results that not even the few Japanese who might claim tolerable competence, are available for purposes of school-teaching. Only the riff-raff, only the men who know so little of English, French, or German that they can not hope to find a better market for their knowledge—only these men, as a last resource, apply for the poor post of teacher. We have known a considerable number of so-called teachers of English in Japanese public schools, and we have never known one, not a single one, that could by any stretch of imagination be called competent to teach. Of course this does not apply to University Professors and men high in the ranks of the educational faculty. We are speaking of the school-teacher with whom the average student is brought into contact. At once the student discovers how very meagre is his teacher's equipment, and simultaneously with the discovery his respect for the teacher disappears. He has no pity. Sympathy does not sharpen his imagination to conceive the long and cruel struggle endured by his teacher in order to reach even the lowly eminence on which he stands, raised barely above the level of starvation. Pity and sympathy are plants that do not flourish in a school-boy's bosom where his teacher is concerned. He simply loses his interest in study and there gradually rises up in his breast an insubordinate, rebellious disposition. Thus not the ultimate literary attainments of the student alone are at stake but also his morality. He learns to resist authority, which means also that he does

not learn how to exercise it, for it is by obedience that men are taught to command. The effects of this evil are far-spreading, and the sum of the matter is that with such teachers as those now available in Japan, school discipline is impossible. The country must abandon its stingy attitude towards education. Nothing in this twentieth century is more pitiable than to see the eager, earnest, zealous students of Japan, hungry for knowledge and full of patriotic purpose, fed with such crumbs of cheap instruction as are now provided for them by their Executive and their Legislature.

RUSSIAN CONSCRIPTS.

WHATEVER may be the reasons for the telegraphically announced order of the Russian Government that the number of conscripts this year shall be a hundred thousand in excess of the usual figure, the fact is full of significance from an ethical point of view. What is to be said of a system of administration under which the Government, by a stroke of its pen, can condemn a hundred thousand youths to two years' hard labour—for the life of a conscript is little better than the life of a prisoner in jail—and can throw a hundred thousand families into mourning? We do not say that Russia's condition is any worse in this respect than that of Germany, France, Austria-Hungary, or Italy. Doubtless in countries that have parliaments such a question could not be decided without reference to the legislature, and from that point of view the incident would be less shocking. But, after all, it is the conscription system, not the method of selecting or treating conscripts, that is barbarous. During the course of the South-African war a good deal was said in Germany about the mercenary army of Great Britain, and many German writers attempted to convince themselves and their readers that the system of conscription adopted in their country is ethically superior to the voluntary system pursued in England. All that kind of talk deserved to be pitied rather than resented. It is an old device that of abusing a neighbour's possessions in order to pull them down to the level of one's own. In their heart of hearts the Germans know well that the English system is incomparably more civilized than theirs, and there is assuredly not a moment of the day from year's end to year's end when some German family, bereaved of its son, does not pray that its country was in a position to dispense with conscription, or that Europe had emerged sufficiently from the semi-barbarous age to respect the liberty of her people. The Germans would be the first in Europe to abolish the system of conscription, if they could, and we do not question that many of their thinking men have been startled and shocked by this announcement of Russia's latest measure. Conscription places in the hands of an autocrat a weapon of

appalling potentiality, and enables him, at the same time, to condemn whole sections of his subjects to one of the most irksome kinds of forced labour. The present Emperor of Russia has given abundant proofs that he is a man of peace and that under his sway Russia will never embark upon any path of unscrupulous aggrandisement. This startling order of his is doubtless dictated by reasons of which we should all recognise the validity, did we know them—their validity, that is to say, Europe being what it is. There, however, is precisely the trouble—Europe being what it is. An old Chinese saying runs that men do not trip over mountains but over molehills. It is well illustrated in the history of the world to-day. The magnitude of a sin constitutes an ample excuse for its commission. If a Sovereign condemned one unoffending youth to two or three years of unrequited hard labour, even the most subservient people would protest; but when His MAJESTY treats a hundred thousand in that manner, the world simply wonders. We all have to guard against the sin which we so glibly lay to the charge of the Chinese, the sin of lifting up our eyes and thanking God that we are not as other men are, but it is certainly permissible for Anglo-Saxons to be grateful that conscription is not among their institutions.

THE KAISER.

WE often wonder what kind of staff the GERMAN EMPEROR has gathered about him. They must be men not merely of extraordinary industry but also of very exceptional initiative. For a time it seemed possible that the Kaiser's almost omniscient tactfulness was due entirely to his own busy brain, and that the innumerable acts of grace and wisdom with which he delighted and instructed the world were prompted by his own insight. But it is no longer possible to be satisfied with that view. Evidently His Majesty has succeeded in surrounding himself with a staff of men who not only keep him informed of every incident occurring whether in Germany or elsewhere, but also accompany the information with suggestions of the most valuable kind. The organization and the inspiration are the Emperor's own of course, but the range and volume of the work are beyond the capacity of any one man unendowed with supernatural qualities. The KAISER has succeeded in imparting a new character to Sovereignty. He has made it, not the master of the State, for that it always was—though history shows few instances of mastership as wholesome as that of the GERMAN EMPEROR—he has made it also essentially the servant of the State. There is no institution in Germany that serves her so well as she is served at present by Imperialism.

ON THE STUDY OF THE JAPANESE LANGUAGE.

A LECTURE DELIVERED BY PROF. B. H. CHAMBERLAIN BEFORE THE ENGLISH SUMMER SCHOOL AT HAKONE, ON JULY 26TH.

LADIES AND GENTLEMEN,—I make no doubt that the Committee who sent me the flattering invitation to address you to-day, and you yourselves who pay me the still higher compliment of coming to listen to these imperfect remarks,—I make no doubt, I say, that you are all well aware that such lectures can help you but a very little on your arduous way. Good advice is proverbially ineffectual,—perhaps partly because it is not always so very good after all, though given out as such. But advice can help specially little in the present case. Though talking be the linguist's aim, *talking about* this talking will effect nothing. In the study even of words, what is required is, not words, but deeds,—hard work in fact, drudgery, what school-boys call, or used to call in my time, regular "grind," daily unremitting toil both when disposed for study and when not so disposed. And if this be true of the learning of all languages, I suppose we may call it true of Japanese in the superlative degree, because Japanese is probably — all things considered—the most difficult language on the face of the earth. No adult European can ever hope to master it thoroughly, in all its branches, as he might hope to master, say, German or Spanish. Our learning of Japanese is a mere question of degree,—what to take and what to leave, how far to go, what moderate grade of excellence to hope for, where to draw the line between our linguistic studies and other duties,—all questions evidently bound up with the particular temperament and the particular circumstances of each individual student, and therefore scarcely falling within the competence of advice, unless it be the advice of a few intimate friends who possess personal knowledge of these circumstances. This being so, please do not take anything I may say to-day too literally. A language is like geography:—one may begin it anywhere, anyhow. There are no axioms in its case, as there are in mathematics, and alas! there is no royal road. If you have any private system of your own, and it suits your particular bent, by all means stick to it.

Nevertheless, when this has been said, you will probably still wish for something more positive and definite. It is sometimes pleasant to talk over difficulties, even when one has the foreknowledge that nothing much can be gained thereby:—it is at least a relief to the mind. So, before coming to Japanese in particular, I would draw your attention to one cardinal fact—if you have not noticed it already—which may be predicated of all linguistic study. It is that, broadly speaking, there are two, and only two, systems of learning any language whatever. According to the first of these systems, which is the one infants go on, the language to be acquired is the only one taken into account:—it is conquered by means of itself. According to the second system, which is that naturally fallen into by adults, the language to be acquired is constantly referred, word by word, to another language already known, namely the student's native tongue, which serves as a prop to lean on at every step. Our grammars, our dictionaries, all adopt this second system. They take it for granted that the student thinks, not in the language he is learning, but in his own; they tie him for ever and a day to his mother-tongue's apron-strings, and thereby no doubt earn a gratitude which is deeper in proportion as the learner possesses less linguistic ability. Some few original teachers, on the other hand,—Ollendorf, for instance, in the old days, more or less tentatively, and Prendergast boldly and consistently in his splendid "Mastery System,"—have endeavoured to lead the pupil back to the first plan, directing him, though adult, to learn as if he were a little child. That this first system is the more successful of the two, admits of absolutely no doubt whatever, because we have millions of proofs daily before our eyes:—every child who learns

to prattle in the language of those around it is a walking and talking demonstration of the fact. On the other hand, all the adults who study foreign languages are examples of the relatively poor success of the alternative system. We do not learn to speak Japanese like natives in twenty years,—for all our dictionaries, and our teachers, and our aching heads,—whereas our five-year-old children learn it perfectly, just as, if they were moved to Fusan or to Vladivostok to-morrow, they would in a few months have learnt Korean or Russian perfectly, or any other language under the sun. The question, therefore, is not :—which is the better of the two systems? but : is the infant system possible to adults? A grave question, assuredly, and one which, rather than attempt to answer categorically, I would recommend to your careful cogitation, in the hope that the clear posing of the question may help each, in his different way and degree, to some individual answer calculated to influence his manner of tackling his difficult task. I say it with diffidence, but my own impression is that some few adults *can* learn exactly as a child does, and that the men who do so are precisely those whom we admire as “great linguists.” They do it, for the most part, unconsciously,—at least, so it has seemed to me in the few cases which I have been able to watch. Such master-learners—if so one may phrase it—unconsciously clear their minds of their mother-tongue; they start with a linguistic *tabula rasa*; and so, nothing else being there, the foreign idiom comes in and takes possession. Perhaps that is why people otherwise silly and empty-headed often excel their neighbours in the learning of foreign tongues. Mezzofanti, who spoke fifty-eight languages and ever so many dialects of them like a native, was otherwise quite a commonplace individual. I also incline to think that many adult persons who, without being Mezzofantis, possess a fair measure of the capacity for abstracting from the idiom of their native language, might cultivate and strengthen this capacity by practice, and thereby obtain better results than they at present do. On the other hand, there are no doubt many—especially such as do not begin till after 25 or 30 years of age, when the mind is set hard in its mould—to whom such mental gymnastics are impossible. This is especially apt to be the case when no foreign language of any sort has been learnt during childhood. Perhaps these would do best not to break their heads, sour their tempers, perhaps even injure their health, by attempting to learn Japanese at all; or at any rate they might restrict themselves to the few phrases needed when in conference with the cook or the washerwoman. After all, it is not necessary, even in Japan, for everyone to become a Japanese scholar. I have even heard it asserted that the Japanese prefer those of us who do not speak their language, and I do not doubt but that a considerable element of truth lurks in the assertion.

In any case, were it my duty to settle a curriculum for European students of Japanese, I should (excuse a slightly Irish method of expression) settle two. One of these curricula would exclude the Japanese written character and the book style altogether. It would restrict itself to Romanised Colloquial, unless indeed overpowering practical considerations, in the case of missionaries, made the addition of the reading of the Bible in *Kana* a *sine quâ non*. To these students I would give Imbrie's “English-Japanese Etymology” as their principal text-book, because it treats the language—and that with wonderful mastery and accuracy—from the point of view of those whose thoughts perforce remain enclosed within the pale of English idiom. The higher grade curriculum should be entirely different, and that from the very start. The details would, of course, vary according as the pupils were intended for missionary, consular, mercantile, or other work. But in any case they should (excuse the apparent indelicacy of mentioning my own books; I only do so because I cannot well avoid it in the present connection),—they should begin with the “Colloquial Japanese Handbook,” where, subject to certain concessions dictated by practical considerations, the language is treated, so to say, from the inside. They should pass on

without delay to the “*Moji no Shirube*,” or at any rate to the study of the written character, both Chinese and *Kana*, in some form or other, and stress should be laid on the necessity of weaning themselves altogether from the use of Romanised texts. In Japan, more even than in Western countries, the traditional written system *is* the language. This is a fact which cannot be too strongly insisted upon. Efforts have, it is true, been made to abolish this written system. But you know probably how signally the *Rômaji Kwai* failed in the attempt. Its failure is to be regretted, no doubt,—deeply to be regretted. If the Japanese employed our Roman alphabet, they would be in closer touch with the thought of the West, and the labours of their own school-children would be lightened. But as a matter of fact, the Romanisation movement did fail; it failed totally and ignominiously, and few prophecies are perhaps safer than that any future movement in the same direction will likewise fail. There are several reasons for this; but the overwhelming reason is that, as I remarked just now, the traditional writing here *is* the language. Some of you may think what I am going to say a paradox. It is nevertheless sober truth that the words here in Japan—great numbers of the words; at least—do not precede the writing, but that the writing precedes the words. The proper way of asking the question with regard to thousands of Japanese terms is, not “How is such and such a word written?” but “How are such and such characters pronounced?” It is not that an originally existent sound—*hō*, for example—has been taken and written in different ways to signify a “rule” (法), a “side” (方), an “answer” (報), a “treasure” (寶), a “cannon” (炮), a “country” (邦), “to let loose” (放), “to offer to a superior” (奉), etc., etc. That would not be the historically correct manner of describing the facts. The Japanese pronunciation, with its distressing homophony, is a relatively modern phenomenon. Many of these *hō*'s are even now distinguished from each other in the pronunciation of the Chinese themselves, some being *fa*, some *fang*, some *fung*, and so on. For all we know, every one of the *hō*'s may have been sounded differently in ancient days. In any case, each is quite a separate and distinct word, with an individual history of its own, and it is therefore written with a character of its own. The Japanese pronunciation is, so to say, an accident; to speak more scientifically, it owes its origin to a separate set of causes. Pronunciation apart, the characters are all there, have been there for hundreds or thousands of years, significations and connotations all complete,—mute symbols, but available for use, ready to start into conscious existence whenever some new technical term is required in any of the innumerable arts and sciences and business needs of modern life. All the most delicate gradations of thought are stored in them, and stowed away in drawers and boxes only requiring to be taken out. Without the characters, thousands, tens of thousands of words would not, could not, exist, because it is only from the characters that they derive their being. That is why I say that the written character is the original, the Japanese reading the derivative. This may seem a hard saying, and I have found by experience that persons fresh from home, however intellectual and cultivated, fail to appreciate it, doubtless because the Chinese character takes rank among those numerous subjects in which a certain amount of practical knowledge is an essential condition of intelligent theoretical discussion. A man entirely ignorant of Chinese characters is not in a position to ask intelligent questions about them, much less to understand the answers. But I venture to think that all the “old hands” will confirm to you the truth of the statement I have made. Moreover, any doubts on the subject can easily be resolved:—you have only to study the characters for a year, and you will not then ask for any further proof. All such stock objections as “If the Japanese understand each other when speaking, why can't they understand when the sound of the words is noted down phonetically?” will vanish of themselves. Scales will fall from your eyes, and you will see that the modern Japanese

language without the Chinese characters is not thinkable, because it is a contradiction in terms. Don't mistake me. I do not mean to say that things *might* not have taken another course. The ancient Japanese language of twelve centuries ago is quite thinkable without the characters; and if China had not happened to be situated next door, and had not happened to become Japan's first school-teacher, the language would doubtless have developed along lines of its own. But it has not done so. Circumstances have caused it to develop along the lines of the Chinese characters; and now that the Japanese language is old and fixed in a certain groove, to try to get it out of that groove is a task as vain as were the attempt to get the inhabitants of London or New York to-day to speak Anglo-Saxon. In fact, as I have sought to explain elsewhere, the Europeanisation of Japan in thought and in *things* has produced, and goes on daily producing, an increased dependence on China in *words*, just as we Europeans—the more we go ahead with our telegraphs, our telephones, our photography, and what not, so much the more freely do we draw on the store of ancient Greek to find names for these modern inventions. The process, in both these cases, is perfectly natural and legitimate. Let us, therefore, if we want to know Japanese properly, study *first the characters, next the characters, and always the characters!* There is no other sure road into the intellectual heart of this nation. There is no other way of putting oneself on a level with even the average educated native,—I do not mean of course on a level with Japanese lawyers or professors; that is beyond the power of any foreigner,—but on a level even with the small shopkeepers and our very servants themselves. If the student's memory refuses to retain the whole of the necessary 2,000 or 3,000 characters, let him try to make it keep 1,000. If it won't keep 1,000, let him try for 500, for 250, for 100. Even that small number would be 100 times better than none at all. It would suffice to bring about a sort of internal change in his mind, by giving him a glimmer of insight into the intimate relation between the written character and the spoken speech. It would show him how, for instance, *minami-kaze* and *nam-pū* (南風) “the south wind,” are not, to the mind of a Japanese, two distinct words for the same thing, but merely two pronunciations of the same way of writing. In fact, it would alter and adjust his point of view. His mind would come to be in Japan, as well as his body. If I had the management of young men brought to this country to work among its people, I would take a large hammer and a whole bagful of nails, each nail inscribed with a Chinese character, and I would drive them into their skulls,—a painful surgical operation, perhaps, at the moment; yet I feel sure that those young men would come and thank me afterwards.

* * * *

Well, I set out by pooh-pooh-ing the giving of advice, and here I am giving advice with a vengeance! *Shikata ga nai*. What else is a poor lecturer to do, when his subject is the proper method of studying Japanese?

Besides the one great, fundamental point of the Chinese characters, many minor items on which advice might possibly not come amiss, occur to my mind. For instance, do you sufficiently vary your attacks upon the enemy which you have set yourselves to conquer? Personally, I have found variety most useful, on account of the mental stimulus given by new interests. One day, maybe, one gets hold of some little Japanese poem or proverb, questions concerning which addressed to a native friend bring into view a new world of thought, and consequently of expression. Another day, perhaps, the policeman has come on his monthly round of enquiry, or the postman drops in apropos of an insufficiently prepaid letter or some other mistake. The natural impulse is to let one's “boy” go out and settle the matter. But why not rather face the occasion oneself, and almost certainly gain some new and practically useful term thereby? Or why not write down—if it be but in Roman—some of the songs sung by the school-children, for instance, the “Railway Songs” now so much in vogue? Or, again,

why not tackle the signboards of the street one lives in, and so learn words, characters, and even manners and customs at one and the same time? Your teacher, as an educated man, will be too much ashamed ever to draw your attention to the stall of the fortune-teller or *nin-sô-mi*. But if you notice the inscription of this latter worthy yourself, you will have learnt at least two of the very commonest characters in the language (人相), and you can proceed thence to find out a good deal of what goes on in your house among the servants, who, ten to one, consult the said fortune-teller whenever anything is lost. In fact I, for one, being a little Bohemian by nature, should feel inclined to go off and consult the fortune-teller myself. He would at least give me a lesson in the language, which would be cheap at ten cents. Sitting in a shop or wayside tea-house, and listening to what the other customers say, is an excellent plan. In the railway cars, what else has one to do but listen to the chat of fellow-travellers? But it must be that effective kind of listening, which is itself half-way to remembering. I recollect getting an excellent lesson a few years ago, while paying a visit at one of the legations in Tôkyô, where a young lady, born in Japan and absolutely Japanese in speech, was acting as interpretress to the lady of the house. Said the latter, "Please thank Countess so-and-so for her great kindness in bringing me that lovely figured silk;" and as she uttered the words, I grew quite warm, thinking what an embarrassment I should have been in if asked to interpret such a remark, as I had not the faintest notion of what the correct Japanese for "figured silk" might be. But do you imagine that the fair interpretress construed her task so literally? Not the least doubt but that she was intimately acquainted with the technical term, not for figured silk only, but for each and every article of Japanese haberdashery and female adornment. But she did not use the word on that occasion, because that was not the way a Japanese would naturally express herself. What she did say, with the exact intonation and manner of a Japanese young lady, was simply *O miyage wo arigatô gozaimasu*, "Thank you for your kind present," which is the idiom consecrated by custom for use on such occasions. Of course, I knew the phrase well enough; but I had not thought of it, because the English idiom was ringing in my ears. I have never forgotten the lesson. It is by such means,—here a little, and there a little, one idiom to-day, another to-morrow, some sought out from books, others brought by chance, but only remaining with one if carefully watched and registered,—it is by such varied tactics that victory over this most difficult tongue may be gained.

The choice of a teacher, again:—What a weighty matter, and yet how often stumbled into haphazard, almost without deliberation! What are the qualifications for a good teacher of Japanese? Certainly not knowledge of grammar:—that you can get more intelligibly and compendiously from your European authorities. No, what is wanted is a man with a good accent (above all, beware of Northerners),—a man of fair general education, and, more than aught else, one who likes hearing the sound of his own voice. For silence is *not* golden in a language-teacher. Let your teacher have all sorts of other defects:—he will be sufficiently good if he possesses the crowning virtue of being a chatter-box.

And this leads me to the last item on my list. I have reserved it to the end on account of its importance. I mean the vital question of pronunciation. It has often struck me as matter for surprise that correct pronunciation is not more insisted on. Japanese teachers seem rarely to drill their foreign pupils in pronunciation. They will tell you particular points if you ask them, but they will not themselves introduce the subject. Perhaps their silence is prompted by politeness, perhaps by despair. Be this as it may, the current impression that Japanese pronunciation is easy has, I am convinced, done considerable mischief, and I would beg you forthwith to disabuse your minds of it. No doubt the main outlines of Japanese pronunciation are easy:—there is no such evident crux

in this language as the Chinese tones, or the curious Welsh *ll* which no Saxon ever gets his tongue round, or one or two Russian letters impossible to civilised mankind, or even the guttural *ch* of the Germans. Nevertheless, believe me, Japanese pronunciation is *not* easy. If there is here no great acknowledged stumbling-block, there are, as it were, little pebbles and ruts in almost each letter, lying in wait to trip one up at every step. Perhaps it would be more correct to say that the pebbles and ruts, the asperities, the heavinesses, are in our own native English, and that our tongues, through long usage of so rough a speech as ours, have lost the ability to glide smoothly, as required by the more liquid Japanese. Of course I cannot undertake to give a lesson in Japanese orthoëpy this afternoon. To begin with, I am not competent to do so:—no foreigner is, though a foreigner of some experience, and endowed by nature with what we call a good ear, may well help at certain stages, by pointing out any specially glaring defects. I do not think that there is any better plan to recommend than that of listening to natives very carefully,—listening of course when they are pronouncing for our special benefit; but, as they may then strain a little and consequently become somewhat artificial, I should recommend listening still more attentively when they are conversing among themselves. The tone of voice in Japanese—what has been termed the "language tune,"—differs from our own. English speech is oligarchical. It exalts certain syllables by emphasising them strongly; sometimes it emphasises whole words strongly, at the expense of all the rest. Japanese is democratic:—its words have equal rights. No one who does not set himself to discard our heavy English emphasis can become a good Japanese speaker. Moreover there is a general softness—one might almost say a mincing quality—that runs through Japanese enunciation. To take an instance where, when Romanised, the Japanese word coincides exactly with the English:—*chin*, "a pug-dog," is altogether different from our thick, full English word "*chin*." The *ch* is different, the *i* is different, and the *n* is different, so that the whole word is different, though spelt alike. Or take the village where we are now assembled, the village of what we English speakers call "*Hūkōny*." In so calling it, we mispronounce the *a*, we mispronounce the *o*, we mispronounce the *e*, and we put a wrong stress,—four mistakes in the course of six letters! The Japanese say *Ha-ko-ne*, which is something entirely different. Our "*Hūkōny*" pronunciation is really but a few degrees removed in faultiness from that of the ingenious globe-trotter who called the place "*Hack I*." On your way here, you doubtless passed through the town of *Odawara*, whose Japanese name is scarcely to be recognised in our "*Odëworrer*."—I reckon that we habitually commit five blunders in uttering that single word of four syllables. How many there may be in the way we sound the name of *Miyanoshita*, I will not undertake to say. But I am certain of one thing, which is that the Japanese do not call it *Mere Noshter*, as if it were first cousin to "*mere nonsense*." And it is the same at every turn.

Do not mistake me. I do not wish to be understood as advocating a perfect Japanese pronunciation of such place-names *when speaking English*. We have our own "language tune," to break up which by words in other tunes, inserted here and there, would be practically difficult and would sound awkward. By all means, when we are speaking English, let it be pure English. Let us say "*Paris*," not *Pah-ree*, "*Munich*" not *München*, therefore also "*Hūkōny*," "*Odëworrer*" and "*Mere Noshter*." As a matter of fact, we shall always end by doing so, whether we wish it or no, because the attraction of the rest of the English sentence carries us irresistibly along. But it is surely quite another matter when we undertake to speak Japanese. I venture to doubt whether any native who had had no intercourse at all with foreigners would easily understand even the words "*Tôkyô*" and "*Yokohama*" as we habitually pronounce them. How much less, then, a whole sentence, where each syllable is put more or less out of joint! Truly the fault lies, not in any dulness of Japanese comprehension, but with

ourselves; and it can be remedied to a very considerable extent by imitation, care, constant practice. It is a matter, likewise, that should be attended to from the beginning, from the very day of landing in the country, because otherwise the student, while getting together his vocabulary, will be getting it together wrong; and to correct an error once engraved on the memory is notoriously a far harder task than to learn correctly from the outset. I notice, for instance, that numbers of persons who have resided for years in this country have never got right in the matter of long and short *o*'s. Yet it is really quite a simple thing, requiring but to be observed and set right once for all. In fact, we distinguish long from short vowels in English; and the difficulty here, such as it is, arises merely from the fact that English usage habitually lengthens the vowels of open syllables, whereas Japanese has both long and short open vowels. If no notice is taken of the length or shortness of vowels,—above all if words to be learnt are written down in Roman with nothing to distinguish the two classes from each other,—the error will be perpetuated from day to day, till at last it becomes ineradicable. Now, if you say *kônô* in Japanese when you mean *kono*, you might just as well say "*his*" instead of "*this*." No creature will understand you, unless it be those servants or pupils who, being in daily contact with you, learn to make allowances for foreign eccentricity, just as we old residents make allowances for "*English*" as she is japped," and guess at the meaning pretty successfully, though to any newly landed Anglo-Saxon it is a profound mystery.

In concluding these, I fear, rather too didactic remarks, there is thus a second maxim which I would fain impress upon you strongly. It is the all-importance of attention to the matter of pronunciation. Let pronunciation be your daily care. Nothing can profit you more, whether your aim be real mastery of the language or only a modicum of the colloquial. Japanese deserves taking trouble about; for, with all its difficulties, have we not the immense encouragement of knowing that it is an important language? We students of Japanese are not expending our energies on some poor crumbling speech of Ainos, or South Sea Islanders, or American Indians, where not the language only, but the race, together with all that charity may attempt for the race, is doomed to rapid extinction. On the contrary, Japan, always great and interesting in the past, stands forth to-day as one of the foremost nations of the earth,—a nation whose future announces itself in the brightest colours. Japan has a literature worth studying; she has a people worth helping,—a people, too, from whose sturdy character and many other admirable traits we ourselves have much to learn. No doubt it is a pity that the language should chance to be so exceptionally difficult a one. But again, *shikata ga nai*. The ambitious student will perhaps be all the better pleased to know that he has a hard fight before him, and thus be able to feel that his spurs are worth winning.

THE HOUSE TAX.

From enquiries made at the Yokohama City Office relative to the matter of the house-tax, we learn that the Authorities will issue on August 7th a notice warning owners that payment of the tax is due in Yokohama besides the special additional house-tax for the 34th fiscal year (1901-2) and the special house-tax for the first-half of the 35th fiscal year (1902-3). In the event of the order not being acquiesced in, distraints will be enforced later on, pending the decision of the arbitration court.

The *Asahi* reports that several days ago Messrs. Jardine, Matheson & Co., of Yokohama, sent a note to the Yokohama City Office demanding payment of charges for four months' storage of 333 *kin* of silk, which were legally attached about four months ago in connection with the house-tax distraint. The Mayor of Yokohama has refused to accede to the demand on the ground that there is no such provision in Japanese law.

THE INDUSTRIES BANK AND THE INDUSTRIES ENCOURAGEMENT BANK.

The Industries Bank (*Credit Mobilier*) has decided, it is said, to make its first issue of debentures. The total amount will be 2 million *yen* and the rate of interest $6\frac{1}{2}$, the face-value of the debentures being 50 *yen*. But the exact date of issue is not yet announced.

The Industries Encouragement Bank (*Kwangyo Ginko*) is also said to be about to issue one million worth of debentures, its fifteenth issue.

THE CORONATION.

Though the proceedings at the meeting of British residents on Tuesday were private, it certainly can do no harm to say that the action of the Yokohama Japanese banks in voluntarily agreeing to close on the 9th in celebration of the Coronation was the subject of much gratified comment by members of the meeting.

KOBE.

In Kobe the British residents have resolved to confine their celebration to an Evening Fête on the Cricket Ground from 9 o'clock, the afternoon fête for children having been postponed to Nov. 8th. A coronation service will be held at 9 a.m. on Aug. 9th in All Saints Church. In the case of the service as well as of the fête all are invited to attend in ordinary costume.

YOKOHAMA.

It is understood that Sir Claude Macdonald, the British Minister, will be present in an unofficial capacity at the Yokohama celebration, and as already intimated the affair will be of a purely popular nature. The coronation service will begin in Christ Church at 10 a.m. A cricket match, which is quite unconnected with the celebration, will commence in the forenoon and last the greater part of the day. Tiffin will be served in the pavilion. While the cricket match is in progress yacht races will be going on, one Coronation prize being offered in each class. The day's proceedings will wind up with an evening fête and there will be fireworks. It is to be hoped that the weather will be fine.

KARUIZAWA.

A lady correspondent writes:—Are you warm in Yokohama? When I left the other day there were signs that the long-delayed summer was really about to put in an appearance, so perhaps you may appreciate the news when I tell you that up in this delightful mountain village I am going to bed under six thicknesses of blanket and even then find a hot-water bottle grateful and comforting to my poor, cold—well “understandings.” We are going to have a Coronation Celebration all on our own account. We shall begin the day with Holy Communion, then pass on to a general thanksgiving service in which all may join, using the Union Church for both celebrations, as the Episcopal Church is too small for the huge crowds now assembled here. In the afternoon the little ones, and children of a larger growth too, will have sports and tea together in some lovely private grounds. At 5 p.m. the British residents will meet to drink the toast of “Their Gracious Majesties King Edward and Queen Alexandra,” and we will let off all the patriotism possible. In the evening everybody of all nationalities, languages, and peoples, will meet at a miscellaneous concert. In this connection the Committee thoughtfully direct our attention to item 7 on the programme. I turned to it at once and found the mystic word, “Collection”—so that's all right. Now don't you think we are in for a rare, good old time? By the way, three-quarters of Yokohama's feminine attractions are up here—(here follows a list of ladies, which we refrain from printing)—and quite half of Kobe's. I am meeting all sorts of old acquaintances, and despite the rain and mist that has

been atrociously *en evidence*, every one seems happy, in the best of good humour with themselves, the place, and the world at large, and therefore life is altogether delightful all round.”

A Constantinople telegram says:—“The Sultan, being desirous of giving some special mark of his friendly feeling towards King Edward, on the occasion of His Majesty's Coronation, intends sending one of the Imperial Princes to Mr. de Bunsen, the British Chargé d'Affaires, to express his congratulations on the auspicious event. The Ministers will also pay visits to Mr. de Bunsen, and on the evening of Coronation Day, a Turkish military band will play on H.M.S. *Imogene*, on board of which vessel Mr. and Mrs. de Bunsen will hold a reception of members of the British Colony. The Sultan, furthermore, proposes giving orders that military bands shall play in honour of the Coronation in every town in the Turkish Empire where there is a British Consulate.”

Dramatic and even tragic are the only words which can be used to described the remarkable scene in Westminster Abbey on 24th June. Everything was in progress for the rehearsal of the Coronation Ceremony, the band on the organ screen was performing the brilliant march by Saint-Saëns, when of a sudden the stupefying intelligence of the King's illness arrived. A group of prominent persons was formed, including the Dean of Westminster, Canon Robinson, Canon Duckworth, Lord Esher, the Bishop of London, and others. It was seen by the observers that something very serious had occurred. The march terminated, and Sir Frederick Bridge rose and requested silence. By this time most of the vocalists had also arrived. Amid deathly silence the Bishop of London rose and announced the news. At his request the whole assembly then fell on their knees, and the Bishop of Bath and Wells, who was to have sung the Litany, together with the Bishop of Oxford, on the Thursday, took up his position at the Litany stool, and the whole choir, accompanied on the organ by Mr. Walter Alcock, joined in singing Tallis's beautiful Litany and the well-known hymn, “O God, our help in ages past.” And then the words of blessing were gently pronounced by the aged Dean. Thus terminated perhaps the most impressive and painful service which has ever been heard within the walls of the Abbey.

EDWARD THE SEVENTH.

Ev'ry thought throughout the nation
Dwells upon the coronation
With joyous songs the world shall ring;
And with British reputation
Rouse the Empire's acclamation
Defend the faith! God Save the King!
Thrilling sounds from ev'ry steeple.
Hear the joy bells of the people.
Eager their loyalty to show.
Shouting greetings as he passes.
Ever staunch and true the masses
Vent their good-will with hearts aglow.
Endear'd to all long both have been;
Now we give the toast remaining,
To Their Majesties while reigning.
Health and long life to King and Queen.

S.S. *Forerice*.

D.A.G.

THE NAGASAKI HOTEL.

At the annual meeting of the shareholders of the Nagasaki Hotel, Ltd., on July 30th, the Chairman, Dr. R. J. Bowie, in putting the report and accounts before the meeting, said: We regret that we are unable to place before you a more satisfactory statement of affairs, but we are sure you will agree with us that the past six months have been quietest known in Nagasaki since any of us arrived, and as is natural, the hotel has suffered from the depression. I can assure you that it has been a very difficult task to make our working expenses, in fact during the first three

months of this year we found ourselves working at a loss. Respecting the property of the company, you will notice that very little has been expended for the half year, a fact on which we can congratulate ourselves. Your directors having frequently inspected the buildings etc., are able to assure you that they in a first class condition. Owing to the drop in silver exchange it was found necessary to write off *yen* 2,375 from the Investment Account, and the amount has been debited to Profit and Loss Account. I may state, as there has been some talk of our not having debited the interest charged for debentures, that as a matter of fact on July 1st our Profit and Loss Account showed a debit balance of *yen* 7,711.84—to which, according to precedence, we made no reference in our report—and for which provision will be made in the next account. The report and accounts were adopted.

YACHTING.

Last Saturday's programme provided for three races. The weather was, however, so little promising, that the 39 raters preferred not to start for the “Maid Marion” Cup over the 22 miles long course to Bansu Hana and back. The cruising class started with the exception of *Daimyo* and *Svanhild*, which were bound for Uraga, at 1.30 with a light breeze, consisting of *Asagao*, *Surprise*, *Mosquito*, *Virginia* and *Molly* in the order named. At the Harbour Entrance, however, the breeze fell so calm, that most of the yachts anchored in order not to be taken too far out of their course by the strong tide then coming in, and *Molly* soon after gave up. At about half past three a little breeze came up from the north west and *Surprise* was seen to lead out of the Harbour Entrance followed by *Asagao*, *Virginia* and *Mosquito*. The wind soon freshened, and at the Tsurumi Mark the times were: *Asagao* 4.01.20; *Surprise* 4.02.00; *Mosquito* 4.02.10; *Virginia* 4.04.10. Spinnakers were then set to starboard and the Lightship was passed as follows: *Asagao* 4.28.20; *Mosquito* 4.31.20; *Surprise* 4.34.05; *Virginia* 4.35.20. *Mosquito* further shortened the distance between her and the leader, and the Honmoku Buoy was passed thus: *Asagao* 5.02.40; *Mosquito* 5.03.10; *Surprise* 5.12.00; *Virginia* 5.16.30.

The yachts had now to beat back to the Lightship, in which *Mosquito* lost a little ground, the wind freshening meanwhile and developing into a nice sailing breeze with an occasional squall. The Lightship was rounded as follows:—*Asagao* 5.45.35; *Mosquito* 5.47.20; *Surprise* 5.58.00; *Virginia* 6.13.45. The yachts were completely hidden now by the mist and rain coming down fast. *Mosquito* stood out on the port tack while *Asagao*, thinking to avoid the tide better, stood in towards the breakwater, but, when they crossed tacks, the leaders were so close together, that it was difficult to say which had the advantage. *Asagao* however managed to get ahead of her larger sister again and finally finished 2 minutes and 3 seconds before *Mosquito* whose handicap from the winner was 2 minutes. As the time limit expired at 6.30, it will be seen from the following times, that the yachts only just succeeded in making it a race. The result of the race was as follows:—

	Finish.	Handicap.		Corrected.
		Club-time	Arbitrary.	
<i>Asagao</i>	6.25.35	... 5.26	... allows	6.25.35
<i>Mosquito</i>	6.27.38	... allows	2	6.25.38
<i>Surprise</i>	6.37.40	... allows	7	6.30.40
<i>Virginia</i>	6.56.55	... 11.40	... 9	6.47.55

It may be mentioned that *Virginia*, although a new name, is the former *Ideal* built in 1896, which was successfully raced by her then owner during the season of 1897.

Asagao therefore takes the first prize, the “Scandinavian Residents' Cup” and two record points, and *Surprise* second prize and one point, *Mosquito* having declared not to accept it on account of having taken passengers on board during the race.

The 12 raters raced over the usual course with the result of *Dora* winning the prize from *Thelma* by about 5 minutes.

"THE CHRISTIAN DAIMYO."

PREFACE.

To-day, when we find that Japan has reached a certain degree of occidental civilization and is inclined to seek alliances with European nations, it may not perhaps be inopportune to throw a retrospective glance on an analogous situation which this country occupied at the commencement of the 17th century. On that occasion Japan's debut in European civilization was one of the most promising, but all that she then borrowed disappeared suddenly without leaving even a trace behind. It may be that in reflecting on the events that brought about so deplorable a result, the Japanese, more conscious of their strength, will lay aside their unreasonable distrust and fear, and that the foreigners, less fanatical and less greedy, will henceforth rival the missionaries in charity and the merchants in probity.

"The Christian Daimyo," despite its apparently superannuated title, will perhaps be a means to this end. It is an abridgment of the religious and political history of Japan from 1549, the date of the introduction of Christianity into this country to its extinction, which took place towards 1650. It will indicate who were the Christian *Daimyo*, what were the motives which led to their conversion, what was the rôle they played from the political and religious point of view, and finally what were the reasons which drove them to apostasy. It will then show the conduct of the missionaries of the different congregations, as well as that of the foreign merchants who frequented Japan during this epoch. It will rectify, in fine, as much as possible, a great number of errors which many Japanese and foreign publicists have fallen into in dealing with this subject owing to ignorance or prejudice.

The documents on which this study is based have been taken from the letters of missionaries formerly active in Japan, of which letters the library of the Imperial University has furnished me with a great number. Others have been lent to me by the Jesuit Fathers of Shanghai and by individuals residing in Japan. Several descendants of the Christian *daimyo* have had the kindness to place their genealogies as well as the annals of their families at my disposition.

The numerous histories of Japan have likewise furnished me with a quantity of information, especially in connection with facts purely political. It goes without saying that these histories written for the most part under the Tokugawa regime, approve blindly of the most unjust deeds of the powerful Shoguns, and always find the foreigners in general and the missionaries in particular in the wrong.

LIST OF DOCUMENTS.—LETTERS OF MISSIONARIES.

1. Cartas de Japão. Collection of letters from 1549 until 1566.
2. Briefe aus Japan. Another collection from 1548 until 1585.
3. Collectio selectarum epistolarum ad socios in Europam. Collection made by John Maffei, S.J.
4. Alcune lettere delle cose del Giappone 1579-1581.
5. Avvisi del Giappone de gli anni 1582-1583.
6. Lettera annua del Giappone 1596.
7. Lettera annale del Giappone scritta al Padre generale della Compagnia di Gesu 1588.
8. Lettere annue de Giappone 1622.
9. Relatione della persecuzioni in varii regni del Giappone ne gl'anni 1628, 1629, 1630.
10. De rebus Japonicis, Indicis, Peruanis epistolae recentiores, a Joanne Hay Scoto, in librum unum coarctatae. Collection of letters from 1577 until 1601.
11. Fasciculus e Japonicis floribus. Containing the names of about all the martyrs in Japan, as also the dates of their deaths. Printed in 1646.
12. Histoire de la religion chrétienne au Japon (1598-1651), par Léon Pagès.
13. A Japanese translation of the Manila Annals concerning the Japanese exiles in the year 1614.

HISTORIES OF JAPAN.

1. Kiûshu-ki, or history of Kiûshu.
2. Ashikaga Kiseiki, history of the Ashikaga family.
3. Miyoshi-ki, history of the Miyoshi family.
4. Nihon Gwaishi, } Both of the best histories
5. Koku-shi-riyaku, } of Japan.
6. Taikô-ki annals of the Taikô.
7. Chôsen Seibatsu-ki. Expedition against Korea (1592).
8. Osaka Kei-gen-ki, history of Osaka during the years 1614 and 1615.

9. History of the Empire of Japan, printed in 1893.
10. Dai Nihon Shôgyô-shi, history of the commerce of Japan.

CHAPTER I.

Arrival of Francis Xavier in Japan.—His visit to the *daimyo* of Kagoshima.—His residence in that town.—His journey to Hirado, to Yamaguchi and to Kyoto.—Political and religious state of Japan at this time.—Return of Francis Xavier to Yamaguchi.—His visit to Otomo, *daimyo* of Funai.—His departure from Japan.—His death.

The 15th of August, 1549, the day on which Francis Xavier arrived at Kagoshima, will undoubtedly remain a memorable date in the religious and political history of Japan. It marks in fact the first attempt to add to the great Christian family this singular people whom an abyss had hitherto isolated. From this epoch also dates the commencement of official relations between Europeans and these islanders, ignorant till that moment of the very existence of our continent. For the few voyages undertaken by the Portuguese merchants since 1542, had had no other result than commercial transactions, very advantageous as a rule for the Portuguese.

To the extraordinary qualities which the celebrated Jesuit already possessed, his apostolic vocation had added that intrepidity, that immovable conviction which prevails against insurmountable obstacles. From the time he heard the story of the Japanese whom he had welcomed in the Indies, he resolved to seek the Emperor of Japan and enrol him under the banner of Christ. It was under the influence of this transport of enthusiasm that he induced the Viceroy of the Indies and the Governor of Malacca to furnish him with letters conferring on him a quasi-official character, and then set out at once for Japan. Two other Jesuits, Father Cosmas de Torrez and Brother John Fernandez, as well as three Japanese neophytes, accompanied him.

About a month after his arrival at Kagoshima, he solicited and obtained an audience with Shimazu Takahisa, *daimyo* of that district, a man who, utterly indifferent to every religious doctrine, only dreamt at that time of fighting with his neighbours and of increasing his territory at their expense. In spite of these unfavourable indications, Francis Xavier was nevertheless received with deference. In the belief that this preacher whose influence had been represented to him as considerable, might possibly be of some use to him, in his relations with the Nambanjin, (1) Shimazu took much interest in the newcomer and gave him complete liberty to preach in his domains.

Xavier immediately set to work. As he was not yet able, however, to express himself correctly in Japanese, he contented himself with reading to his hearers, either the catechism or the Gospel of St. Mathew which one of his Japanese companions had translated for him. His success was not encouraging, however, for at the end of a year he could only count some one hundred converts. But insignificant as was this result of his preaching, it nearly caused a disturbance. The bonzes suspected a dangerous adversary in this austere foreigner and demanded his expulsion from the country. Shimazu at first refused to accede to this demand, but seeing that things were wearing a dangerous complexion, he gave in. Xavier, after having confided the neophytes to the care of one of his Japanese companions, set out with the others for Hirado.

Before leaving the domains of Shimazu, however, the exiles experienced a last consolation. At a distance of six leagues from Kagoshima was at that time situated the castle of Hexandono, (2) a near relative and vassal of Shimazu. This lord not only received the travellers with hospitality, but after having heard from them the principal truths of the Christian religion he had his wife, his eldest son, and several of his retainers baptized. He himself would willingly have followed their example but the fear of displeasing his master prevented him. (3)

(1) Barbarians from the South. A name given to the Portuguese because of their coming from the Indies.

(2) It is impossible to identify the name of this personage, or the exact place where his castle was situated.

(3) *Cartas de Japão*, p. 279.

Some days later Xavier entered the port of Hirado, where several Portuguese ships were then anchored. His fame had preceded him thither; and, wishing to let the natives of the island see the veneration they entertained for the great apostle of the Indies, the Portuguese gave him a veritable ovation on his arrival. Matsura Takano, *daimyo* of Hirado, vied with the Portuguese merchants in his kindness and courtesy and received the missionary with great pomp. Matsura was that type of dissembler who conceals under a varnish of exaggerated politeness the most revolting deceit. Living in a state of poverty that was closely akin to misery, he might almost be described as a pirate, ravaging continually as he did the coasts of his neighbours, rather than a *daimyo*. The foreign ships, which had just then entered the port of Hirado for the first time, he regarded in the light of messengers of fortune, and he hastened to welcome them with well simulated heartiness. Perceiving the ascendancy that Xavier and his companions exercised over the Portuguese he understood that it would be greatly to his interest to treat them with regard. Another motive which led Matsura to show himself kindly disposed towards the preacher, was the deep hatred he entertained towards the *daimyo* of Kagoshima, his mortal enemy. As the latter had just expelled them the crafty Matsura resolved to receive them with open arms and thus to monopolize at one and the same time the foreign missionaries and the foreign merchants, to the great detriment of Shimazu.

In spite of, perhaps on account of, this excess of affability on the part of Matsura, Xavier was not deceived for a moment as to his final intentions. He thanked him for the favours that he promised to lavish on the preachers of the Christian religion without, however, counting too much on those favours. At the end of several weeks, Xavier gave Father de Torrez charge of the isle of Hirado; while he himself, taking with him three companions, set out for Yamaguchi, the residence of the wealthy *daimyo*, Ouchi Yoshitaka.

At this time Yamaguchi was, next to Kyoto, the most considerable town in Japan. The number of its inhabitants was reckoned at about 50,000, and it was not only a centre for carrying on commerce with China and Korea, but also the resort of savants and the refuge of a great number of *Kuge* (4) whom poverty had driven from the imperial court. These *kuge*, with their hereditary contempt for the profession of arms, had brought to Yamaguchi all the frivolous amusements of the court of Kyoto, the sumptuous toilets, the dances, the poetical competitions, the game of tennis, the insipid manner of preparing and drinking tea, etc. *Daimyo* and *samurai* conceived little by little a liking for this effeminate life and it was thus that Yamaguchi, where wealth abounded, became a city devoted to pleasure and to debauchery.

It goes without saying that such a place as this hardly answered to the dreams of a preacher of Christian morality. Nevertheless as soon as Ouchi learned that a foreign priest accompanied by several disciples had arrived in Yamaguchi, he manifested curiosity to hear him. Admitted to the residence of the *daimyo*, Xavier explained his object in coming to Japan, and explained some points of the Christian doctrine as well. Ouchi approved the religion of the foreigner and authorized him to preach it in the town. At the same time he frankly confessed to Xavier that in view of the fixed habits of life into which he had fallen it would be impossible for him to ever become one of his disciples.

It was at Yamaguchi that Xavier must have first become acquainted with one of the characteristics drawbacks of this people, with whom he entertained such great sympathy. The children, so terrible in this country, and probably the most ill-disposed towards foreigners of any children in the world, pursued him in the streets, overwhelmed him with their mockery and threw stones at him. Sometimes adults, even *samurai*, surpassed the children in thoughtlessness and want of consideration—to use no harsher terms—

(4) Nobles of the Imperial Court and relations of the Emperor.

and thus showed how much the rights of hospitality were unknown in Japan. Xavier was deeply mortified at this behaviour; his letters generally full of eulogy whenever they speak of the Japanese, enable us to divine the pain these regrettable occurrences caused him. It may even be supposed that this hostile disposition on the part of the populace contributed in no small degree to hasten his departure from Yamaguchi and induce him to direct his steps towards Miyako(5) as Kyoto was then called.

He longed, however, to seek the Emperor of Japan and to present to him the letters and presents with which the Viceroy of the Indies and the Governor of Malacca had entrusted him. He had already become convinced that as long as he was at the mercy of the different *daimyo* who tolerated or prohibited his preaching just as their caprice dictated, the Christian religion would have hardly any chance of penetrating among the masses. A general permission from the Emperor should, it seemed to him, put an end to all these difficulties.

But what was his disappointment to find on arriving in Kyoto, not the all powerful Emperor on whom he based all his hopes, but a poor old man destitute of all authority. Since Minamoto Yoritomo had in 1192 assumed the direction of affairs with the title of Shogun, the prestige of the Emperors had only decreased from reign to reign till it had finished by disappearing almost completely. At the time of Xavier's arrival in Kyoto, the Emperor Go Nara was without any influence. Reduced to live on whatever help some of the *daimyo* were good enough to send him, he led with his multitude of relations a most miserable existence. His palace was nothing better than a huge ruin into which thieves found their way at will, and from which they carried off even the little that was left. The princesses and the ladies of the palace used through the breaches in the outer wall to hail the peripatetic merchants of cakes and sweet potatoes in order to procure for themselves at a low price the little dainties of the common people. The ceremonies which marked an accession to the throne as well as those which accompanied a funeral could no longer take place for lack of funds. Hundreds of famished *kuge*, all more or less related to the Emperor, claimed unceasingly the protection of the latter, and thus added the last touch of misery. It was for this reason that several of them had abandoned the court and sought a refuge, either with hospitable *daimyo* like Ouchi, or even with wealthy peasants. The only means left to the emperors for raising a little money consisted in the sale of titles of nobility. This was one of the few prerogatives of which the Shoguns had not despoiled the emperors. Were a *daimyo*, a minister, a *samurai*, or even a simple merchant to desire any title whatever,—and Heaven only knows how often the case occurs in Japan,—then the imperial court alone could confer it on him, for cash down of course. Thus it was that through their own fault, through the blessed inertia they had sought in Buddhism, the emperors of Japan had come to be disowned by the great and ignored by the people. Before becoming devotees of Buddha the Mikados, regarded as gods according to the Shinto doctrine, governed their subjects themselves and were venerated by them. But Buddhism with its inevitable consequence of annihilation soon converted them into bonzes whose only occupation was meditation. Already in the year 586, the Emperor Yomei had declared himself a disciple of the new religion and his son, Shotoku Taishi, became a most ardent apostle of it. From that time the emperors rivalled each other in their zeal for Buddhism. Several princes of the blood became bonzes, whilst not a single one deigned to become a Shinto priest, even at Ise in the great national temple. Moreover from the time of the Emperor Reizei (968-969) to that of the Emperor Kokaku (1780-1816) they exchanged the title of "Tenno, King of heaven," for that of "In, monastery" a more modest title and one more suited to disciples of Shaka.

Such was in 1550 the situation of the Emperor Go-Nara, but that of the Shogun Ashikaga Yoshi-

teru was still more critical. In place of directing events he was being tossed about by them till such time as the inevitable shipwreck would come. The power of which Takauji, the first Ashikaga, had possessed himself with so much ability in 1336, had in the end been frittered away in the hands of his incapable successors. In 1550 the Shogun had hardly any more authority than the Emperor and while the latter was at least left tranquil in his palace, the Shoguns were attacked on several sides. The *daimyo*, who were getting more and more independent, had not only shaken off a yoke that had become insupportable but the most audacious of them aspired to govern the Shogun himself while taking for themselves the office of "Kwanryo," equivalent then to that of Prime Minister.

It may be easily understood that in this confused condition of affairs, the Europeans, when they first arrived in Japan, could not see exactly how matters stood. Thus they bestowed the title of Emperor on him who to all outward appearances possessed imperial power, whether a Shogun like Yoshiteru, or Naidaijin (6) like Nobunaga, or a Kwampaku (7) like Hideyoshi. As for the real Emperor, whom Europeans of to-day generally call by the name of Mikado, he was in their eyes only a religious chief, a sort of great bonze whom they entitled the Daii. The *daimyo*, in view of the entire independence with which they governed their domains, made laws and struck money, were all regarded as kings, and were consequently called kings by the newcomers.

However the greatest power was then in the hands of the bonzes. Sheltered behind the great Buddha they did exactly what they pleased without anyone doing aught to remonstrate with them. Rich in the goods of this world they testified their gratitude to the gods by spending these goods in the most agreeable manner possible. A long time before, they had exchanged the prayer-book for the sword and had formed orders half religious, half military, something like those of the Templars and the Teutonic Order. Skill with warlike weapons was the best sign of a vocation. Besides, all the masterless *samurai*, ruined or deposed *daimyo*, and in general all the outcasts were drawn towards these rich monasteries, where they found not only a lodging but also something to do. The prestige of these bonzeries was such that not a dispute was settled nor a matter of any importance discussed without their support being asked. Nei her the Emperors nor the Shoguns even at their highest pitch of power could venture to oppose these redoubtable bonzes, whose number and influence enabled them to have their way in everything. At Hiei-zan alone, a celebrated mountain situated to the north east of Kyoto, they numbered more than three thousand. On the least contradiction they took up arms and descending from their mountain with the "Mikoshi," a kind of sacred ark ahead, they presented themselves before the palace of the Emperor or that of the Shogun, according as they had a crow to pluck with one or the other. Matters had gone to such extremes in this connection that the Emperor Shirakawa (1073-1086) had confessed that there were three things over which he had no control: the waters of Kamogawa, (8) dice, (9) and the bonzes of Hiei-zan.

The bonzes might have confined themselves to these clamorous manifestations but unfortunately their intestine struggles often degenerated into veritable civil wars devastating entire provinces. Shortly before the arrival of Francis Xavier at Kyoto, the people belonging to the Nichiren sect attacked the Hongwanji, the greatest temple in Kyoto, and reduced it as well as half of the city to ashes. Besides, the discord which arose as a result of this disaster had reached an inconceivable degree of acuteness and had threatened to lay waste with fire and sword the provinces adjoining the capital.

Add to this that the bonzes gave themselves

(6) Minister of the interior.

(7) Sort of mayor of the imperial palace.

(8) A river which traverses Kyoto and whose waters flood the town from time to time.

(9) Dice symbolise the games of chance to which the Japanese are much addicted.

over without restraint to every form of vice. There was indeed such a divergence between their precepts and their conduct that it might reasonably be asked if there was a single one of them who still observed the rules imposed on him by his state of life. The people regarded indeed with no favourable eye the unrestrained debauchery of their pastors, but whether the ascendancy which the latter had gained had, as it were, fascinated them, or whether after all their ministry appeared to the people to be absolutely necessary to them, certain it is that the people tolerated their disorders. They were convinced that the bonzes alone could recite prayers with efficacy and ward off the pains of hell. The people had only to provide for their maintenance: that done they might fold their hands in peace, the bonzes were responsible for the salvation of all. This easy system of morality was besides very much to the taste of this easy-going people, very little inclined towards the severer virtues, and this was still another reason which made them indulgent towards the bonzes.

From this short sketch the reader may easily see that Kyoto hardly answered the expectation which Xavier had formed of the capital of Japan. He was, however, the first to perceive his error. After having in vain sought an audience of the Emperor and of the Shogun he learned that this favour was only obtained by a lavish expenditure of money, which, however, he did not possess. Considering then that neither the Emperor nor the Shogun was in a position to authorize him to preach all over Japan, he decided to attempt no more in that direction. He was also obliged to give up his preaching in the streets of Kyoto for he was met by the coldest indifference. Decidedly the success he had promised himself by his journey to Kyoto had to remain an unrealized dream.

Without delaying himself by useless regrets he quitted this city after having been there hardly a fortnight. Embarking on one of the junks which descended the Kamogawa to Sakai, he immediately set sail towards Hirado without even stopping on the way. Having failed both with the Emperor and with the Shogun he understood that it would be necessary for him to gain over one by one the different *daimyo* if he wished to reach the entire nation. As Ouchi had seemed to him to be one of the most powerful of these he resolved to return to Yamaguchi and install himself there, at least temporarily. It was to Ouchi, too, that he resolved to present his letters of recommendation as well as the presents at first destined for the Emperor.

On reaching Hirado he communicated his project to the Portuguese, of whom a certain number then resided there. These promised to give him moral and pecuniary support in all his enterprises. They also signified to him that a little more care in his dress would not fail to produce a better impression on the Japanese, with whom exterior appearance was everything. Xavier gave ear to this prudent advice, with the result that from this day he never appeared in public save in as ceremonial a dress as his high mission required.

Great was the surprise of the proud *daimyo* of Yamaguchi when he saw the foreign priest, whom some months before he had regarded as a kind of dreamer, come to present him with letters and presents on the part of the Viceroy of the Indies and of the Governor of Malacca. These presents, which consisted of a little clock, a musical instrument and several other objects up to that time unknown in Japan, produced a marvellous effect. Hardly had Xavier withdrawn when one of the first retainers of the *daimyo* presented himself at his abode carrying on the part of his master a large sum of money. Xavier refused this gift, however, and contented himself with asking for himself and his companions permission to preach freely in the territories of Ouchi. This permission was immediately granted and written notices publishing the fact were displayed in several parts of the town. Thanks to the good will of Ouchi and to the unselfishness of Xavier the preaching of the missionaries was attended by unexpected success. In two months there were in Yamaguchi itself about 500 neophytes, among them several *samurai* of the highest rank.

(5) Miyako signifies capital.

Heaven knows what patience Xavier had to display in dealing with the quibbling and sceptical Japanese before being rewarded with such a result as this. His letters give us some idea of the subtlety and of the naïve want of logic which appeared in most of their objections. It was also at Yamaguchi that Xavier drew the portrait of the missionary called to preach the Gospel in Japan. One experiences a sort of shudder on seeing the degree of virtue, of science and of abnegation he requires of those who devote themselves to this ministry.

The church of Yamaguchi established, Xavier turned his eyes towards Funai, the residence of the *daimyo* Otomo Yoshishige. A long time before this, that *daimyo* had expressed a desire to hear the foreign preacher, and as at this moment he repeated his request, Xavier accepted his invitation. Before leaving Yamaguchi he once more exhorted Ouchi to change his conduct and warned him very seriously that chastisement would soon overtake him. The sequel will show that Xavier was not deceived.

Having left Yamaguchi towards the middle of September, 1551, Xavier arrived some days later in the territory of Otomo Yoshishige. Otomo was at this time the most powerful *daimyo* in Kiushu and one of the greatest in Japan. His power extended over several provinces. He was about twenty years of age and was extraordinarily gifted. From the first voyage of the Portuguese to Funai, the capital of the province of Bungo, Yoshishige, still a child, had given manifest proofs of uncommon straightforwardness and honesty. On beholding the great wealth of the foreigners his father, Yoshiaki, had been dazzled by it, and had, in his ardent desire to possess himself of it, agreed with his council to massacre the Portuguese and to seize upon the merchandise and the ships. This act of brigandage was on the point of being carried out when the young Yoshishige intervened in favour of the strangers, and pleaded their cause so well that his father revoked his decision. Such was the personage before whom Xavier now went to present himself.

When the humble Jesuit approached Funai, the Portuguese, at that time rather numerous in this town, received him with almost royal pomp and accompanied him to the residence of the *daimyo*. As soon as Yoshishige saw Xavier he conceived a lively affection for him. The ardent faith which was reflected from the countenance of the apostle gave him an appearance so majestic and supernatural that the young *daimyo* was profoundly impressed by it. He welcomed him with all the affability which the Japanese know so well how to show towards those that please them. Xavier was affected even to tears by this reception and Otomo Yoshishige acquired then and there his love and devotion to the fullest extent. Otomo signifies "great friend" and from that day Yoshishige became the greatest friend that Xavier had among the Japanese.

Admitted to the intimacy of the *daimyo*, Xavier undertook to explain to him the truths of the Christian religion. Yoshishige acceded all the more readily to this desire as he was himself very anxious to get some account of the foreign doctrine. With this object in view he invited Xavier to preach in his residence, where the most distinguished retainers, the savants, and several bonzes of rank formed a large audience. (10)

(10) Mr. Griffis pretends to know that Xavier had never been capable of preaching in Japanese, that he scarcely knew the first rudiments of this language. It is difficult, of course, to tell what facility Xavier acquired in speaking this ungrateful tongue, but at all events he was able, after a close study of two years, to make himself understood by his audiences as is still in our days the case with all the Catholic missionaries. Besides it is not for Mr. Griffis to constitute himself a judge in so delicate a question, he who, after having been eight years in Japan, has not succeeded in acquiring the first elements of this language. When one sees him translate such ordinary words as *daidokoro* by "great place," *taimatsu* by "great torch," *ippiki* by "animal," *aru beki* (?) by "served you right," one is led to put him in the same category with the Pierre Lotis and the de Rosnys. Occasionally the learned professor permits himself the liberty of even creating new words, for example *hashira-gami* (?) which he renders deliciously by

In spite of this fair prospect of success Xavier only passed two months at Funai. Pressing necessities claimed his presence in the Indies the evangelization of which had been confided to him. Moreover, orders from Europe enjoined him to turn his attention to China. Besides, the Church of Japan was founded: Xavier had only to confide it to the zeal of the disciples that he had formed by his example. On the 20th of November, 1551, he went to take leave of Otomo and as a last adieu he assured him that he would die content when he would have learnt of his conversion to Christianity. Xavier did not enjoy, however, the consolation of learning this happy news: a premature death came in the following year to tear him from his apostolate at the very moment he had set foot on the soil of China. (11)

ATTEMPTED BURGLARY IN YOKOHAMA.

During the heavy rain-storm of Sunday night a thief attempted to enter the premises at No. 22, occupied by Messrs. Bruhl Freres, but failed completely in his object. The burglar, who evidently had been attracted by the sight of a big fire-proof safe standing close to a window looking out on Water Street, forced open the shutters guarding the window and then cut a neat circular hole in the $\frac{1}{4}$ -inch plate-glass, with the idea, we presume, of putting his hand through and springing back the hasp. But he had reckoned on false premises, for behind the plate-glass was another sheet of frosted glass let loosely into a groove, and this simple device ruined the thief's plans. For, on attempting to cut a hole in this also, he forced the whole sheet out and the glass falling to the floor with a crash aroused the night staff. The watchman hastened to the room but the burglar had evidently thought it best to decamp and no trace of him could be found. The police were at once communicated with, but so far they are without a clue. In a conversation with Mr. B. Abenheim, we gather that he opines to the belief that the burglar was a foreigner, as a Japanese cracksman would have studied his subject better and would have begun operations in a more secluded spot than a window immediately facing the Hongkong and Shanghai Bank, in which a policeman is patrolling throughout the night.

NAVAL EXPENDITURES IN TWENTY YEARS.

The increase in naval expenditures during the past twenty years is so vast as to excite alarm in those countries already heavily taxed with army establishments. The *St. James Gazette* gives figures of ordinary or annually recurrent expenditures of six continental Powers, which, however, are incorrect. There was comparatively little new construction going on in 1882, and none whatever in Japan and the United States, but since 1890 all the naval Powers have been busy building ships, with a gradual increase in expenditures, and the following corrected table of eight navies shows that while a total of a little over \$136,000,000 sufficed in 1882, Great Britain alone expended in 1902 \$23,000,000 more than the sum total of eight navies twenty years ago:

Countries.	1882.	1902.	Per cent. Increase.
Austria ... U.S.	\$3,825,000	U.S. \$8,873,000	132
France	31,180,000	62,400,000	100
Germany	7,000,000	46,822,000	569
Great Britain ..	54,729,000	159,824,000	192
Italy	9,372,000	23,703,000	153
Japan	1,540,000	18,557,000	1104
Russia	13,755,000	50,005,000	264
United States..	14,934,000	77,925,000	423
Totals U.S.	\$136,335,000	U.S. \$448,109,000	229

"pillar" or "chief gods" just as the reader pleases. After these examples, taken at random, one can easily understand to what extent he can subscribe to this writer's appreciation of the models of elegance and chastend eloquence which he pretends to have discovered in the *Nihon Gwaishi*.

(11) Here are the terms in which Mr. Griffis ("Mikado's Empire") sums up the apostolate of Xavier in Japan: "Not long after, having turned his attention to the furtherance of trade and diplomacy, he departed from Japan, disheartened by the realities of missionary work." To fail so signally to appreciate both the work done by the great apostle and his ardent zeal, which was only extinguished by death, is to prove that one is absolutely blinded by prejudice.

LAW CASES.

JOVANSEN v. CLUB HOTEL.

In the Yokohama Chiho Saibansho on Thursday morning, before Judge Danno and associated Judges Kobayashi and Mabuchi, was resumed the suit, adjourned from July 3rd, brought by Mr. Adolphe Jovansen, formerly manager of the Club Hotel, Ltd., Yokohama, against the Club Hotel, claiming *yen* 18,775 damages in consequence of sudden dismissal from the post of manager. Mr. Ideura appeared for plaintiff and Mr. Sawada for defendants.

As arranged at the previous hearing, Mr. Hopkins, Secretary of the Club Hotel, and Mr. Cotte, proprietor of the Restaurant de Paris, No. 74, Yokohama, were examined as witnesses; Mr. J. de Becker acting as interpreter for the former.

At the outset of the proceedings, Counsel for plaintiff said that as Mr. Cotte, who is a French citizen, could speak Japanese pretty well, he would like to answer in Japanese the questions from the Bench.

Mr. R. G. Hopkins deposed that he was 33 years of age:—I am an Englishman and reside at the Club Hotel. I am not an employee of the Club Hotel; I received notice of dismissal yesterday. I have no relationship with either Jovansen or the Club Hotel and have no interest in the result of this judgment (The oath was here administered) Until yesterday I was in the employ of the Club Hotel as Acting for the Managing Director. I think I have seen the documents produced. Most documents passed by the Directors were written by me but I don't think I wrote this. I think it was Mr. Neville, one of the Directors. As far as I can remember I did not draw up the original. I know the circumstances under which it was drawn up. The reason for it was that previously the chef had been coming into the dining room, but on the appointment of the new manager the dining room was placed under him, and the permission to the chef was withdrawn. This was an instruction issued to the chef and the manager. Both documents now shown me are in my handwriting, I prepared them at Mr. Jovansen's request to show that the income of the Club Hotel for the last three months of 1901 was greater than in the corresponding period of last year. Other documents now shown me were prepared to show market prices. When Mr. Jovansen asked me to draw up these documents he was Manager of the Club Hotel. It would be after the end of 1901. They were made up about the same time—I think in January. I recognise the signatures on the document shown me. I see the amounts on Exhibit 6 and I note that they are higher in 1901 than in 1900. That does not mean an increase in profits but an increase in income in 1901. I cannot say if it showed an increase in the profits. The increase was mostly after the Oriental Hotel was burned down.

On the evening of Feb. 26th last it is a fact that I was assaulted by Mr. Jovansen. He accused me of being familiar with his wife, that was the reason. As the result of an examination this suspicion was in the directors' opinion dissipated. I know that a portion of certain goods imported by Mr. Jovansen were sold by auction. Some of the goods were inferior in quality and taken all over they worked out at a higher cost than they could have been bought at locally. The goods were sent to Mr. J. W. Hall for public auction, but no account sales have been rendered. I do not know whether they have been sold. Mr. Jovansen ordered goods from abroad, as far as I know, without consulting the directors. I did not know of it when the goods were ordered. They arrived, I think, in February and were delivered in the end of that month. The cost was a little over 800 *yen*. I believe the directors refused to take them and to accept the draft, afterwards it was paid. Mr. Jovansen had power at the time he ordered these goods to order them. The reason

the draft was paid was because the directors did not like to have a draft on the hotel dishonoured. I know that Mr. Jovansen ordered cards of invitation to sailors on men-of-war and that on the back these bore the fares of jinrikisha to the Yoshiwara and other places. That was in February this year. (Shown a blue letter, No. 1 and 2) I know the writing and afterwards I knew who the writer was. They were written by a person of the name of Clyde. (Shown another letter) I do not know anything about that but the paper is paper used in the Club Hotel.

The letter shown me looks like Mr. Neville's writing. Another letter shown me is in Mrs. Jovansen's writing.

After Mr. Jovansen had assaulted me I went to the office. I made no attempt to defend myself.

Did you inform the Board of Directors about this assault?—I intended to do so but before I could get out Mr. Neville telephoned for me and on my going to him said that Jovansen had reported the matter to him. Mr. Neville is one of the directors. I brought no legal action against Jovansen; I had no desire to go to the trouble. The goods that were sent to Mr. Hall were sent about a fortnight ago. I never saw the draft for them. I do not know whether the plaintiff was in the hotel when the draft was accepted. I think the draft was paid in the beginning of April. The cards for the men-of-war's men were printed under Mr. Jovansen's instructions. Mr. Jovansen told me to draft the card and all the details were put in under his instructions.

L. Cotte deposed that he is a Frenchman residing at No. 74 and that he had no interest in the result of the case. He also took the oath. He was chef at the Club Hotel for three years. He bought his provisions from the Yokoyama Shoten, for the last three months he bought a little from No. 82. He continued: I do not know about the whisky, champagne, liqueurs, as they did not belong to my department but the other entries in the document shown me are correct. I bought cheap by going myself to the Yokohama Shoten.

At this stage the Court gave up in despair the process of examining the witness, but on his stating that he knew German his examination in that language was essayed through Mr. Akaki, Court interpreter, who was watching the proceedings in the Court room.

Witness said that as he had been accustomed to use Japanese ham only he could not say anything about America ham, but the prices mentioned in an exhibit, which was produced from the bench, were comparatively higher than those ruling in Yokohama.

The Chief Judge—For what reason did witness say that the prices mentioned in the exhibit were higher?—Compared with those charged at other stores in Yokohama.

The Judge—Were the provisions obtained from Messrs. Langfeldt & Co. excellent in quality?—Yes, certainly, they were good and cheap.

The Judge—Were the provisions purchased under the witness' instructions?—Yes, generally, with the exception of spirits. The greater portion of the provisions were obtained from the Yokoyama Shoten.

Counsel for defendants said that as Mrs. Clyde, was expected back in Yokohama shortly from China, she should be summoned as a witness.

The Court announced that the application would be considered by Judge Kato, who was in charge of the case, but who is now enjoying a summer vacation.

The proceedings were adjourned *sine die*.

Nagata Kakutaro, of Kagoshima Prefecture, and thirteen other stowaways were brought back to Yokohama on July 31st by the steamer *Riojun Maru* from the United States whither they had gone by that steamer. They were all taken to the Yokohama Chiho Saibansho for trial.

A Chinese named Chiu Ju-nan, of No. 198, Yamashitacho, Yokohama, was arrested by the Kotobukicho Police on July 30th on a charge of having stolen *yen* 31 in cash and a gold ring, valued at *yen* 12, from a Chinese living at No. 22, Itchome, Matsukagecho, Yokohama, on the

night of July 28th. He was sent to the Yokohama Chiho Saibansho the following day for trial.

In connection with the recent counterfeiting case, in which some three persons were arrested several days ago on a charge of having counterfeited five *yen* notes of the Bank of Japan, several more arrests have been made in Kyushu. The names of the alleged forgers are Ouchi Saburo, Urata Sadaki, Fujii Ryoza, Okamatsu Yoshitaro and several others, all natives of Fukuoka Prefecture. The amount forged is said to have amounted to *yen* 25,000, but the greater portion of the notes have been seized by the authorities. It is stated that further arrests will be made.

The Mitsui Bank is about to institute an administrative suit, through Messrs Okamura Teruhiko and Iwata Chuzo, against a decision of the Tokyo Municipal Authorities given in favour of the Tokyo City Office. From a paragraph appearing in the *Nichi Nichi*, we learn that some time ago the City Authorities imposed an additional city tax on the whole of the business of the establishment. The Bank being dissatisfied carried the matter before the Tokyo Municipal Authorities for decision with the result that the case was dismissed. Not satisfied with the verdict the Bank has now applied for a legal decision in the matter.

There is news from Nara that on August 4th judgment was delivered in the Nara Chiho Saibansho in the case of Mr. Umeki Momotaro, member of the Nara Prefectural Council, and several others, who have been prosecuted on a charge of having violated the Law of Elections in connection with the general election of candidates for the Lower House. Mr. Umeki was sentenced to a fine of *yen* 20, Mr. Okuda Genkichi, chief of village office, to a fine of *yen* 15, and four others to fines of *yen* 10 each. The Court further announced that their rights of franchise would be suspended for two years. It is also reported from Nagoya that Mr. Mizutani Ryushiro, of Kuwana district, Miye Prefecture, who offered himself as a candidate but was prosecuted for a similar offence, was sentenced by the Tsu District Court a few days ago to a fine of *yen* 50 and to be disfranchised for four years.

RAW SILK EXPORTS.

The following statistics showing the export of raw silk from 1st July to 31st July, 1902, have been compiled by Messrs. Vivanti Bros. :—

Firm.	America.	Europe.	Total.

NEWS OF THE WEEK.

Prince Komatsu left Moscow on the 6th instant for Port Arthur. It will be interesting to see how long the journey takes.

A rather sharp and jerky shock of earthquake occurred in Yokohama about 12.15 on Thursday afternoon.

Ten shares of the Yokohama Engine and Iron Works, offered for sale at auction by Mr. Jno. W. Hall on Thursday morning, were sold at *yen* 116 per share.

At the annual general meeting held on Thursday Mr. G. Blundell, Managing Director, presiding, the report and accounts were adopted and it was decided to declare a dividend of 7 per cent.

The Authorities of the Sample Museum attached to the Department of Agriculture and Commerce have issued orders to Japanese Consuls abroad asking them to purchase samples relating to fine arts, industries and other businesses. The orders involve an outlay of *yen* 5,000.

The proprietor of the Central Warehousing Company, of Midoricho, Yokohama, proposes to establish a bonded warehouse in Itchome, Takashimacho, for the purpose of storing sugar only. An application was made a few days ago to the Minister of Finance for sanction.

The report of the Hundreth Bank for the year that closed on June 30th shows that the business brought in a net profit of *yen* 120,618, of which *yen* 20,000 is allotted to reserve and *yen* 60,000 to payment of a dividend of 30 per cent., the remainder, *yen* 40,618, being carried forward to next year's account.

A social meeting of persons who went through the memorable siege of Peking in 1900 will take place in the Atago-kan, a hotel in Shiba Park, Tokyo, at noon on August 6th. The meeting will be attended by Baron Nishi, ex-Japanese Minister to China, Mr. Ishii, Secretary of the Foreign Office, and others, in official and non-official circles.

In consequence of the recent bad weather the number of invalids in the country seems to be remarkably large this year. At the Tokyo Eiju Byoin, a military hospital in Kojimachi, there are now over 200 patients, all soldiers from barracks in and about the capital. Both official and private hospitals in Tokyo and elsewhere are reported to be full of invalids.

The Imperial Marine Disaster Relief Association has decided to establish a relief station at Fura, Boshu. The work will be started during the course of this month. The Association, which is a private concern, was first organized in Tokyo in 1889. In the first year, it had only two relief stations and the cases of rescue numbered 14 in all. These figures increased in 1901 to 21 stations and the rescues to 316. The Association is now enjoying an annual state subsidy of *yen* 20,000.

The Nagasaki City Assembly, which was held on the 28th inst., received the supplementary estimates and heard the report of the City Councillors as to the very large sum by which it was possible to reduce them. This report was passed by 22 votes to 9. The Japanese residents of Nagasaki are not yet satisfied, however, reports the *Nagasaki Press*, and have appointed four special committees to go to Tokyo and lay the matter before the Home Department. The Mayor, Mr. Yokoyama, has handed in his resignation.

A capital story is to be found in the last letter published from Mr. Bennett Burleigh. This is the story:—"It was just Saturday week, when some of us expected the peace settlement, that a worthy dean—a most reverend gentleman—possibly slyly thought he could steal a march on Lord Kitchener. He telegraphed from the Orange River Colony, saying: 'As I am acting as chaplain, and conducting Divine service in

very many camps to-morrow, may I ask if the hymn, "Peace, perfect peace," would not be a most appropriate one to sing." The great 'K. of K.' wired in reply, 'Please yourself; but I think "Onward, Christian soldiers" quite as good.'

Edward James Corby, a sailor belonging to the United States warship *Kentucky*, was sentenced on July 29th, in default, to a fine of yen 80 by the Yokohama Chiho Saibansho, having been found guilty of causing death through a bicycle collision. As already reported in these columns, the sailor was coming down Jizo-zaka, Yokohama, on a bicycle on May 17th when he collided with a Japanese named Shibayama Kumakichi, of No. 1521, Nakamura-machi, Yokohama, who subsequently died from the effects of the injuries received.

During the month of August the Young Men's Christian Association, of Kanda, Tokyo, will open a summer school in the residence of Mr. Manase Maruhachi, Hayama, Soshu, for the benefit of students. Sermons and lectures both in English and Japanese will be given, in addition to various kinds of lessons. Books, newspapers, magazines, etc. will also be provided for reading purposes. Those desiring to spend the summer in this manner are requested to send in applications as soon as possible.

Mr. Galloway Weir having wearied of asking questions in Parliament regarding the British Consulate at Kobe, has turned his attention to things at home, with the result that a recent debate in Committee on the Scotch Estimates was lengthened to an extravagant extent. The following lines were afterwards found on the floor of the House of Commons:—

Mr. Weir, Sir, is my name,
And these, Sir, are my wishes,
It's natural for a weir to dam
The progress of the fishes.

Mr. Eduard C. Andre, the Belgian Consul at Manila, has obtained a divorce from his wife Clementina (*née* Cabanes). Mr. Cabanes, senior, was well known in Spanish official circles of Manila in the '80's. His daughter was then considered one of the belles of the city. She has now been condemned to pay the costs of the divorce case and Court has further decreed that she shall deliver up to Mr. Andre, the petitioner, the children of the marriage, and is forbidden from bearing his name henceforth.

In connection with the new law relating to Exchanges, the Yokohama Stock and Rice Exchange decided, at a meeting of chief officials held a few days ago, to increase its capital from 150,000 to yen 200,000. As to the matter of subscription, it was resolved that in case the shareholders refuse to accept the new bonds, the whole of the bonds will be taken up by the officials themselves. As a result of the adjustment recently conducted the Exchange's balance sheet showed a loss of yen 30,000, but this deficit will be made good by the increased capital. A special general meeting of shareholders will be convened at an early date to discuss the resolution.

A Wei-hai-wei correspondent somewhat belatedly informs us that: "The petty officers and men of the Japanese cruiser *Yakumo* when at Wei-hai-wei on Friday, June 27th, were entertained by the petty officers and seamen of the *Glory*, *Albion*, *Ocean*, *Goliath*, *Argonaut*, *Alacrity*, *Rosario* and *Mutine* to a dinner and smoking concert. The guests, who numbered 300, were met by the band of the *Argonaut* at the Pier and were escorted to the place of entertainment. Mr. Frank Roomes, Master-at-Arms of H.M.S. *Glory*, presided and a very pleasant evening was spent."

A shocking affair is reported at Fujisawa on the Tokaido, by which Mr. Toma Tomezo, master of the Chuo-do, local newspaper agents, and his wife were badly wounded by an employe on August 2nd. It appears that shortly after 3 a.m. that day the employe, whose name is Nakano Tojiro, armed with an axe entered the bed-room of his master. As a first step, he stole over yen 220 in

cash from the drawer. The noise awakened the wife who cried out, "Thief, thief!" Instantly down came the axe which cut her head badly, and the next moment the master was likewise cut on the face and body. The injured man, however, managed to get out of the house and reported the matter to the Police. The unfortunate husband and wife were then taken to the Fujisawa Hospital for treatment. The assailant and the money have not yet been traced.

The head-quarters of the Kihin-kai (Welcome Society) have been removed from the Imperial Hotel to the building of the Tokyo Chamber of Commerce in Kojimachi.

During the month of July the Tokyo Electric Company (formerly Tramway) Company realized yen 34,552, showing an increase of yen 489 as compared with the corresponding month of last year. Receipts on the Shinagawa line of the Company amounted to yen 4,159, being an increase of yen 59.

Prince Cyril gave a luncheon at the Grand Hotel at noon on August 6th, to which were invited Prince Kan-in, Viscount Tanaka, high officials of the Imperial Household, Mr. Rinoe, Secretary of the Kanagawa Kencho, the Russian Minister to Japan, Mr. Hamada, Superintendent of the Kanagawa Police, and many others.

Two important extensions of the Royal Naval Barracks, Keyham, have been completed. Two blocks, accommodating nearly 2,000 petty officers and men, have cost £63,000 and will be occupied forthwith. A block for officers has cost £80,000, but cannot be occupied until it has been furnished, at an estimated expenditure of £20,000.

The Japanese Authorities have received a telegram to the effect that the Crown Prince of Siam, now in Europe, will arrive in Japan early in November instead of in September as previously announced. This change is due to His Highness' desire of remaining in the United States for a longer time.

On the afternoon of August 4th a landslip occurred at Nakamura, Yokohama, resulting in the destruction of a house owned by Mr. Yuzuruhara Manjiro. A similar occurrence took place near the Sengen Shrine in Nichome, Motomachi, Yokohama, the same day, but fortunately there was no casualty. A third accident of the same kind brought down into the public road a large quantity of stones and debris which formed part of a retaining wall in rear of No. 166, Bluff. The accidents were due to the recent heavy rain-fall.

Mr. Shimomura Fusajiro who is devoting his whole energy to the development of commerce between Russia and Japan, will again set out for Russia on August 12th, leaving Shimbashi by the 12.20 p.m. train for Nanao, whence he will take steamer for Vladivostok. His first trip was made in 1900 when he proceeded as far as St. Petersburg for the inspection of trade in the interior of Russia. On August 5th he visited Mr. Alexief, Russian Commercial Agent for Japan, in Yokohama, and sought the latter's assistance in the matter of conveying to the Russian capital two big screens, one representing storks and the other cherry blossoms and birds, which he intends to present to the Czar.

Among the passengers by the O. & O. steamer *Doric* will be noted the name of Mr. T. D. McKay, the universally known general passenger agent of the San Francisco Overland Route and representative of the O. & O., & Pacific Mail Steamship Companies with their connecting railway lines. Mr. McKay returns with even fuller and larger powers than before to promote the undertakings with which he is associated, and it may interest our readers to know that he is one of the subjects of a very flattering letter written to the head office by the passengers on the *Doric*. We learn from Mr. McKay, with reference to a paragraph in another column, that when he left San Francisco no doubt was entertained of the body recently washed ashore being that of the

late Captain W. Ward, the master of the ill-fated steamer *City of Rio de Janeiro*.

Shiosawa Yoshichi, 17 years old, an employe of Mr. Wakao Ikuzo, a well-known merchant of No. 63, Shichome, Honcho, Yokohama, was robbed of yen 500 on the afternoon of July 31st. It appears that the youth obtained the above sum from the One Hundredth Bank in exchange for a bill of lading and was returning to his master's house, carrying the money in his hand, when a man suddenly came up from behind and snatched the money. So rapid were the thief's movements that neither his victim, nor the passers, by could overtake him. The matter was at once reported to the Police authorities.

Under the auspices of Messrs. Kinchi Arata, Nakaye Sankichi and other citizens of Yokohama a regular service of steamers will shortly be opened between Benten Bridge, Yokohama, and Yokosuka for the conveyance of passengers. According to the time schedule there will be three services every day, leaving Yokohama at 8.30 a.m., 11 a.m. and 4.30 p.m., and starting from Yokosuka at 8.30 a.m., 2 p.m. and 6.15 p.m. It is stated that the journey will occupy only one hour and a half. At present, the *Shinki Maru*, a steamer belong to Mr. Ota Teijiro of Yokohama plies between Minatocho, Yokohama, and Yokosuka, leaving the former place every morning.

A report from Otsu says the second united regatta which took place on Lake Biwa on Aug. 4th was attended with success. It was under the auspices of the Dai-Nippon Butoku Kai (Association for the promotion of Physics and Morality). The weather was all that could be desired and the competitions were witnessed by a large number of spectators from various parts of the country, including Mr. Kinoshita, President of the Kyoto University, the faculties of various schools and others. In the champion race, the crew representing the Hokodan, a middle school in Sh'mane Prefecture, covered the course of 1,100 metres in five minutes and thirteen seconds.

A somewhat sensational affair took place in the godown of Messrs. Frazar & Co., No. 258, Yokohama, on the afternoon of August 5th when several coolies, acting on behalf of a Japanese silk merchant named Uyeno Torakichi, attempted to seize a quantity of silk stored in the godown. The origin of the affair seems to be that in May this year a transaction was effected between the Japanese silk merchant and the foreign firm, by which the latter took delivery of 20 cases of silk, giving yen 150 as bargain money to the silk merchant. Later on complaints were made by the foreign firm on the ground that the quality of the article was inferior, and for some reason or other the goods have since been stored in the godown, pending settlement of the trouble. On Tuesday afternoon the silk merchant sent several coolies, with three carts, to the godown to recover the silk and it appears that the coolies attempted, without notice to the foreign firm, to take out the cases. In the midst of a dispute between the employes of the foreign firm and the coolies the police interfered and it was arranged that the matter should be carried to the proper authorities for decision.

With regard to a dispute between Messrs. Frazar & Co., No. 258, Yokohama, and Mr. Uyeno Torakichi, a silk merchant, over a recent silk transaction, it is understood that the matter has been privately settled. No legal proceedings will therefore be taken by either side.

FIRE IN YOKOHAMA.

Fire broke out on Sunday night about 11.45 in a single-storied stone-faced, tile-roofed godown at No. 201 Yamashitacho, occupied by Chinese. The Satsuma-cho brigade turned out and worked a couple of standpipes for an hour and a half, the Police Brigades also taking part in the operations, and by their combined efforts the flames were prevented from spreading, the building in which they originated being, however, considerably damaged. The supply of water was good. The cause of the fire is unknown.

AMERICAN TOPICS.

A handsome tablet to the memory of the brave deeds of American and British officers and soldiers in Samoa was unveiled on July 24th in St. Peter's Church at Mare Island.

Mr. John Willis Baer, Secretary of the Christian Endeavour Society, has resigned that position to accept one as Assistant Secretary of the Presbyterian Board of Home Missions. He will take up his new duties on October 1st.

According to the *Baltimore Sun*, the appropriations made by the U.S. Congress at its last session, including the isthmian canal and contracts sanctioned, amounted in all to \$1,059,577,052, and it stigmatizes the session as "a billion dollar" affair.

Every man may accept with profit the epigrammatic advice given by General Horace Porter in his recent oration at the centenary of West Point Military Academy, as follows: "Never under-rate yourself in a battle, and never overrate yourself in a dispatch."

By the death, on July 10th, of Lord Cheylesmore (William Meriton Eaton) an American lady attains a coronet, as Lord Cheylesmore is succeeded by his brother, Major-General Herbert Francis Eaton, whose wife was Miss Elizabeth French, daughter of the late F. O. French of New York.

The North German Lloyd Steamship Company profited by the burning of its wharves and sheds at Hoboken, N.J., by not repeating the folly of restoring them in combustible materials. The piers have been constructed of solid concrete, and the sheds covering the wharves for the storage of merchandise are now being erected entirely of steel.

The London Society of Arts has given the Prince Albert medal for 1902 to Mr. Alexander Graham Bell of Washington, D.C. This medal is given annually by the Society to some person who has distinguished himself in the advancement of manufactures, arts or commerce. Mr. Bell is the fourth American to be thus honoured, the others being Messrs. Eads, Edison and David E. Hughes.

The Pennsylvania Railroad has introduced something new into its twenty-hour New York-Chicago service. An extra fare of \$1 for every hour saved from the ordinary schedule is made on account of this fast service, and the company now agrees to pay a corresponding rebate to every passenger whenever the train is more than two hours late. The innovation is as novel as it is equitable.

A corporation has been organized to use the water contained in the Chicago drainage canal system for the generation of electric power outside the limits of the sanitary district. It is represented that by the construction of dams and proper hydraulic appliances the water flowing in the Desplaines channel beyond the sanitary district may be made to generate from 20,000 to 30,000 horsepower of electric energy, and this is to be transmitted to Joliet for industrial purposes.

When Bishop Potter returns from Europe in the fall it is said on good authority that he will ask the diocese for the appointment of a bishop coadjutor. Before sailing Bishop Potter discussed the matter with some of his intimate friends. He said that the duties of office were too great in view of his advancing years. If the appointment of coadjutor is requested it is believed the choice would lie between Dr. David H. Greer of St. Bartholomew's and Dr. Morgan Dix of Trinity.

The military and naval operations in Long Island Sound from August 30th to September 6th are to be conducted under the strictest rules of secrecy, as if war actually existed, and the closest censorship is to be placed on the press. No facilities for getting the news will be allowed the newspaper men detailed to report the operations, and if anything of vital importance leaks the U.S. War and Navy Departments intend accepting

the experience as a lesson to teach them how to guard against a similar event in future.

The law abolishing U.S. war tax stamps on cheques enabled holders of internal revenue stamps purchased two years prior to the 1st of July to redeem them. Money will be refunded, however, only on stamps bought within the two years. Many banks have, therefore, been caught with large stocks of irredeemable stamps on hand. One New York bank is said to have nearly \$50,000 worth, another has \$15,000, and a third \$9,000. These cannot be redeemed except by special act of Congress extending the two-year limit, and a bill of relief is intended to be introduced for that purpose at the next session.

When the Standard Oil Company announced its dividends for the year it seemed, remarks the *Call*, as if it had looted the country, but when the steel trust presented its annual statement it was seen that a good deal had escaped the oil men. Next came the Treasury report showing that the Government had found good pickings after all the trusts got through, and finally the reports of gay crowds at the summer resorts show that a whole lot of wealth escaped taxation. Evidently the American goose can stand several pickings and still show plenty of feathers at the wind up.

A San Francisco paper remarks:—It is noted that at Pittsburg, where he delivered the Fourth of July address, the President permitted no handshaking, did not hold a public reception, and none but the committee of the day were allowed to approach him. There was a time when such a course would have aroused adverse criticism, but in this instance it seems to have met the approval of all. In fact, American crowds are becoming too big for the old primitive handshaking custom of greeting a President to be maintained, and the sooner we are rid of it the better.

Dr. George Dorsey, of the Field Columbian Museum, has made a discovery in his investigations among the Hopi Indians that overturns many of the old theories of anthropologists in regard to supposed inscriptions on the adobe houses of the tribe. In a lecture to the students of the University of Chicago he announced that "these inscriptions which the anthropologists have been trying to decipher and read for years have been found to be nothing more than the scratches made by mischievous Hopi children in the mud of the adobe houses after they had been freshly built."

The two battleships of 16,000 tons and two armoured cruisers of 14,500 tons designed for the United States Navy are to have speeds of eighteen and twenty-two knots, respectively. In view of the fact that foreign warships of similar classes are being built with greater speed, it is just possible that there is some mistake about the intended speed of the American ships. The five battleships of 15,000 tons now building are designed for nineteen knots. Six armoured cruisers of 13,680 tons and three of 9,700 tons are to have speeds of twenty-two knots, yet the new battleships, designed three years later, are intended to steam one knot less than their predecessors, and no increase in speed is given to the enlarged armoured cruisers. In England armoured cruisers of the *Drake* class have exceeded twenty-three knots, and six others of 10,200 tons are to steam twenty-three knots, as are ten others of 9,800 tons. The *Russell* type of battleships have speeds of nineteen knots, although they are only of 14,000 tons displacement, and the three of the *King Edward* class are to steam 18.5 knots. The four new battleships, each of 13,200 tons, in the German navy are to make nineteen knots. Italy is building two battleships of 12,614 tons and twenty-two knots, and Japan and Russia contemplate not less than nineteen knots in their new ships. If the speeds are correct as given for the American ships it is possible that there may be other compensating features, such as increased protection, armament or coal capacity to make up for the apparent loss of speed as compared with foreign ships.

CORRESPONDENCE.

LIKIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I enclose an article anent *likin*, being a summary of the views of the Governor of Fukhien Province. Unconsciously the Governor has pointed the moral that the principle of transit passes granted by I. M. Customs having once been admitted, the extension of I. M. Customs control must bring about the end of *likin*, the better system of transit passes driving out the clumsy system of *likin* barriers not only without loss to the Chinese Government but actually at a profit to them.

Transit Passes are issued on one-half of the estimated *likin* charges being paid by the merchant, but (a) there is no, or little, waste of the money so paid; (b) an impulse would be given to foreign trade at once, more than doubling it.

Consequently the Chinese Government would get more money from the new system than from the old, whereas the merchant would pay only half of the present suggested import duty; 6 or 7 per cent. instead of 12½. There would, of course, remain the difficulty that on the goods covered by the Transit Pass arriving at the inland entrepôt where they are to be sold, if they could not all be disposed of there, further transport would mean payment of *likin* charges. This, however, is only an ordinary trade risk, and with regard to buying goods in the interior for export such as tea, camphor, etc., there would not be this difficulty. *Likin* appears to be a matter entirely under control of the Provincial Authorities and regarded by the Chinese as a matter of local self-government. The Imperial Government seem to make a point of not interfering in any way as regards *likin*, so that an agreement on their part to abolish *likin* in return for 12½ per cent. duty could hardly be made effective when opposed to the Chinese ideas of provincial self-government in local matters which have always been respected.

I am not an economist myself, but those who understand the subject may find the article enclosed suggestive.

Yours faithfully,

G. P. PEACHEY.

Ikkakuro Hotel, Obama,
Nagasaki, July 29th, 1902.

Peking, May 22nd.—In yesterday's *Gazette* there is an interesting protest made by the Governor of Fukhien against the granting of transit passes. He says that these transit passes for goods in bond from the port of entry to their inland destination, which are issued in triplicate, on payment of half the *likin* charges to the I. M. Customs officer, have not been issued from the port of Foochow for a long time, and that the present granting of such transit passes to the English firm, Yung Chang, for the purpose of purchasing camphor in the interior is a dangerous precedent for giving transit passes to cover all classes of goods. A reduction of nearly half the *likin* charge, he says, is letting the merchants off too lightly, and if the granting of these transit passes is extended to all classes of goods the collection of the *likin* in the interior will soon become impossible. But, he says, all the expenses of the city of Foochow and the payment of the Army Corps stationed in the province depends mainly on *likin*, so that the reduction of it by half would create a deficiency that will not only cause a large outcry from the troops, but by one fell swoop deprive the city of Foochow of its chief source of revenue. As it would be a great error to mistakenly remit important items of revenue, the Maritime Customs of Fukhien province ought to guarantee to the *likin* office an additional sum out of the shipping dues collected from steamers at the barriers. A request was granted in the 25th year of Kuang Su similar to this made in the case of transit passes granted by the Maritime Customs, and it is dutifully requested that a special sum be set aside to be paid over every year to the Fukhien *likin* office, according to the amount guaranteed by the Customs. It is also requested that the granting of transit by the *likin* offices for tea and wood be governed by the old rules, namely, "In accordance with the certificate drawn up by the Taotai Superintendent of *likin*." In conclusion the Governor of Fukhien begs that the Imperial bounty will take into consideration the fact that no compensation has yet been made for the reduction of Fukhien *likin* charges, and asks for permission that the half dues for transit passes be handed over in their entirety to provide for all pressing and important expenditures, and to prevent any deficiency or error he has communicated with the Board of Foreign Affairs (not yet instituted), and the Board of Revenue, asking them to act as auditors.

THE CHEFOO SCHOOL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I be allowed to call attention to the fact that the terrible fatality in the Chefoo School comes closer to us in Japan than your sympathetic editorial indicates.

Six children from Japan have been in school there during the past year. One of them, Master Nicholas Gray, of Nagasaki, one of the brightest and best-loved lads in the school, was one of the unfortunate victims.

Many of the foreign residents of Japan seem to have been unaware of the existence of the excellent schools which the China Inland Mission maintains in Chefoo until this terrible calamity called attention to them.

There are three of these schools, one for boys, one for girls, and a preparatory school for young boys and girls. Intended primarily for the children of the Mission, outsiders are admitted on very favourable terms. With a corps of competent masters and mistresses, and finely equipped buildings, located on the East beach, these schools offer a solution of one of the most difficult problems of residence in Japan.

Very truly, yours,

HENRY B. SCHWARTZ.

Kagoshima, Japan, July 29th.

THE IMPERIAL HOTEL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Having spent an exceedingly pleasant fortnight at the Imperial Hotel at Tokyo and having travelled North, East, South and West, I feel I would only be doing a simple act of justice in placing on record my unqualified appreciation of the great comfort and luxury I enjoyed at the "Imperial."

I only know it from present experience, what it was and how it was conducted a very few years ago when Mr. Stafford Ransome wrote his admirable work "Japan in Transition," I have no knowledge, but as regards the Hotel to-day its management, cuisine, and all and everything appertaining to the establishment, it is a standing libel and menace, and Mr. Ransome should at once handsomely acknowledge the wrong impression that portion of his book still presents to the travelling world. I do not know the law of Japan but I am sure the Courts in England would compel its expulsion from all future sales.

Under the new management, so ably conducted by Mr. E. Flaig, I find absolutely nothing wanting. A notice appears in every room in the house to the following effect:—

"The new manager of this Hotel, E. Flaig, is anxious at all times for the comfort of visitors and specially requests that any complaint or suggestions of whatever nature may be brought direct to his notice and he will do all in his power to meet their wishes."

This to me is like throwing the gauntlet down and challenging one to offer exception to something, and I almost feel aggrieved at not being able to do so. Some two or three years ago I spent a very happy time at a remarkably well-managed Hotel (the Grand) at Luxor on the Nile, and I now find the present Manager of the "Imperial" was mine host at that favourite resort.

If I continue in this strain your readers will think I am penning a "puff" advertisement. I could write a leader hereon if such were my avocation in life, but I leave it to future guests and travellers to confirm.

Yours faithfully,

JAMES PINNOCK.

Tokyo, August 1st, 1902.

RUSSIA'S CHANGING POLICY.

(FROM THE "HONGKONG DAILY PRESS.")

Port Arthur, June 5.

As no one supposes that the lease of this part of the Liaotung Peninsula for twenty-five years carried with it the slightest intention by Russia of terminating occupancy at the end of that term, it is not news to announce that work here performed could not have been more thorough if Russia had the land in fee, instead of by leasehold. A visit here disposes of certain preconceived notions that seemed well-rooted. If this place were to be reserved as a military and naval station, preparations for a new city, now well advanced, would be difficult to explain. The site of the present town will become a fortress, but the civilian town will be reached as handily as one may, in any city. Cross the boundary that separates adjacent wards, and observation at this time can hardly fail to approve a means of escape from a town altogether so unattractive as the old settlement, where the sun glares, the dust blinds—except when rain chokes the highways with deep mud—and where locomotion at all seasons is so tortuous, odorous, uneven as to madden everyone

less callous than the roystering Russians and the nerveless Chinese.

The new town was laid out on modern lines. It covers two miles square and has straight, wide roads, passable exits toward the outlying areas, harbour conveniences suitable for a busy port, and house room for twice the population that could be packed into the present Port Arthur. There will be water-works and electric lighting. Auction sales in two sections have yielded \$600,000. The cost of laying out the city and supplying it with public works will be defrayed from such sales. The design for the new city looks to develop along lines of peace; and hope expects from the civilian town more benefit to Russia than from the quarter from which civil life is excluded, within the coming year. Dalny, the city which is to spring into the commercial arena, may hardly be characterised as a stalking horse, but calculations would be wide of the mark which assumed that Port Arthur was to neglect everything except fortification. Whatever the future may hold for Dalny, Vladivostok, or for some seaport near the tip of Korea, this harbour must for some years be the most convenient under Russian control for railroad business, for which quick transit to the China or Japan coast may be required. It is the natural railroad terminus for passengers or freight destined for either of those countries, for while its position may not be superior to that of Dalny, that condition must still be referred to a time ahead, to arrive after the expenditure of from 15,000,000 to 20,000,000 roubles.

Meanwhile the railway will run directly here, as it is doing, and Dalny will be off on a branch line. Vladivostok will doubtless attract a trade of its own, for development in that region seems inevitable, but such development is also ahead, and the connection of railway links in northern Manchuria has relegated Vladivostok to an inferior place just now as a railway terminus. With the Russian bag open at both places, it probably does not much matter which of the two ports shall gather in the greater amount of business, but it may not be too much to say that if the element of nationality did not enter into railroad control, and if this port were in other than Russian hands, a start might now be made which would give any other port hereabouts a long stern chase before it could overhaul Port Arthur. Purpose to mislead need not be credited to the announcement that no goods will enter here except military supplies, for that intention may be entirely compatible with a miscellaneous commercial use for this port, while other ports are fitting themselves to attract business. Assuming that Russia is alive to trade and investment enterprise, it is not to be supposed that Russian capital will idly await the completion of railway or municipal conveniences at a time when outside energies are heading this way.

Russian advantages in transportation, in seaports, and in prestige among the natives, would probably be secure enough to excuse ordinarily a belated entry into business competition; but since Russia's work here has been mainly political, with strong military bias, the field now approached is untried, and the Russians show no disposition to waste time before familiarising themselves with it. Hence the advantages that are obvious may be offset by those not so clearly definable, and Port Arthur seems likely to apply itself to commercial growth, even if the ultimate motive may be only to acquire tangible trade and investment possessions which later on may be passed over to ports specially devised to carry on or to control such lines of development.

Port Arthur has relied on Japan for coal, and on the United States for railway iron and supplies, flour and various provisions. These goods could not be brought overland and the meagre agricultural and mineral returns from the interior forced the port to a choice between hauls from Japan and the Pacific coast of America, and those from Odessa. Railway construction has made accessible agricultural districts and coal and iron-fields, in Manchuria and the outlying region.

There is one point on the railway, not far from Mukden, where native miners have brought coal in carts, a distance of fifty miles and sold it at two dollars Mexican, or less than four shillings, per ton. It has lacked uniformity of quality, for the miners rarely sorted it, but some of the best is said to rank with Cardiff coal, and all of it is marketable. Timber four feet in diameter has been brought out of the same district. Various prospectors have lately gone into the district, and reports from them, while intended for general information, bear out native tales of great mineral wealth there. The richness of the coal-mines worked by the China Engineering and Mining Co., across the Pechilhi Gulf, invests with plausibility all surmises that lands in Manchuria and elsewhere, which the railway approaches, will respond abundantly to exploration. Iron ore may now be brought almost any distance overland, at rates to compete with cost of freights over the Pacific, if Russia should decide that home products must be used to shut out rivalry.

A problem of some magnitude presents itself in

this connection, for this port has customs free and plans have always contemplated a free port at Dalny. That arrangement seems likely to induce trade away from China ports, where the five per cent. tariff rules. Apparently, it was thought, in the first instance, that no barrier would be raised against the transit by rail of such free goods into China. There is no sign yet of a barrier, but the device has worked scarcely at all against China, while it has enabled buyers for the territory back of Vladivostok, a high tariff port, to get goods in by Port Arthur much more cheaply than could Vladivostok merchants who brought in goods in the regular way, paying the Russian duty at Vladivostok, and finding sales impossible, except at a loss, because of the alertness of their competitors in using this place as a free port of entry. Since the government must wish to prevent embarrassment to Russian merchants from this cause, the free port plan may not work. It is, of course, desirable to favour the importation of Russian goods of all kinds. If such goods be brought by sea, charges must be so much greater than the trans-Pacific rates—and the rates across from Japan—that the goods could not compete in price with goods similar in quality from the United States and Japan. Should shipments come by rail, the cost of long haul, and the confusion incident to separation of consignments, so that Siberia might escape taxation, to be imposed south of the accepted Russian boundary, would add to cost already as high as in China for many products, and higher than for others, and practically close China markets to imports and defeat the main purpose in opening the Liaotung harbours.

It has been suggested that a customs tax be imposed here and at Dalny, with preferential rates for Russian goods; but such a measure would contract the market rather than expand it, and throw burdens on trade in general that could not be borne with any prospect of continued development. A mis-step might provoke serious detrimental results and yet risk must attend any measure of adjustment. There is present occupation for a fiscal genius in disentangling this skein. If they could, the Russians would like to eat their cake and have it too. They wish to push their business far into the North. Railway, bridge and dwelling construction must consume an enormous amount of iron products and railway equipment. They hope to enjoy the proceeds from coal, iron ore, and a variety of mineral resources of this rich land; to supply the market with cotton prints and other cotton goods made in Russia, and to grow in Siberia and Manchuria wheat which may be ground in local mills.

If in these lines they may hew the way and so establish a leadership which only superior energy can wrest from them, they will do their utmost to meet with strength and skill all competition which they may encounter. To this end they encourage colonisation, realising that the contest for commercial supremacy is to be decided by peaceful means, and yet with no less care and effort than they have given heretofore to activities employed for armed aggression and defence, they appreciate how valuable a sturdy yeomanry may be in the furtherance of their purposes. With Russians scattered in all directions, interests of that land will have the best possible upholders.

Thus while it will not be expedient to oppose hereabouts, by measures seriously offensive, incursions by others in trade, investment or exploration, and while exception cannot be taken in any quarter to the use of agencies everywhere recognised as legitimate, Russian interests may become so important, should results turn out as planned, as not only to begin entries on the credit side of the national books, against military debts, but also to justify here and along the frontier further expenditures to hold securely all that may be gained, and lay foundations for the future. Newchwang is off the main line of railway. It is not a port to be despised commercially, but in the scramble for foreign trade here, Russia stands in no worse place than any foreign bidder, and therefore may capture quite as much trade as any of the other applicants get. That port seems slated in any case, in the free-for-all list.

The Siberian railway may have had its inception in thought of military transportation. In its present stage it is as inadequate for that service as for any other demanding speed and efficiency in operation. The only travel yet possible by all-rail means is that which venturesome spirits, able to shift for themselves, and toughened as for a campaign, may take for an experience worth remembering. Most of the trips made overland were by the Amur River route, which has been superseded by no more expeditious and much more trying travel over the newly connected rails which bring Port Arthur nearer in time to St. Petersburg than is Vladivostok.

From present appearances, the line will not become efficient for military use as soon as for general travel, and the time for the latter is not definitely calculable. Thus for the present, at any rate, the road will be viewed as much better adapted to commercial than to military call, and improvement will doubtless look

for a long time to satisfying a limited patronage, such as passenger travel and odd freights, rather than to providing means for the rapid transfer of bodies of troops. A quicker and surer way of landing men and ammunition is by sea transport.

With the railway establishment, a telegraph service has become operative which presents drawbacks of a crude order but which answers commercial requirements fairly well, and induces business at the comparatively low rates at which it carries messages—the cost per word being 10 kopecks, or five cents gold to Manchurian points, 15 kopecks to points in Russia, 59 kopecks to London, and 98 kopecks to New York; ocean cable rates having been from here \$2.80 (Mexican) per word to London, and \$3.30 to New York. However sceptical observation may be as to the real purpose of the railway and telegraph, the creation of a fleet of twenty or more ships, for a coasting trade over a route from Shanghai to Vladivostok, touching at this and other northern ports, and at points in Japan, will hardly be charged to other than commercial account. Two ships in the fleet make 16 knots per hour, a speed not approached by any other port in the coasting trade.

Port Arthur as a town remains as good a specimen of dirt and ramshackle dinginess as it was before the Russians occupied it. Their work on it has not been intended for the public eye, or for other than military and official information. With an attractive new city in the hollow of the sheltering hills, the old blot will disappear or be covered by the wall of a fort. That will be a distinct gain for decency whatever may await the civil port in commercial lines.

FORMOSA UNDER JAPANESE ADMINISTRATION.

By DR. SHIMPEI GOTO.

THE GEOGRAPHICAL OUTLINE.

Formosa is a big island in the Far East, which was ceded to Japan from China as a result of the war of 1894-5. Its area, including the adjacent islets, is 5,535 square miles. Extending from the north to the south in the shape of a leaf, it faces Fu-chow on the mainland of China on the west and neighbours the Philippines on the south, while the isles of Liu-kiu and Yaweyama on the northeast form the connecting links between the new territory and the mother-land of the Japanese Empire. In the middle of the island there is a high range of mountains running from the south to the north; hence a great number of rivers in it, which inundate often each year, are soon dried up and hardly available for navigation.

THE CLIMATE.

The climate of Formosa is not so healthy as that of the main island of the Japanese Empire; but it is not of an intolerable nature. The heat is mitigated by frequent showers in summer, and the general climatic condition may be improved artificially to a certain extent. Thus it is hoped that the new territory of Japan will become quite fitting for the habitation of the people of her old territory.

THE POPULATION.

The great variety of population is a peculiar feature of Formosa. Of the aborigines there are two kinds, one quite primitive and the other a little advanced; the half-civilized Chinese constitute the principal portion of the population; the highly civilized peoples of Europe and America are largely represented there; and, finally, the Japanese have become the rulers of the island. Human races of widely different grades of development are thus found within the boundaries of an island. It would be very interesting to study those races ethnologically, socially, economically and politically; but all I can do here is to make a simple numerical statement. According to the statistics for 1899, the population of Formosa was as follows:—

	Number of houses.	Population.
Japanese	8,321	33,120
Natives	532,176	2,725,041
Total	540,497	2,758,161

The number of the Japanese given above does not include the troops stationed in the island, while the number of natives includes the aborigines. It is, however, difficult to ascertain exactly the number of the primitive aborigines, who are put in the latest statistics at 19,960 houses and 99,332 persons, though according to some estimates their actual number is still smaller. The Chinese in Formosa mostly consist of immigrants from the South of China or their descendants. Their customs and religious proclivities are similar to those in the southern provinces of China, but few of them are acquainted with Chinese characters.

POPULAR FEELING UNDER THE NEW RULE.

When Formosa was put under the sovereignty of Japan a feeling of anxiety was entertained as to the

effects of the new rule, not only by the native population and the foreign residents in the island, but also by the pioneer settlers from the mother land. Considering that even among the Japanese settlers there were some who showed a disposition to clamor against the setting up of institutions which they considered not favorable to their private interests, it is no wonder that complaints were made on various scores by the natives and foreign residents. Indeed, it is perhaps inevitable that those who assume the government of a new territory should encounter criticisms and attacks in the beginning when the general line of policy is not yet clearly defined and the efficacy of the new rule is not yet manifest.

THE SUCCESSIVE GOVERNOR-GENERALS AND CIVIL GOVERNOR.

The Governor-General is the head of the Formosa Government; and, when the military rule was put an end to, the Civil Governor, under the Governor-General, was made responsible for the civil administration. Thus far there have been in succession four Governor-Generals and three Chief Civil Administrators (Civil Governor), the first three Governor-Generals having held the office each for a short time, ranging from six to fifteen months. It was in March, 1898, that Baron Kodama, the present Governor-General, was appointed to the office. I was also called upon at the same time to take the office of Chief Civil Governor.

In the past, the frequent changes of high officials, accompanied by those of lower ones, caused misgivings to be entertained about the capability of the Japanese nation to establish a stable and effective rule over the new territory acquired as a fruit of the successful armed conflict.

Indeed, when Baron Kodama was appointed to the Governor-Generalship of Formosa no definite line of administrative policy had been fixed by his predecessors, and the island was in an utterly chaotic condition. The present Governor-General had, therefore, to make almost a novel departure in the discharge of his duties, which he proceeded to perform with all his energies. The outline of the policy fixed at the outset of his Governorship consisted of laying out new administrative districts; encouraging industries, establishing educational institutions and adopting sanitary measures; dismissing superfluous officials and securing the services of enlightened and vigorous men for the discharge of principal functions of the Government; and, in general effecting reforms in all directions without unnecessarily interfering with the old customs of the natives.

THE TREATMENT OF INSURGENTS.

The recurring rise of insurgents was one of the greatest difficulties encountered by the Japanese in administering Formosa. Attempts were made continuously from the period of the military rule to suppress those malcontents by the superior force of arms. The present Governor-General, however, adopted the policy of inducing them to surrender themselves and to return to peaceful occupations, for he thought that the establishment of an effective and beneficial rule would naturally lead to the cessation of insurrectionary movements. This new policy was not slow to show its effects. Through the insurgents who first surrendered themselves, the ideas and conditions of others were ascertained more easily, and thus it became possible to adopt measures better calculated to bring about further surrenders. The leniency with which Baron Kodama treated the insurgents has been subjected to criticisms on the part of the Japanese as well as of foreigners; but the wisdom of the policy is shown at present by the fact that it has already produced a very satisfactory result.

EDUCATIONAL INSTITUTIONS.

In order to promote the well-being of the Formosan people, and to let them enjoy the benefits of an enlightened rule, it is necessary above all to make the use of the Japanese language prevail in the island. In the meantime, however, there is a pressing need of Japanese officials conversant with the native tongue. A Central Language School was, therefore, established in Taipei in the year following the cession of the island to Japan, for the double purpose of teaching the Japanese language to the natives and the native language to the Japanese. The Central Language School is divided into the Normal School Department and the Language School Department. In the Normal School Department Japanese students are trained so as to qualify them to serve as teachers in primary schools for native children, local language and normal schools, and primary schools for Japanese children. The number of students is at present 45. The Language School Department is again divided into two sections, one for the study of the Japanese language by native students, and the other for the study of the native language by Japanese students. The students in both sections are trained with the object of adapting them for public services or private occupations in Formosa. Some native students in the upper classes of the Japanese Language Section have been given an elementary technical education with special reference to the

railway and telegraph services, and the experiment has proved successful in a considerable degree.

There are at present 91 students in the Japanese Language Section, 16 students in the Railway and Telegraph Section, and 25 students in the Native Language Section. A large number of those who have been educated in the various sections of the Central Language School are actually doing very useful work all over the island. There are also three auxiliary schools appended to the Central Language School. The first auxiliary school, with 251 scholars at present, is for the benefit of native young people, and it is designed at the same time to show a model of elementary education in Formosa and to furnish the students of the Normal School Department with opportunity to practice the art of teaching. Next, the second auxiliary school is for the benefit of Japanese children and consists of a primary course of six years, a supplementary course of two years, and a middle school course of five years. The number of scholars at present is 339 in the primary course, 27 in the supplementary course and 77 in the middle school course, the aggregate being 443. Lastly, the third auxiliary school has the object of giving to native girls an elementary education and a training in handicrafts, the number of scholars being 131 at present.

Besides the central educational institution described above, a series of local educational institutions has been established in the important places of the island. Thus there is an ordinary normal school in each of the three cities, Taipei, Taichu and Tainan. The students in these normal schools are all natives, who are to become assistant teachers in primary schools for native children, while the students in the Normal School Department of the Central Language School are to become principals and other important teachers in primary schools. The number of students in the ordinary normal schools is 298 at present, being 94 in Taipei, 124 in Taichu and 80 in Tainan.

Primary schools for Japanese children are established in the more important places with a considerable Japanese population. Their number is now 11, with 1,342 scholars in all. Primary schools for native children are distributed all over the island, and number 121 at present, with 16,034 scholars.

There are two language schools and their branches, numbering eleven, for teaching the Japanese language to aborigines and helping them improve their daily life. The number of teachers in these schools and branches is 20, and that of scholars 555.

SANITARY MEASURES.

Formosa has been known as a very unhealthy land, where none but adventurers would fain set their feet. Indeed, until four or five years ago it was not a pleasant place to live in. The general condition of the island before and just after its cession to Japan may be imagined by the fact that even in Taipei, the capital, life was made disagreeable by an enormous number of mosquitoes and flies. But sanitary measures adopted by the Japanese authorities have already been productive of remarkable results. The number of obnoxious insects has greatly decreased. A new system of drainage has cleansed the streets of Taipei. Good drinking water is supplied by means of artesian wells in Taipei and of water works in Tamsui and Kelung. These are examples of improvements whose benefit is conferred on all citizens alike.

Japanese officials in Formosa are provided with official residences newly built with special care for sanitation. Those buildings being now all finished, the health of the Japanese officials has shown a great improvement. Indeed, the percentage of the sick as well as of deaths occurring among them has decreased remarkably, as is shown in the following table:—

	No. of officials.	No. of the sick.	No. of deaths.	No. of the sick per 100.	No. of deaths.
1896	558	1,579	26	283.00	4.73
1897	6,016	18,258	126	303.49	2.09
1898	8,392	17,824	83	210.01	0.99
1899	7,704	17,360	105	225.34	1.36
1900	9,499	20,962	104	220.68	1.10

[Note.—The number of the sick is larger than the total number of officials, because an official may become sick several times in a year.]

Compared with the state of five years ago, the decrease in the death rate is more than 75 per cent. How far the Japanese have succeeded in artificially improving the sanitary condition of Formosa may be imagined from this fact.

Eleven hospitals have been established in Formosa since its cession to Japan. The one in Taipei is the biggest and most complete establishment of all, and the service of graduates of the Medical College of the Imperial University and of specialists who have studied in Europe is secured there. Besides the hospitals, there are 72 official physicians distributed over the island. They are, in certain respects, like parish doctors in Europe. The only difference is that they are paid by the Government and give medical help to the people. There is also a school in Taipei for training native physicians, the number of

scholars at present being above 100, who are all supported by the Government. The result of the training is generally satisfactory, and four scholars are already on the point of finishing their course of study.

BENEFICIAL EFFECTS OF CIVILIZED RULE.

Medical help and training given to the natives are illustrative of beneficial effects of the new and civilized rule, and they are also the best channels through which those effects will become manifest to the general mass of the people. It may be hoped with reason that the measures adopted by the present Governor-General with a view to developing industries, imparting education and improving the sanitary condition will lead the native population to appreciate the boons of Japanese administration and to assimilate themselves gradually to the ways of civilized life. The policy of influencing the natives by means of beneficial measures is already bearing good fruits politically. The attempts formerly made to suppress native malcontents by sheer force are things of the past, and the difficulties caused by them are now fast disappearing. It would be interesting in this connection to give an account of the judiciary, police and prison systems in Formosa; but, as my space in *The Independent* is too limited, I must omit touching upon these subjects and go on to make a comparatively full statement about the financial condition of the new territory.

THE GENERAL FINANCIAL POLICY.

In December, 1898, Governor-General Baron Kodama introduced to the Diet a programme for the execution of public undertakings, extending over a period of twenty years, together with a project for establishing Government monopolies of three great industries in the island. Though not without encountering opposition in the Imperial Legislature, the bills were adopted at last, owing to the strenuous efforts of the Governor-General, and his programme is now being carried out.

PROJECTED PUBLIC UNDERTAKINGS.

The undertakings embodied in the twenty years' programme are: (1) The laying of a trunk line railway extending over the whole length of the island; (2) the cadastration of the land; (3) the construction of harbours, especially of one in Kelung, and (4) the building of Government offices and residences. In order to meet the expenditures for executing these works the Formosan Government was authorized to raise loans to the amount of 35,000,000 yen, of which the principal and interest are to be paid out of the revenues of the island. The estimated expenditures are as follows:

Laying and improving the railway	28,810,000
Construction of the harbour of Kelung ...	2,000,000
Cadastration of land	3,000,000
Building of Government offices and residences	1,200,000
Total	35,000,000

(1) The Trunk Line Railway.—According to the original programme the railway was to be finished in ten years, but, judging from the progress that has been already made, the completion of the work may be effected earlier by three or five years. The part of the line now open to traffic is working quite satisfactorily. The revenues accruing from it are greater than they were expected to be. It has also produced remarkable effects in stimulating industrial enterprises and facilitating the development of the island in general.

(2) The Cadastration.—The cadastration of land, together with the census of population, constitutes a fundamental condition of effective administration. The Formosa Government, therefore, has undertaken to perform this difficult task, which was commenced in 1899 and is expected to be finished this year. The cadastrate will be based on trigonometrical surveys, and when it is finished various rights over land will be confirmed, landed property will be made secure, the credit in land will increase and the transfer of rights over land will be definitely testified. Thus it is natural that the undertaking should be well received by the people. In addition to this, however, the equity and industry of the officials engaged in cadastration, as well as the right method adopted in doing it, have produced an excellent impression upon the native population. It was not many years ago that the Chinese Governor Liu attempted and failed to make a cadastrate in Formosa. The fact is worthy of notice that where the Chinese rulers failed the Japanese are now fairly on the way to success.

(3) The Harbour Works.—The estimated expenditure assigned to harbour works in the financial programme which is now being carried out is all needed for the dredging of the harbour of Kelung. It is the intention of the Formosan Government to complete the works by constructing a breakwater, embankment, piers, docks and warehouses, and improving the town of Kelung. For this purpose a further programme involving an expenditure of tens of millions will be submitted to the Diet in due course of time.

The volume of foreign trade in Kelung is at present below that of some other ports in Formosa. According to the statistics for 1899, the amount of imports and exports was 25,380,000 yen and distributed as follows:—

	Yen.
Tamsui	16,960,000
Anpin	4,250,000
Kelung	480,000
Takao	490,000
Other ports	3,200,000

It may appear from these figures that the projected harbour works in Kelung are out of proportion to the importance of the port. But in making a project of such works changes that are to come about in the future must be taken into consideration.

Kelung is designed to be the chief port of Formosa, and its harbour works ought to be adequate for meeting the requirements of the growing industry and commerce of the island. Harbour works in Tamsui and Takao, however, will also be undertaken before long.

(4) Building of Government Offices.—Government Offices and official residences built under the Chinese régime are generally ill-adapted to the new order introduced by the Japanese; especially are they deficient in sanitary arrangements. Hence the building of new offices and residences has been undertaken by the Formosa Government. Among the new buildings are prisons in various localities, designed according to the advanced system adopted in Japan. It may be mentioned that they are already more than half finished.

The undertakings enumerated above are all being executed in a satisfactory manner. Misgivings were entertained at the outset as to the capability of the Formosan Government to pay the interest and redeem the principal of the loans raised for carrying on these undertakings. But the results thus far secured, as well as the financial condition described below, amply show that the calculations of the present Governor-General were well founded and that the misgivings entertained in certain quarters were quite unwarranted.

GOVERNMENT MONOPOLIES.

As the establishment of Government monopolies of opium, salt and camphor is one of the noticeable features of the financial programme for Formosa, their natures shall be explained here.

(1) The Opium Monopoly.—It goes without saying that opium smoking is a very pernicious habit; but at the same time, it is generally admitted that those who have already formed the habit had better be tolerated to continue it. The Formosan Government, therefore decided to subject the opium trade to strict restrictions, with a view to abolishing the habit by degrees. Only those who have been already poisoned by opium to such an extent that they are unable to abandon the habit of smoking without feeling great pain are allowed, by special warrants of the Government, to use it as a medicine, while it is absolutely forbidden newly to begin opium smoking or to continue the habit in cases where the poisoning has not advanced so far as to make abstention impossible. It was for the purpose of pursuing the policy of gradually abolishing opium smoking that the Government monopoly of the article was established in Formosa. In fact, the above mentioned line of policy was fixed in principle not long after the cession of the island to Japan, when, as chief of the Bureau of Sanitation in the Department for Home Affairs in the Imperial Government, I participated in deliberating upon the question and making the decision. The monopoly is working satisfactorily and yields an annual revenue of about 4,000,000 yen at present.

(2) The Salt Monopoly.—Salt is produced in large quantities in the southern parts of Formosa, where the process is to let sea water flow into salt fields and then cause it to evaporate by the heat of the sun. Under Chinese administration the industry was monopolized by the Government, only the system was quite different from the one established by the Japanese. The monopoly was once abolished by Count Kabayama, the first Japanese Governor-General of Formosa; for, in the opinion of the Count, it was not right to monopolize an industry for the production of a necessary of daily life like salt. But the abolition of the old system, instead of enhancing the development of the industry by private enterprise, led to results contrary to expectations, such as the destruction of certain salt fields and the rise in the price of salt. The monopoly was therefore, re-established by the present Governor-General upon an improved system. The production has lately increased in a considerable degree, so that a large quantity of the article is now exported to Japan proper. The revenue accruing from this monopoly is 700,000 or 800,000 yen at present, but a much better yield may be confidently looked forward to in the future.

(3) The Camphor Monopoly.—It may be said that camphor is supplied to the whole world almost exclusively by Formosa. The manufacture of camphor

is, therefore, a very important industry in the island. Nevertheless, when the new territory passed under Japanese rule this industry was in a rather precarious condition owing to the carelessness and ignorance of producers as well as speculative operations of traders. Camphor trees were cut down with utter disregard to future consequences; crude methods were employed for manufacturing, and the price of the article rose and fell suddenly because of the absence of any regulation of its production. Hence the camphor monopoly was established with the object of protecting the trees, improving the method of manufacture and putting the industry on a secure basis. It being known that the amount demanded by the whole world is not more than 5,000,000, or 6,000,000 kin (a kin is equal to 1.3 pounds) a year, the production is to be regulated accordingly. The revenue yielded by this monopoly is about 4,000,000 yen, which brings the total profit of the three monopolies to about 9,000,000 yen.

THE FINANCIAL INDEPENDENCE OF FORMOSA.

At the same time as framing the general financial programme and establishing the Government monopolies, the present Governor-General formed a plan of eventually making the Formosa finances independent of the help of the Imperial Government. In the past the following sums were granted by the Imperial Government in aid of the Formosa Government:

	Yen
1896	6,900,000
1897	5,950,000
1898	3,980,000
1899	3,000,000

According to the project of Baron Kodoma, which was adopted by the Diet, this grant has been and is being steadily decreased, until it will entirely disappear in 1910.

THE REVENUE OF THE FORMOSAN GOVERNMENT.

In order to prove the possibility of securing the financial independence of Formosa it is necessary only to point to the recent remarkable increase of the revenue. In 1897—i.e., the year before the appointment of the present Governor-General—the estimated revenue of the Formosa Government stood at 7,000,000 yen, and the actual revenue even fell to 5,000,000 yen. But as the result of the operation of the monopolies, the adjustment of the land tax and other financial reforms, the total revenue now exceeds 14,000,000 yen, and will amount to 20,000,000 yen in two or three years. The increase has been far above the expectations entertained at the time of framing the financial programme, as is shown by the following figures:

	Revenue anticipated in the original programme.	Actual revenue.
	Yen.	Yen.
1899	9,060,000	*10,150,000
1900	9,510,000	*15,200,000
1901	9,690,000	†14,400,000

* Actual amount. † Budget.

THE RESOURCES OF FORMOSA.

The satisfactory and hopeful condition of the finances of the Formosan Government is based on the rich resources of the island. Among the more important products of Formosa are tea, rice, sugar, hemp and flax, indigo, paper, silk, minerals, cattle, and marine produce. The Government is taking measures to encourage the industries connected with these products, and they constitute growing sources of revenue. The case of sugar may be taken as one of the most remarkable examples. If the industry develops as it is expected to do the production of sugar will become in a few years five or six times the present amount, so that the import of the article from foreign countries into the Empire of Japan may be checked to a considerable extent. Formosa tea seems to have met a failure in the American market for a time. But Oolong tea, being a peculiar product of Formosa, is above competition. Hence, if the quality be improved and the price lowered by better methods of production, it might maintain the market and make good the failure in the past. A crop of rice may be had twice a year in most parts of Formosa, and there is still room for increasing the production and improving the quality. Under the circumstances it is of special importance that proper measures should be taken to facilitate the agricultural and industrial development of the island. For this purpose, the Formosan Government is fortunate enough to have secured the services of Dr. Niobe, who studied in America and Europe, and who is one of the greatest authorities on agricultural science in Japan.

As to the mineral wealth of the island, gold, sulphur, coal and petroleum are the most important, the yearly output of gold being about 1,000,000 yen at present.

CONCLUSION.

The total expenditure incurred by Japan in connection with Formosa since its cession up to the end

of the last fiscal year (March 31st, 1901) amounted to 150,000,000 yen, including the military expenses. In the same period a total revenue of 40,000,000 yen was derived from Formosa. Hence, the financial burden borne by the Imperial Government has been 110,000,000 yen in all. Now, seeing that the annual revenue derived from Formosa is between 14,000,000 yen and 20,000,000 yen, it may be said that the capital invested by the Imperial Government is bearing interest at the rate of 15 per cent. to 20 per cent. Besides, the import of Japanese commodities into Formosa is now above 15,000,000 yen. Supposing that the profit of this trade is at the rate of 20 per cent., the annual gain of Japan is about 3,000,000 yen, which nearly covers the present amount of the grant in aid which the Formosan Government receives from the Imperial Government. The day is past when Formosa could be regarded as an embarrassing burden and the success of its administration could be doubted. There is no room now for questioning the capability of the Formosan Government to meet the liabilities arising out of the loan of 35,000,000 yen. Nay, even if a loan of 100,000,000 yen be raised on account of the Formosan Government, the financial responsibility may be borne without overtaxing its resources.

LANGFELDT & CO., LIMITED.

REPORT AND ACCOUNTS.

The following is the report and statement of accounts:—

Report of Directors, and Statement of Accounts, to be submitted at the 23rd Semi-Annual Ordinary General Meeting of Shareholders, to be held at No. 73, Main Street, Yokohama, on Monday, the 11th day of August, 1902.

The statement of Assets and Liabilities, and the Profit and Loss Account for the half year ended the 30th June, 1902, accompany this Report.

Owing to the heavy fall in the price of imported coal, the Company has sustained a severe loss, the accounts showing a debit balance of yen 12,060.34 for the half year.

It should be stated that while the loss has been incurred wholly on the coal business, only a portion of the loss has been made on sales of coal during the half year, the balance in stock having been written down to present market value, so that the whole estimated loss on the remaining stock of coal also appears in the present half-yearly accounts.

Mr. V. R. Bowden has joined the Board of Directors and Mr. J. F. Cox Edwards has been appointed Auditor in the place of Mr. Guinness, who has left Yokohama.

D. H. BLAKE,
C. B. BERNARD,
M. F. BENGEN,

E. & O. E.

Yokohama, 2nd August, 1902.

D. H. BLAKE,
C. B. BERNARD,
M. F. BENGEN,
V. R. BOWDEN, } Directors.

I have examined the foregoing accounts and compared them with the Books and Vouchers of the Company, and certify them to be in accordance therewith.

J. F. COX-EDWARDS, Auditor.

Yokohama, 31st July, 1902.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

FRENCH ADMIRALS DISMISSED.

London, July 31.

The French Admirals Beaumont and Servan have been dismissed the service, the former because he introduced his mistress into the official gallery at the National Fête held on the 14th July (the Fall of the Bastille), ignoring the Prefect; the latter because he was indifferent to the hygienic condition of his ships.

DISTINGUISHED JAPANESE.

Count Matsukata has visited the Russian Minister of Finance, Mr. C. de Witte. Prince Komatsu has been received in audience by the Czar.

KING EDWARD'S IMPROVEMENT.

King Edward slowly paced the deck of his yacht unaided to-day.

AMERICA AND THE CHINESE INDEMNITY.

It is stated at Washington that the United States has not consented to the payment of the Chinese Indemnity in gold. It is proposed to refer the question to the Hague Tribunal.

A TERRIBLE DISASTER.

London, Aug. 1.

A terrible explosion has taken place in the Mount Kembla colliery, Wollongong, New South Wales. Twenty-seven dead bodies have so far been recovered, 149 men have been rescued, and 100 are entombed. It is feared that their rescue is hopeless.

DEATH OF COLONEL FORESTIER-WALKER.

Colonel Forestier-Walker has been accidentally killed on the railway at Helouan (p Heilbron).

KING EDWARD.

Later.

A bulletin says that the King is making rapid progress and is now able to walk the entire length of the deck, unassisted.

His Majesty cruised in the afternoon in the direction of Weymouth.

THE WEST INDIES.

The House of Commons has voted £25,000 for the West Indies.

Mr. Chamberlain declared that we must assist West Indian trade; and asserted that the Legislature had too long refused to impose countervailing duties on sugar.

GERMAN GUNS.

During the Debate in the British House of Commons on the Army Estimates, Mr. St. John Brodrick, Secretary of State for War, said that the guns of Germany were better than our own in accuracy, range and quickness.

THE MINING DISASTER.

London, August 2.

Sixty-seven bodies have been recovered at Wollongong.

THE LYNCH CASE.

Colonel Lynch has been committed for trial.

THE KING.

The King has cruised in his yacht as far as Brighton.

FORESTER-WALKER.

Forestier-Walker has been gazetted general (?)

LIBERAL SUCCESS.

Mr. Barran (Liberal) has been elected to represent one of the divisions of Leeds.

Lord Rosebery, speaking at a banquet of the Liberal League, said the election was a great triumph for Liberalism and was also a warning to the Government, to whose prestige it was a severe blow. It should teach Liberals the value of concentrated effort.

LABOUR CANDIDATE RETURNED.

Mr. Shackleton, the labour candidate, has been returned unopposed for the Clitheroe Division of N.E. Lancashire, in succession to Sir U. J. Kay-Shuttleworth, who has been raised to the peerage.

THE KING.

London, August 3.

The King remains at Cowes and has received several visitors.

CHINESE INLAND NAVIGATION.

Reuter learns that unless the Chinese objections to inland navigation, which indicate insincerity on the part of the Peking Government, are over-ruled, China traders will not permit the conclusion of the mutilated treaty.

RUSSIA AND CHINA.

Aug. 4.

It is semi-officially stated at St. Petersburg that Russia expects a negative reply from the Powers to her Note mentioned on July 18th, and will then affirm, as regards any increase of duties on Russian sugar, that it is an infringement of the treaties and that she will hold herself free to disregard treaty stipulations.

BOER GENERAL AND THE CORONATION.

The Boer General Meyer has received an invitation from the King to attend the Coronation, but has replied that while he would have liked to stay, his doctors have ordered him to the Continent to take the waters.

THE BOER LEADERS.

London, August 5.

Before sailing Generals Botha, Dewet and Delarey issued an address stating that the Boer conference at Vereeniging in May appointed them to collect money abroad for the widows and orphans of burghers.

THE CORONATION.

The troops detailed for duty at the Coronation begin arriving on Wednesday. Workmen are busy re-erecting the stands and re-fitting seats. Barriers and gates are being re-constructed across those streets that abut on the route of the procession.

THE KING.

London, August 6.

The King yesterday ascended and descended unaided the staircase of his yacht.

ADMIRAL IJUI.

Admiral Ijuin has been received in audience by the King.

EMPRESS EUGENIE.

The Empress Eugenie has visited Their Majesties.

THE KING.

London, Aug. 6.

The King has circumnavigated the Isle of Wight.

THE CHINA TRADE.

Lord Cranborne stated in the House of Commons that the Chambers of Commerce and other bodies interested in the China trade had been consulted with reference to portions of the treaty.

THE KING'S HEALTH.

A later telegram says that the King drives to the Palace in London to-day in an open carriage.

CHINA AFFAIRS.

Admiral Seymour in a letter to the *Times* agrees with his esteemed friend Liu-kung-yi, that the time has come for the withdrawal of all those troops from Shanghai whose occupation was only intended to be temporary.

Sharretts, the American tariff commissioner at Shanghai, has announced that he will oppose the abolition of the *likin* and the substitution of a surtax which, he thinks, will prove more disastrous to all the nations and specially to America.

THE KING AND QUEEN.

London, August 7.

Their Majesties left Cowes in wretched weather. The warships at Portsmouth, including the Japanese, fired salutes. The Royal Party arrived at Victoria and drove to the Palace by a circuitous route in an open carriage at a walking pace. They were favoured by a temporary cessation of the downpour. There was great enthusiasm along the whole route.

THE POWERS AND SHANGHAI.

Lord Cranborne said that Great Britain had made a proposal to the Powers for the evacuation of Shanghai, but it was impossible for us to evacuate alone. We must in all respects have most favoured nation treatment.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE MURDERERS OF MARQUIS DE MORES.

Saigon, August 1.

The criminal tribunal at Soussa has condemned the assassins of Marquis de Mores to death and to 20 years' hard labour.

M. BEAU.

M. Beau and General Sucillon have arrived in St. Petersburg.

VICE-ADMIRAL MARECHAL.

The *Redoutable*, carrying Vice-Admiral Maréchal, is expected at Nagasaki.

COLLIERY DISASTER.

Saigon, August 2.

An explosion has occurred in a mine near Sydney; 27 deaths.

REBELLION IN SZCHUAN.

Three hundred rebels have been killed in Szchuan. Order is restored.

M. BEAU REACHES PARIS.

M. Beau has reached Paris.

FRENCH NEWS.

Saigon, August 4.

A consultative committee of colonial defence has been organized in the Ministry of the Colonies.

The chief of Chilian rebels, Ching Teng-ping, has been taken and executed.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

ITALY AND SWITZERLAND.

The trouble between Italy and Switzerland has been settled by the friendly intervention of the German Emperor. It has been decided that each country shall change its Representative in the other's capital, and

that, pending the appointment of the new Representatives, diplomatic duties shall be discharged by the Secretaries.

MEDICAL INSPECTION AT CHEMULPO.

A telegram from Chemulpo dated the 6th instant says that, on the preceding day, it was determined that all ships coming from Liaotung or Japan should be medically inspected.

(RECEIVED AT THE WAR DEPARTMENT IN TOKYO.)

FIGHTING IN FORMOSA.

The Governor-General of Formosa reports that on the 1st instant 80 men of the native militia stationed in the neighbourhood of Tekiheki and Sorci in the Toroko district, revolted and attacked the police, of whom they killed four. On the afternoon of the same day they attacked the detachment of troops at Shokosha, and second-Lieutenant Fujiwara was killed. The number of casualties on the Japanese side is uncertain. On the 2nd instant two companies of infantry were despatched to the place from Taichu.

CHOLERA IN TIENSIN.

According to a telegram from Tientsin dated the 5th instant, the total number of cases of cholera up to the 3rd instant in the walled city was 1,330, of which 915 ended fatally, and the number in the northern suburb outside the wall was 1,247 with 804 deaths. There has been one fresh case in the Japanese settlement.

(FROM THE "JIJI SHIMPO.")

THE COLONIAL CONFERENCE.

London, July 31.

The conference of the Premiers of the British Colonies has been re-opened. Mr. Chamberlain, Secretary of State for the Colonies, presided, and the subjects discussed were connected with shipping, wireless telegraphy, and the political relations of the Empire.

COUNT MATSUKATA.

Count Matsukata has visited M. de Witte, the Russian Minister of Finance.

CENTRAL AMERICA.

Great Britain has abandoned her sovereignty over Island (?) harbour in the Republic of Honduras, Central America, but she retains British Honduras.

DISTURBANCE IN HAYTI.

The rebel army of Hayti has defeated the Government forces.

THE GERMAN NAVY.

London, August 2.

Germany is about to augment her navy on a large scale.

EX-PRESIDENT STEYN.

Ex-President Steyn, of the former Orange Free State, has arrived in Southampton; at the same time there landed 35,000 troops. Steyn is suffering from brain disease.

JAPANESE STEAMERS IN CHINESE WATERS.

The *Times* correspondent reports that Viceroy Liu is entertaining much apprehension about the competition of Japanese steamers on the inland waters of China.

GERMAN EMPEROR AND LORD KITCHENER.

The Emperor of Germany has invited Lord Kitchener to Germany for a pleasure trip.

REBELLION IN VENEZUELA.

A desperate battle has been fought at Aguadals (?) between the Government forces and the rebels. Both sides had been in a state of armistice for some time.

TROUBLES IN CENTRAL AMERICA.

London, August 4.

General Belchy (?), with 3,000 Government

troops, is stationed at Panama, where fortifications have been constructed. General Severa (?), in command of 4,000 rebels, is about to storm the position. The insurgents of Venezuela are now advancing in the direction of Caracas, escorted by the war-ship *Carthage* of Colombia.

The war-ship *Banlagh* (?) in the possession of Matos (?) has damaged her propeller and is anchored at Trinidad. The gunboat *Bolivar* blockades the Orinoco River.

RUSSO-JAPANESE ASSOCIATION.

The *Tageblatt*, of Berlin, reports that a Russo-Japanese Association has been organized for the purpose of furthering the commercial interests of the two countries. The head office will be stationed in Tokyo.

EX-PRESIDENT STEYN.

Ex-President Steyn, of the Orange Free State, has started for Holland.

KING EDWARD.

The King has enjoyed himself by taking part in a game played by Princes of the Blood.

TROUBLES IN CENTRAL AMERICA.

London, August 5.

It is announced in Colon that the rebels have been defeated at Addaads (?).

The insurgents in Venezuela have blocked the railway traffic at Caracas.

The war-ships of the United States, Germany and Italy have assembled in La Guayra. All the other ports have been taken by the rebels, with the exception of Maracaybo.

FRENCH NAVY.

During the French naval manoeuvres it was ascertained that submarine torpedo-boats were successful in destroying three battle-ships.

(FROM THE "JAPAN HERALD.")

PRINCE KOMATSU.

London, August 2.

Prince Komatsu is going to Moscow on Monday, and returns home by the Siberian railway.

THE SIBERIAN RAILWAY.

Russia has granted sixteen and a half million sterling for the construction of the railroad from Stretensk to Blagovestchensk.

FRANCO-RUSSIAN AMENITIES.

The *St. Petersburg Gazette* states that Sousillon, the Commander of the French troops in Pechili, accompanied by the French Minister to Peking, will shortly visit St. Petersburg.

THE RUSSIAN ARMY.

London, August 4.

A Russian decree which has been issued orders 318,645 recruits to enrol this year, or 100,000 above the number for 1901.

THE KAISER AND THE TSAR.

The Kaiser meets the Tsar to-day at Reval, (a Russian seaport, capital of Esthonia, situated on a small bay on the south side of the Gulf of Finland, opposite Helsingfors—52 miles distant—and 232 miles by rail W.S.W. of St. Petersburg).

THE KING'S HEALTH.

London, August 5.

The progress of the King is regarded as so satisfactory that his ability to perform all the details of the Coronation ceremony on Saturday is practically certain.

London, August 6.

King Edward, in leaving Portsmouth to-day for London, walked down the gangway from the Royal yacht and into the train unassisted.

On arriving at Victoria Station the Royal party drove to Buckingham Palace in an open carriage; notwithstanding the rain.

Enthusiastic scenes were witnessed along the entire route.

THE FOREIGN TROOPS IN CHINA.

Admiral Seymour, in a letter to the *Times*, says that no reason that can diplomatically be openly expressed demands the continued presence of foreign troops in Shanhaikwan. International competition (adds the Admiral) demands and justifies all nations to withdraw their troops simultaneously.

(FROM THE "DEUTSCHE JAPANPOST.")
THE KAISER AT EMDEN.

Berlin, July 31.

Accompanied by the Secretary of State for the Navy, v. Tirpitz, the Minister of Communications, Budde, and the Postmaster General, Krätke, the Emperor inspected the port of Emden. Referring to the days of the Great Elector, who transferred the sea trade of the Electorate of Brandenburg to Emden, and to those of Wilhelm I., who re-established the German Empire, the Emperor foretold better days to Emden on account of the Dortmund-Ems Channel, which will connect directly the great German hinterland with Emden.

The Kaiser then distinguished the saved crew of the torpedo boat *S. 42*, run down by the English steamer *Firshy* near Cuxhaven.

TO VISIT RUSSIA.

Later Emperor Wilhelm and Admiral v. Tirpitz started for Kiel, whence they will go to Russia to attend the naval manœuvres. The Imperial yacht *Hohenzollern* will be accompanied by the cruisers *Prinz Heinrich* and *Nymphë*.

PRINCE KOMATSU AND COUNT MATSUKATA.

Prince Komatsu and Count Matsukata were received with great distinction at St. Petersburg. The latter had an interview with Mr. Witte, the Russian Chancellor of the Exchequer.

KAISER DECORATES AMERICANS.

On account of Prince Heinrich's visit to the United States, the German Emperor conferred numerous decorations on American citizens.

THE ELBE DISASTER.

Berlin, August 4.

The Hamburg board of enquiry into the Elbe accident puts the blame on the Captain of the *Primus* for sailing in the wrong channel.

PAN-AMERICAN CONGRESS.

The Pan-American Congress reassembles at New York on the 1st of October.

THE GERMAN EMPEROR'S LOVE OF PEACE.

Reviewing the German Emperor's speech delivered at Emden, the Russian *Novosti* writes that Germany's pacific policy is the main guarantee of European peace, and that the present peaceful outlook is due to the Emperor's love for peace.

GERMAN NEWS.

The Sultan has accepted M. Rouvier's unification proposals.

Emperor Wilhelm started to-day from Kiel for Reval, Russia, to attend the Russian naval manœuvres. He is accompanied by Count Bülow, General v. Plessen, Captain v. Usedom, Mr. v. Tschirsky, Count Eulenburg, the Chiefs of the Military and the Navy Cabinets Count v. Hülsen and Frhr v. Senden and Prince Friedrich Heinrich of Prussia. The Emperor will be received by 25 Russian men-of-war. There will be large naval manœuvres with sham attacks, attacks by artillery, defense by torpedoes a. s. f.

The former President of the Orange Free-State, Stejin, has arrived at Southampton.

The *Norddeutsche Allgemeine Zeitung* states that the naval budget for 1903 keeps within the Navy Law limits.

Baldwin's attempt to reach the North pole has failed. He reached only the 81st degree and 44m. of north latitude. The attempt will be repeated in 1903.

GERMAN NEWS.

Berlin, Aug. 6.

The *Times* report suggesting that Germany resists the evacuation of Shanghai is utterly unfounded. Germany is quite willing to withdraw her troops, provided that other powers will do the same.

The Russian press strongly opposes the Anglo-Chinese commercial treaty since the pending negotiations were not officially notified to the other powers. The French papers are very sceptical and opine that China will be forced to concede to the other powers the same or similar conditions as those granted to England, if the treaty shall be at all effective.

Rumours in Berlin say that the rendition of Tientsin to Chinese authorities will take place about the end of August.

The German Emperor dedicated a splendid silver cup to the Russian navy. Everywhere the Kaiser's journey to Reval is considered as a new guarantee of the peace. The *Norddeutsche Allgemeine Zeitung* points out that the visit will tighten the friendly relations existing between the two great neighbouring powers the more so as no reasons for political friction are apparent. The fact that Count Bülow accompanied Emperor Wilhelm and thus had an opportunity of exchanging views with Count Lamsdorff was due to the Tsar's suggestion.

(FROM THE "N.-C. DAILY NEWS.")
THE WINGFIELD SCULLS.

London via Bombay, July 29.

Cloutte, of the London Rowing Club, has won the Wingfield Sculls.

THE TREATY WITH CHINA.

The commercial community are well satisfied with Sir James Mackay's agreement with China.

THE SITUATION IN SOUTH AFRICA.

General Botha, speaking at Stellenbosch, declared that Africans, when educated, need not make room for anybody.

EXPLOSION AT FOOCHOW.

Foochow, July 28.

There was an alarming explosion of a powder magazine on the 25th instant, at noon, half-way between the Native City and the upper bridge. It is estimated that forty lives were lost. Large stores of power and ammunition, together with two powder machines, were destroyed. The cause of the explosion is unknown.

THE BOXERS IN SZECHUN.

Ch'engtu, July 29.

The Boxers are nearing Ch'engtu and the available troops are quite unable to disperse them.

A MARINE DISASTER.

Hongkong, July 30.

News has been received from Singapore that the steamer *Ban Hin Guan* collided with the German steamer *Prinz Alexander* at Muar, Straits of Malacca, on Tuesday morning last, and that the *Prinz Alexander* was sunk with a loss of ninety lives.

(The steamers *Prinz Alexander* and *Ban Hin Guan*, are small coasting vessels. The *Prinz Alexander* (Capt. Moss) is a Dutch steamer of 727 tons' register, and has lately been running between Singapore and Batavia. The *Ban Hin Guan* (499 tons) is a British steamer on the run from Singapore to Port Swettenham, via intermediate ports).

White Java and Penang	6.00 to 6.80
White Refined	8.20 to 10.10

EXPORTS.

RAW SILK.

There has been rather less buying than in the previous week and prices show some slight variation. Crack Filatures are dearer, while in Re-reels and Kakedas some slight concessions could be obtained, although these latter will be somewhat set off by firmer exchange. Advices from consuming markets are still dull, but there is a prospect of better news in the middle of the month.

QUOTATIONS.

Filatures—Extra, Fine	Y. 1,020 to 1,030

BOVRIL AT THE FRONT.

Bovril has played such a conspicuous part in South Africa that it forms no inconsiderable feature of the story. The Lancet has had frequent references to Bovril in the reports of the officers of the Royal Army Medical Corps. Nearly every newspaper correspondent has had to refer to Bovril to make his story complete. Rudyard Kipling and Baden-Powell have written their Bovril stories. Over 500 British hospitals and similar public institutions use and pr scribe Bovril, not beef tea, but Bovril.

The reason is not far to seek. Bovril is a nourisher as well as a stimulant. It contains the albumen and fibrine, the sustaining properties of the beef. It is this fact, together with its absolute purity, that commends Bovril to physicians and scientists, and proves in practice what it demonstrates in analysis.

BISSET AND URE'S SHARE REPORT.

Yokohama, August 7.

Indo Chinas—Business has been done at Taels 70.

Helm Bros., sellers at yen 45. Kirin Breweries have been done at yen 160. Yokohama Engine and Iron Works, sales at yen 117. Club Hotels have changed hands at yen 75. Langfeldts, sellers at yen 72.50. All debenture stocks are wanted at quotations.

SKIN TORTURES
And Every Distressing Irritation of the Skin
and Scalp Instantly Relieved by a
Bath with CUTICURA SOAP

And a single anointing with CUTICURA, the great skin cure and purest of emollients. This is the purest, sweetest, most speedy, permanent, and economical treatment for torturing, disfiguring, itching, burning, bleeding, scaly, crusted, and pimply skin and scalp humours with loss of hair, and has received the endorsement of physicians, chemists, and nurses throughout the world.

Millions of Women

USE CUTICURA SOAP, exclusively, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations, inflammations, and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sensitive antiseptic purposes which readily suggest themselves to women, and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and

beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet soap and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the most torturing, disfiguring, and humiliating skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Aust. Depot: R. Towns & Co., Sydney, N. S. W. So. African Depot: LENOON LTD., Cape Town. "All about the Skin, Scalp, and Hair," free. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

YOKOHAMA: SATURDAY, AUGUST 23RE, 1902.

DEATH.

At Foochow, suddenly, from heat apoplexy, THOS. HOLYOAKE BOX, of Yokohama.

SUMMARY OF NEWS.

PRESIDENT ROOSEVELT is preparing to make an extensive tour through New England and the West.

THE Philippines Commission has appropriated a quarter million dollars for the islands' exhibit at the St. Louis Exhibition.

MONDAY being the 84th Birthday of the Emperor Francis Joseph, the usual official courtesies were exchanged locally.

THE Odawara Electric Car Company, at a recent special general meeting, decided to increase its capital to yen 170,000.

THE Inouye Bank of Osaka is reported to have decided to dissolve by September 30th. The

bank was opened in 1894 with a capital of yen 500,000.

THE new torpedo-boat destroyer *Asashio* is reported to have arrived at Gibraltar on August 16th on her way to Japan.

THE Sapporo Sugar Refining Company, Hokkaido, at a recent general meeting of shareholders, decided to dissolve owing to failure in business.

It is reported that Marquis Ito will, after the conclusion of various functions attending the recent general elections, issue a manifesto to the members of the *Seiyukai*.

THE N. D. L. launch *Lloyd*, which went on the sea-wall near the Kawasaki Dock-yard at Kobe during the recent typhoon, was pulled off on the night of the 15th and taken to Ono.

TRAFFIC on the Sanyo Railway was expected to be re-opened thoroughly from both termini on the night of August 19th, the damaged section between Ohata and Shimomatsu having been repaired that same morning.

It is said that Mr. Root, U.S. Secretary of War, scandalized at the gambling going on among army officers in the Philippines, has demanded the resignation of several impoverished ones of whom their creditors complained.

THE Japanese Consul in Bombay wires home that nearly the whole of India is suffering from the continued drought and that fears are entertained for the cotton crop. As a matter of fact, quotations for cotton are steadily rising.

INFANTRY Captain Count S. Hisomatsu, on the staff of the Sambô Hombu, has been appointed an attache of the Japanese Legation in Paris. Captain Takatsuka, a staff officer, has also been ordered to proceed to France on official business.

PROFESSOR T. TERAQ, of the Law College in the Imperial Tokyo University, left Tokyo on August 15th for Brussels to represent Japan at the coming general meeting of the International Law Association to be held there on September 18th.

NEGOTIATIONS for amalgamation are in progress between the Kyushu and the Osaka Life Assurance Companies. A conference of representatives from both concerns is expected to take place on September 5th in Osaka, when the matter will be definitely settled.

PRINCE KOMATSU is expected to arrive at Port Arthur by August 21st. Instead of leaving at once for home His Highness will remain at Port Arthur until the 23rd when he returns on the cruiser *Yakumo*. The Prince will therefore arrive in Tokyo on or about the 28th.

THE Manila authorities are going to spend half a million dollars (gold) on the reconstruction of the city. Forty thousand natives are to be moved into a big camp beyond San Lazaro, says the *American*, while Manila is being put into a sanitary condition.

WHILE attempting to leave Yokohama on the 18th for Hokkaido, the steamer *Atsuyama Maru*, of the Nippon Yusen Kaisha, struck a shoal within the breakwater. The tide was at the ebb, but the vessel was floated by 2 o'clock and at once left for her destination. No damage was sustained.

THE gold-dust gathering industry in the northern part of Hokkaido continues prosperous. A report has it that the prospectors this year are remarkably less in number as compared with last year. In point of output, however, there is a considerable increase this year, the figures

from April to the end of June having amounted to over 3 *kwan* 662 *monme* altogether. This shows an increase of over fifty per cent.

A JAPANESE paper says that 1,678 persons have been prosecuted on charges of violating the Law of Election in connection with the recent general elections. Of these, 145 were found guilty, 262 discharged and the remaining 1,271 are detained in Court prisons pending decisions.

H. I. H. PRINCE KITASHIRAKAWA (Tsunehisa), son and heir of the late General Prince Kitashirakawa, Commander-in-Chief of the Imperial Body Guards, having attained his majority in August this year has been allowed to take a seat in the House of Peers in accordance with the law.

A TELEGRAM from Fusan dated August 14th says that thirteen Japanese have been injured more or less seriously by French sailors and that the Japanese Consul of the port has accordingly visited the French warship, to which the sailors belong. The particulars of the affair are not known.

THE order of the Rising Sun, third class, has been conferred by the Emperor of Japan upon Mr. Charles Holme, Honorary Secretary of the Japan Society, and the Order of the Sacred Treasure, third class, upon Mr. Paul Bevan, Honorary Treasurer, and Mr. Marcus B. Huish, Honorary Librarian, also of the Japan Society.

TRACY, the notorious bandit, who has kept the Sheriff officers of Seattle at bay since June 9th, when he broke out of Oregon prison, has at last thrown up the sponge. He was run to earth at Spokane and surrounded, whereupon he committed suicide. Many murders besides the four men he killed at the prison, are laid to his charge.

LIEUTENANT MURAI KIKUZO, of the Artillery, was accidentally killed at the foot of Mount Fuji on August 16th. Shortly after noon he was riding on horseback, inspecting target marks at the foot of Fuji when a 12-inch gun was fired from No. 1 fort. The missile struck his right thigh and also hit the horse. Death was instantaneous. It is scarcely necessary to state that the Artillery were carrying out target practice that day.

ADMIRAL IJUIN, Commander-in-Chief of the Japanese Coronation Squadron, wires home that the *Asama* and *Takasago* left Portsmouth on August 18th for Cork, their duties in connection with the Coronation having ended. The telegram further announces that the fleet had been invited by the Mayor of Cork to touch at that port, where an International Exhibition is now open. The Coronation Squadron will start for Japan towards the end of August.

A TELEGRAM from the Japanese Consul in San Francisco says that Yokohama, Tokyo, Kobe, Moji and Nagasaki having been declared cholera-infected ports by the American Authorities articles shipped from Japan, such as provisions, hair, furniture, etc., must be accompanied by certificates from American quarantine officers in Japan, to avoid troublesome measures of disinfection.

MAJOR-GENERAL YAMANE, of the General Staff Office, has been appointed an attaché of the Japanese Legation in Peking, as successor to the late Captain Kajikawa, who committed suicide in Peking about a month ago. The General is well acquainted with the internal condition of China and his knowledge of Western sciences will help him in discharging the various difficult tasks which call for his attention. The veteran officer went through the campaigns of the China War and the war of 1900. He has studied in Germany.

CHINESE NOTES.

Saturday, Aug. 16.

Excellent a reform as would be the abolition of *likin*, we have never entertained any expectation that it would be accomplished. Some one of the Powers concerned was quite sure to raise a difficulty. Therefore the matter has ceased to be very interesting. As a point of history, however, it may be noted that Viceroy Liu Kun-yi is now said to be offering opposition, which is inexplicable, seeing that his consent had been already obtained, and that the Kwangtung officials who are specially interested in preserving the tax owing to the large import of foreign goods *viâ* the Pearl and the West Rivers, have bribed Mr. Wu Ting-fong, the Chinese Representative in Washington, to organize obstruction. So soon as accusations of that kind come upon the tapis a question loses respectability.

Monday, Aug. 18.

Tokyo journals contain telegraphic accounts of the ceremony of restoring the civil government of Tientsin to China, which took place on the 15th instant. The details are quite uninteresting in the crude form that a telegraphic message necessarily assumes. There were many meetings and salutations, everybody treated everybody else with much courtesy, salutes were fired, champagne was drunk, and a banquet finished the proceedings. That is about all there is to tell. The various detachments of foreign troops, forming the garrison, German, English, French and Japanese, retired finally to the foreign settlement, each with bands playing and colours flying. It is permissible to hope that the long occupation will have a good effect since it has familiarized the Chinese with foreign methods of administration. When Great Britain forced open the gates of Canton in 1857, she would probably have increased the legacy of hatred which the experiences of the past 2½ centuries bequeathed to the Chinese, had not her subsequent occupation of the city, during a long interval, been the means of establishing with the citizens relations such as never could have existed so long as the local authorities were allowed to maintain their old policy of seclusion.

In the matter of evacuations and renditions, the next step will be the withdrawing of the foreign troops from Shanghai. There, however, the jealousies of the Powers offer a troublesome barrier. No one wants to march out first. Germany is said to have stated that until all four States are absolutely agreed, there can be no serious talk of evacuation, which statement sounds somewhat superfluous. If there be one lesson that the events of the past two years in China have clearly taught it is the lesson that European Powers thoroughly distrust each other. There appears to be about as little mutual confidence between them as there is between anyone of them and China.

Tuesday, Aug. 19.

The foreign administrators of Tientsin are said to have handed over to Viceroy Yuan a sum of 185,027 taels, being the amount remaining in the municipal treasury as the outcome of taxation. It is not to be doubted that Tientsin's fiscal condition has been distinctly good under foreign administration, but the hope at one time entertained that the object lesson furnished by European-American methods of government would produce a permanent effect upon the Chinese does not appear likely to be realized.

The Tientsin correspondent of the *N.-C. Daily News*, writing under date of July 31st, said:—

The return of Tientsin to the control of the Chinese is definitely fixed for the 15th August I am informed, and arrangements are beginning to be made for concluding the transfer. In anticipation of this, small yellow flags are being sold on the streets of the city and it will be profusely decorated with them on that occasion it is said. It will be a voluntary expression of the sentiment of the people, and probably very few, if any, shop or residence fronts will be without the yellow emblem of loyalty. There can be no doubt, I think, but that the great body of the Chinese are rejoicing at the prospect of coming under the government of their own officials again. Between the two classes—governed and governing—there will be a better understanding, and the former believe, at any rate, that they will receive better treatment than at the hands of the foreigner. At least they understand the treatment and prefer it.

If that be true, it is distinctly disappointing. The people of Tientsin must be supposed to have had conclusive experience. They certainly know the administrative methods of their own people, and they had nearly two years to study the administrative methods of foreigners. Yet they seem to prefer the former. This bears out the old assertion that in few countries, if any, does a more thoroughly autonomic system of local Government exist than in China.

The latest tale about the intramural railway is that the difficulty about the restoration is caused by a desire on the part of the Chinese to station 2,000 men near the station, whereas England objects to more than 500. There may be some grain of truth in the story but we confess our inability to detect it.

Wednesday, Aug. 20.

We have recently had several alarming statements to the effect that the rebellion was spreading in Szchuan and that it threatened to assume serious dimensions. Such accounts are not borne out by an imperial decree published in Peking, apparently on the 17th instant, which says that, according to a report received from the Viceroy of Szchuan the Throne learned with satisfaction that the disturbance had been virtually quelled. The decree added, however, that no means should be spared to restore complete tranquillity. We presume that this decree is addressed to the new Viceroy, Tsên Chun-hsuen, who, at the beginning of August, replaced the Manchu Viceroy Kuei Chun.

We yesterday published a forecast by the Tientsin correspondent of the *N.-C. Daily News* that after the rendition of the civil government of Tientsin to the Chinese, trade would show a material revival. A telegram from the correspondent of the *Asahi Shimbun*, dated at Tientsin the 18th instant, shows that the forecast has already begun to be verified. He says that even the brief space of three days which have elapsed since the rendition have sufficed to produce a marked revival of trade.

KOREA.

Saturday, Aug. 16.

Intelligence comes from Fusan that a disturbance has taken place there. Apparently a party of French marines undertook the operation of painting the town red, and before they got through they had come into violent impact with thirteen Japanese residents who were all "laid low" in the process. The little port is represented as being in a flutter, and Mr. Nusahara, the Japanese Consul, finds his hands suddenly full of work. It is a strong recommendation

of Western civilization that its products should act upon this fine manly conception of amusement. Wrecking houses and battering their inhabitants are much more suitable games for grown men than those sleepy old pastimes that usually serve to divert Oriental minds.

The Minister of Finance in Söul is reported to have resigned, and his place is temporarily occupied by Mr. Li Yong-ik, to whose name Japanese journals generally append the parenthesis *Rosia-to* (pro-Russian). There is no explanation of this event. We shall presently have the usual tide of tales.

Monday, Aug. 18.

According to Japanese newspapers the trouble at Fusan was caused by a party of eight or nine French marines who landed early in the afternoon, and having drunk themselves into a reckless mood, attempted to put to sea in a cargo boat owned by a Japanese company. Three or four of the employees of the latter having attempted to interfere, a fight ensued. While it was in progress, the Frenchmen received recruits which brought their strength to about 60 men, and they cut and wounded some 13 Japanese, including bystanders and old folks who tried to quell the disturbance. A party of Japanese marines put off from the *Kongo* when they saw what was going on, but fortunately they were persuaded by the police not to land. How the disturbance was finally quelled our contemporaries do not state. It is added that two or three of the Japanese are very badly hurt, and that one of them has been stabbed in the stomach so as to endanger his life. The sum of the matter is a drunken row; one of the old-fashioned outcomes of Occidental civilization. The countries of the Far-East have hardly lived up to this standard, as yet.

Wednesday, Aug. 20.

It appears that cholera has effected an entry at Chinnampo. The telegram announcing the fact is extremely vague. It says that the malady is spreading and that there are 20 or 30 patients (*sjumei*) daily, and then it adds that up to the 14th instant there had been 50 patients in all. One Japanese was included in the latest returns.

Thursday, Aug. 21.

The Emperor of Korea is about to celebrate the fortieth anniversary of his coronation. Such events are sources of considerable anxiety in Korea, the basis of all festivities, namely money, being unfortunately absent. Hence there has been much talk of negotiations between the Court and Mr. MacLeavy Brown, the latter not being at all disposed to squander upon superfluous demonstrations the small modicum of funds remaining in his hands. Apparently some exit from that dilemma was found. But now another presents itself. The Korean Government announced His Majesty's purpose to the various Courts of Europe and asked them to send special envoys to attend the ceremony. Naturally the reply was that the Representatives already in Söul would be instructed to act for their respective countries on the auspicious occasion. That did not please the Korean monarch. He had looked for something more splendid. One Power, however, appreciated his mood and agreed to send a special envoy. That Power was Russia and the envoy chosen was Mr. Waeber. But the news is said to have caused anything but satisfaction in the Korean capital. An apprehension prevails that the Russian en-

voy does not come merely to make *acte de presence* at the ceremonial, but that he brings something up his sleeve; something which will invest the rejoicings with an atmosphere of mourning. It is certainly a source of anxiety to have importunate friends and also to be in possession of objects which they covet.

ACCIDENT AT OSAKA.

At 4.55 p.m. on the 15th instant one of the powder magazines on Benten Island at Osaka blew up. The magazine contained gun cotton, and the explosion was repeated at the neighbouring magazine, also containing gun cotton. Each of the magazines covered an area of 20 square yards, and they were separated by a distance of 40 metres. The shock was so severe that all the chimneys of the Arsenal, with two exceptions, were thrown to the ground, and in falling they partially destroyed a number of the buildings clustered about them. Even factories on the other side of the River Yamato were badly injured—the Noda, the Hirano and the Asahi spinning mills. At this moment of writing the casualties to life and limb are not clearly known. Seventy workpeople, men and women, employed in the Arsenal, were rendered unconscious by the shock, but they ultimately recovered, though all were injured more or less severely. The force of the explosion is said to have resembled that of a heavy earthquake. Among 240 or 250 houses forming the Shinkita street, which lies on the opposite side of the river, not one escaped without breakage of some kind. The cause of the accident is quite unknown, and at present the disposition is to attribute it to spontaneous combustion.

Later news shows that two men were in the immediate vicinity of the magazines that blew up. They were the watchmen. One of them escaped completely; the fate of the other is not mentioned. About 30 persons were wounded by fragments of glass and one suffered severely from fragments of masonry, but it appears likely that only one death—if even one—will be found to have resulted. The magazines are said to have been very strongly and securely built. They were made of brick with a covering of clay and were surrounded by solid banks of earth. Moreover, a thick bank separated the two magazines. The powder was not in process of being handled at the time of the accident, and there appears to be no way of accounting for the explosion except spontaneous combustion. Ordinary gunpowder does not behave in such a manner, but smokeless powder is a compound comparatively little understood, and when we remember that another explosion occurred recently at Meguro, a suspicion is suggested that the smokeless powder now made in Japan—admittedly an immature product—may have been responsible for both catastrophes. The quantity of powder stored in the two magazines at Osaka was 37,218 lbs.—17 different varieties. That such an enormous quantity should have exploded with such trifling results to life or limb is one of the strangest facts on record; it speaks well for the precautions that had been adopted.

The *Fiji Shimpō* remarks that, apart from the Fukuoka explosion, which seems to have taken place under quite exceptional circumstances, there have been three accidents at powder magazines in the course of the pre-

sent year: one at Meguro on the 25th of March, one at Itabashi on the 25th of July, and one at Osaka on the 15th of August. It is our contemporary's opinion that these incidents, occurring so frequently and at such brief intervals, can not be classed in the chapter of unavoidable accidents, but must be attributed to want of proper care on the part of the employees engaged by the War Department in connexion with the post-bellum increment of armaments. The *Fiji* urges that a drastic inquiry should be instituted. Every one must endorse the recommendation.

VOLCANIC ERUPTION AT TORI-SHIMA.

Tuesday, Aug. 19.

Torishima, a small volcanic islet lying about midway between the Bonins and the Seven Isles of Idzu, which had some 150 inhabitants, has been the scene of a violent volcanic eruption which must have taken place between the 13th and the 15th of August. The terrible story of the wholesale wiping out of these people was brought to Yokohama on Monday morning by the crew of the Nippon Yusen Kaisha steamer *Hiogo Maru*, and a representative of the *Japan Mail* was at once despatched on board. He was courteously received by Mr. Sakurai Tatsunosuke, purser of the steamer, who told the following tale:—The *Hiogo Maru* is a regular liner running between Yokohama and Ogasawara-jima (Bonin Islands) from June to the end of August. She left Yokohama on August 5th for her run to the Bonins and no peculiar phenomenon was observed on Torishima on the 7th instant, when the vessel touched there on her outgoing voyage. Torishima is distant about 302 miles from Yokohama. At noon on the 15th the steamer left the Bonins for Torishima, which she approached about noon the following day. To the great surprise of all on board everything on the island was found buried beneath the debris of a volcanic eruption. The island was in active eruption and the phenomenon was distinctly apparent from a distance of 25 or 26 miles. The *Hiogo Maru*, however, drew near the island as close as possible, but at the distance of about one mile it was thought dangerous to go nearer, and she accordingly drew out and continued her voyage.

Torishima is situated in 30° 28' 26 North latitude, 140° 14' 20 longitude, and at one point rises 1,200 feet above sea level; it is about 1¼ miles in length and about one mile in width. Nearly the whole of the island is composed of volcanic rocks and its chief product is guano. Mr. Tamaki Hanyemon, of Kyobashi, Tokyo, is the lessee of the island. The place is also known by the name of Kita-tori-shima or Miko-shima.

Apropos of this disaster, the purser of the *Hiogo Maru* further stated that the *Aihan Maru*, a sailing-vessel owned in Osaka, was the first to witness the eruption, that ship having passed the Island on the 13th on her way to the Bonin Islands. About one mile to the south of Torishima a new submarine volcano is sending out huge columns of water and other substances to a height of about 600 feet at intervals of 10 or 15 minutes. This eruption was seen by the men of the *Hiogo Maru* both on the outward and return voyages, the waters in the immediate neighbourhood of the disturbance being of a dark-yellow colour. It is scarcely necessary to add that the Captain of the *Hiogo Maru* is convinced that all the inhabitants of Torishima, who were housed in four long,

large, separate buildings on the seaboard of the island, have perished to a man. The buildings have disappeared and the entire face of the island is changed.

Wednesday, Aug. 20.

From statements appearing in Japanese papers we gather that Torishima, the scene of the disastrous volcanic eruption reported by us on Tuesday morning, was without inhabitants until 1887, when an enterprising man, Mr. Tamaoki Hanyemon, organized a scheme for catching albatross. He realized a large profit by the business. Happily he was absent from the island at the time of the catastrophe. By an evil fatality a party of 29 workmen were landed on the island almost immediately before the disaster. They were taken there by the *Hyogo Maru* which then proceeded to Ogasawara. Thirty men should have landed, but the permit carried by one of them not being in order, he was sent back. The *Hyogo Maru* left also on the island a bridal party. Of course the fate of the people is a mere matter of conjecture, but unfortunately little hope can be entertained of their survival.

Thursday, Aug. 21.

It is now possible to fix with tolerable accuracy the date of the Torishima disaster, for the *Hyogo Maru* called at the island on the 7th instant, when on her southward voyage, and the *Aisaka Maru* passed northward on the 10th instant. At the time of the *Hyogo Maru's* call, things were in their normal condition, but when the *Aisaka Maru* passed, the eruption was going on, and complete desolation seemed to reign everywhere. Probably, therefore, the 9th was the fatal day. The *Hyogo Maru* called there on the 16th when returning northward. She carried a mail bag for the island, but was of course unable to deliver it—an unhappily literal case of a dead-letter office. The village where the inhabitants resided—153 in number—was at the base of the principal mountain in the island and could be plainly seen by passing vessels before the eruption. Not a trace of it could be discerned from the deck of the *Hyogo Maru* when she called in on the 16th instant. Evidently the whole village had been overwhelmed in the catastrophe. The only fortunate feature of the affair is that the eruption happened in what may be called the dead season. In every twelve months there are two periods when the albatross visit the island; they are the months of November and December and the months of January and February. During those four months fully 300 people assemble on the island, but happily the number actually present was only 155—namely, 103 men and 52 women. The *Fiji Shimpō* publishes an outline drawing of the island, showing that a large mountain, Fuji-shaped, rises in the centre, and that it is surrounded, near the summit, by a rugged collar of lava, the result of previous eruptions. This mountain towers above Chitose Bay, the chief roadstead of the island. Torishima lies directly in the line of Japan's volcanic energy. Sulphur Island is in its neighbourhood, a fact sufficiently eloquent. This line of volcanic energy starts from Fujiyama and passes thence to Hakone, Izu no Amagi-san, Izu no Oshima, Miyake-jima, Mikura-jima, Hachijo-jima, Aogashima, Torishima, Yomome-jima, Rozario Island, Iwo-jima, Marcus Island, etc. The mountain rising in the centre of Torishima has a height of only 1,076 feet. It is not the only crater on the island. There appear to be three or four

others also, and all were in a state of vehement activity when the *Hyogo Maru* passed on the 16th inst. The most important inhabitants from the main land of Japan who were in residence at the island were a doctor and his wife, an engineer and his wife, and the agent of Mr. Tamoki and his wife. It is stated that on the back of Chitose Bay there is a large cave, in which some of the inhabitants may have taken refuge; and further that at one spot in the island trees were observed standing uninjured. All hope of saving life is not completely abandoned under these circumstances, and it is possible that the *Takachiho*, which has been ordered to proceed to the island, may find some persons surviving. The *Takachiho* was lying in dock at Yokosuka, preparatory to a trip to Marcus Island, when the order reached her. She came out of dock at once and made rapid preparations, so that she leaves to-day and will reach the scene of the disaster on the 23rd instant. Assuming that the eruption took place on the 9th, fourteen days will have elapsed before succour can be brought, an interval which renders the situation additionally desperate. Besides, when the *Hyogo Maru* visited the place on the 16th, she cruised round a great part of the island, blowing her whistle continually, but there was no response. The island is 5 miles in circumference and has an area of 1125 acres, of which 64 acres were arable and $2\frac{1}{2}$ acres were used for building purposes. There were plantations measuring about 5 acres, and about 150 acres of pasture land, the remainder being mountainous, the hills overgrown with verdure.

The Naval Department announces that the *Takachiho* left Yokosuka at 5 o'clock on the evening of the 22nd inst., for the scene of the eruption. She will also go to Marcus Island, and the round voyage will probably occupy 20 days.

THE CHINESE STUDENTS.

Saturday, Aug. 16.

It is stated that some eighty of the Chinese students now in Tokyo have decided to return to their country. The motive assigned to them is that so long as Mr. Tsai represents China at the Court of Japan, the interests of Chinese students in this country will be impaired rather than promoted, and that the action of the Japanese Government in the case of Messrs. Wu and Sun renders it impossible for other students to pursue their studies with any feeling of security. Efforts are being made to combat this resolution. The *Nippon* says that the source of trouble lies in the Chinese Government's discrimination against private students. All the men sent at public charges receive posts immediately on the completion of their studies, but those that pay their own expenses are left out in the cold.

Monday, Aug. 18.

A paragraph in the *Nichi Nichi Shimbun* throws a new light upon the reported resolve of some 70 or 80 Chinese students to return to their own country. Our contemporary says that about 100 students are unable to gain admittance to the public schools owing to their Minister's refusal to go security for them, and that, seeing nothing to be gained by remaining idle in Tokyo, 60 or 70 of them have resolved to take their departure. Their comrades, naturally much concerned on their account, are endeavouring to inculcate a little more patience, but the lads are said to be convinced that Mr. Tsai will not assist them in any way. Another

deputation of them visited the Chinese Legation at 8 p.m. on the 16th instant, but the Minister refused to see them, and as they did not immediately disperse, they were handed over to the police. Of course this is all wrong. There must be some way of dealing with respectable lads other than placing them in the hands of the police. It can not be doubted that these students have a grievance. How far it is a legitimate grievance we can not pretend to know, but since their only desire is to be enabled to carry out the purpose of their coming to Japan by entering a Government school, it becomes almost monstrous that the services of the police should be enlisted to restrain them. However, we must assume that they were guilty of some act of violence when admittance was denied to them. So long as they behave quietly they will have public sympathy, but if they begin to smash doors and windows, their cause also will be shattered.

The Chinese students have published a brochure setting forth the incidents of the former visit to the Legation, the summoning of the police and the examination of Messrs. Wu and Sun by the latter, together with other details of the recent complication. The brochure contains statements which suggest that there has been some misunderstanding. Words which he could never have used are put into the mouth of Mr. Kobayashi, of the Foreign Office, who acted as go-between. He is represented as having told the students that unless the Chinese Representative succeeded in getting them into the *Seijo-gakko*, after they themselves had taken certain prescribed steps, he, Mr. Kobayashi, would contrive that the Minister should resign. Of course the students resented such an engagement as derogatory to the dignity of their country, but equally of course Mr. Kobayashi cannot possibly have intended to convey any impression of the kind. Meanwhile several of our Tokyo contemporaries persist in saying that 70 or 80 of the students have decided to return to their country.

WAKE ISLAND AND MARCUS ISLAND.

With reference to Wake Island, or Wake's Island, a correspondent, Mr. W. C. Tyler, has called us to account for publishing a paragraph which indicated that the place is still a no-man's land. If Mr. Tyler reads the paragraph carefully, he will see that none of the statements it contained was our own. They were all taken from, and credited to, a Japanese contemporary. These incidents will doubtless have the effect of bringing about a distinct understanding as to the rightful ownership of all islands which, if left in their present officially undetermined state, may at any moment become bones of contention. As to Wake's island, however, we are disposed to query the accuracy of Mr. Tyler's information. It is by no means sure, we think, that the United States Government has decided to use the place as a cable station. Recent surveys are said to have shown that at certain conjunctions of wind and tide the island is actually submerged, a feature of its existence not exactly suited to the purposes of a cable station. Indeed we must confess that no declaration of the island's being included in the United States dominions has yet come under our notice, though we are aware that there was some talk of landing the cable there.

Meanwhile the *Takachiho* has received

orders to proceed to Marcus Island, and will probably set out about the 20th instant. According to the *Chugai Shiyogyo*, she is to carry a document from the American Legation, setting forth the fact that the United States Government has recognised Japan's title to the island. This is to be shown to Captain Rosehill when he reaches the place. There are now 16 marines on the island under the command of Lieut. Akimoto. They were left there by the *Kasagi*. Captain Rosehill is said to have taken 9 riflemen with him from Hawaii, and to have received very uncompromising orders from his company, but it is not anticipated that there will be any trouble, even should he reach the island before the arrival of the *Takachiho*.

THE "KAIJI KYOKAI."

In its issue of the 14th of August the *Kobe Chronicle* publishes a leading article of about a column and a half, devoted to an attempt to prove that the recently organized *Kaiji Kyokai* (Maritime Affairs Association) bears no resemblance whatever to Lloyds, and that to allege the existence of such a resemblance is "simply absurd." The purpose of the article is an attack upon the Tokyo correspondent of *The Times*. Some three months ago he telegraphed to *The Times* that an association had been formed in Japan on the lines of Lloyds. Concerning this telegram the Kobe journal naively remarks:—"Not having heard anything of the formation of such a society, which, in the face of the world-wide ramifications of Lloyds, appeared surprising enough, we waited the explanation with some curiosity." By and by the explanation came. *The Times'* correspondent, in a letter to that journal, referred incidentally to the new association—the *Kaiji Kyokai*—which he described as "an association that might be compared to Lloyds but also undertaking functions not exercised by the latter." It is upon that letter that the *Kobe Chronicle* builds up its column-and-a-half leader. It announces that "we have examined the articles upon which the *Kaiji Kyokai* is organized, and find that under the head of 'object' the first article provides that the object of the Association is to publish a magazine called *Kaiji Zasshi* in order to promote the general interest in maritime affairs." "We need scarcely inform our readers," proceeds the Kobe journal, "that Lloyds is something very different from a society for the study of marine affairs," and then, having retailed some encyclopedia-extracted information about what Lloyds really is, our contemporary concludes that "Japan's commercial men are scarcely in a position to establish an organization on the lines of the famous English corporation." "Such, however," it remarks in a triumphant finale, "is the information to which *The Times* lends the hospitality of its columns."

We do not blame the *Kobe Chronicle* for ignorance. Situated as it is, its means of acquiring knowledge about Japanese affairs are so scanty that its frequent blunders do not surprise any one. But rashness is another matter. Why not exercise a little caution? Our contemporary must be aware of the extreme paucity of its knowledge. Why then rush giddily into the field and strike perilous challenges upon the shields of folks who may reasonably be supposed to know? However faulty may be our contemporary's reflecting apparatus, it surely might have guessed that *The Times'* correspondent could not be so extremely fatuous as to compare the publishing of a Marine Gazette

to the functions discharged by Lloyds, and that something substantial must be behind his statement. "Not having heard anything of the formation of such a society," says the candid *Chronicle*. Many other newspapers in Japan had heard of it; had inserted notes about the objects of the society; had given the names of its promoters; and had published accounts of the opening meeting. Of all that the *Kobe Chronicle* was splendidly ignorant. "Not having heard anything of the formation of such a society." So then, after reading the letter of *The Times* correspondent, the *Kobe* journal began to ask questions, and some mischievous translator, fond of a practical joke, laid before it a number of the *Maritime Journal* (*Kaiji Zasshi*), published by a society organized 8 years ago, which society has no more to do with the recently formed *Teikoku Kaiji Kyokai* than the *Kobe Chronicle* has to do with prudence. The journal in question reached its 168th bi-monthly number on the 7th of August. It is a publication of some value, but the association that issues it is entirely unconnected with the very important society which constituted the subject of the remarks in *The Times*. "Such is the information to which *The Times* lends the hospitality of its columns," cries the *Kobe Chronicle*. Truly we commiserate our unhappy contemporary. Can it not procure some guide to save it from there flagrant fiascos? That it should be ignorant of important Japanese events is a matter between itself and its readers; but that it should make its ignorance a handle for attacking the knowledge of others is too audacious to escape comment.

A TIRESOME TASK.

Nothing could be more futile and less philosophic than a protracted attempt to extract from an eel some explanation of its wriggling. The poor creature's only reply must always be another wriggle: it is not familiar with any other form of locomotion. Therefore we recommend the *Japan Times* to abstain from seeking to straighten out the sinuosities of the *Kobe Chronicle's* mind. Nothing can result beyond renewed squirming.

And again, in the interest of tired people, we would ask our Tokyo contemporary to refrain from prompting any further repetition of that ancient tale that Japan's hostile critics are friends in disguise. They kick her downstairs all the time, and then they assure her, when she complains of her contusions, that truly they love her sincerely. The mere weariness to the ear of the listener is perhaps less painful than the parade these ingenuous persons make of ugly hypocrisy. The atmosphere is far sweeter and more wholesome when they are allowed to remain quiescent. Why stir them up?

DEATH OF MR. NISHIMURA.

Professor Nishimura Shigeki, one of Japan's most eminent scholars and reformers, passed away on the 18th instant at 7.48 p.m. His age was 75 and he had been prominently before the public during the whole of the *Meiji* era. Originally a student of Dutch, he distinguished himself by his knowledge of Japanese and Chinese, and above all by his fearless enunciation of liberal views, his attitude being diametrically opposed to the *jo-i* doctrine and favourable to foreign intercourse. Very early after the Restoration he published a book called *Taisei Shi-kwan* (a View of Western History)

which may justly be said to share with the late Mr. Fukuzawa's *Seiyo Jijo* the honour of having helped materially to sway Japan into the path of progress on Occidental lines. Professor Nishimura held important offices in the Educational Department until 1886, when he was appointed a Court Councillor, receiving at the same time the post of principal of the Noble Ladies School. In 1890 the Emperor named him a life member of the House of Peers, but he resigned that position in 1892, and since that time he has occupied himself chiefly with literary labours. He was a prolific author, having published no less than 21 original works and 6 translations. After resigning his membership of the House of Peers, he organized a society called the Kodo-kwan, of which the object was to promote morality. At the meetings of this society he delivered a series of remarkable lectures which have been published in book form. From them we learn that their distinguished author retained an abiding faith in Confucianism and that he strongly opposed the utilitarianism of Professor Kato Hiroyuki. Japan certainly loses in him a great scholar and a profound thinker. He had received the First-Class Order of Merit and been raised to the First Grade of the Third Class of official rank. The funeral leaves his Mukojima residence on the 22nd at p.m. instant and proceeds to Yushima.

THE HONGWAN-JI TROUBLES.

Much is appearing in Japanese journals at present about the troubles of the Higashi Hongwan-ji. It is a question of debt, as our readers know—a debt of 3 million *yen*. The origin of this debt is a large expenditure on account of theological schools and propagandism. Funds for the purposes of the head temple are not obtained by direct appeals to believers. The Hongwan-ji follows the methods of the Chinese Government, in some respects. It divides its needs among the principal temples affiliated to it. Each of these, in turn, divides its obligation among the minor temples in its jurisdiction, and the latter, in fine, approach the parishioners. One result is that as every collecting temple enriches itself in the process of collection, the sum that reaches the Hongwan-ji is only a fraction of the amount actually paid by the parishioners. That, of course, is not the reason of the debt; though it is perhaps an explanation of the fact that funds are not forthcoming to discharge it. There is evidently a want of vigorous and clean-handed management, and there is also an absence of genuine coöperation among the managers of the great temple's finances. Two parties—the Ishikawa and the Atsumi—have a monopoly of the administration. When one goes out of office, the other comes in, and neither seems to command sufficient support to be able to adopt drastic measures. Thus things have drifted from bad to worse. Recently there has been much talk of seeking Count Inouye's intervention, but Count Inouye's measures would be much too thorough and too far-reaching to please all the leaders of the sect. What is now proposed is a grand general meeting of all the *Shinshu* believers from every part of the empire. Fifteen hundred have already, it is said, announced their intention of being present. Count Otani, the Lord Abbot, is believed to contemplate retirement, and there are not wanting folk who predict complete disaster for the Temple. But well-informed people ridicule that apprehension. They say that a debt of 3 or even

5 million *yen* can never pull down an institution with such a history and such a hold upon the hearts of its parishioners.

THE ELECTIONS.

Saturday, Aug. 16.

The accounts published by journals of varying political complexion naturally differ as to the results of the general elections, and of course nothing will be quite certain until the official returns are known. In the meanwhile, the differences are so trifling that the following figures may be regarded with tolerable confidence:—

<i>Seiyu-kai</i>	170
Progressists	102
Imperialists	18
Sansei Club	6
Independents	52

348

It will be seen, therefore, that 28 constituencies remain to be heard from. Of these the *Seiyu-kai* confidently affirm that at least 20 will fall to them, so that their final total cannot be less than 190, as predicted within the past few days.

An interesting point is that the members of the defunct House had very little success at the polls. Only some 82 have been hitherto elected, though virtually the whole 300 seem to have stood. The remaining constituencies may change the figure, but under any circumstances it can not be anticipated that out of the 376 members of the House more than 100 will be old hands. Our Tokyo contemporaries do not, as yet, offer any explanation of this circumstance. They will doubtless have much to say about it by and by. Foreign onlookers will be disposed to regard it with satisfaction. The old House of Representatives did not acquit itself in such a manner as to bring credit on parliamentary institutions in Japan. Let us hope that the new will do better, and that the constituencies' rejection of former members means a vote of censure.

The Progressists have had more success than was anticipated. Our readers may remember that the predictions published on the eve of the elections gave not more than 80 or 85 seats to this once powerful party. But it has already won 102, and we may conclude that it will finally emerge from the contest with 105 at least. In the present state of the Japanese House of Representatives it is certainly most important that some one party should have a plurality of the whole House. Hitherto the strongest party could not be said to control the situation efficiently. A combination of the sections with the independents could always muster a plurality vote, and the result was that every measure had to be preceded by consultations, trimmings and compromises. Now for the first time in Japanese parliamentary history we shall see the termination of that unwholesome state of affairs. On the other hand, there will be a sufficiently strong opposition to make the *Seiyu-kai* "sit up." The Imperialists will always be found in the *Seiyu-kai* camp, unless something very unexpected occurs, and consequently Marquis Ito will always have a solid following of at least 200 party men, while from the Independents he can count on fully 35 votes, giving him a certain phalanx of 230 or 240 whenever any crucial question comes up for discussion. The opposition, however, will number from 136 to 146, a number quite large enough to command respect.

The *Niroku Shimpō* thinks that religion has had something to do with the result. It alleges that its proprietor, Dr. Akiyama,

lost some votes owing to his opponents having circulated a false rumour that he was a convert to Christianity, and it attributes Mr. Yokoi's failure to the same cause. Possibly that is true. A candidate for election in Europe or America who should approach a constituency under Buddhist or Shinto colours would have a rough time of it. On the other hand Mr. Kataoka Kenkichi has been elected, which proves that prominent professions of Christianity do not deter all Japanese constituencies. It has not been hinted that Mr. Ebara Soroku's rejection in Tokyo was owing to his Christianity, but however that may be, it is undoubtedly significant that out of three eminent Christians who used to sit in the Lower House, one has lost his seat—Mr. Ebara—and one, Mr. Shimada Saburo, now appears before his constituency as a rationalist.

Much interest is excited by the fact that three members of Dr. Hatoyama's "legal family" have been elected—Dr. Hatoyama himself, and Messrs. Ueyhara Shikazo and Numata Ugenda, the two last being in Dr. Hatoyama's office. The *Niroku Shimpō* also returns two members, Dr. Akiyama and Mr. Takenouchi Yosaburo. Mr. Takenouchi is well-known in literary circles as the author of the *Nisengohyaku-nen-shi* and the former editor of the *Sekai-no-Nippon*.

Mr. Hara Kei now enters parliament for the first time, and we are glad to see that the well known and universally respected Mr. Matsuda Masahisa has at last won a seat. He had been rejected again and again for reasons which no one could fathom; at least no outsider.

Monday, Aug. 18.

The only returns published since the date of our last issue are those for Saitama prefecture, 9 seats, of which 6 have gone to the *Seiyu-kai* and 3 to the Progressists. There will be some delay before all the remaining returns are known.

Thursday, Aug. 21.

So far as we can ascertain, the latest returns indicate that the *Seiyu-kai* have secured 186 seats and the Progressists 105. There will thus be a close approximation to the ultimate numbers. Apparently some few seats are still undetermined, but it is very difficult to ascertain exactly how this matter stands without exhaustive comparative examinations. The total membership of the new House will be 376. Consequently the *Seiyu-kai* will fall just short of commanding a plurality of votes. That does not signify anything like parliamentary incompetence, however. The Independents have to be taken into account. Many of them will certainly be found in the *Seiyu-kai* camp at all divisions. It may therefore be said that now for the first time in Japan's parliamentary history a political party appears upon the scene possessing an absolutely preponderating voice in the Lower House. Marquis Ito once distinguished himself by handing over the administration at the briefest possible notice to the *Jiyu-to* and the *Kaislin-to* so soon as their combination had given them a plurality of votes. Will the veteran statesman now contend that the same principle should be obeyed by the present Cabinet? We do not think so.

Friday, Aug. 22.

Upon nothing are the Tokyo journals approximately agreed with regard to the elections except in the matter of the number of seats won by the *Seiyu-kai*. There they are tolerably unanimous. They give the big party from 190 to 193 votes in the new House.

As to the Progressists, however, divergence of view exists, the numbers varying from 96 to 103. Minor parties will have little importance in a House thus constituted, for even though the *Sanshi Club* and the Independents went into the lobby *en masse* with the Progressists, the combination would still be unable to outvote the *Seiyu-kai*. But of course if we except a contingency too remote to be worth considering, the Independents will not join the Progressists *en bloc*. Apparently some 57 Independents have been returned, and they are divisible—according to the *Nichi Nichi Shimbun*—into 19 business men, 19 uncertain, 10 pro-Progressists, 7 pro-*Seiyu-kai*, and 2 pro-Imperialists. The Imperialists are somewhat in the fish-out-of-water condition now-a-days. They have no *raison d'être*. But it is certain that they will not be found in the Progressist camp. And it is almost equally certain that the businessmen will go with the *Seiyu-kai*. Here, then, we have an addition of at least 30 votes to the latter's strength, giving them 220 followers, at the lowest computation, in any crucial division. It is correct to say, therefore, that for the first time in Japanese parliamentary history a political party is paramount in the Lower House. The Cabinet can no longer follow the programme of *divide et impera*.

We shall not be at all surprised to learn that Mr. Kato Takaaki has declined to sit for Kochi. He is much too big a man to accept a seat in the Diet which is based upon a sectional split in the ranks of a great party. There can be no doubt that all the *Seiyu-kai* voters of Kochi would be pleased to have such a representative, but the fact remains that from the outset of his parliamentary career Mr. Kato would find himself in an atmosphere of dissension. He will turn his back upon that kind of thing, we imagine. *Tout vient à celui qui sait attendre.*

MR. KRUGER.

The ex-president apparently finds it impossible to reconcile himself to the surrender of his nationals. According to a telegram from the *Asahi's* London correspondent, he is as obdurate as ever. He refuses to endorse the surrender, and is endeavouring to form an anti-English party. Mr. Kruger made the mistake of his life when he left South Africa. Whether it was an error of judgment or a failure of courage, it equally destroyed his reputation. He left his compatriots at the darkest hour of their fortunes, and passed to Europe where his presence did not effect the smallest improvement in their condition. We have not, for our own part, the least doubt that he conscientiously believed himself to be acting in the best interests of his people, but the verdict of history may not be so kind. If, when he went away from Africa, he was ignorant of the desperate condition of the two republics, then he stands convicted of extraordinary blindness. If, on the other hand, while appreciating that condition he nevertheless hoped that his presence in Europe would be potent to enlist the active support of nations which had stood aloof even in brighter days, he judged the world very falsely. Either view is bad for his reputation. History may perhaps take the latter view, but it will have little mercy on a man who when all is lost and when the happiness of his compatriots can be best consulted by cheerfully accepting an inevitable situation, endeavours to fan into flame the dead embers of futile animosity.

THE WEATHER.

Monday, Aug. 18.

The weather is now beginning to cause much anxiety. There is a general supposition that up to the *Bon* season (13th), the degree of heat or cold or the quantity of rain does not materially affect the rice crop. But it is now widely believed that whatever the weather may hereafter be, the rice crop is already doomed to a shortage of 20 per cent., and that should this unseasonably low temperature continue, something very like a rice famine will ensue. The price of the cereal is rising rapidly in the market. Within the last 4 days the quotation has gone from 14.67 *yen* per *koku* for immediate delivery to 15.25 *yen*. In futures the rise is still more marked, rice for delivery in September being now quoted at 15.26 *yen* against 14.27 *yen* on the 13th instant, and that for delivery in October at 14.54 against 13.92. The retail prices show even greater appreciation. The result is that the lower orders, who eat third class rice, now get only 5 *shō* for a *yen* whereas a few days ago they could get more than 6 *shō*. The effect of this evil prospect is very palpable in the share market, as the following list will show:—

QUOTATIONS FOR STOCKS.

Name of Stock.	Quotation on 16th.	Quotation on 15th.	Decline.
Nippon Tetsudo.....	71.30	72.50	1.20

Tokyo Kabushiki Tori-hikijo	120.60	125.30	4.70

Since the above was in type the price of rice has risen still further, and it is expected that official action will be taken to restrain speculation on the exchanges. There seems to be a mania for buying, on the hypothesis that the country is doomed to a bad harvest. Salt and barley have also begun to appreciate rapidly.

Meanwhile, there does not appear to be any sign of the weather becoming normal. Another centre of depression seems to be travelling north from Kiushiu, and yet another is developing in the central provinces. Fukuoka and the western parts of Kiushiu report rain and storm.

Tuesday, Aug. 19.

Detailed reports of the losses caused by the inundation in Hiroshima prefecture were given in our last issue. They showed that 79 lives had been lost and 29 persons injured. These returns are now supplemented by official reports from Yamaguchi prefecture. There also the loss of life was very serious. The districts which suffered most were Kuga, Kumage and Tsuno, and the casualties were: 76 drowned, 13 crushed to death, 13 injured, 11 washed away with houses and their fate unascertained, 4 animals killed, 195 houses swept away, 4,528 houses inundated and 365 injured. The Sanyo Railway appears to have suffered greatly, no less than 323 places being more or less broken. The number of landslips reported is 793, and 49 boats were wrecked. The sum of suffering in these two prefectures is terrible. Apparently 179 lives have been lost and 42 injured.

The depression reported as having formed in the central provinces seems to have passed out into the Sea of Japan. There are consequently some hopes that the worst is now over, especially as a steady rise of temperature is reported from various places. But

of course the heat is very far from being normal. Tokyo newspapers allege that similar climatic conditions prevailed in 1887, but we can not recall such persistently cool weather during the past 35 years.

Wednesday, Aug. 20.

Improved weather has produced an immediate effect upon the rice market. The price for delivery during the present month has fallen by 52 *sen* per *koku*, the price for delivery in September by 73 *sen*, and the price for delivery in October by 49 *sen*.

Friday, Aug. 22.

Opinions continue to be much divided about the rice crop. Experts of the Department of Agriculture and Commerce are represented as alleging, in the sequel of visits paid to the various localities, that should the weather be favourable for the rest of the season, the yield will not fall far, if anything, below the average. What that signifies will be at once apparent if we observe that the average crop is 36 million *koku* approximately, and that, consequently, a shortage of 20 per cent.—as was confidently predicted before the recent commotion in the exchanges—involves a loss of $7\frac{1}{4}$ million *koku*, or about 80 million *yen* at the lowest calculation. The difference of opinion, therefore, between official experts and private investigators relates to a question of no less than 70 or 80 million *yen*. There is a probability—a strong probability, according to some critics—that the recent outcry was greatly swelled by speculators. What is certain, however, is that in Tokyo prefecture all the crops—not rice alone, but also barley, beans, sweet potatoes and so forth—will be from 15 to 20 per cent. short of their averages. Meteorological records show that the temperature in the capital did not reach 86 F.° on more than four occasions this year. But it should be remarked in this context that while harsh, inclement weather prevailed in Tokyo and Kanagawa prefectures, good reports were received from other districts. On the whole we are disposed to think that the prospect is better than the alarmists say. The 1st of September is the 210th day—the *nihiyaku toka*—to which rice-farmers attach so much importance. If the present weather lasts until then and for some time afterwards, nature will be found to have repaired many of her own ravages. There is some uneasiness now about another centre of depression which is developing in the neighbourhood of Formosa, but every one must feel that the climate has changed, and that though a typhoon now might bring in its train a breath of autumn freshness, it would not be preceded or followed by a series of chilly, unfructifying days such as we had recently.

TOBACCO.

The Tokyo papers state that things are not faring well this year with the Government's tobacco monopoly. Originally permission was given for tobacco cultivation over an area of 63,280 acres, but as it appeared that the necessary quantity could not be raised from that superficies, the figure was raised to 67,865 acres. It is estimated that, in average years, the yield per acre is about 1333 lbs., and the total yield from 67,865 acres would be about 90½ million lbs. On that basis the Treasury estimated a revenue of 11,720,000 *yen*. This last figure is obtained by deducting from the total selling price of the tobacco—namely, 22,230,545 *yen*—the sum expended

in purchasing the leaf—namely, 9,918,151 *yen*—and the sum representing leaf carried over to next year together with cost of machinery—namely 583,861 *yen*. Owing, however, to the inclement weather that has prevailed throughout the season, the yield is not expected to be more than $\frac{7}{10}$ of an average year, which means a loss to the Treasury of 3,818,557 *yen*. In addition this the leaf itself is bad, and if the loss on that account be added, the return will probably be short of the estimate by nearly 5 million *yen*. The Government is considering whether to raise the selling price or to import Chinese tobacco to make up the deficiency. The latter plan is said to be opposed by the tobacco men, and indeed the former suggests itself as natural and normal. A bad yield of any crop means that the cereal becomes proportionately dearer to the consumer. Why should tobacco be exempted because it happens to be a State monopoly? When establishing the monopoly, did the Government mean to guarantee consumers against all future fluctuations in the cost of their pipe?

FORMOSA.

The recrudescence of troubles in southern Formosa is said to be due to the old cause, camphor exploitation without proper compensation to the natives, or due consultation with them. Another reason assigned is that the Governor-General's attitude towards the natives is not uniform. Some of them are treated with the utmost consideration and even receive handsome presents, while others are hunted and shot down. It is further stated that notes given to them by the camphor-collectors were not cashed when presented for payment, and that much discontent results. The *Asahi's* correspondent, who sends these details, says that the enemy's stronghold—called "patience pass" (*shimbo-zaka*) on account of the difficulty of assaulting it—was captured by the Japanese on the 26th of July with a loss of 10 killed and wounded. Owing, however, to an outbreak of virulent malaria among the troops, further operations had to be stayed.

CHOLERA.

In Osaka there were 23 new cases on the 19th, bringing the total since the outbreak of the epidemic to 170.

Other returns are:—Moji, 19th instant, 15 cases; 20th instant, 14 cases.

Kumamoto, 19th instant, 5 cases.

Yamaguchi Prefecture, 20th instant, 20 cases, of a very virulent type. There are signs of the disease's spread in this prefecture.

Fukuoka, 19th instant—the epidemic seems to have been checked in this prefecture, and the sanitary offices have been closed.

SUPPLEMENTARY ESTIMATES.

Last session the two Houses of the Diet passed a project of law intended to check the abuse of supplementary estimates. The law has now been promulgated. It provides that except in cases of necessity or when money is required to meet lawfully incurred obligations, supplementary estimates must not be presented. The *Chingai Shogyo* pens what is very like a platitude with regard to this, namely, that through the loop-holes left by the law, abuses may creep in as readily as ever. Yes, but is nothing to be left to the discretion of the authorities? That would be bad legislative art.

NOTES ON CURRENT EVENTS.

The German Diet has passed the first reading of the new Tariff Bill. That, of course, has no special significance. The second and third readings will be the difficult stages. But it is to be hoped that as the bill has emerged from the hands of the committee, it will now become law without much further trouble. It threatened at one time to cause serious political complications. Germany's finances are not in the most flourishing condition at present. The deficit in her Budget for 1901 was 40 million marks, and the prospect for 1903 also is unfavourable. She is passing through her hard times as all countries have to do.

The promoters of the Osaka Exhibition have appointed a committee to consider questions relating to the accommodation of foreigners attending the Exhibition next year. It is an important matter, for Osaka is not rich in hotels capable of comfortably lodging foreign guests. Probably a majority of the visitors will prefer to live in Kobe or Kyoto, making daily visits thence by train to Osaka. After all, it is much the same as Yokohama folks attending an exhibition in Tokyo.

General Yu Lung left Tokyo by the 6.20 a.m. train on the 15th inst. Their Excellencies Baron Komura, Baron Kikuchi and Baron Utsumi, were present at the station to see him off. General Yu has been engaged investigating matters connected with roads and police since his coming to Japan.

There is to be a grand review of troops in India in December—winter manoeuvres on a large scale. Lord Kitchener is to attend, and so is the Duke of Connaught. The *Asahi Shimbun's* London correspondent sends this news. Perhaps it would be more correct to call the affair a big inspection. His Majesty's Government want Lord Kitchener to see how the Indian troops shape when viewed by the fresh light of his South-African experiences.

Count Matsukata is now in Italy. His Excellency seems to be going round all the cities of note and seeing as many publicists as possible. Indeed Tokyo newspapers state that one of his chief objects in going abroad is to meet men of eminence.

An unhappy accident has occurred owing to imprudent use of the anti-cholera serum of Dr. Kitasato. It appears that one of the servants in Dr. Kitasato's laboratory carried off a portion of the serum and inoculated a friend. The latter, struck by the facility of the operation, told some acquaintances of his, workmen in a factory, and one of these inoculated not only himself but five of his comrades. Owing, however, to neglect of proper precautions, the serum produced evil results in the case of these six men. One of them has died and the others are under treatment. It is to be hoped that this accident will not produce a prejudice against the serum. That is not likely, however. The Tokyo newspapers treat the matter lightly—too lightly perhaps, but at any rate in a tone not at all calculated to alarm any one. The death of the man who inoculated himself and his friends was caused by blood-poisoning.

A long telegram to the *Jiji Shimpō* describes the coronation review as a great success. The weather was remarkably fine—a bright, sparkling day with a gentle breeze. The British fleet consisted entirely of the home squadron. It was

composed of 20 line-of-battle ships, 24 cruisers, 15 gun-boats, 32 torpedo-destroyers and 10 training ships. The vessels were arranged in 6 ranks, with a front of four miles. Only 4 foreign ships were present, namely, 2 Japanese, 1 Italian and 1 Portuguese. The *Saxon* with the Boer generals on board, met the *Nigeria* at sea having on board Lord Roberts, Lord Kitchener and Mr. Chamberlain, and greetings were exchanged. The King's party were on six steamers. They passed slowly along the lines amid vociferous cheering. His Majesty's ship then anchored near the *Asama* and the King signalled for all the commanding officers to come on board his vessel. Admiral Ijuin accompanied them. That night at 9 o'clock the whole fleet of over a hundred ships were brilliantly illuminated with electric lights.

A telegram to the *Asahi Shimbun* says that the long-standing question between England and China with regard to the delimitation of Burmah, has been settled, the issue being that England acquires an addition of 350 square miles of territory. That was likely to be the issue. The Thibetan sheep-drivers who have been the main cause of the complication, will now be required to remove their flocks and refrain from future trespass. It is probable that they were not witting trespassers at any time.

The total cost to England of the Boer war, including the estimates for the year ending 31st March, 1903, is £222,974,000, or about *yen* 1,111,896,000. A pamphlet of the Cobden Club which has been widely distributed, proceeds in the well-known Cobdenite manner to show that this is sufficient to establish fifty universities, while Oxford and Cambridge are desperately poor and hardly able to keep their heads above water. This money, says the brochure, has been spent "in the partial devastation of two British colonies, and the almost complete devastation of two neighbouring republics." Of the money so spent £159,000,000 has been, or is to be, borrowed. The increase of taxation of the United Kingdom since the beginning of the war is £34,173,000 for the current year, and of this sum £17,600,000, or more than one-half, has been raised through the increase of the income tax.

News from Mito says that two out of four torpedo-laying boats, which left Yokosuka for Ominato, were driven ashore by a gale of wind when attempting to make the harbour, Naka-no-minato. No lives were lost and steps are now being taken to float the boats.

King Edward, when receiving the cheque from the Lord Mayor of £115,000 sterling—the nation's Coronation gift—is reported to have remarked that he will continue to strive his utmost to free the London Hospitals from debt so long as God spares his life. The King has given the whole of the money to the Hospital Fund.

The *Yakumo* and the *Tokiva* set out on the 19th from Ujina for Port Arthur to meet Prince Komatsu.

There is said to be much discontent among the workmen in the Koishikawa Arsenal. It is mainly a question of the time of paying salaries. The men, who number 27,000—it is said, though we doubt the figure—, complain that whereas it used always to be the custom to hand them their pay twice monthly, namely, on the 15th and the 30th, the money due on the 30th of last December was not paid until the 15th of

January, and similar irregularities have occurred since then. It is further stated that the men have been required to subscribe to a reserve fund, but that any workman absenting himself for two months whatever be the cause, forfeits all the money standing to his credit in the fund. Such incidents have provoked discontent and the men are contemplating a strike. That is the account given by some journals. But others allege that the men want an increase of wages, and still others declare that the trouble has its origin in an attempt to reduce salaries. Nothing seems certain except that discontent exists.

Hongkong papers publish the full text of King Edward's Message to the nation on the eve of his coronation:—

To my people on the eve of my Coronation, an event which I look upon as one of the most solemn and important in my life.

I am anxious to express to my people at home and in the Colonies and in India my heartfelt appreciation of the deep sympathy which they have manifested towards me during the time that my life was in such imminent danger.

The postponement of the ceremony owing to my illness caused, I fear, much inconvenience and trouble to those who intended to celebrate it, but their disappointment was borne by them with admirable patience and temper. The prayers of my people for my recovery were heard, and I now offer my deepest gratitude to Divine Providence for having preserved my life and given me strength to fulfil the important duties which devolve upon me as the Sovereign of this great Empire.

(Signed.) EDWARD R. AND I.

Buckingham Palace, 8th August, 1902.

On the 14th of July the Japan Society of London was to give a garden party at the Royal Botanical Society's Gardens in honour of Rear-Admiral Ijuin and the officers of the Imperial Japanese Detached Squadron. No details of the fête are yet to hand, but we observe that members could obtain tickets for friends on payment of 5/ per ticket. They do things economically in London now-a-days, and wisely so.

THE BOOKSHELF.

Life of Charles Darwin, by his son, FRANCIS DARWIN. London, John Murray; Yokohama, Messrs. Kelly & Walsh, Limited. New Edition.

THE *Life and Letters of Charles Darwin* were first given to the world in 1887, and so great was the interest taken in the book that several editions had to be printed. The present volume is a new edition of an abbreviated work which was prepared in 1892 to meet the still persistent demands of the public for details of the life-work of the great scientist. Murray is well-advised in placing this cheap issue of the book upon the market, and we have no doubt that it will command a ready sale in Japan. By a skilful arrangement of the letters the story of Darwin's life is laid before the reader as told by himself and his friends. We see the beginning of his career as naturalist of the *Beagle*, the gradual development of his ideas which culminated in his famous book, the *Origin of Species*; then the battles-royal which raged about that book in all quarters of the globe; the slow but steady conversion of the leaders of scientific thought to his way of thinking; and then the quiet after-glow which pervaded the evening of his days, and made it possible for him to write at the close of his Autobiography:—"As for myself, I believe that I have acted rightly in steadily following and devoting my life to science. I feel no remorse from having committed any great sin, but have

often and often regretted that I have not done more direct good to my fellow-creatures." Darwin was 74 years old when he died, and the greater portion of his years were spent in a well-nigh hopeless battle against disease: his achievements are therefore all the more extraordinary.

The Ball, by ARTHUR S. BAXENDALE. London, Wm. Heinemann.

THIS is a short love story issued by Mr. William Heinemann in his new library entitled Novelettes de Luxe. We should imagine, from the style of the composition, that the writer is a novice at the game, so jerky are the sentences and so crudely set the machinery, the various incidents hanging together by the merest thread. Mr. Baxendale has also a decided *penchant* for slang, and his pages are seldom free from the breeziest examples of the day; it may please some people, but a little of such writing goes a long way. People from the Straits Settlements will find the story interesting, for the heroes—there are two—are a Colonial servant home on leave and a planter who discovers alluvial tin deposits on his estate and succeeds in selling out to a syndicate in the most approved modern style. The two ladies who win the love of these brave fellows are very likeable, and so is their father, a retired Colonial Governor.

We have received from the *Japan Gazette* office, a well-printed brochure of some 55 pages entitled "The Words and Works of the Great Architect of the Universe," by a Master Mason. From the preface we learn that the subject matter of the booklet has been written at different times, "as far back as the early sixties." We postpone a longer reference to the work until a future day.

THE CORONATION FIREWORKS.

The fireworks which should have been displayed on the same day that witnessed the other portions of the local Coronation Celebration were duly exploded, discharged and otherwise expended on the night of the 14th inst., and it may be said at the outset that they made a very fine show. The weather was fortunately fine, the sky somewhat overcast and a moderate breeze blowing about east. The set pieces were so disposed as to face the Naval Depot, which was thrown open to the foreign public, and this place as well as the Grand Hotel and the Boathouse (which had been placed at the disposal of the Coronation Committee) was occupied by considerable crowds. There was likewise a fair display of lanterns on the Boathouse and at other points.

The display began at 9.15 p.m., consisting chiefly of the flower and other sky scenes with which people are now familiar. But undoubtedly some of the coloured developments were novel. The hues were vivid and varied to an extent which we do not think has been observable in previous affairs of the kind.

The first of the set pieces was a design showing in their proper colours the flag of Japan and the Union Jack crossed. This afforded a most brilliant spectacle, the British flag especially remaining intact longer than is usual in such displays. The next bore the words "Long Live the King," and the third had the letters "E A", underneath on the left a crown and on the right an anchor, with the date "1902" below. The fourth was a picture of His Majesty between the letters "E R" and the words "God Save the King."

The set designs were excellent. The various colours resorted to were brilliant in the highest degree and the conception of the figures was capital. The other parts of the exhibition were, as we have said, very praiseworthy.

UNLICENSED PILOTS IN KOBE.

TWO Japanese fishermen have been fined by the Kobe Local Court for a violation of the Pilots Law. One of them was condemned to pay 100 *yen*, the other 200 *yen*, the heavier of the two penalties being inflicted in consideration of the fact that the man had been previously convicted of the same offense. The *Kobe Chronicle* declares that "under the special circumstances of the case the sentence can only be described as monstrous, and it is calculated to cause a doubt whether questions of equity are ever taken into consideration by Japanese Courts in their judgments." That is very strong language, but readers of the *Kobe Chronicle* are accustomed to very strong language whenever the object of attack is something Japanese. Let us see what are the grounds of attack in this instance. The facts proved in court and admitted by the men themselves were that they had given their services to assist in navigating two foreign sailing ships through the channel from Kii Point to Kobe. They denied that they acted as pilots, but their names were entered in the ships' logs in that capacity. One of them—the man who had been already fined for a similar offense—told a remarkable story of how he had been fishing off Kii Point "for the benefit of his health;" how he had been signalled by a ship; how he had boarded her; how the master had asked him whether he knew the winds and currents and whether he would assist in navigating the vessel through the channel; how he had assisted, and how he had received no remuneration whatsoever, though on the previous occasion his reward had been fifty *yen*. In fact, it could scarcely be doubted that the two men deliberately looked out for remunerative jobs as pilots though they possessed no licenses and were well aware that the law forbade such proceedings. That they deserved punishment, therefore, goes without saying. The only question is the degree of punishment. The Kobe journal contends that "the smallest fine should have been imposed for a technical breach of the law that was committed as a matter of necessity." The "smallest fine" is 2 *yen*. These men, then, should have been fined 2 *yen* for an illegal act the reward for which was probably 50 *yen*. It would pay them well to violate the law perpetually at that rate. But the interesting point is our contemporary's assertion that they broke the law "as a matter of necessity." The reasoning by which that conclusion is reached seems remarkable. It amounts to this. No licensed pilot was immediately available; the ship-masters, being unacquainted with the approaches to Kobe, "could not be expected to take the responsibility of passing a narrow strait without assistance;" therefore it was "a matter of necessity" to employ an unlicensed pilot! The whole argument is vicious. It is based on the assumption that ship-masters should consider themselves aggrieved

because they are hampered by a law enacted solely in their own interests. Indeed the *Kobe Chronicle* is so extremely silly, as to write:—"It seems to us that foreign Ministers are entitled to ask the Central Government whether ports can be considered open to trade if regulations are framed which compel a ship-master to run the risk of losing his ship or of being an accomplice in a breach of the law." But it is precisely to prevent shipmasters from running the risk of losing their ships that the Pilots Law was framed, and it is precisely by committing a breach of the Law that shipmasters run that risk. The Law is intended to restrain incompetent persons from offering their services to pilot ships, and yet the *Kobe Chronicle* is so amusingly wrongheaded that it complains of the risks caused to shipmasters by not being allowed to violate the law. One is puzzled, in truth, to discover which is the Kobe journal's object of assault, the law itself or the Court that administers it; for while, on the one hand, it denounces the Court's judgment as "monstrous," on the other it would have the Foreign Ministers prefer a complaint directed solely against the law. Conceive a Foreign Minister following the *Kobe Chronicle's* advice. Conceive him repairing to the Foreign Office in Tokyo and saying:—"Look here. You have a law forbidding unqualified persons to act as pilots in Japanese waters. The effect of that law is that shipmasters of my nationality can not employ unqualified persons without conniving at a breach of the law. Thus they are not free to risk with sufficient recklessness the lives and property entrusted to their care. Do you call that giving free access to your ports?" But it is not to the Foreign Ministers alone that the *Kobe Chronicle* assigns strange functions. It sets up a wonderful consul also for public entertainment. "We understand that in one case full particulars of the trial have been taken by the Consul concerned, and that the incident will be made a diplomatic question." The Consul concerned is the German Consul, and we may therefore be prepared for the startling spectacle of a visit by Count ARCO VALLEY to Baron KOMURA with this charge:—"Your judges have fined two of your own subjects for violating one of your own laws. I consider that the fine is excessive and that it shows a deficiency in the sense of equity on the part of your judicial officers. You must have the sentence reversed." Count ARCO VALLEY, too, than whom no Minister that has ever been in Japan knows better what is due to the dignity of his country and what is due also to the dignity of Japan. That is not the sum of the *Kobe Chronicle's* silliness. It actually perpetrates the following bit of nonsense:—"If the law prescribes that a vessel must take a licensed pilot if it takes a pilot at all in order to reach a Japanese port, it is clearly the duty of the authorities to see that licensed pilots are available on all occasions they may be required." That is pot-house politics of the

most unadulterated type. If "the law provides that people may not walk in the streets in a state of nudity if they walk in the streets at all, it is clearly the duty of the authorities to see that garments are available on all occasions they may be required by street-walkers."

There is a malady called auto-suggestion the victims of which are irresistibly impelled to rush at and mutilate anything savouring of religion or the rites of the church. They believe themselves to be possessed by a devil and doubtless they would have been treated on that hypothesis in ancient times. The *Kobe Chronicle* seems to us to be suffering from auto-suggestion, and things Japanese are its objects of aversion. Yet it professes to love them, and to be always benevolently solicitous for their welfare.

THE WAKAMATSU FOUNDRY.

THE High Committee of Civil Service Investigation having concluded its examination into the affairs of the Wakamatsu Foundry, has presented its report, the result of which is that Mr. WADA, the Head of the Foundry, has been dismissed from the service with a reprimand. He will have public sympathy, for it must be admitted that he found himself in what is commonly termed "a tight place." Originally the outlay on account of the enterprise was put at something over four million *yen*, and the consent of the Diet was obtained for that expenditure. But very soon afterwards a report was received from Mr. OSHIMA, an engineer who had been sent to Europe and America to make investigations. This report showed that the scheme approved by the Diet was altogether inadequate, and that at least 10 million *yen* more would be required. This and subsequent additions were voted by the Diet until a total appropriation of over 20 millions was reached. That should have sufficed, and would have sufficed had prices remained as they were in 1896 and 1898 when the estimates were prepared. But prices did not remain there. Everything rose rapidly, and by and by Mr. WADA found himself obliged to ask for a supplementary grant. This the Cabinet did not agree to include in the estimates, and the problem that then presented itself to Mr. WADA assumed a very embarrassing character. If he devoted the money to its originally fixed purposes, in other words, if he paid for all the machinery ordered abroad by Mr. OSHIMA, he would be entirely without funds to complete the works in Japan, and the Foundry would have to be left unfinished, a conspicuous monument of failure. The public, of course, would decline to accept the true reason, namely, dislocation of estimates owing to unexpected appreciation of prices, and would simply say that Japanese engineers had undertaken more than they could do. If, on the other hand, the payments to foreign manufacturers were deferred pending another appropriation from the Diet, Mr. WADA would have to shoulder

the responsibility of departing from the officially approved programme, which had also received the Diet's endorsement. Nevertheless the latter alternative seemed to him the lesser evil. Rather than suspend the work on the Foundry, he decided to risk his own career by changing the destination of the funds and carrying the Foundry to its conclusion. It appears that he had the consent of the then Minister of Agriculture and Commerce, but the result nevertheless is his dismissal. Under the circumstances the Government does not seem to have had any other course, but, as we have already said, the public will sympathise with Mr. WADA.

It is impossible not to recall at this juncture the fact that when the establishment of an iron foundry was contemplated by the Government, offers are understood to have been made by foreign firms of the highest standing, who were prepared to build and start the foundry under conditions by no means onerous to Japan, and who would have agreed to hand over the whole concern to the State after a certain term of years. The Government doubtless gave the matter full consideration and came to the conclusion that it could do better on its own account. Perhaps events will ultimately justify that decision, but it must be confessed that the outlook is not promising at present. An immense sum has already been expended; further appropriations are necessary; the Foundry is not yet able to do the work for which it was intended, and the Diet has actually approved a project for constructing another Foundry at Kure. It appears to us that this is a case of going too fast. Japan has no occasion to give any further proofs of independent competence. What she has to think of now is how to get her wants supplied in the cheapest and most efficient manner, let the requisite assistance be procured whence it may. We do not believe for a moment—and we speak with a vivid recollection of the huge fiasco at Kamaishi—we do not believe for a moment that the Wakamatsu Foundry will ultimately prove a complete failure, but it certainly will have cost an immense sum before it emerges from the clouds that now envelop it, and not the least of the sins chargeable against it is that it has ruined a man like Mr. WADA KORESHIRO.

THE EXTINCTION OF FINLAND.

“A CITIZEN of the World” draws attention in our correspondence columns to an article entitled “The Extinction of Finland,” in which is told in plain, unvarnished terms the story of the gradual swallowing up by a great Power of one of the most interesting nationalities of northern Europe. A well known member of the English House of Commons who recently travelled through Finland declares that the short story of the Finn contains no soiled page. He speaks truly. Placed by nature in a desolate storm-swept and water-logged land, the hardy Finn has developed

a civilization peculiarly his own. Ever battling with the elements for his scanty harvest—the ripening crops racing with the descending frost for their harvest-goal and oftentimes losing—living amid Arctic conditions half the year round; notwithstanding all these drawbacks the Finn has become one of the sturdiest specimens of humanity. Only the sturdy could, indeed, survive the hard conditions of this wintry corner of Northern Europe, and the sturdy frame has bred a sturdy patriotism, which has fed for centuries on the richest soil of folk-song, lyric proverb, legend, magic-spell, epic saga, and chanted rune in all Scandinavia. We can best get an idea of the patriotism of the Finn by reading the “March of the Biorneborgers,” composed by the poet RNEBORG, a translation of which appeared in *The Times* on January 8th, 1901:—

Sons of a race whose blood was shed,
On Narva's field; on Poland's sand; at Leipzig;
Lutzen's dark hills under;
Not yet is Finland's manhood dead;
With foemen's blood a field may still be tinted red.
All Rest, all Peace, Away! begone!
The tempest loosens; lightnings flash; and o'er the
field the cannon thunder;
Rank upon rank, march on! march on!
The spirit of each father brave looks on as brave a
son.

No nobler aim
Could light us to the field;
Our swords are flame;
Nor new our blood to yield!
Forward each man, brave and bold!
Lo! the glorious path of Freedom, centuries old;
Gleam high! thou banner Victory-sealed!
In the grey bygone days, long since, all battle-worn,
Be still our splendid colours, though tattered onward
borne!
Of Finland's ancient Standard there's yet a shred
untorn.

Never shall our father's ground
Be reft by force from out the arms of soldiers who
have never bled;
Never shall the word go round
That Finns to their free Northern home were traitors
found.

The brave can only do and die
Not backward turn at danger's threat; nor shrink;
nor quail; nor bow the head
Be ours the warrior's fortune high
To fall—we only plead for one last Victory!
Take sword in hand!
Rush gladly on the foe!
Die for our land,
So Honour's life shall grow!

Untiring plunge from fray to fray,
The present time is ours—'tis now the harvest-day;
Thinned ranks as splendid witness show
To Valour's daring deeds, our land that save and
ward;
On with the grand old banner, that never battle
scared,
Around the staff still gathers faithful Finnish guard.

Needless to say this poem, by order of the Russian Government, must not be sung in Finland. And this leads us to the subject of the practical abrogation of the ancient Finnish constitution, of which our correspondent writes. The only defender of this step, outside Russia, is we believe, Mr. HENRY NORMAN, and even he in his recent book, “All the Russias” is but half-hearted in his advocacy. The perusal of the chapters which he devotes to the subject leaves an unpleasant taste in the mouth. Mr. NORMAN contends that the exigencies of Russia compel her to take the steps she is taking, and that she has been moved to do what she has done in Finland by the force of imperative national self-interest. “She believes herself vulnerable to a foreign foe coming *via* Finland, and in

her view national security means military and other unification.” The tariff of the Grand Duchy has operated to her advantage over the inhabitants of Russia proper, her laws are more civilized, her educational policy freer, and her contribution to the national army is smaller in proportion than any other portion of the Muscovite empire, while there can be no doubt that the Finns have committed many indiscretions, displayed sad lack of tact, seen insults where none were intended, and deliberately contrived many an humiliating impasse which no autocratic Power like Russia could be expected to lightly pass over. Strictly speaking the Finns according to law are right in their contention and Russia is wrong. But Russia has might on her side and unfortunately a considerable portion of this world is still ruled by the ancient maxim that “might is right and right is might”—*force majeure*, in other words; or to quote her advocate, imperative national self-interest. Mr. NORMAN sums up the case for Russia as follows:—

There is one more consideration which those who raise the loudest cries of illegality would do well to ponder. Russia, as one of her leading statesmen remarked to me, might, with perfect ease and safety, and in all the odour of perfect legality, absorb the whole of Finland next month, and wipe it off the map as a separate entity. This would be the simple process. First, she announces that she withdraws from all protection over Finland and grants to the former Grand Duchy absolute and complete national independence. Then, as the presence of an independent and possibly hostile State upon her exposed frontier would be obviously incompatible with her national security, she marches an army corps into Finland and annexes the whole country—lock, stock, and barrel. There would be a huge outcry, but anybody who knows anything of contemporary Europe knows that not a finger would be raised to stop her. And I do not see an American fleet steaming up the Baltic. Thus Russia could get all she wants, and infinitely more than she is asking, without transgressing for an instant by a hair's breadth that sacred formal legality in which laws and lawyers often perpetrate injustice everywhere.

The question from Russia's point of view is thus brutally laid bare, and there is no doubt that Finland must come into line with the rest of Russia, and that those of her brave sons and daughters who cannot endure the change must seek new homes across the broad Atlantic. There is nothing else to be said; but “pity 'tis, 'tis true.”

JAPAN'S EDUCATORS.

JAPAN'S friends in Europe and America observe with much interest and some anxiety the gradual disappearance of foreigners from the ranks of her educators. In one sense it is a subject of congratulation that she should find herself in a position to dispense with the services of strangers and to manage her own affairs entirely by her own unaided strength. Yet it is impossible not to feel regret that she has never reconciled herself to permanently assimilating the foreigners who enter her employment. Looking back over the long list of distinguished men who, after passing a few years here, returned to their own countries to win honour and renown, one can not but feel that Japan would have been greatly richer could she have retained these men

not merely as employees but as life members of her service. In England—which we may be permitted to quote, not as claiming for it any monopoly of wisdom, but simply because we know it best—the rule has always been to throw wide open to all nationalities the door of the temple of science, and to regard it as a public gain when a chair at an university, a leading position in a college or a prominent place in any learned body, is occupied by a man from the Continent of Europe or from America. Scientific progress, like racial development, depends largely on infusions of foreign blood, and it is certain that the country which can draw into the ranks of its citizens the largest number of clever foreigners will find itself best equipped, in the long run, for the competitive race in which the units of the civilized world are now engaged. From that point of view it is an unqualified pity that the Japanese have always adopted the policy of using the foreigner merely for such a period as may suffice to equip a native *remplacant*. We are vividly reminded of this misfortune by the fact that the last day of July saw the termination of her educational connexion with three such men as Dr. EDWARD BAEZ, Dr. LUDWIG RIESS and Dr. JANSON. In Dr. BAEZ' case it is well known that the eminent physician has long contemplated the abandonment of all academic duties which might interfere with his prosecution of scientific studies. The world will be the gainer by the increased leisure he now obtains. But how greatly will the Imperial University of Tokyo be a loser! It might reasonably have been expected that Japan would have strained every nerve to secure permanent connexion with a man so celebrated; a man not merely conspicuous in his own profession and as a great anthropologist, but also endowed with gifts which render him absolutely invaluable in any society where it is desired to cultivate and preserve an atmosphere of vigorous scientific and moral progress. Dr. BAEZ, however, ceases to belong to Japan, though happily he does not leave the country. In the cases of Dr. RIESS and Mr. JANSON we can not tell whether any such consolation offers. Both may be leaving Japan—for good, we were about to say, but for good it certainly is not. Dr. RIESS graduated from the Berlin Gymnasium in 1880, having enjoyed the inestimable benefit of receiving instruction from such men as GNEIST and BESLER among jurists, LOTZE and ZELLER among philosophers, WAGNER and SCHMOLLER among political economists, and CURTIUS, MOMMSEN, DROYSEN, and FREITSCHKE among historians. No wonder that influenced by the presence of such men and by the great facilities for study and observation offered to a student of history—which branch of science he had chosen—in the centre of German public life, he remained at Berlin University during the whole five years of his student career, instead of, as is the custom in

Germany, changing his *Alma Mater* from year to year. English history having been his speciality, he was chosen to collect materials relating to German history in the Public Record Office in London, the Register House in Edinburgh, and the Registry of Deeds in Dublin. Another visit to England for the same purpose, after taking his degree, and yet another at a later date on behalf of the *Hauseatischer Geschichtsverein*, brought him to the time when, having already passed his State examination for becoming a teacher in a Prussian Gymnasium, he was chosen for the Chair of European History in the University of Japan, which country he reached in February, 1887. He has thus served in Tokyo for 12 years, his agreement having been renewed four times. That is evidence of the appreciation won by him, and as for his distinction in a wider sphere, it is attested by the list of his works—"On the Right of Voting in England," "Fundamental Problems of Roman History," "The Chorus in Ancient and Modern Tragedies," "The Exodus," "The Song of Deborah," "The Shimabara Rebellion," "The History of Formosa," and "The Exportation of Gold from Japan by the Portuguese and the Dutch." Dr. JANSON's record of competence is not less conspicuous in his own line, though he has not, so far as we know, gained distinction as an author. After finishing his course at the Berlin Veterinary College, he became a veterinary surgeon in the German Army, and then completed the post-graduate course at the Berlin University, thereafter becoming an Assistant and Teacher in the Veterinary College of that city. He came to Japan in 1880, and served at the Komaba Agricultural College as Professor of Veterinary Science. Twice during his 22 years' service in this country, he was sent on scientific missions by the Government; once to study the progress of veterinary science in Europe, and again to inspect the horse-breeding institutions in British India, Egypt, Austria-Hungary and Germany. Such are the men that Germany gives Japan to assist her in her fine educational efforts. Surely it is a pity that she does not retain their services to the end. When we recall the many names of eminent Germans who have aided her in nearly all her Departments of State during the *Meiji* era, and when we reflect that not more than one or two of them now remain to her, we are compelled to doubt whether she has acted wisely in her own interests. VERBIEST, the great German Jesuit, who was probably one of the most highly gifted men of any nationality that have visited the Far East since the fall of the Yuan dynasty, served China under four successive Emperors. Even mediæval China appreciated the value of a scientist who to a large fund of knowledge added the advantage of long experience in the Orient. It is not so in Japan. No foreigner labours any longer under the delusion that there is a career for him in this country. That men of high attainments,

like those who are the subject of this article, nevertheless consent to serve here, must be attributed to reasons which are not usually operative and which will not long remain operative in Japan. It is a fine thing to walk alone. We grant it frankly. But we should have thought that Japan had outlived such an ambition, and that for the sake of gratifying a purely romantic emotion, she would not willingly deprive herself of advantages which no Occidental country can afford to forego.

FRANCE AND RAILWAYS IN CHILI.

THE *Nichi Nichi Shimbun's* Peking correspondent telegraphs that France insists on demanding the charter for the Tientsin-Paoting Railway as a condition to the restoration of the intramural line. China is said to be much embarrassed by the demand, and to have proposed a compromise on the basis of a promise that the building of the road in question shall not be entrusted to any foreign State except France.

One is sometimes tempted to marvel how any European State would behave under the circumstances of China's existence. Imagination refuses to soar to quite such a height, but still it is possible to conceive the thing in part. Its wild absurdity becomes at once apparent. Suppose that France herself, for example, were converted into the happy hunting-ground of foreign railway exploiters, and that England, Germany, Belgium and Russia undertook to dictate to her who should build her iron-roads, where they should be built, and whence the capital must be obtained—phew! the air would be crowded with blades and bullets instantaneously. Since history began to be written there never yet has been another nation so patient, long-suffering and magnanimous as the Chinese. It is all very well to force our civilization upon them, but it is they who can teach us, not we them, where those fine qualities are in question. Suppose that all the States of the West were to set themselves to reform each other with the same kind of zeal that animates them in their dealings with China. Suppose that England, America and Germany were to tell Russia that she really must alter her methods of penal servitude; suppose that England and France were to tell Germany that she is too subservient to officials and that it behooves her to alter that defect; suppose Germany were to tell Spain that her customs officers are corrupt and that her preventive system must be remodelled,—why intimations of that class, fierce as would be the indignation shown in resenting them and quickly as they would plunge Europe into war if persisted in, would nevertheless be only a faint shadow of the impertinent interference that the countries of the Occident allow themselves to exercise in China's case. Yet she bears it all quietly, and, what is most unjust of all, she gets no credit for her quietude, but is laughed at,

sneered at, and ridiculed all the time. In the coming by-and-by, when the outlines of this unsightly story shall have been sufficiently softened by distance to make their frank inspection possible to weak human vision, there will be entered in the pages of history such a scathing criticism of the Occident *vis-à-vis* China that happily for our self-esteem our eyes will have been permanently closed long before the chapter is published.

UNOPENED PORTS.

KANAGAWA KEN NOTIFICATION No. 285.

It is hereby notified that the formalities to be observed for making application for permission enabling foreign vessels to enter unopened ports mentioned in the last paragraph of Article 3 of the Shipping Law shall be as hereunder stated.

August, 1902. Governor of Kanagawa Ken.

Formalities to be observed for making applications to obtain special permission enabling foreign vessels to enter unopened ports.

1. Persons desiring to make applications to the proper Minister of State for special permission shall send in their applications to the Kanagawa Kencho and apply for their transmission to the competent department.

2. On the applications the following facts shall be clearly mentioned:

(a) Name of vessel.

(b) Nationality. Where registered.

(Mention the name of the country where the vessel is registered. For a vessel not registered in any country, state to that effect.)

(c) Kind of vessel. Steamer or sailing vessel.

(d) Name and nationality of vessel's owner, Name.....subject or citizen.

(e) Name and nationality of master, Name... ..subject or citizen.

(f) Tonnage. Gross.

(g) Number of masts. How many.

(For a vessel which has no mast, state to that effect.)

(h) Rigging. Mention what sorts of sails the vessel carries, such as cutter or schooner. For vessels which have no sails, make mention to that effect.

(i) Object of navigation. Mention object of navigation, such as for pleasure or for visiting celebrated places.

(j) Route. Mention the route which it is intended to take.

(k) Name of the ports to be entered. Mention the name of each port to be visited.

(l) Term of special permission. Fix a term not exceeding one year. For any vessel which was examined by the marine office according to the regulations for the examination of foreign vessels, mention in addition the following conditions:—

(m) The limit fixed for the ship's navigation, mentioned in the certificate of examination of the vessel.

(n) The period allowed for navigation, mentioned in the certificate of examination of the vessel.

3. With this application the following documents are to be sent:—

(a) A document made out by the proper consul certifying the nationality of the vessel's owner and the nationality of the vessel, and if the consul can not certify the nationality of the vessel, a paper made out by such consul certifying the ownership by such owner. In case where the consul can not certify the ownership of the vessel any other document proving the ownership may be used instead of the consul's certificate.

(b) Should the applicant for special permission be a foreigner who is not the vessel's owner, a document by the proper consul certifying the nationality of the applicant, in addition to the certificate mentioned in this preceding paragraph, must be enclosed.

KANAGAWA KEN NOTIFICATION No. 286.

It is hereby notified that as to special permissions enabling foreign vessels to enter unopened ports in accordance with the last paragraph of Article 3 of the Shipping Law, the Kanagawa Kencho will receive application therefor and the desired special permission will be issued, but only in the cases mentioned hereunder:

The applications are to be made out in accordance with the formalities mentioned in Kanagawa Ken Notification No. 285, issued in August 1902.

1. If the applicant is a resident in Kanagawa Ken.

2. If the object of entering is either for pleasure, for health, for scientific investigations, for propagation of religion, or for rendering assistance to ship-wrecks.

3. If the number of days required for entering is not more than one week.

4. If the ports, where it is desired to enter, are those lying within a line from the west end of Jioga Shima, Sagami province, to Sunosaki promontory, Awa province.

August, 1902. Governor of Kanagawa Ken.

LAWN TENNIS.

The following are the results of the preliminary rounds in the competition for Mr. David Jackson's Cup, which is being played for by members of the Y. C. and A. C.:—

FIRST ROUND.

H. Goddard, R. Bohlke, E. B. Clarke, W. H. Mason, H. W. Kilby, C. E. Libeaud, W. J. Waddilove, P. de C. Morriss, F. W. Pettitt, byes.

A. Kingdon beat de Cuers de Cogolin, 6-4, 6-5.

H. R. Barnard beat G. L. Read, 6-0, 6-0.

J. H. C. Goodban, w. o., A. Scott, scratched.

M. F. Stephens beat S. H. Kuhn, 6-0, 6-1.

E. Buxton Forman beat J. S. Happer, 6-3, 6-3.

N. G. Maitland beat B. R. Berrick, 3-6, 6-1, 6-1.

H. Bethell, w. o., J. F. Drummond scratched.

S. Wheeler, w. o., E. C. Davis, scratched.

F. O. Stuart beat J. L. Graham, 6-0, 6-2.

F. E. White beat H. Y. Irwine, 5-6, 6-1, 6-4.

A. W. Read, A. W. S. Austen, H. G. Oxley, N. T. Marquetti, M. Mendelson, K. van R. Smith, G. G. Brady, P. R. Scott, K. F. Crawford, F. E. Wilkinson, J. F. Marques E. W. Townend, byes.

SECOND ROUND.

H. Goddard beat R. Bohlke, 6-3, 6-2.

E. B. Clarke beat W. H. Mason, 6-2, 6-4.

H. W. Kilby beat C. E. Libeaud, 5-6, 6-1, 6-1.

P. de C. Morriss beat W. J. Waddilove, 6-1, 6-3.

M. Marshall beat F. W. Pettitt, 6-1, 6-1.

A. W. Read beat A. W. S. Austen, 6-1, 6-0.

S. Wheeler beat H. Bethell, 6-2, 6-2.

H. G. Oxley beat N. T. Marquetti, 6-1, 6-3.

K. van Smith beat M. Mendelson, 6-0, 6-0.

G. G. Brady beat P. R. Scott, 6-1, 4-6, 6-3.

K. F. Crawford beat F. E. Wilkinson, 6-4, 6-1.

E. W. Townend beat J. F. Marques, 6-1, 6-1.

THIRD ROUND.

E. B. Clarke beat H. Goddard, 6-5, 5-6, 6-5.

H. W. Kilby beat P. de C. Morriss, 6-2, 6-2.

H. R. Barnard beat M. Marshall, 6-2, 6-3.

M. F. Stephens beat J. H. C. Goodban, 6-4, 6-0.

E. Buxton Forman beat N. G. Maitland, 6-2, 6-4.

F. O. Stuart beat F. E. White, 6-2, 5-6, 6-3.

A. W. Read beat H. G. Oxley, 6-0, 6-0.

K. van Smith beat G. G. Brady, 6-3, 6-4.

E. W. Townend, w. o.; K. F. Crawford, scratched.

FOURTH ROUND.

H. W. Kilby beat E. B. Clarke, 6-1, 6-1.

E. Buxton Forman beat M. F. Stephens, 6-3, 6-1.

K. van Smith beat E. W. Townend, 6-3, 6-3.

S. Wheeler beat A. W. Read, 6-2, 6-1.

On Wednesday Barnard beat Forman after a splendid tussle. The play in the first set was rather tame on both sides but the other two sets were played in first class form. As regards the match between van Smith and Wheeler it was practically ace for ace throughout. The result was Barnard beat Forman 2-6, 7-5, 8-6. Wheeler beat van Smith 7-5, 6-4. This puts Wheeler into the final and Barnard and Kilby have yet to play to decide who meets him. The games were most enjoyable and everybody was delighted.

THE ECHIGO OIL INDUSTRY.

The interest of foreigners in Japanese industries is no doubt increasing, and already considerable sums of foreign money have been invested in them. Hence it seems to us important that as far as possible the foreign newspapers published in Japan should endeavour to furnish their readers with trustworthy accounts of the manner in which various companies have been formed and divers industries developed. We admit that this is no easy task, as the information which is desired is frequently not to be found in any one publication, but lies scattered in the back numbers of Japanese newspapers and magazines, where it is not infrequently given in a very confusing manner. Among modern Japanese industries none has developed more rapidly than the Echigo oil trade, and we are not surprised to find that two of our Japanese contemporaries have recently devoted much space to this subject. Last year the *Chûgwaï Shôgyô Shimpô* between August 21st and October 1st published no less than 18 articles on the Echigo oil companies, advocating in the strongest manner a combination, which has to a certain extent since taken place. On June 21st last the *Jiji Shimpô* commenced a series of articles on the same subject, which went on till July 13th. The principal facts furnished by the above-named newspapers we purpose stating as concisely as possible for the information of business men.

We begin with the *Shôgyô Shimpô's* articles. The progress of the kerosene industry may be said to have had three stages. (1) The Echigo stage, which lasted till 1900. (2) The Japanese stage, which ended at the beginning of this year; and (3) the International stage, on which it has now entered. The kerosene industry of Japan began with the discovery of the Amaze oil field in 1875. This was followed by the discovery of the Nagamine fields in 1898, and the discovery of the Kamada fields in 1899. Both the latter places are situated in Nishiyama. The wells were at first opened by hand labour only (*tebori*), then a rude apparatus was used, the digging by means of this method being called *Kazusa-bori*, which subsequently gave place to machinery imported from America. During the first stage of the industry's progress, that is, prior to 1900, there were no less than 40 oil companies in existence, with a total capital of 4,026,960 *yen*. During the two years that followed, 28 new companies made their appearance, with a capital of 9,645,000 *yen*. Thus it is seen that the capital of Japanese companies alone was about 12 million *yen* when the Standard Oil Company of America formed an International Company and came into the field with a capital of 10 million *yen*. It would be an entire mistake to suppose that the principal object of the International Company was to swamp Japanese companies and establish a monopoly. The founders were of opinion that there was room for all parties engaged in the oil industry. It began work by sounding for new wells and by carrying on an extensive refining business. But in the matter of opening wells it met with a severe reverse at Nakayama in Mishima-Gôri (Echigo). On this account the company decided to alter its tactics and to confine itself principally if not exclusively to refining. This decision had the effect of turning into enemies the oil companies that had hitherto welcomed its entrance into the business. As long as the International confined itself to refining the material which it had extracted from its own wells, the Japanese companies could hold their own against it, but when it began to purchase crude petroleum extensively and to refine on a very comprehensive scale, small companies previously engaged in refining found themselves unable to compete. The profits hitherto realised by the refineries of Kashiwazaki began to fall off at an alarming rate, and so it came about that in sheer self-defence the small companies had to combine. Though the International Company may not have originally intended to swamp other companies, its subsequent action made it impossible for the latter to do business in the small way in which they had

hitherto carried it on. The action of the companies in combining in June last has been represented in some quarters as dictated by anti-foreign feeling, but such, we believe, was not the case, says the *Shōgyō Shimpō*; it was a mere business exigency that made them unite, such as might have occurred anywhere. It was a mistake that the companies did not combine before. Combinations are always difficult to effect in this country, and so it happened that when the small companies saw the International losing money over the wells it had sunk in Nakayama, they concluded that its competition was no longer to be feared, not realising that a great company like the International would be most unlikely to relinquish a business till all hope of profit therefrom were gone. Seeing that the Company had constructed huge refining works at Naoyetsu, it might have been inferred that it would commence to purchase crude petroleum, and that when it did this the shoe would begin to pinch as far as small companies were concerned. Some people seem to think that the companies which have combined with the Takarada Company can ruin the International. But this we take to be impossible. All that the companies have done by combination is to qualify themselves to compete with the International on equal terms. The combination means an enormous reduction of working expenses, better management and more extensive operations. But from a business and national point of view further combination may be said to be desirable. We should like to see, says the *Shōgyō Shimpō*, a union of the Nippon Sekiyu-Kaisha, the Takarada Sekiyu-Kaisha and the Zō-ō* Sekiyu-Kaisha. The advantages they would obtain by uniting are numerous. The strength of the three companies differs in some important respects. The Nippon Sekiyu-Kaisha is principally a refining company; and it is furnished accordingly with splendid machinery for this purpose. The Takarada Company excels in its thorough knowledge of the oil business and in its organisation. The extent of its oil fields, however, does not exceed four million *tsubo*, which, as compared with the 10 million owned by the Nippon, and the 30 million possessed by the Zō-ō, sounds very small, but by skilful manipulation of its affairs it manages to pay a higher dividend to its shareholders than either of the sister companies. The Zō-ō possesses no refining works, but makes a point of purchasing from small holders as many promising fields as are for sale. Thus it is seen that the three Companies in many respects complement each other. If the three were to amalgamate, the Trust formed would be joined by all other existing Japanese oil companies.

Such a union was urged by Count Okuma in Nagaoka last year and the advantages were most fully stated by the *Shōgyō Shimpō* in the articles the gist of which we have now given.

We now proceed to epitomize the *Jiji's* observations on the proposed union under the headings supplied by the author of the articles referred to above.

1. *Preliminaries to union.*—In the spring of last year as a result of Count Okuma's speeches in Nagaoka a society which aimed at uniting the three great Japanese oil companies was formed called the 鑛業有志會, Kōgyō-Yūshikai. But somehow or other the nucleus of union was wanting, and the negotiations between the companies made no progress. A man of considerable influence in the Takarada Company, Mr. Kishi Ukichi, of the 69th National Bank, made a desperate effort to set the ball of union rolling, but failed and left the Company. From some points of view it was a matter of little importance which of the three companies took the lead in the endeavour to bring about an amalgamation, but there were considerations which led to the action of Mr. Kishi as representative of the Takarada Company. The Nippon Sekiyu Kaisha being the oldest of the three companies as well as the best organised, was so confident of its own strength as not to be at all keen about uniting with other bodies. As for the Zō-ō, owing to the large outlay

involved in its extensive purchases of new oil fields, its finances were not in a specially flourishing state and, moreover, its relations with the Takarada Company were by no means cordial. Hence it happened that the Takarada took the lead. This company has scored a success that is extremely rare among such bodies. Beginning with a capital of 15,000 *yen*, and possessing in oil-fields an area of 4,000 *tsubo* only, it has made sufficient progress to be able to pay an annual dividend to its shareholders of over 40 per cent. That such a successful company should advocate union with other bodies seemed to promise success.

(2) *The origin of the desire for union.*—There were two causes that seemed to make the formation of a great oil trust desirable: one being the financial embarrassments of numbers of small companies connected with the industry and the other the formation and the success of the International Company.

(3) *The reasons of the critical situation in which various oil companies have found themselves during the past two years.*—Here it is necessary to review the history of the oil industry as a whole. That there was petroleum in Echigo was known a thousand years ago,† but it was not till the year 1871 that this knowledge was turned to profitable account. In that year the Nippon Sekiyu Kaisha was formed with a capital of 750,000 *yen*. Two years later a special well-sinking machine began to be used in a place called Amaze. This marked the actual commencement of the industry. The company, however, did not succeed at first, but they drew the attention of the public to the possibilities of the oil industry. The recent history of the industry may be said to date from the year 1890, when the great discovery of oil fields took place at Amaze. The rush for the place at that time was remarkable. At first the yield was large. In 1894 there was an output of more than 30,000 *koku* of crude petroleum. The following year it fell to 25,000. In 1897 it was 13,000 and in 1900, only 7,000 *koku*. But the discovery made at Katsuyama (Higashiyama) in the year 1889 gave a new impetus to the industry, so that when after the Chino-Japanese war the industrial fever was at its height no less than 300 oil companies and associations were formed in Nagaoka alone. By the constant opening of new wells in Katsuzawa the annual yield was worked up to 120,000 *koku* in 1895 and to 300,000 *koku* last year. The discoveries at Nagamine and Kamada in Nishiyama only date from 1898. Nagamine alone yielded in that year 23,486 *koku* of crude petroleum and the following year the figures had risen to 171,900 *koku*. In 1900 the yield reached the total of 303,427 *koku* and last year it was over 400,000 *koku*. Encouraged by what was taking place at Nagamine, enterprise in Kamada grew keen. At the time of these discoveries a very enlightened and a very shrewd business man known in those parts as the progenitor of the oil industry, Ishizaka Shūzō, advocated an open-door policy in developing the business. His energy was extraordinary and he met with unprecedented success. He opened as many as 40 new wells in one year. At one time the oil came flowing out of his excavations at such a rate as to be uncontrollable and much damage was done to crops in the neighbourhood; the owners of which were, however, fully compensated by Ishizaka. Most of this man's property was bought by the Zō-ō Kaisha. It was by means of this purchase that this company was enabled to fulfil its contract to supply 6,000 *koku* of crude petroleum to the Hirano Refining Works situated at Kashiwazaki. Since Kashiwazaki is not more than 3 *ri* distant from the oil fields mentioned above, it has become a great rendezvous for men on the look out for employment in the oil fields. A short time ago it also became the birth-place of numerous iron-pipe making companies and refineries, most of which, owing to the rapid exhaustion of the Nishiyama stock of petroleum, were likely to come to grief even if they had not

been swamped by the gigantic rival the effect of whose appearance on the scene we are now about to trace.

(4) *The panic caused among the oil companies by the formation of the International Company.*—Two years ago the Echigo oil companies were all thrown into a state of consternation by the operations of the International Oil Company. It entered the field with a capital of 10 million *yen*, put up buildings at Naoyetsu covering 100,000 *tsubo* and made preparations for refining 2,000 *koku* of oil per day. It was seen that against such a company no small concerns could hold their own for a single day. Hence arose a desire for amalgamation among all those engaged in the oil trade.

(5) *The steps taken to bring about a union.*—It is to the credit of the Takarada Company that from the first it has striven for union. And last year in order to prepare the way for a combination of the great companies it purchased the property of a number of small concerns.

(6) *A short history of the development of the Takarada Company's business.*—This Company began business in 1893 with a capital of 15,000 *yen* only and oil fields covering 4,000 *tsubo*. In 1894, its capital was 30,000; in 1895, 50,000; in 1896, 250,000; in 1897, 300,000; in 1899, 600,000 *yen*; and as a result of the union of companies effected last year its capital now stands at 1,500,000 *yen*. The following table shows the rate of the progress of the company's business in nine years:—

Years.	First Half-Year's Yield in <i>koku</i> .*	Second Half-Year's Yield in <i>koku</i> .	First Half-Year's Net Profit <i>yen</i> .
1893	1,116	3,289	2,380
1894	5,350	4,000	2,816
1895	7,877	9,391	1,054
1896	13,169	12,893	20,286
1897	26,177	31,924	34,939
1898	31,903	27,542	29,085
1899	69,019	58,763	110,345
1900	80,622	102,009	123,444
1901	114,726	123,976	174,322

Years.	Second Half-Year's Net Profit <i>yen</i> .	First Half-Year's Dividend per cent.	Second Half-Year's Dividend per cent.
1893	2,611	30	30
1894	1,619	32	14
1895	11,820	6	4
1896	19,303	48	36
1897	33,125	32	28
1898	37,147	12	12
1899	133,545	40	48
1900	142,227	32	40
1901	348,867	48	40

The Takarada Company began by working the wells by hand, but in 1895 they introduced machinery from America. That accounts for the larger yield in that year, while the cost of the outlay on machines explains the comparatively low dividends. In 1899 the Company purchased the property of the Nagamine Kumiai and after they had acquired it discovered new oil fields on the lots purchased. One of the principles of the company is not to buy land wholesale with the hopes of finding oil, but to purchase lots that have been well tested by others, and in doing this they are prepared to pay at a high rate for their property. For some years they have been buying up small companies. Up to 1899 they had absorbed no less than 13 of these bodies. The Takarada Company, then, may be said to have worked for union all along.

(7) *The recent attempts of the Takarada Company to effect a union of the big Companies.*—It was in December of last year that the Takarada Company opened special negotiations with the Nippon Sekiyu Kaisha and the Zō-ō Kaisha with a view to the amalgamation of the three companies. The Nippon Sekiyu Kaisha proved irresponsive. Its position in Echigo was according to its own ideas so assured that it had no need to depend on the help of any other body whatever. As to the Zō-ō, at first it seemed to favour union, but subsequently it was found that great difference of opinion existed among its shareholders. In order that our readers may understand the real situation of the companies to each other we now proceed to give a short history of the business carried on by the Zō-ō and its attitude towards the proposed union.

* It must be understood that the yield given here is that of crude petroleum.

* Zō (藏) and Ō (王) are the names of places.

† The character 鑛 *kō* is usually translated ore in English and *aragane* in Japanese. Its application to crude petroleum is somewhat peculiar and irregular but it is quite general in Japan.

‡ In ancient Japanese history the following statement is made: *Koshi no kuni* (Echigo) *yori moyuru tsuchi, moyuru mizu mo kenzu*. "Inflammable shale and liquid that burns were presented to the Emperor."

(8) *The Zô-ô Sekiyu Kaisha.*—This company dates from 1894, when its capital was 75,000 yen. In 1895 it stood at 350,000 yen and in 1899 had risen to 425,000 yen. The early operations of the Company were unsuccessful, but in 1899 the discovery of a rich oil field in Kamada proved to be the turning point in its career; thenceforth it made money rapidly. On July 8th of that year the company began to sink a well. On the 29th of September they had reached a depth of 618 feet when the oil began to flow at such a rate that they obtained 80 koku in one day. This company has, as stated above, devoted itself to purchasing land supposed to contain petroleum on an extensive scale. Though a good deal of the 40 million *tsubo* of land it possesses may be worthless for mineral purposes, it still has an enormous quantity of valuable ground, and on this account occupies a unique position among oil companies. Well, this company being without refining works of its own and regarding with approval the introduction of foreign capital into Japan, some little time ago, made a contract with the International Company to supply it with 6,000 koku of crude petroleum per month. This caused great umbrage among the Japanese oil companies. Anti-foreign feeling helped to fan the flame and the Zô-ô found itself in the midst of a hornets' nest. It was asserted that by taking such a step it had rendered union among the Japanese companies impossible and the thorough ostracism of the company was strongly advocated in Echigo.

(9) *The subsequent career of the Zô-ô.*—The Zô-ô cannot be said to have been anxious for union with the other companies from the first. In recent years the Company has not been prospering, and its Directors have for a long time felt that they must do something to raise the wind, so they gladly accepted the offer of the International to purchase their crude petroleum. But when the clamour for union among Japanese companies was raised, the Directors determined to appeal to the shareholders and to allow them to take what action they pleased. So it came about that the situation resolved itself into a fight between two sets of shareholders; the one being in favour of union with the Takarada Company and the other advocating the sale of the whole of the property of the company to the International Oil Company. Taking cognisance of the situation, backed by their legal adviser, Mr. Akiyama Genzô, the International Company gave the Zô-ô Company to understand that if by amalgamating with the Takarada Company they found themselves no longer able to fulfil their agreement with the International to deliver 6,000 koku of crude petroleum per month, they would be sued for a very heavy sum. But, as certain shareholders represented at the meetings of the Zô-ô Company held to discuss the question, the Zô-ô's contract with the International was by no means so binding as the latter company tried to make out. It did not even state the time during which the arrangement was to continue. Things eventually got so mixed up that the majority of the shareholders only thought of clearing out of the Company with a good balance of profit on their side, and hence it happened that the Zô-ô sold its property and its rights to the International for 575,000 yen. When the fact became known the Directors and shareholders of this Company were denounced as *baikokudo* (menials who had sold their country), their names were erased from the roll of the Kôgyô Club, mentioned above, and in some instances lives seem to have been in danger.

(10) *The position of the Takarada Company since its absorption of a number of small companies.*

a. Its capital now stands at 1,500,000 yen; its oil fields measure 25,690,000 *tsubo*.

b. It has 83 wells worked by American machinery, and 77 worked by what is known as the hand method (*tebori*).

c. The quantity of crude petroleum it turned out last year was 432,000 koku, valued at 1,120,000 yen. Its most recent output per day is stated to be 675 koku, from 98 wells situated in Higashiyama and 1,187 koku from 58 wells in Nishiyama. The total output of crude petroleum last year throughout Japan was 1,118,507; so that

it is seen that the share of the Takarada Company is over 1/3 of this amount.

d. Its delivery pipes measure 298,000 feet, one of them being able to deliver 6,000 koku per day.

e. It has 3 refineries in Nagaoka and 2 in Kashiwazaki. It is able to turn out of these refineries about 850 koku per day.

f. Its oil is for sale in every part of Japan and steps are now being taken to introduce it into China and Korea.

g. Hitherto the principal business of the Company has been to sell the oil in its crude state. It disposes of 1,000 koku a month to the International Company, but in future it purposes to combine with an increased output of crude oil more extensive refining operations. Already the business of the Company has outgrown that of the Nippon Sekiyu Kaisha and the International.

(12) *A short history of the Nippon Sekiyu Kaisha.*—Though it must not be inferred that there are no small oil companies left in Echigo or that their existence in future will be rendered impossible by the three great companies repeatedly mentioned above, public interest is of course chiefly concerned with the prospects of the three great associations. Having sketched the progress made by the Takarada Company and the Zô-ô from their origin, we now proceed to do the same with the Nippon Sekiyu Kaisha.

a. This company commenced business in 1889 with a capital of 150,000 yen at Amaze. In 1894 its capital had reached 300,000 yen, in 1896, 600,000; in 1900, 1,200,000, and in June 1902 it had run up to 2,400,000 yen. From the commencement of its business in 1889 down to the end of last year it had turned out and sold 991,990 koku of oil. Its net profits for the years during which it has been doing business were:—1889, 1,622 yen; 1890, 11,514 yen; 1891, 12,286 yen; 1892, 21,531 yen; 1893, 15,052 yen; 1894, 26,263 yen; 1895, 49,007 yen; 1896, 64,292 yen; 1897, 79,960 yen; 1898, 130,271 yen; 1899, 374,870 yen; 1900, 473,123 yen; 1901, 698,157 yen.

b. The business of this company consists of three parts: (1) the sinking of wells and the production of crude petroleum; (2) refining operations; (3) the making of delivery pipes.

c. It has oil fields in 15 different places, covering an area of 12,300,000 *tsubo*.

d. It has two refineries, one at Amaze and the other at Kashiwazaki, and turns out from them something over 200,000 koku of oil per year.

e. Its delivery pipe works are capable of making 1,500 ft. of piping per day.

f. The oil turned out of its refineries is pumped into its own tanks and forwarded by its agents to every part of Japan. The Company does all its own work and its organisation is of the most perfect kind. Its business methods are in every way trustworthy and speculation of any sort is avoided.

(13) *The International Oil Company's present situation.*—This Company, as related above, began with a failure. It purchased unproductive fields, and then decided to confine itself to purchasing raw petroleum from other companies and to endeavouring to outstrip all other bodies in the work of refining. After its huge Naoyetsu refinery had been completed, it began to realise how difficult it would be to obtain a regular and an ample supply of crude material for daily use. Even by the purchase of the Zô-ô's property it cannot be said to have rendered its position entirely free from anxiety. In the past its losses have been heavy, and unless it succeeds in discovering in the land it has purchased some very rich fields, its annual supply of crude petroleum will not suffice to keep the works going at a paying rate. The company is run by energetic spirits and will not readily succumb, but hitherto its profits have been largely curtailed by the necessity of purchasing crude petroleum at pretty high prices. We are informed that in the month of May it turned out 14,482 koku of oil, valued at 147,746 yen; but what the outlay on the crude oil required for the production of this amount came to we are not told. It looks at present as if the International Company would find it difficult to compete with the two great Japanese companies even though they agree to

remain separate. But the probability of their amalgamation is by no means remote. It is said that the Takarada Company still has hopes of inducing the Nippon Sekiyu Kaisha to join hands with it, and in that event the position of the International would become parlous.

(14) *The Future of the Oil Industry.*—It goes without saying that Japan's oil industry has a brilliant future before it. The use of kerosene in this country has grown at a wonderfully rapid pace. In the first year of Meiji the amount of oil imported was 639 koku. In 1901 it had reached 1,300,000 koku. The value of the oil imported in 1868 was only 7,236 yen; that imported last year was 14 million yen. The following table shows the rate at which the import of kerosene into Japan increased:—

Years.	Koku	Value yen.
1868.....	639	7,236
1872.....	8,936	160,608
1877.....	53,645	605,598
1882.....	413,644	2,320,905
1887.....	421,177	1,871,428
1892.....	653,785	2,328,398
1897.....	1,221,164	7,667,350
1900.....	1,356,846	14,162,652
1901.....	1,379,927	14,943,400

Notwithstanding the large supply that has come from abroad, of late years the demand for the Echigo oil has gone on increasing, as shown in the subjoined table, which covers seven years:—

Years	Koku of crude petroleum	Value yen
1895.....	158,334	526,976
1896.....	207,470	619,333
1897.....	257,614	668,677
1898.....	355,006	670,308
1899.....	544,583	1,450,904
1900.....	836,628	2,142,003
1901.....	1,115,807	2,345,916

It is calculated that about 5/10 of the total quantity of this crude petroleum was used for lighting purposes. It would seem then that Echigo supplied 3/10 of the total amount of oil used for lighting in Japan during the seven years, and that the remaining 7/10 came from abroad. Taking the year 1901, the value of the crude petroleum being 2,345,916 yen, it is estimated that when refined this amount of petroleum would fetch not less than 4 million yen. But the fact remains that the proportion of oil imported is still very large, so that there is room for a further great development of the business. As to the limits of the Japanese supply of oil, it seems impossible to obtain any trustworthy information. Echigo is by no means worked out: new fields are constantly being discovered in that province. Then petroleum has been found in Hokkaidô and in the Yamagata and Shizuoka prefectures. So that among Japan's modern industries her oil trade may be pronounced to be full of promise. How the quality of the Japanese oil compares with the American and Russian brands, we are not told by the *Jiji*, but from other sources we gather that when properly refined Japanese petroleum is equal to the best American and Russian oils.

The present writer proposes at his leisure to prepare short histories of other important industries in the course of development in this country.

The koku is a Japanese measure of capacity. Its English equivalent is:—1 koku=30 7003 English g. llons.

MR. BASUKE.

Mr. Basuke, whose picture exhibitions in Yokohama and Kobe will be remembered by all lovers of artistic things, has returned to Japan after spending nine months in the leading art-schools of Philadelphia and New York. He has greatly profited by his studies and his exhibition in the autumn will be eagerly looked forward to. Mr. Basuke has, we are glad to learn, opened a studio at No. 1, Onoyecho, Ichome, Yokohama, and has already started class-work. His life-class, which includes three foreign amateurs, meets on Mondays, Wednesdays, and Fridays. Ordinary lessons in water-colours and sketching take place every day from 9 to 12 and from 2 to 4. We extend Mr. Basuke our heartiest good wishes for the success of his *atelier*.

LAW CASES.

MIZUTANI v. SINGER MANUFACTURING COMPANY.

In the Yokohama Chiho Saibansho on Friday morning, before Judge Kato, trial was resumed of the case, adjourned from August 12th, brought by Mr. Mizutani Motokichi, of No. 38, Nichome, Yoshidamachi, Yokohama, against the Singer Manufacturing Company, No. 80, Yokohama, claiming recovery of bargain money amounting to one thousand yen, with interest at six per cent. from April 1st this year until the execution of judgment. Mr. R. Ideura appeared for plaintiff and Mr. G. Akiyama for defendants.

Owing to the fact that Mr. K. Okajima, formerly an employe of the Singer Manufacturing Company, was about to go abroad on certain business he was examined as a witness before the proceedings in the case were taken up, as at the previous hearing.

To the Judge he said—I reside at No. 1, Kinsukecho, Hongo, Tokyo. I remember that a contract was made between plaintiff and defendants relative to the present case some time in November last year. I was manager (among the Japanese employes) of the defendants' office when the contract was effected. In July, 1890, I first entered the service of the Head Office of the defendants in England and early in 1902 I came back here and joined the Singer Manufacturing Company in Yokohama. Afterwards I had an appointment in the Tokyo branch of the Company, where I served for about one month. With reference to the present case I visited Mr. Mizutani, the plaintiff, some time last year with Mr. David Deans, the then manager of the defendants' office, but I did not concern myself directly about the signing of the contract. Mr. Sugimoto Shokichi, in the defendant's office, knew the particulars of the affair, for he was concerned in the transaction from the beginning.

The Judge—Did you ever act as interpreter relative to the matter?—Yes, I did.

The Judge—Did you ever explain to the plaintiff the working capacity of the sewing machines?—I do not remember well, but I think I acted as interpreter on behalf of Mr. Sugimoto and others concerned in the case.

The Judge—What kind of machines were they?—They were silk handkerchief sewing machines of Scottish make. Some of them could be driven by foot, and others either by electricity or steam.

Continuing the witness said—It was about August or September last year that Mr. Mizutani, the plaintiff, was given an explanation as to the working capacity of the machines. I think the explanation was minutely given to the plaintiff before the contract was made.

The Judge—Mr. David Deans said that the maximum speed of the machines was 1,700 stitches per minute; by what method could the maximum speed be developed?—I do not know exactly. Mr. Deans had not made any special explanation. I am indeed ashamed to say that none of the employes of the Singer Manufacturing Company knew anything about the machines, for they did not see them; nor were the machines in the defendants' offices when the contract was signed. It appears that the Japanese employes vaguely told the plaintiff that the machines could develop a speed of 1,700 stitches.

Mr. Akiyama—Was the explanation made to the plaintiff when the contract was effected? By whom? And who said that as no reference was made in the contract relative to the working capacity of the machines it would be better to refer to it in the contract?

The Witness—It was Mr. Sugimoto who spoke to that effect. I remember that Mr. Sugimoto told the plaintiff that a speed of 1,700 could be developed per minute. (Shown a note) the witness said that it was written by the plaintiff himself.

Mr. Akiyama—Had Mr. Sugimoto told the plaintiff that the important point in the contract rested on the maximum speed of 1,700 when the contract was made?

The Witness—I do not know well, but I think Sugimoto must have said so to the plaintiff before the transaction was arranged.

Mr. Akiyama—Did the plaintiff himself say that he would like to purchase the machines because they could develop a speed of 1,700 stitches?—I don't know, but as it was an important point such an explanation must have been made to the plaintiff.

Mr. Akiyama: How were the machines to be driven—by foot, or by what means?—No special reference was made; either to foot or steam, or electricity.

Mr. Ideura—Does the witness remember that the plaintiff was told that the machines, when driven by foot, could develop a maximum speed of 1,200 stitches?—I do not. No special explanation seems to have been made in any way.

The proceedings were adjourned *sine die*.

MAIGRE v. ALLEN.

In the Yokohama Chiho Saibansho on Tuesday morning before Judge Kato, was heard an action brought Mrs. R. Maigre against Mr. J. R. Allen, asking that the latter should evacuate certain buildings and pay house rent from January this year until the evacuation at the rate of yen 90 per month, costs of the case to be borne by defendant.

Mr. Ota appeared for plaintiff, but neither defendant nor his Counsel were present.

Mr. Ota stated that his client rented to defendant three brick buildings, one measuring 42 *tsubo*, the other 42 *tsubo*, and a third 8 *tsubo*, at the monthly rental of yen 90 from January, 1901, until December 31st the same year, at the expiration of which term the defendant agreed to leave them. The defendant, however, disregarded the agreement and is still occupying the premises despite notices occasionally forwarded by plaintiff. Counsel further asked the Court that the claim should be executed provisionally.

The Court announced that judgment would be given on August 21st.

Judgment was delivered in the Yokohama Chiho Saibansho on Thursday morning, by Judge Kato, in the case brought by Mrs. R. Maigre against Mr. J. R. Allen, asking that the latter should give up the occupancy of three buildings rented to him and pay house rent from January this year until the evacuation at the rate of yen 90 per month. The defendant was ordered to leave the buildings and to pay house rent as claimed by plaintiff. The Judge further announced that should plaintiff pay yen 180 as deposit into Court the claim may be executed provisionally.

JOVANSEN v. HOPKINS.

In connection with the Hopkins-Jovansen case, Mr. R. G. Hopkins and Mrs. Jovansen were summoned to the Court on Monday and underwent examination.

The preliminary examination was concluded, and as a result Mr. Hopkins was detained at the Court and Mrs. Jovansen returned home.

The divorce suit brought by Mr. Jovansen against his wife, alleging adultery with Mr. Hopkins of the Club Hotel, has advanced a stage. The preliminary enquiry concluded several days ago, and, as a result, Public Procurator Ohira filed charges against the defendants on August 14th. The case will come on for hearing in the Yokohama Chiho Saibansho shortly.

In the Yokohama Chiho Saibansho on Thursday morning, before Judge Kato and associated Judges Naruse and Hoshino, was resumed the suit brought by Mr. Adolphe Jovansen, formerly manager of the Club Hotel, Ltd., Yokohama, against the Club Hotel, claiming yen 18,775 damages in consequence of sudden dismissal from the post of manager. Mr. Ideura appeared for plaintiff and Mr. Sawada for defendants.

Mrs. Clyde, who has returned from China, was examined as a witness through Mr. J. de Becker, who acted as interpreter. The proceedings were, however, conducted in *camera*.

The next hearing will take place on August 31st.

BAVIER & CO. v. JEWETT.

On August 15th a complaint was made to the Bluff Police by Mr. H. Victor Gielen, of Messrs. Bavier & Co., No. 209, Yokohama, against Mr. John H. Jewett, No. 225, Bluff, charging the latter with theft. The origin of the affair seems to be that some days ago when Mr. Jewett was leaving his residence at No. 2,000, Negishimachi, which he rented from Mr. Gielen, he transferred from the garden some 150 trees and several ornamental stones, valued at over yen 600. These he handed over to a gardener named Yonekichi. Mr. Gielen alleges that the plants and stones are the property of Messrs. Bavier & Co., but Mr. Jewett claims that they are his own.

HIOKI v. SPECIE BANK.

In the Yokohama Chiho Saibansho on Wednesday afternoon, before Judge Kato, was resumed the hearing of the action, adjourned from July 29 brought by Mr. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., No. 35, Yokohama, against the Yokohama Specie Bank claiming yen 15,871.74. The plaintiff appeared in person and the defendants were represented by Mr. Takahashi.

Owing to the fact that Judge Danno conducted the previous hearing but was now absent enjoying his summer vacation, the proceedings were started afresh.

The plaintiff repeated his former statement and said that prior to the foreign firm being declared bankrupt they exported 780 boxes of tea to New York through the Specie Bank, for which the firm obtained a bill of lading. On February, this year, the firm's debts to the Bank stood at some yen 110,000, but the greater portion was refunded afterwards. The above loan had been contracted for under the terms of export account. Quite apart from the export account the firm obtained from the Bank a loan of yen 60,000 in January this year and with this sum repaid to the Bank debts amounting to yen 36,125.11.

Mr. Takahashi stated that whenever the bankrupt firm intended to purchase and export tea abroad the Specie Bank offered every possible convenience. Messrs. Mourilyan, Heimann & Co.'s debts to the Bank were so heavy that the firm found it almost impossible to refund the whole and yet it exported 780 boxes of tea though the assistance of the Bank which supplied the necessary money for the purchase of the staple. The sum claimed by the plaintiff was in connection with the above transaction. As the firm still owed money to the Bank it was unreasonable for the plaintiff to bring forward such a claim. On the other hand, the Specie Bank had really a claim against the bankrupt firm.

The hearing was adjourned until August 23rd at 8 a.m.

On August 14th Judge Tanuma, of the Yokohama Chiho Saibansho, proceeded to the premises of Messrs. Cornes & Co., No. 50, Yokohama, and made official inspection of the books of the *habutaye* department in compliance with the request of the firm. It appears that a petition has been sent in to the authorities by the firm asking for an official examination of the *habutaye* accounts, which measure the firm found necessary in connection with the closing up of the department. The firm, in adjusting accounts, is said to have found deficits amounting to a considerable sum.

YACHTING.

Two of the large yachts raced on Saturday across the Bay and back for the *Maid Marion* Cup—*Mary*, though only 38½, declaring to sail as a 39 rater. They started in a light north-easterly breeze and got out of the harbour entrance close together, but while *Maid Marion* tacked close round, *Mary* stood across the fairway and was evidently set down considerably by the strong flood tide. The result was that *Maid Marion* established a lead which apparently she maintained as long as the boats were in sight. When they re-appeared, however, after rounding the Bandzu-hana mark, they brought along a fairly good

wind and *Mary* was well in the lead. Their relative positions were maintained to the end, *Maid Marion* being unable to get within her time allowance of 5m. 30s.

The corrected times were :

	h.m.s.
<i>Mary</i>	6.18.20
<i>Maid Marion</i>	6.21.40

The cruising class had a race round the Lightship to Nagahama and back for the *Mosquito* Cup. This, though very slow in consequence of lack of wind, had a somewhat sensational finish. *Daimyo* was just able to make it a race by crossing the line 20 seconds inside the time limit—seven o'clock. *Molly* stuck to *Daimyo* all through the race, being only 6 minutes astern at the Lightship, 5 minutes at the Widow Buoy and 4½ minutes at Nagahama. All the other craft gave up and came home.

The corrected times were :

	h.m.s.
<i>Daimyo</i>	6.59.40
<i>Molly</i>	7.02.20

The first prize therefore goes to *Daimyo*.

The Mosquito Club boats had a race round a mark at Tsurumi, the Lightship and another mark off Mandarin Bluff. The prize was one offered by Mr. C. V. Thorn. In the course of the race *Pele* fouled *Sodeska* and was disqualified. Following are the corrected times:—

	h.m.s.
<i>Pele</i>	4.39.02
<i>Edna</i>	4.34.30
<i>Yugao</i>	4.45.55
<i>Nandeska</i>	4.50.13
<i>Sodeska</i>	4.43.46
<i>Vixen</i>	4.43.16

Edna therefore wins the prize.

BASEBALL.

Some excellent ball-playing was seen during the course of the Baseball match on Saturday afternoon. The teams were captained by Messrs. Thorn and Merriman respectively and were so evenly balanced that the former only won by the bare margin of one run. Indeed, up to the very last ball pitched, victory seemed to hang in the balance and the possibility of a tie in the very closing minutes of the game was averted solely through smart fielding. Thompson, Dyer, and Thorn were all in excellent form, and Goddard also deserves high praise for his play both at bat and in the field. McChesney and Edwards were the best among the other team.

Teams and score:—

BRITISH STEAMER ASHORE IN SHIMONOSEKI STRAITS.

The British steamer *Lindenhall*, from Hongkong for Kobe, went aground on a sandbank near Shirashima, off Mutsure Island, on the southern side of Shimonoseki Straits, on Aug. 12th. The place is out of the usual track and the steamer had no means of signalling to other vessels for help. The captain of the steamer hired a fishing smack and went to Moji early on the following morning. Messrs. Uriu & Co., of Shimonoseki, agents for the vessel, sent over ten lighters to discharge the sugar on board. The vessel was refloated subsequently, with the assistance of steamboats.

The vessel was brought to Shimonoseki on Aug. 18th and her bottom was examined by a diver. It was found that two big holes have been made in the hull. The sugar, 5,500 tons in all, will be landed at Shimonoseki and the vessel will be taken to Nagasaki for repairs.

THE LATE MR. MICHIE.

We take the following from the *N.-C. Daily News*:—

“Alexander Michie, who passed away on the 7th instant in the old country, at the age of 63, was a man of strong character, who made his mark in Shanghai many years ago. He came out to Lindsay & Co. in 1850 and afterwards became a partner in that firm, which was one of the leading houses of Shanghai until the commercial crisis of 1865 brought it down. In those early days the China coast was almost unknown, and it was Alexander Michie who practically discovered Chefoo and Newchwang, which ports he visited in a lorch; and he was a member of the Blakiston expedition to the Upper Yangtze in the sixties, when the gorges were first passed. He was subsequently a partner in the firm of Chapman, King & Co., and when that firm ceased to exist he went to Tientsin, where for some years he was editor of the local paper. He was an exceedingly prolific and trenchant writer, and was for many years a contributor to the *Times* and *Blackwood*, his writing being characterised by a vigour and directness not often met with. He dealt with the missionary and opium questions in a very forcible manner, and established a lasting reputation in the literary world by his great book ‘The Englishman in China.’ Alexander Michie was a man not only of great attainments but of sterling worth and probity, and was a friend any man might have been proud of. No particulars of the circumstances of his death have come to hand, but it is known that he died in harness, full of power and vigour to the last. His memory will ever be green to the many who enjoyed the pleasure of his friendship.”

The *North China Daily News* prints the following “In Memoriam”:—

Won through the fight, the roar of combat past,
“After Life’s fitful fever, he sleeps well!”
True to his code—in harness to the last—;
Brave heart, sleep well!
No stauncher friend e’er shielded with his blade
The weakling, fainting in the dust of fight;
No foe more generous, or more undismayed,
Fought through, to Light!
“Sans peur,” most sure; and “Sans reproche,”
he lies—
Dear grim kind face, with closed and clouded eyes;
True, loyal, kind—whatever most we prize—
His Immortality!
Seeking no guerdon, yet he gave his best:
What more to say?—he fought his fight—and
won!
And now—dear greyhead—lies in his long rest.
—His work—well done!

A. M.

NEWS OF THE WEEK.

An experiment at Versailles with the new Satory explosive powder led to an accident which resulted in the death of a sub-lieutenant, an adjutant, and three junior officers, and the wounding of fifteen.

While testing a gasoline motor on Friday evening Mr. W. C. Vaughan sustained rather severe injuries by an explosion. He was badly burned about the face, but so far it is not thought that his eyesight has been affected.

Tenders will be invited about September 10th by the Tokyo Street Electric Railway Company for a supply of plant. The Company is reported to be ready to start work as soon as sanction has been obtained.

Vice-Admiral Hidaka, the new Commander-in-Chief of the Japanese Standing Squadron, hoisted his flag on the battle-ship *Hatsuse* on August 17th. The flag-ship with the battleships *Asahi* and *Mikasa*, is now in Aomori Bay.

August 14th being the day of the capture of Peking in 1900 by the allied forces, a celebration

was held in the Military Club, Hiroshima, on the evening of that day, at which were present Lieut.-General Baron Yamaguchi, Commander-in-Chief of the Fifth Army Division, and many other guests.

The broken submarine cable between Fusan and Tsushima, having been repaired, was reopened on August 20th.

Baron S. de Landes, the new Netherlands Minister to Japan, proceeded to the Palace on the morning of August 21st and was received in audience by the Emperor, to whom the Minister presented his credentials.

The cruiser *Takachiho*, having on board some Government officials, journalists and others, will leave Yokosuka, at 5 p.m. on August 22nd for Torishima, the scene of the recent volcanic eruption. Captain R. Kajikawa is in command.

Negotiations for amalgamation are in progress in Osaka between the representatives of the Okayama, Nishinari, Bizen and Kasaoka Cotton Spinning Companies. It is generally believed that the negotiations will be attended with success.

Marquis Ito is now staying at Oiso. Mr. T. Kato, ex-Japanese Minister to England, in response to the Marquis’ invitation, went down to Oiso on August 19th. Mr. K. Kataoka, ex-President of Lower House, also visited the Marquis the same day.

Mr. McTaylor, chief engineer of the British steamer *Glenfarg*, was found suffering from abdominal typhus on August 15th when the steamer entered Yokohama from London via ports. The patient was at once taken to the Naval Hospital on the Bluff for treatment.

President Loubet has been pleased to confer medals upon ten Japanese lady nurses in recognition of faithful services rendered by them at the Hiroshima Military Hospital, where a large number of French sailors and soldiers, either invalid or injured, were accommodated in 1900.

The broken cable between Fusan and Tsushima Island will be again in operation in about a week or so. The cable-steamer of the Great Northern Telegraph Company will arrive at Nagasaki in a few days from the south and it is expected that the repairing work will at once be started.

In consequence of a split in the Koyu-sha, a prominent club in Yokohama, in connection with the elections, Messrs. Otani Kahei, Asada Matsuhichi, and a number of other leading members have resigned. A special meeting of members has therefore been called for Aug. 16th to discuss the question of closing the Club.

Last month a monument was unveiled at Kiel in presence of the German Emperor and Empress, in remembrance of those brave German mariners who found their death in the late Chinese war, especially during the attack on the Taku Forts. The ceremony was introduced by divine service in the garrison church.

Prince Cyril left Yokohama on August 21st for Kobe on the *Admiral Nakhimoff*. The Russian Prince had a splendid send-off on board his ship, to which repaired Viscount Madenokoji, Master of Ceremonies, Mr. Rinoiye, representative of the Governor of Kanagawa, the Russian Consul-General at Yokohama, and many others, both foreign and Japanese.

Captain Thomson of the British steamer *Benvoirlich*, is reported to have been ordered by the Japanese Authorities to pay a fine of yen 10 on the ground that he has violated Art. 77 of the Customs Tariff Law. It seems that the Captain presented the usual manifest to the Customs, but omitted ten boxes of dried indigo.

Another accident recently occurred at Chatham with the obsolete muzzle-loaders used for firing salutes at the Spur Battery, over-looking the town. It appears that Gunner Evans, R.A., was assisting to fire a salute on the departure of Prince Ko-

matsu, who had been paying a flying visit to Chatham Dockyard, when the charge prematurely exploded. Evan's right arm was blown off at the elbow, and his left hand at the wrist.

The *Tokyo Asahi* has a paragraph to the effect that in view of the conclusion of the Anglo-Japanese Alliance there is a growing desire on the part of British ladies to know the real condition of their sex in Japan. Through the efforts of Mr. Nakazawa Kohei, a Japanese now in London, and others it has been arranged that steps shall be taken to this end.

It is a singular fact that the last four left in the final rounds of the Y. C. & A. C. competition for Mr. David Jackson's handsome tennis cup should be a Canadian, an American, an Irishman, and an Englishman. The competition attracted entries from Germans, Frenchmen, Americans, and Britons born in many lands. K. van Smith, S. Wheeler and H. W. Kilby, by-the-way, were born in Japan.

The *Ostasiatische Lloyd* understands that Rear-Admiral von Ahlefeldt, second in command of the German cruiser squadron, has been appointed to be naval administrative officer, and will leave for home about the middle of this month. Rear-Admiral Count Bandissin, till now commander of the yacht *Hohenzollern*, has been appointed second in command of the cruiser squadron, and will be succeeded by Commander von Usedom.

Mr. T. D. McKay, the well-known general passenger agent for the San Francisco Overland Route, is making special preparations for the advent in these waters of the magnificent new Pacific Mail liner, *Korea*, shortly due. Some of the dainty silk doilies and embroidered handkerchiefs which he is getting ready as *souvenirs* will be highly prized, we imagine, by their lucky recipients. Mr. McKay is bubbling over, as usual, with information regarding the lines he represents.

With reference to Reuter's telegram of August 16th, announcing that Japan has placed an order at Clydebank for two large cruisers, the leading Tokyo papers are unanimous in denying the truth of the intelligence and proceed to state that in view of the uncertainty of the much-talked-of third naval expansion programme there is no sufficient reason to believe that the Japanese Government has given such an order. The metropolitan press alleges that keen competition has already started among ship-builders in England with reference to the proposed expansion of the Japanese navy.

About 8 p.m. on August 18th a thief entered the servants' quarters of the residence of Mr. M. F. Bengen, No. 126, Bluff, Yokohama, and was about to jump out of a window with some clothing and other articles, when the wife of Nunagaki Tokusaburo, cook in the service of the house, who happened to be in the kitchen with her child, grasped the man from behind. As a result the thief and woman fell down to the ground. In the midst of the struggle, Mr. Mendelson's servant and another came, attracted by the woman's voice, and arrested the thief, who was at once taken to the Bluff Police Station. He is named Okamura Isaburo and is a native of Shizuoka Prefecture.

The steamer *St. Paul*, which arrived at San Francisco a month ago from the Arctic regions, reported that Mr. Harry de Windt and the members of his "Paris to New York overland" expedition was picked up off the Siberian coast by the *Thetis* in the middle of June. Mr. de Windt's expedition left Paris on the 19th December last and consisted of Mr. de Windt, Vicomte de Clinchamp-Bellegarde, and Mr. G. Harding. The object of the expedition was to cross from Paris to New York overland, through Siberia and over the ice on Behring Straits.

From a paragraph appearing in the *Yokohama Shimpō*, we gather that over 50 foreign residents of Yokohama have paid their house-tax for the 34th fiscal year and for the first half of the 35th fiscal year (1902-3) up to the present, the money collected amounting to a little over yen 2,000.

On August 7th, the Yokohama City Office issued a note of warning to 235 owners of property, asking them to pay the tax without delay, but so far some 50 owners only have responded to the call. Under the circumstances, the Authorities will shortly issue a second notice and in the event of their order not being acquiesced in a second house-tax distraining will necessarily follow.

Experiments in the extraction of sugar-beet have been made at the Agri-Horticultural Gardens at Lahore. Three kinds of sugar-beet were tried, but it was found that in each case the percentage of sugar in the roots was somewhat below that necessary for profitable cultivation, and as no simple method, such as could be adopted by the ordinary cultivator, has been found to give satisfactory results, the experiments will be discontinued. It would appear, says an exchange, that beet-sugar cultivation in India will need to be undertaken under European management, if at all.

Mr. Petersen, a Danish subject of No. 115, Yamashitacho, Yokohama, has been ordered by the Japanese Authorities to pay a fine of yen 50 on account of having violated Art. 76 of the Customs Tariff Law. It appears that Mr. Petersen, acting under the instructions of the Captain of the German war-ship *Hansa*, now in Uraga Dock, took out of the vessel some 88 files and other articles and conveyed them to Yokohama without the permission of the Customs Authorities. Afterwards the goods were brought to Yokohama by the steam-launch *Teiki Maru* on August 13, when the matter was discovered by the authorities.

An improved submarine boat of 100ft. in length for the British Navy has been launched at Barrow-in-Furness. The boat is the joint invention of Vickers, Son, and Maxim and the Admiralty. This submarine boat dives under water in a few seconds, and is fitted with Grubb's apparatus for steering under water. The apparatus is an improvement upon the French periscope. When on the surface the new boat can be navigated like a torpedo boat, but is not so easily observed. The boat will be able to be used in line of battle instead of only for coast defence, and it can assume the defensive. The submarine boat described is expected to be the finest afloat.

It is with sincere pleasure (says the *Foochow Echo*) that we are able to announce on good authority, that the gallant conduct exhibited by Mr. J. Geddes, of the Santu Customs Staff, on the occasion of the loss of the steamer *Yuko Maru*, some time back, has received due recognition by the authorities concerned. We learn that Mr. Geddes has received from the Japanese Government a very handsome gold medal, a pair of silver vases and a cheque to reimburse his losses in the matter of clothing; also the promise of a free passage in any of the Company's steamers whenever it suits him to travel. Mr. Geddes, we learn, has also been promoted one step in the Customs Service.

An interesting episode took place recently at Colchester, England, where an inquest was held on some 10,000 silver coins which were dug up during the rebuilding of the London and County Bank. It is the duty of the finder of any treasure trove to report to the coroner, who, by an old statute of Edward I., is directed "to inquire of the treasure that is found, who the finders were, and likewise who is suspected thereof." The coins were heaped upon a table in front of the jury, who, after an hour's inquiry, found they were treasure trove, and asked the coroner to make representations to the Crown on behalf of the local museum. The coins were then claimed by the police on behalf of the Crown.

Java is being visited by a very severe attack of cholera, resulting in hundreds of deaths. The death which will be heard of with most regret in China and Japan is that of "Colonel" Charles Hicks, the advance agent of Harmston's Circus, who died on the 22nd ult. Colonel Hicks was an American by extraction, but was well known in Australia and all over the Far East. In Hong-kong he was extremely popular, his genial manners

and gifts as a *raconteur* winning him hosts of friends. Amongst other victims are a major of artillery and his daughter, a captain of artillery, the captain of the steamer *Sommerfeld*, Mr. Reigers, the head of the Tramway Company, Professor Koopman and various others, including the wife of Mr. Bouman, a well-known broker. On the 21st ult. nine European soldiers fell victims and six on the following day. Cholera has never been so bad in Java before.

The following table shows the relative positions of the English counties in the cricket championship on 23rd July:—

	Played.	Won.	Lost.	Drawn.	Points.	Per-centage.
Yorkshire	16	8	1	7	7	77.77
Sussex	16	5	2	9	3	42.85
Lancashire	16	6	3	7	3	33.33
Warwickshire ...	10	4	2	4	2	53.33
Surrey	15	4	2	9	2	33.32
Notts	13	3	2	8	1	20.00
Kent	12	5	5	2	—	—
Somersetshire ...	11	4	5	2	—1	—11.11
Worcestershire ...	13	3	4	6	—1	—14.28
Derbyshire	9	2	3	4	—1	—20.00
Gloucestershire...	12	3	5	4	—2	—25.00
Essex	12	1	3	8	—2	—50.00
Leicestershire ...	13	1	3	9	—1	—50.00
Hampshire	10	1	6	3	—5	—71.42
Middlesex	8	0	4	4	—4	—100.00

On August 18th, Mr. Y. Umeda, Mayor of Yokohama, issued a notice to the general public urging the advisability of encouraging the habit of thrift among the citizens. Mr. Umeda says that the post office savings system was first started by the Government in the eighth year of *Meiji*, (1875), and various improvements have since been inaugurated with a view to encouraging the habit of thrift. As a result, deposits at the end of 1901 amounted to yen 26,806,859 representing 2,275,680 depositors. The figures show an average deposit of yen 11.77 per depositor, or four persons per 100 of the population. Compared with European countries there is a great falling-off in point of deposits, though this is chiefly owing to the fact that the standard of wealth in Europe is much higher than in Japan. Be that as it may, the Yokohama City Authorities are convinced of the urgent necessity of inculcating thrift and advise the citizens to pay attention to this matter.

An Imperial decree issued at Peking on August 12th said: "We have received a joint memorial from Liu K'un-yi and Chang Chih-tung, Viceroy respectively of the Liangkang and Hakuang provinces, embodying a number of suggestions which they say have been obtained from the mining regulations of various countries abroad, and which they recommend should be adopted as the basis for the revised mining regulations of the Empire. Upon perusal we find the suggestions made very reasonable and we, therefore, hereby command the said Viceroy to go into the matter carefully and thoroughly and select what they consider those portions of the mining regulations of other countries best adapted to the requirements of this Empire for embodiment into our laws thereon. Care must further be taken not to adopt those which might afford opportunities for fraud and other irregularities detrimental to the finances and independence of the country."

A sad fatality occurred on the Shanghai river on August 13th. The boys of the St. Xavier's School went for a picnic to Lung Hua Pagoda and during the afternoon several bathed in the river. Between 3 and 4 o'clock in the afternoon a little boy named Adrian Russell, not quite ten years of age, was having lessons in swimming from some of the elder boys and afterwards went into shallow water, some 10 feet from the shore, to rest. A little later, he and another boy, H. C. Reeks, waded out and apparently stepped into a pit. Reeks sank three times, but was rescued. Russell, however, disappeared from sight and the body was not recovered until some hours later. Some of the elder boys dived repeatedly in search of the body, but without success and at 10 p.m. the search was abandoned. At 1 a.m. the following day the body was observed floating on the top of the water and was recovered. The body of the deceased was badly

bruised and scraped, having been caught, it is supposed, by the yuloh of a large native boat which was passing at the time of the accident.

CORONATION BONFIRES.

The Coronation bonfires were lighted in England on Monday night, June 30, and as at the celebrations of the Victorian Jubilees, proved that after all the most primitive form of illumination is the most effective. Everything, says the *Spectator*, combines to make a bonfire on a beacon hill exciting to the sense and the imagination. First, the situation of the bonfire is in almost all cases highly romantic. It stands on the summit of some wind-swept hill or wild moor, far away from the homes of men. Yet the pageant of flame peoples the hilltop with men and women. On the North Downs, for example, what was even more impressive than the actual fire was the spectacle of bands of people converging in the darkness to the immemorial hearth of the bonfire. Down numberless paths and glades they came trooping, and the hill top, usually utterly silent on summer nights save for the song of the nightingale in some little brake or thicket, was alive with the sound of voices and the soft pad of footsteps on the turf. So trooped primitive man to the Beltane fires at the sight of the summer solstice, and so men believed they trooped to the Witches' Sabbaths on the Downs. The fires were mostly built of faggots well smeared with pitch, and burnt with flames so bright and fierce that all the near landscape looked as clear as in the daytime. That was weird and striking, but it was still more thrilling to stand on some height away from the bonfire and see the fires ringing one round on the neighbouring hills. From many hills a dozen or more bright fires could be seen blazing at once, and they seemed to suggest the camp fires of the giants hemming in the subjugated land. And beyond and above the visible fires, the sky was lighted on all sides by the red reflected glare of the more distant beacons. In the words of the Edda, "field and fell were ablaze," and one would hardly have wondered if the lonely barrows had given up their tenants to watch once more the leaping flames, or if Wodin and Thor and Balder had stepped from the deep shadows of oak and ash and thorn and chanted the hymns of Valhalla. But instead the wind brought the mellowed tones of "God Save the King" from distant hills to mingle with the clearer, harsher notes of the singers close at hand. Truly no one who saw the bonfires will ever forget them, or fail to agree that they are the most striking of all national forms of rejoicing.

CORRESPONDENCE.

"THE PASSING OF FINLAND."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I enclose an article entitled "The Passing of Finland" which I would like to see reproduced in your columns, if you can find space for it. No story of oppression or tyranny that I have read in recent years has stirred my soul more than this article which indulges in no hysterics, but reads like a plain, unpolished, truthful account. Perhaps you may know something of the state of affairs in Finland and be able to throw some light upon it. I have heard that Mr. J. R. Mott stated that when he visited Finland two years ago he found all the inhabitants wearing deepest mourning because of the great and cruel oppression that was crushing the life and hope out of their nation. How is it that so little has appeared in newspapers and magazines upon this subject if affairs have gone so far as described in the enclosed article? I have read a few, and only a few, articles in all the papers, on this subject. Where are all the lovers of Liberty in the United States of America? Is not the great Republic on such terms with Russia that at least in a very friendly and gentle way the matter could be introduced by diplomats? Where are all those in France who pose as leaders and agitators for the oppressed? Where are all those who have denounced England and pled for the Boers during the past three years? Had they ever better cause to lift up voice or pen than now in behalf of the Finns? How can we talk of progress if we do nothing to save a happy, thrifty, free, self-governing, progressive people from

cruel, unjust oppression and possible extinction? If God saw the afflictions and heard the cry of the Israelites and delivered them from the oppressor, Egypt, is there no hope that he would hear the cry of all Christian peoples, were all who sincerely believe in Him to unite in Prayer that he would in some way deliver Finland, or is it better for humanity that Finland should be crushed out? I would gladly hear from some one who is better informed on this question than I am.

Knowing your willingness to serve the interests and promote the welfare of humanity I have presumed to trespass to so great an extent upon your space.

Yours sincerely

A "CITIZEN OF THE WORLD."

Japan, Aug. 15th 1902.

The purity of Finnish politics is perhaps unexampled. Chastened by an iron climate and Muscovite ravages during the successive wars between Russia and Sweden, the national character has been moulded on broad and progressive lines. Chastened by adversity yet enjoying six centuries of the evolving liberty of Swedish ideals, the Finns in 1809 possessed an independent spirit that would never have brooked transfer to Russia except under the very broad conditions sworn to by Alexander I. Admiral Cronstedt's inexplicable surrender of Sveaborg, the Gibraltar of the Baltic and the barrier that afterwards saved the Russian fleet from the Allies during the Crimean War, led to a treaty between Sweden and Russia, to which the people of Finland only consented when they were assured that it was a mere change of suzerainty under which they would enjoy an internal independence unknown to any colony or dependency of that day. And for ninety years Russia remained content with the agreement which, with no expense to herself, gave her practically ice-free ports and the strategic points necessary for her command of the Baltic.

Russia's worst enemy must give her all credit for her policy in Finland during those nine decades. Despotism protected a most advanced constitutionalism, and in return gained an unswerving loyalty. The Czars as Grand Dukes have shown only benevolent interest in the Duchy, which has been virtually ruled by elective assembly. The Diet consists of two Houses, the Riddarhuset, composed of 120 nobles enjoying hereditary rights, and the Ständerhuset, which comprises the elected representatives of the Church, the commercial and professional classes, and the proletariat. In the latter the seats are proportionately distributed—36 to the clergy, 58 for burgesses, and 60 to the peasants. By the Finnish Constitution no law is valid unless it has been passed by the Diet and approved by the Senate, an advisory body of twenty members. These are selected by the Grand Duke, who as President is represented by the Governor-General, constitutionally the only Russian official in the country except the Secretary of State. As a large majority of the senators have been highly patriotic Finlanders, no friction has resulted between the two bodies in relation to the general policy of progress.

Finland has been built up by an economic system that is the direct antithesis of the general Russian plan. Simplicity, sobriety, and thrift are dominating factors in all stages of society, and they have achieved wonderful results in the face of grave natural obstacles. The poorest peasant scrapes and toils to lay aside a few 'penni,' the highest classes scorn extravagance, so that the unproductive consumption is very small and 'gentlemen of leisure' rare indeed.

With the lightest taxation in Europe, this State of 2,380,000 souls has achieved amazing progress. Tireless industry and thrift, and exemption from oppressive military burdens under Russia's protection, secured a sound financial basis for the State. The Diet was soon in position to pass liberal measures for intercommunication, and 1,300 miles of railway have already been constructed by the Government, and the country has also been opened up by joining the larger of its thousand lakes by canals and deepened rivers. Foreseeing the vast increase of land values in many districts and profiting directly, I am told by the precepts of Henry George, the Government also bought out large landowners along the chief routes. The wisdom of this measure was specially exemplified in the province of Viborg, next the government of St. Petersburg. Seized by Russia in 1721, the land was divided among a few Russian 'barins,' who sustained the system of virtual serfdom, though the province was restored to Finland by Alexander I. In 1861 the State bought up their vast estates as they were being rapidly opened up by rail and road. The land was divided up among the peasants, the forests were cut and yet preserved by Government control, industries were fostered, and a large unearned increment soon began to find its way to the Treasury to be used for further improvements. By such means the National Debt has been reduced one-third, large sums have been devoted to public buildings and popular education, and an annual surplus has yet been carried forward in the Treasury. Subsidies and a discrimi-

nating tariff have fostered certain industries. The annual exports exceed £5,000,000; the imports are slightly more. It is interesting to note that the average purchasing power of the Finns for foreign goods alone is about the same as the entire average purchasing power of the Russians. The Finnish mercantile marine, consisting of some 2,400 vessels, many of which are small coasters, sustains a large share of the Baltic carrying trade.

Space forbids details of the Poor Law and model prison system of Finland, and the moderate yet efficient methods of regulating the drink traffic. The educational system of this little nation is certainly the most advanced in Europe. Women enjoy full privileges in the colleges, which maintain a high standard. There are also four training institutions for school teachers and special colleges for navigation, agriculture, and commercial education.

The patron saint of Finland is an Englishman, Henry, Bishop of Upsala, who was murdered by a pagan fanatic after a most successful crusade in 1157 which won the country to Christianity. Gustavus Vasa, knight-errant of Lutheranism, introduced the reformed religion, and the country was listed to take its part in the 'Corpus Evangelicorum' as a semi-independent Grand Duchy. The religious liberty of its people has long attracted the attention of the Pobiedonostzeff school in Russia, which considers it a menace to the Orthodox church. Reaction religious joined hands with reaction political to curb Finnish liberties many years ago. But even Alexander III. absolutely refused to sanction interference in the country that his father ever held as an example to Russia proper. In the early eighties some friction arose over the language question. In seven centuries Swedish had become the universal language of the educated classes. But the discovery by Dr. Loennrot of the "Kalevala," fifth of the world's national epics, revived interest in the native Suomi, or Finnish tongue. Party strife waged bitterly between the Svekomans, or Swedish element, and the Fennomans, or Finnish nationalists. In 1883 Finnish was made of equal official value by Imperial decree, and the friction grew rapidly less under the common policy of progress.

But Governor-General Bobrikoff is a Russian of the old school. The cheers and groans of the party contest were beyond him. During the elections on the language question he had asked for extraordinary powers, but for sixteen years his appeal was shelved. The present Czar is more easily influenced than were his predecessors. Thus Russia's policy, like the swing of a pendulum, alternates from the liberal influence of M. de Witte to the reactionary desires of the Procurator of the Holy Synod. Though the Czarina had renounced "those false doctrines of the Lutherans erroneously called the Evangelical confession," through her influence M. Pobiedonostzeff refrained from attacking the Baltic Lutherans. But, instead, he was able to revive the feeling against Finland's political liberty. Horrible to relate, the "Pelastus Armeija" was allowed to hold meetings in Helsingfors, branches of the Salvation Army sprang up throughout Finland, and the authorities gave them every facility. This was among the list of the Grand Duchy's "crimes" against the Church.

Like a bolt from the blue, the Czar launched his historic manifesto of 1899, General Bobrikoff's dusty appeal was brought to light and granted, and, directly against the advice of the late Count Mouravieff and M. de Witte, reaction started its policy of reducing Finland to a mere Russian territory, of crushing a Canada in thought and freedom under the iron heel of retrograde despotism. The dignified appeals of the Finns for simple justice have been interpreted as dangerous disaffection. The country has been flooded with Russian police, meetings, public and private, were proscribed, and press censorship was instituted. The petty and irritating measures of the Governor-General are legion. The gagging of the Diet, abolition of stamps and the national Post-office (hitherto second only to our own in efficiency), the disarmament of the Finnish reserves by a trick, and their dismissal are matters of history. My own impression, gained in Finland and strengthened by the views of British residents, is that Bobrikoff's deliberate policy has been to provoke a demonstration. In face of repeated insult the Finns maintained their dignity. But last spring the new Public Record building, erected by the State, was raided by Russian officials, and the national archives, including the Magna Charta of the country's liberty, were taken to St. Petersburg.

A day of national mourning followed. The crowd, though orderly, hooted the house of a Russian who persisted in lighting up his windows, and Colonel Gordie, Finnish Chief of Police, declined to provoke a riot by ordering a charge, but merely kept the people moving. Next day he was summarily dismissed and an Imperial officer appointed by Bobrikoff's order. The civil Governor resigned as a protest, and this elective position was at once filled by the appointment of General Kaigarodoff, a Russian absolutely ignorant of the country, people, and language.

A decree making Russian the official language in all departments before 1905 was now hastened. The Senate and Interior departments were ordered to report in Russian, though that language is absolutely unknown in Finland. Many municipal councils resigned in a body. As old and tried Civil servants cannot easily acquire so difficult a tongue, the entire Civil Service is being disorganized, Finns being replaced by Russians. The last work of the notorious Russian Secretary of State, M. von Plehve, recently appointed to replace the murdered Minister of Education in St. Petersburg, was to secure the dismissal of Count Armfelt, the Assistant Secretary, who should have succeeded him; Baron Aminoff, Chief Constable; Baron Bonsdorff, Director of Education; also the heads of the departments of Interior, Prisons, and Customs, and many other prominent Finlanders. The proscriptive Russian tariff is to be extended to the Grand Duchy, which has no raw materials to protect and whose industries have flourished through cheap machinery.

It is the Military Service Act, however, which is causing the greatest dissatisfaction. The last Diet rejected Bobrikoff's measures that proposed to abolish the national army and extend general Russian conscription to Finland. With the minor amendment that territorial regiments should be raised in Finland for general service in the Empire, and with Russian-speaking non-commissioned and commissioned officers, the Act was next sent to the Senate with the Czar's orders for its promulgation under pain of dismissal. Those senators who refused their assent were dismissed, and the remainder signed the Act under protest. But no law is valid in Finland until it has been read to the people from all Lutheran pulpits. Some pastors resigned, thus closing their churches on the day for reading; others complied under protest, their congregations rushing out en masse. Forty, however, refused to recognize the legality of measures that had not passed the Diet, and when ordered to take their trial the law of Finland upheld their action as constitutional.

The people are all with the patriotic forty, whom Bobrikoff threatens to try by a special tribunal. Their punishment will start the disorders that he has done so much to create. Demonstrations before their houses in Helsingfors led to the introduction of Cossacks last month, and scores of arrests were made. The first call for conscripts last week ended in further disorder, and, though news is rigorously suppressed, evidence is already reaching Sweden that the rioting has been more serious than was reported from St. Petersburg. A serious crisis is imminent, and it has been forced upon the long-suffering Finns, since disaffection and rioting will justify complete Russification and administrative measures which M. de Witte strongly opposed in the State Council last year as unwise and unnecessary. The Constitution is repealed and the Diet indefinitely suspended.

Meanwhile the Finlanders are amazed at the apathy of Europe. The nations have rung with sympathy for the Boers, but they say nothing for the country in their midst where individual and political liberty are doomed as well as nationality.—By G. C. Musgrave, in the *Manchester Guardian*.

JAPANESE SCHOLARS AND ENGLISH POETRY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Some years ago, about one-eighth of a century, when I first began to teach the young Japanese idea how to shoot my native speech, I noticed that my confederates did not attempt to teach the poems in the reading books, but confined their attention strictly to the prose. This seemed to me my chance to make myself useful. Therefore after consultation with my superiors, and with their full permission, I commenced to use the poems in the various readers, as the basis for quite a variety of exercises. First, the marvellous power of memory inherited from generations of study of the Chinese classics was put into play; second, a prose paraphrase of the poem was dictated; third, the pupil was required to compose a prose paraphrase of the poem, and last but not least the poem was made the basis of conversational exercises, written out and memorized, until the pupil could compose them off hand himself.

The success of this method of linguistic gymnastics was greatest in the lower classes, so that the youngsters could actually think in English; sometimes we had visitors: a bespectacled stork from the Mombusho stalked into the room, when the youngsters were chattering in English as if it were their mother-tongue. The dear dignified functionary was visibly flabbergasted (is the exact word) to hear them speak so freely a tongue in which they were not born; he actually waded down the aisle and looked on the best boy's book to find there if possible those magical Chinese characters that in his mind were the keys to the temple of wisdom, but he saw nothing but the crabbed stuff that we use.

To limber up the wits of the higher classes I used the game of twenty questions. At times we were somewhat noisy. Well do I remember when an officer of the Kencho came in to the class-room and fled in fear almost at once "rattled" by the racket. His own son came often to see us, and practiced upon us a speech, that he had learned in the metropolis, so soft and sweet, and such an exact imitation of the very tones of the voice of his lady teacher, that we with difficulty restrained the impulse to salute him with a holy kiss.

Why do the Japanese neglect to study English poetry? They say because it is too difficult. But they revel in difficulties. They despise all easy reading and plunge in *medias res* and battle most bravely with Spencer, Mill, Carlyle and Emerson. Why then do they avoid English poetry?

I pause for a reply.

X.

WAKE ISLAND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your editorial of to-day on the subject of "Wake Island" you have built on an entirely false premise, viz., in all the recent maps of the world you will find Wake Island put down as a United States possession for this reason: Long before the Spanish war the American Government formally took possession of this island, and immediately after that conflict surveyed a cable route from California to Manila via Hawaii, Wake, and Guam. There was to be a cable station at each of the above-named places, and everything was made clear and ready so that a bill which was brought before the last two Congresses could be prepared.

While the bill for a Government cable was not passed, a charter was granted to the Commercial Cable Co., which permitted that company to construct a cable across the Pacific with stations at Hawaii, Wake, and Guam to Manila. This company has now decided to continue its line to the mainland of Asia, and their cable is already being manufactured in England with some two thousand miles already constructed and on board ship for departure. The writer is surprised that the *Mail*, usually so well informed, should have made such a gross editorial mis-statement.

Hoping that you will give this correction space in your valuable columns,

I am, dear sir, very truly yours,

WILLARD C. TYLER.

Hotel Metropole.

Tokyo, 15th August, 1902.

THE COLLISION IN MALACCA STRAITS.

Details of the collision in Malacca Straits on July 29th are now to hand. It appears that the *Prinz Alexander*, 728 tons, was bound for Singapore when about four o'clock in the morning a steamer 15 miles south of Fresh Water Island near Malacca, the *Ban Hin Guan*, Captain Scott, bound for Port Dickson came in sight. It is believed that the mate of the *Alexander*, Mr. Schwartz, was on watch at the time, but there is no actual account of how it happened that the *Ban Hin Guan* collided with the other boat bow on, the force of the impact being terrible. The *Alexander* almost immediately began to fill, and sank in a very short time. The third engineer, a young man Campbell, was on watch below, and his chief, MacIntyre, went down into the engine room and told him to get out as the ship was sinking. Campbell had barely time to get up when the vessel went down, and he was sucked down with her. Marvellous to relate, he came to the surface again, and seizing a log of wood managed to keep afloat till picked up by the boats of the *Ban Hin Guan*. The latter vessel, although badly injured, herself lay to, and by strenuous search managed to save twenty persons. Of these, one was Captain Moss and the other Mr. Campbell, these being the only officers saved. The boat was carrying a good number of passengers, and it is roughly estimated that ninety natives, Chinese and Malay, forty of whom belonged to the crew, have been drowned, besides Mr. MacIntyre, Chief, Mr. J. Norris, Second Engineer, and Mr. Schwartz, First Mate. When it was found that no more lives could be saved, the *Ban Hin Guan* hoisted signals of distress, and waited in the hope of assistance arriving. Fortunately, this soon came, the steamer *Pelayo*, Capt. Prynne, bearing in sight and coming to the rescue about eight o'clock. Some hours were occupied in transferring a large number of passengers from the *Ban Hin Guan*—113 as a matter of fact—to the *Pelayo*, and then hawsers were got out, and at noon the *Pelayo*, which was loaded with oil from Langkat, proceeded to tow her to Singapore where both arrived safely.

CHRISTIANITY AND MODERN JAPANESE THOUGHT.

REV. MIYAGAWA TSUNETERU.

[AN ADDRESS GIVEN BEFORE THE ANNUAL MEETING OF THE JAPAN MISSION OF THE A. B. C. F. M., JULY, 4, 1902. TRANSLATED AT THE REQUEST OF THE MISSION BY SAMUEL C. BARTLETT.]

I feel myself highly honoured by the invitation to address your mission on this memorable anniversary of your country's independence.

My subject is:—Christianity and Modern Japanese Thought. To a right understanding of modern thought, however, an investigation of the development of religious thought among our ancestors during at least three centuries of the Tokugawa period, is necessary. As you are aware, the three religions, Buddhism, Confucianism and Shintoism, have no doubt contributed largely to the formation of our national thought, but I now want to invite you to a detailed consideration of the question, of how far their influence actually extended.

1. Beginning with Buddhism:—This religion was at one time so widespread, and so formidable a power, that seven or eight hundred years ago, the monks living on that Mt. Hiei, which towers to the north-east of Kyoto, disregarding the sanctity of the Emperor, often thronged with their disorderly intrigue, into the very palace; so that there is a tradition that the Emperor of the time complained in these words, "Even I have no authority over the floods of the Kamo and the unruliness of the mountain monks." Also about the middle of the sixteenth century, the Shogun, Nobunaga, was so exasperated that he burned all the buildings on Mt. Hiei as an admonition to the monks; and where the present Osaka Castle stands was a monastery called Ishiyama Hongwanji, in which several thousand clericals ensconced themselves and greatly harassed Nobunaga. Thus looked at from the stand-point of politics, the Buddhist clergy formed a hostile nation lurking within the land. For this reason Tokugawa Iyeyasu, when he had possessed himself of the government, foreseeing—no one could tell how much—trouble unless the power of the monks was diminished, established regulations for monasteries, and attempted to place great restraint upon them. The regulations promulgated at Koyosan, in Keicho 15 (that is in 1610) contain an article which forbids Buddhist scholars to violate the old teachings and devise new doctrines. The third Shogun, Iyemitsu, the ablest statesman of all that period, determined by all means to follow the policy of his predecessor, Iyeyasu, in thoroughly curtailing the power of the priests. But thinking that to do this openly would bring down immeasurable calamity, he concluded that to shut them up with honour in the monasteries would be the most clever expedient. Accordingly he gave them parishes under the name of monastic land, and improved the status of the monks, assuming—so to speak—the principle of secluding them, by reverence. This policy perfectly fulfilled its design: enabled to live in luxury within their own monasteries, the monks appear to have become degenerate; for from that time there are no names among the monks especially famed for ability.

Here and there a strong character in the Buddhist ranks, believing that there was no further hope for Buddhism, left it and turned to Confucianism. To mention a few of the principle ones:—Fujiwara Shokwa, who withdrew from Sokokuji in Kyoto; and Tani Jichu, the founder of the Nanden Moralities, who left Shinjoji in Tosa; and Yamasaki Ansai, who went forth from Myokokuji in Kyoto. The office of monk became no more than a guardian of graves and a conductor of funerals, whereby it still had powerful influence over the common people, but was no longer the religion of the *samurai* who constituted the life and sinews of the country.

Shinto makes the Emperor central and teaches reverence for him alone and absolute fidelity to him. For this reason, to the Tokugawa Government, which had shut the Emperor up in his palace at Kyoto and usurped his power, it was thoroughly distasteful. Nevertheless, seeing there was no way of getting rid of it, they outwardly made a great show of reverence, while really subjecting it to oppression. To cite proof:—in the province of Higo there is a shrine called the Aso-no-jinsha. The guardian of this, the house of Aso, was till the time of Taiko Hideyoshi, the Lord of Eastern Higo with an allowance of two hundred and fifty thousand koku of rice, and withal very flourishing. Having been overthrown for resistance to Hideyoshi he was afterwards re-established by Kato Kiyomasa, but in the Tokugawa period dragged out a wretched existence on only three hundred koku. Though thus kept in poverty from generation to generation, in rank he was able to rise from full fourth rank (Sho shi-i) to second of the third rank (Ju sam-mi), and be classed as a *daimyo*. Nor was this state of affairs confined to

Aso alone. The Kokuso of the Oyashiro in Izumo, and the guardian of the shrine at Atsuta in Owari were in like case.

For the establishment of the national life some religion of note was a necessity. What should it be? For practical purposes, Bushido seemed the right thing. This Bushido, or Rule of Knighthood, was, to be true, warm-hearted, chivalrous, and loyal to the plighted word; valuing character as life and feeling death lighter than crane's down—that is to say, be it but a question of the Prince's welfare, ready at any moment with the life blood. To be sure this by itself was altogether too simple and required adornment of some sort—which was obtained by borrowing from Confucianism the doctrines of justice and virtue (*jingi dotoku*). This was the policy of the Tokugawas and certainly did prove successful. The *samurai* nourished in accordance with this plan did indeed come to have most simple minds.

Of course it was not likely that every one, without exception, should find satisfaction in such simple ideas: during the prosperity of the Tokugawa there arose a group of greater thinkers, such as Fujiwara Shokwa, Hayashi Razan, Nakaye Tojin, Ito Jinsai and Togai, father and son, Ogi Sorai, Yamazaki Ansoi, and Arai Hakuseki. Moreover, among these were some who held deistic ideas. To mention two or three:—Nakaye Tojo discusses God as follows in the "Book of the Great God One and Adorable." (*Dai Ichi Son Shin*). He says, "There is so to speak, a great Lord over all. This Lord is the great and only Spirit. He is the Lord and Father of Heaven and Earth and all things. From the mighty universe to the tiny mote, from the eternity to the moment, there is nothing outside of his glorious regard. His mystery fills all space; God of God, Spirit of Spirit."

* * * His great majesty is solitary—without peer. His virtue is wonderful—beyond measure. His reality is beyond naming: if we persist in calling Him something we may say, "Great and only awful Lord of Heaven, who maketh man to know Him and serve Him with reverence as the source of his life."

Ito Jinsai says, "The purpose of advocating the existence of a Creator is to make known the truth concerning morality, to arouse the fear in man of doing evil along with courage to advance in the right, and thus to give him joy through abiding in the way and observing the decrees." He also says, "God is the very cause of power, wisdom and good." On the side of Shinto, Hoshina Masayuki, a grandson of Iyeyasu, who afterwards became the *daimyo* of Aizu, raised the cry of "Sogen Shinto," which resulted from a desire to make the people obediently accept the sacredness of the Shogun. This was of a piece with the policy of the feudal government in building the gorgeous blue-and-gold-adorned temples at Nikko and worshipping the spirit of Iyeyasu in the attempt to displace the Shinto cult which made the Emperor central. After this, from the middle of the 18th century and extending into the beginning of the 19th, two great Shintoist theological leaders Moto-ori and Hirata appeared, and by loudly proclaiming orthodox Shinto made clear the fundamental truth that the Emperor was the sole and proper object of reverence. In this way it came about that gradually there arose a company indignant at the arrogance of the feudal government and anxious to show their loyalty to the Emperor. In Mito, in particular, there sprang up a Shinto sect which might well be styled the Shinto-Confucian Eclectics. These, keeping pace with the advance of Shinto influence were building what was to become the reliance of the Emperor, and in due time to overthrow the Shogunate and establish the government of this new era.

Then at the beginning of the revolution, the head of the Shinto rites (*jingi-kwan*) was put above all the offices (*Sho-kwan-sho*), and Shinto so long down-trodden reared its head again, and with an energy to put an end forever to Buddhism.

Our ancestors, then, having evolved their ideas as explained above, there were among them some profound thinkers but these were a learned minority: the great body of the gentry did not think at all. In general quite indifferent towards religion they had at times about enough faith to worship their ancestors. As for the great mass of the people, while steeped in Buddhist and other idolatries, they were purely, illogically emotional in their religion.

II.—Turning now to the consideration of present thought: I propose to divide my contemporary countrymen into three grades.

I. All above fifty years old. This is the remnant of the old *samurai* body trained in the old pre-revolutionary ideas, who, knowing nothing but the Knights' Rule (Bushido) and service of prince and parent, are simple and blunt. Just, comparatively rich in patriotism, representatives of their kind can be found in large numbers where-ever there are old residential centres of the *samurai*. From among these the number who have accepted Christianity is apparently very great, but this was not so much from a complete conviction of the fundamental truths of Christianity, as, that seeing and deploring the corruption day by

day and month by month taking hold of the public spirit and putting morality to rout, and struck with admiration at the points in which Christian morality is far superior to that hitherto taught, they were moved to espouse it from a patriotic desire in some way to save the country. From among this class there arose also a large number of Christian Ministers, but the weightiest motive here, too, was the purpose of saving the country.

2. Men in their prime, from thirty-five years and upward. This body, having the contemporary learning of the West, have read with delight Mill's Representative Government, Spencer's Sociology, Rousseau's Social Contract, and, for deportment, Smiles' Self-help and Character, and Wayland's Elements of Moral Science. In their time at the Imperial University Prof. Morse was loudly proclaiming the doctrine of atheistic evolution: for one reason and another materialists thronged to the front. Such men as Nakaye Tokusuke, the author of "No God No Soul," though himself a French scholar, is a representative of the materialism of this school.

From among these materialists have come the officials who control the counsels of the Department of Education; heads and professors of universities; principals and deans in normal and middle schools; till it is not an exaggeration to say that the whole authority over education has fallen into their hands. For this reason when they saw fit to oppose Christianity they formed no despicable foe to our religion.

Nevertheless the progress of the times cannot be resisted. This gentry have by, now, had their eyes a good deal opened to the fact that religion is indispensable to the development of the nation, though still insisting that it is not needful for themselves. Bacon's aphorism: It is true, that, a little philosophy inclineth man's mind to atheism, but depth in philosophy bringeth men's minds about to religion; * * * is true of these men, whose minds are far from God and very far removed from religion.

3. The young men now in course of education. This class have received their education at the hands of the materialists discussed above, and so, naturally being influenced by them, were unfortunately inclined to look down on religion. But they, too have been greatly affected by the times; moreover, after an attempt to realize character on the basis of the Imperial Rescript on Education so universally hailed in 1890, they have discovered that nothing has been gained by it. By this failure teachers and scholars alike appear to be greatly discouraged, and seem to have concluded that they must put their reliance upon religion. Messrs. Mott and Torrey's timely coming last year seems to have accomplished a great deal, but these two gentlemen did not so much preach the prime truths of religion, as, from the standpoint of morality, they held up the faults of young men to reproach. As a result of this, several hundred young men were compelled to hang their heads a bit. From this it is easy to see into what distress they have got.

There are among these young men some who have studied Buddhism. How much of moral influence their characters have received I can not say, but in sophistic fooling they have obtained genius indeed. To give an example or two, they go about saying that in this world there is no such thing as God or Spirit, but that these are all the product of human vagary, or that God is one's own creation, or, that soul itself has no existence.

III.—Some Needs.

1. Speaking generally, the Japanese are practical rather than rich in thought. Howbeit, since among the learned there are men who display an ability scarcely if any inferior to Occidental philosophers and theologians, the case is not hopeless even on the intellectual side were the right nourishment provided, still in the case of to-day's education this point is not being very well developed, I think.

2. Speaking again generally, the Japanese are not a reading people. Driven by necessity to read such books as concern their specialties, religious books they will not read. (Of this there are examples enough were it worth while to give them.) Despising books that are easy, they refuse to read the more elaborate ones on the ground that they are hard. About all they read is the newspapers and magazines, and it would be worth our while to devise means of infusing religious thought through this channel. Even magazines, however, the great public is inclined to care little for, alas!

3. It is no doubt the strong point of the people that they can apprehend truth intuitively; but this strong point has become a weak point, in that they give no serious thought to things. Put in another way, not to be too hard on them, they do not involve some easily comprehended thought in profound mystery, on the other hand they do get into trouble by the logical fallacy of taking the part for the whole. They are apt hastily to conclude, that since it is the aim of all religions to encourage virtue and put down evil, why there cannot be much difference: Shaka, Christ and Confucius are all saints together. The old verse, "As you wend up the mountain side the

paths may differ, but you see the same moon on high," well voices the Japanese trend of thought.

4. Individualism is not fully developed. Though they realize that this country, or this social order must be saved, they have not the first notion that they need personal salvation. When first we, even, espoused Christianity the desire to do so came from a wish to save the country: only later did I realize that I must be saved myself, first.

5. The educated classes are almost without religious education, so that, supposing they have the greatest acumen and deepest insight into their own scholarship, to the problem of human existence they give no thought at all. Moreover when it is explained to them they do not understand it. As I said above those who had Buddhist instruction have been used to sophistry and do not take religious truth seriously.

IV.—I want to say something, before closing, about the form of truth most easily assimilated by present day thinkers. It is the moral and social side of Christianity. As proof of that, when a public lecture is delivered, if a topic of this nature is announced, the building will be crammed with hearers; or if you enquire at the book-sellers, they will tell you that books on ethics and social subjects sell better than books on purely religious topics. But from the standpoint of religion, until we have in some way implanted the fundamental ideas of Christianity, we can not say that this teaching has truly taken root in our land.

1. They will readily understand if you say that God is creator, or that Heaven is order; but a God with personality is an idea hard for them to grasp. Even among Christians of the present time, the number who have really comprehended this personal God is comparatively small. I am putting a great deal of effort into this.

2. A ready understanding will be met with if Christ is said to be a man of perfection or perfect righteousness, or the like. But the divine nature of Christ they do not readily accept. Let us then first present Christ the man, and then, Christ above man who is endowed with the divinity of God. To implant the idea in this order is the proper method.

3. If the Holy Spirit is spoken of as an influence, or as the power of God they will understand. Buntensho of So (in China) and our own Fujita Toko taught the "immanence of a holy influence throughout space," and Mencius, a "prevalent spirit." For this reason they represent it to themselves in some such way, I suppose. But here again in grasping the existence of personality they have difficulty.

4. The weakness of mankind they well know. To make them take the next step, to grasp the sinfulness of sin is the great problem. The conviction of a personal God and a sinful self, is the key to unlock the ultimate secret of Christianity. Until this is really grasped the other problems are unintelligible.

5. The way of salvation is another point for my fellow countryman to grasp in its true meaning. As they are endowed with ethical ideas, the "government theory" and "vicarious sacrifice" do not find ready acceptance, while Christ's self-sacrificial spirit is heartily welcomed.

But whatever the way, to make these fundamental truths clear to the present generation is a great and agonizing labour. Of late I have been instructing inquirers in the Sermon on the Mount, then the 7th and 8th Chapters of Romans, and after that the 3rd, 4th, 15th, 16th and 17th Chapters of St John.

I thank you for your kind attention and I earnestly crave the aid and advice of you who are experienced in the evangelistic work of this country.

"THE CHRISTIAN DAIMYO."

CHAPTER III.

Obstacles preventing the conversion of several *daimyo*.—Outbreaks at Yamaguchi lead to the death of Ouchi.—Indiscreet zeal of Omura Sumitada.—His subjects revolt against him.—Sumitada is victorious.—Some reflections on Sumitada.—Conversion of the *daimyo* of the Goto Islands.—Persecutions which follow his death.—Dishonesty of the lord of Shiki.—Conversion of the *daimyo* of Amakusa.

To better appreciate the courage that the *daimyo* must have had to become converted, it is necessary to take into account the difficulties they had to overcome in breaking with a world in which they had till that time lived. Several *daimyo*, convinced of the superiority of Christianity, desired to detach themselves from a religion too rude for their refined intelligence but dared not take the decisive step and hesitated to enter into engagements which would imply their passage to Christianity. Forasmuch as the Christian morality seemed to them sublime in theory, so much did it seem to them to be inconvenient in practice. Not to speak of the concubines that it would be necessary to send

away, they would see themselves obliged to renounce a large number of habits, admitted in Japanese society but in absolute contradiction to Christian morality.

To these obstacles already existing was added one other which had originated with Christianity itself. From the first successes of the Jesuits, there had arisen a party whose object was to combat with all its force the foreign doctrine, which it declared to be prejudicial to the traditions and to the gods of the country. Originating in the great boneries of Kyoto this ultra-conservative party had at first gained over the Mikado and his advisers, and thence spread over the whole of Japan, uniting the majority of the *daimyo*, the *samurai*, and the ordinary people. From that time the conversion of a *daimyo* entailed dangers without number. Much more was this the case since this period of Japanese history consisted of hardly anything but examples of sedition, of disloyalty and of treason. Civil war raged everywhere: each day brought tidings of new revolts of vassals against their suzerains, and of *samurai* against their *daimyo*.

It was thus that in 1551, Ouchi Yoshitaka, *daimyo* of Yamaguchi, perished miserably with his son in a rebellion incited by his own subjects. Yoshinaga (26), younger brother of Otomo Yoshihide and a near relative of the unfortunate Ouchi, had been chosen to continue this illustrious family and proclaimed *daimyo* of Yamaguchi.

But hardly five years after his elevation, Yoshinaga also met with his death in a revolt incited by Mori Motonari, one of his vassals (1556). After this assassination Mori took the place vacated by his master, and thus became one of the most powerful *daimyo* of Japan.

Otomo Yoshihide himself was in continual fear. Several times he was obliged to suppress revolts of his numerous vassals, and it was only by the exercise of extreme vigilance that he was able to escape all their treasonable plots.

In this state of things it is not astonishing that the *daimyo* of Omura soon drew on himself misfortunes which he had certainly not expected. Need we add that his inconsiderate impetuosity and his excessive zeal precipitated events? On the very day of his baptism, Sumitada learned by a messenger that war had just broken out between his elder brother, Arima Yoshisada and Riuzoji Takanobu, *daimyo* of Saga. Sumitada, in his capacity of vassal of Arima, got ready in all haste and determined to set out on the very next day. Usage required that before marching he should conduct his army to the temple of Marishiten, goddess of war, and consult her on the issue of the campaign. Having arrived before the temple in question, Sumitada advanced towards the goddess but in place of adoring her he gave her a blow on the head with his sword saying that henceforth he would not allow himself to be deceived by her auguries. Then at a signal from their leader, the *samurai* set the temple on fire. Upon the spot where it had stood, Sumitada immediately raised a cross, then after having declared to his soldiers that thanks to this sign (27) he would be victorious he set out for the war.

This unexpected act on the part of Sumitada characterizes all the Japanese people. Superstitious rather than religious, they venerate their gods because they are afraid of them. Once their fears are dissipated they treat them with contempt. The child who yesterday still trembled before the idols that are to be seen in the public places, beats them down to-day with stones; for the schoolmaster to tell him that they are inoffensive is enough to make him give way to the excess.

(26) It is an error, generally found in Japanese histories, to put Yoshinaga as well as his predecessor Yoshitaka in the number of Christian *daimyo*. Both protected the foreign preachers without however embracing their doctrine. Yoshinaga even commissioned them with the bonzes. In a written permission dated the 18th September, 1552, he authorized the bonzes who had come from the west to occupy the Daidoji temple and to preach Buddhism in their own fashion (*Cartas de Japão*, p. 161).

(27) The story of the Labarum had so struck Sumitada that he resolved to follow the example of the Emperor Constantine in putting the cross on his standards and on his helmet.

The issue of the campaign was fortunate. Sumitada did not hesitate an instant to attribute it to the protection of God. Hence resulted on his part a redoubling of fervour, manifesting itself sometimes by unseasonable actions. Thus, while assisting once at the ceremonies celebrated by the people each year in the month of July in memory of their ancestors, Sumitada, to the great consternation of his *kerai*, threw the tablets of his ancestors into the fire. Then, finding that there were too many temples dedicated to idols, he ordered his *samurai* to transform some of them into Christian churches.

This extraordinary fervour of Sumitada led to a recrudescence of hatred on the part of the bonzes, and several of his retainers, already irritated at his conversion, sealed with their blood a plot having for its object nothing less than his death. They recalled Takaaki the bastard, lately considered unworthy, and proclaimed him *daimyo*. Matura of Hirado and Riuzoji of Saga, both declared enemies of Sumitada, had promised the conspirators their assistance and suddenly attacked, the first of them the principality of Omura, the second the territory of Arima, in order to prevent the latter from rendering any assistance to his brother. The attack was unexpected and too violent for Sumitada to be able to resist it. The town of Yokoseura fell without resistance into the hands of Takaaki, who established himself there and delivered part of it to the flames.

On the 17th of August 1564, the town of Omura was taken and sacked. Sumitada had at first to conceal himself, then with a small number of faithful followers, hastily called together, shut himself up in the castle of Omura. The rebels sent him messengers calling on him to return to the religion of his fathers and promising that on this sole condition they would submit. Sumitada refused even to enter into negotiations on the subject. Then the rebels hemmed in the castle by land while the junks of Matura blocked it by sea.

The unfortunate *daimyo* was asking himself how he should ever escape from this critical situation, when he learned that his aged father, Haruzumi, ex-*daimyo* of Arima, had arrived at Omura with a great number of *samurai*. Haruzumi had in effect corrupted one of the rebel chiefs; then, followed by all the warriors he could collect, had joined this chief on the outskirts of Omura, from which place they fell suddenly on the besiegers. On getting this news Sumitada issued from his retreat and burst upon the enemy who, taken between two fires, were immediately routed (October the 4th, 1564).

At the same time a furious tempest, such as Japan is often visited by at this season, destroyed nearly all the junks which had taken part in the blockade of Omura.

Seeing that the religious question was henceforth a question of life or death for him, Sumitada resolved to employ all possible means to triumph over Buddhism. He put to death two *samurai* who during the revolt had apostatized and gone over to the enemy, declaring that he could no longer trust men who had failed in fidelity towards God. For years afterwards Sumitada was unceasingly suppressing revolts, and from all these torments he issued greater and greater even in the eyes of the pagans. It was not until 1574 that religious peace commenced to reign in his territories. On the occasion of the visit which the *samurai* and the bonzes made him at the beginning of the year he earnestly exhorted the *samurai* to recognize the superiority of a God who had enabled him to triumph over so many perils. Addressing himself then to the bonzes, he gave them to understand that, being more enlightened than the ordinary people, they should be more prompt to embrace the truth and renounce idolatry. He assured them that they would lose none of the great possessions they enjoyed in their quality of bonzes, that on the contrary he would even increase those possessions.

These words produced their effect. *Samurai* and bonzes and, taking example by them, the other castes became converted in great numbers. Several temples were turned into churches of which the number soon rose to 40. There

were, in 1574, 50,000 Christians in the principality of Omura. For some time longer, the town of Kori, the last stronghold of Buddhism, resisted all attempts at conciliation. Losing ground daily, however, and seeing themselves irrevocably condemned to disappear, the Buddhists capitulated and passed over to Christianity.

As may be seen by the example of Sumitada, one does not become a Christian in a day. Baptism no more than the possession of a Bible can transform the human heart: the practice of the Christian virtues for years at a time are necessary for the attainment of a result even slightly satisfactory.

Just on account of the false steps the neophyte is necessarily exposed to make in the new way, does one find it hard to keep from smiling in pity at the extreme severity not to say injustice, with which some foreign authors (27) have judged of the conduct of Omura Sumitada. To be sure these same authors are ignorant that a little after this epoch, in our Christian countries, a great many princes perpetrated, under the pretext of religious zeal, even more horrible deeds than the *daimyo* neophyte. Had Sumitada been of the belief of these authors they would certainly have compared him to the greatest of the reformers. Even his excesses would probably have been qualified as ardent zeal for the House of the Lord. But Sumitada was a convert of the Jesuits. Hence prejudice leads judgment astray and Sumitada is naught but a fanatic exiling poor pagans who only desire to live in the religion of their fathers, massacring the bonzes and forcing his subjects by fire and sword, to embrace a religion that they did not want. And in all these deeds of violence he was prompted by the hateful Jesuits aspiring only to introduce the Inquisition into Japan.

Of the seven Jesuits (28) that were in Japan in 1563, there were three priests, Father Vilela, who was stationed at Kyoto, Father de Torrez in the Province of Bungo with Otomo Yoshihide and Father Acosta in the isles belonging to Matura. The four lay brothers, of whom two were Japanese, were dispersed throughout the other Christian centres in Japan. There was not, then, a single Jesuit left with Sumitada during the troubles which followed his conversion. Only once do the letters of the religious make mention of a visit—and it was a very short visit—which Father de Torrez paid to Sumitada to congratulate him on the recent victories he had gained and to counsel him to act with more moderation towards his pagan subjects. Moreover, whatever certain Catholic authors (29) more or less given to exaggeration, would have us suppose, Sumitada exiled nobody and put no bonze to death unless he had taken part in some revolt. The word "devils" was never applied to the bonzes but only to the idols on whom Sumitada had indeed declared an implacable war.

Whatever may have been the faults of the *daimyo* of Omura, he had also his good qualities. The resources formerly dissipated in idle pleasures were, after his conversion, employed in the relief of the poor. The public granaries were always open to those who were not in a condition to supply their own wants. Sumitada took pleasure in personally distributing alms and in waiting on the poor, whom he assembled at certain periods in his residence.

This innovation was directly contrary to received traditions, according to which poverty was a chastisement of heaven and those afflicted by poverty beings who merited only contempt.

Furthermore, no *daimyo* in Japan was as seriously employed as Sumitada in combating the extreme misery then prevailing in the country and which too often causes the moral ruin of a nation.

He had resource to all kinds of expedients for promoting the material well-being of his people. With this object in view he undertook a work which will for ever perpetuate his name in the history not only of Japan but also of the nations which were at that time in relations with Japan. Ascertaining that the port of Yokoseura, which

(27) Messrs. Griffiths, Reed, Dixon, etc.

(28) It was not until 1566 that the number of the Jesuits increased to 14, seven priests and seven lay brothers.—(*Cartas de Japão*, p. 534.)

(29) Charlevoix, Crasset, Bartoli, etc.

had been partly destroyed during the civil wars no longer answered entirely to the requirements of the Portuguese, he opened for them in 1568 that of Fukuda, then, in 1570, that of Nagasaki(30) which afterwards became one of the most celebrated in Japan. Already in 1568, Father Vilela had commenced to preach the Gospel in the last-named locality and his efforts had been crowned with success. But it was chiefly owing to the great influence of the Christians of all the provinces of Kiushu that Nagasaki became not only an almost entirely Christian town but also the most important in the territory of Sumitada: its population increased in a few years to 30,000 inhabitants. It was there that, later on, the Bishop of Japan took up his residence; there that the first martyrs died; there that the proscribed religion was to be extinguished in blood.

The military success of Sumitada since his conversion and his growing fortune had not failed to strike several *daimyo* of Kiushu. The more they reflected the more they were led to conclude that it was advantageous to adore a God who was so liberal of his blessings. For them, as for the great majority of neoplates, material advantages were the infallible consequences of fidelity towards God.

The *daimyo* of the Goto islands was the first to surrender to the logic of this reasoning. Already in 1564 he had sent one of his retainers to Hirado for the sole purpose of inviting the Jesuits to come and preach in his isles. The Jesuits had, however, for want of a sufficient number of preachers, at first refused, and it was not until 1566 that the Brothers Lewis Almeida and Lawrence answered the appeal of Goto. As soon as the latter heard of the arrival of the two missionaries he ran to meet them and installed them in the best part of his residence. He then, along with his son, his wife, and more than 400 *samurai* assisted at their instructions. The two missionaries were already congratulating themselves on the promising future that lay before them when a sudden illness of the *daimyo* and several members of his family compromised their success. A conflagration that consumed nearly half the town was the last straw. The bonzes, already dissatisfied at the arrival of the two Jesuits, did not fail to lay all these misfortunes at their door. The angry gods, said they, demanded the expulsion of the foreign preachers. This was more than sufficient to excite against the latter a superstitious population. The *daimyo* was inflexible, however, and decreed that the missionaries should remain in his dominions. The *daimyo's* son and a great number of *samurai* went even further and declared that they were ready to receive baptism. Then the fury of the bonzes redoubled and Goto, finding himself on the brink of a civil war, had to give way, and accordingly ordered the strangers to be exiled. In spite of this sudden change, the son of the *daimyo* persevered in his resolution and two years after (1568) he found means to have himself baptized in secret with his wife and several of his retainers. When, several years later, the death of his father placed him in possession of the Goto islands he openly declared that he was a Christian. He constituted himself the apostle of his islands and his success was all the greater that his manner of procedure was more conformable to the evangelic precepts than that of his colleague of Omura. Less passionate than the latter, he understood that he would more easily gain the hearts of his subjects by persuasion than by violence. He himself traversed the villages to instruct the ignorant and to exhort them to become converted. At church he would not allow the slightest distinction and always wished to occupy the last place. Only once he was on the point to give way to severity, when he ordered the beheading of a Christian woman who had stolen some fruit. However on the advice of the missionaries he remitted the punishment of death.

In 1579 premature death snatched him from his subjects who venerated him as a god, and his son Lewis Sumiharu, still a minor, succeeded him. During the minority of Sumiharu his uncle governed Goto. Openly hostile to the Christian religion,

the uncle in question resolved to ruin it utterly. He accordingly expelled the religious, threw down the crosses, razed the churches, and forced the Christians to assist at Buddhist ceremonies. From this moment a great number of *samurai* apostatized and the people, mostly peasants and fishermen, were a prey to every kind of annoyance. Several went into exile and took refuge in Nagasaki, then the asylum for persecuted Christians. This state of things lasted till the death of his guardian permitted Sumiharu to himself govern his domain, (1595). During all this period the Jesuits were prohibited from setting foot in the Goto isles.

The Archipelago of Amakusa had also been visited by the missionaries. When, in 1566, Father Vilela retired from Kyoto he chose, on the invitation of the lord of Shiki, one of the principal castles of these islands, this place as his field of labour. Too confident, Vilela committed the imprudence of conferring baptism on this lord, who only wished to make use of religion to attract the Portuguese to his domains. But soon seeing that the foreign vessels were by no means hurrying to his ports, the knave apostatized publicly and ordered his Christian subjects to do likewise. Of the 600 converts in the territory of Shiki, nearly all renounced their faith. Some, but they were very few, were faithful to their religion and took refuge at Nagasaki.

The Jesuits had scarcely recovered from this mistake when they received an invitation from Amakusa Izu no Kami, *daimyo* of Hondo, the principal castle of Amakusa Island (1568). It was on Brother Lewis Almeida that this new mission devolved. Mindful of the misfortunes of Father Vilela at Shiki, Almeida thought he should make conditions. He accordingly required from Amakusa a written authorization to preach everywhere he wished, and at the same time permission for all the former's subjects to embrace the Christian religion without any hindrance. Moreover, Amakusa himself was to assist at the first instructions so as to open the way for his subordinates. He had, besides, to authorize one of his children to secure baptism to serve as a guarantee for the new converts. Finally the *daimyo* was to build, at his own expense, a church in the neighbourhood of Hondo. Amakusa complied with all these demands.

Almeida soon saw how much he had reason to congratulate himself on the precautions he had taken for in this more than any other place the resistance that the Christian religion encountered was obstinate. As soon as the first conversions took place, the revolt broke out. The bonzes, supported by the two brothers of the *daimyo*, moved heaven and earth to bring about the banishment of the Jesuit and of those who had embraced his doctrine. Their hatred directed itself particularly, however, against the Governor of the town, who had been one of the first to receive baptism and who had to go into exile. After this first victory the revolt became such that Otomo Yoshishige, then suzerain of these isles, had to interfere with his troops. When tranquillity had been almost restored, Amakusa demanded baptism for himself and one of his natural sons. This was followed by a fresh outbreak. Exasperated at length by the plots of the bonzes, Amakusa swore to exterminate them to the last man. He published an edict exiling all of them from his dominions. And as the merchants had sustained them with their money he informed the latter that they would have to either become converted or quit his territory. Finally, in 1578, Amakusa was able to congratulate himself on having issued victorious from so many difficulties. His wife and his two sons had also become converted by that time, and the number of the Christians was more than 5,000.

Amakusa died in 1582 leaving his domains to his son John. While on his death-bed he conjured the latter never to abandon the Faith for which he himself had suffered so much during his life. Amakusa was sincere from the commencement, his excesses even show it. No one can reproach him for having coveted the wealth of the Portuguese, for they never set foot on his shores, and Amakusa knew that it would be so.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE BRITISH MINISTRY.

London, August 14.

The following now form the British Cabinet:—

The Earl of Halsbury, Lord Chancellor.

The Duke of Devonshire, Lord President of the Council.

The Marquis of Lansdowne, Secretary for Foreign Affairs.

Rt. Hon. Joseph Chamberlain, Secretary for the Colonies.

Rt. Hon. St. J. Brodrick, Secretary for War.

Lord George Hamilton, Secretary for India.

The Earl of Selborne, First Lord of the Admiralty.

Lord Asbourne, Lord Chancellor of Ireland.

Rt. Hon. George Wyndham, Chief Secretary for Ireland.

Lord Balfour of Burleigh, Chief Secretary for Scotland,

Rt. Hon. Gerald Balfour, President of the Board of Trade.

Rt. Hon. Walter H. Long, President of the Local Government Board.

Rt. Hon. R. W. Hanbury, President of the Board of Agriculture.

To these must evidently be added

The Rt. Hon. A. J. Balfour, Lord Privy Seal and Premier.

The Rt. Hon. C. T. Ritchie, Chancellor of the Exchequer.

The Rt. Hon. A. Akers-Douglas, Secretary for Home Affairs.

The Earl of Dudley, Lord-Lieutenant of Ireland.

The Rt. Hon. Austin Chamberlain, Post-Master-General.

THE COLONIES AND THE MOTHER COUNTRY.

London, August 15.

In addition to the naval contributions mentioned in the cables of the 13th, the Colonial Conference has agreed that Australia should contribute £200,000 per annum and New Zealand £40,000. A special arrangement will be made with Canada.

Large Colonial support has also been promised for the national memorial to Queen Victoria to be erected in London.

CRICKET.

England won the test match by one wicket.

THE KING.

The King has returned to Cowes looking remarkably well.

THE FRENCH TROUBLES.

The excitement in France over the closing of the conventual schools continues. Military force has been employed in Brittany. The enforcement of the decrees has been attended by many fines and cases of imprisonment for resistance to the authorities.

A later telegram states that M. Combes, the Premier, has declared to the Cabinet that the resistance is not due to Roman Catholic motives, but to a violent Royalist movement.

WOMEN'S FRANCHISE IN AUSTRALIA.

August 16.

Both Houses at Sydney have passed the Women's Franchise Bill.

NEW JAPANESE CRUISERS.

The Clydebank (Glasgow) firm has received an order to build two large cruisers for Japan.

GLOOMY PROSPECTS IN INDIA.

The rainfall has been deficient over the greater part of India, both monsoons having been below the average. The prospects are gloomy.

NAVAL REVIEW.

A review has taken place of the fleet of 108 warships commanded by six admirals. The scene was superb and impressive.

THE BOER GENERALS.

The Boer Generals have arrived at Southampton and were enthusiastically cheered.

THE BOER GENERALS.

London, August 17.

The Boer Generals have left London to visit King Edward upon his yacht at Cowes.

THE NAVAL REVIEW.

The illuminations of the fleet were spoilt by a thunderstorm.

CHINA AND AMERICA.

The Viceroy Yuan Shi-kai, Liu Kun-yi and Chang Chih-tung have accorded interviews to the Hon. John Barrett, Commissioner-General to Asia of the St. Louis World Fair. They were united in declaring that China must make a supreme effort to promote commerce and friendly intercourse with Europe and America. China would, they assured Mr. Barrett, make an unprecedented exhibit at the St. Louis exposition.

THE BOER GENERALS.

London, August 18.

Lords Roberts and Kitchener met the Boer Generals at Southampton and accompanied them to the Royal yacht.

Lord Kitchener presented the Boer leaders to the King, whose reception of them of them was most cordial.

The conversation was informal and politics were not touched upon.

After the interview the Boer Generals made a tour of the fleet.

THE CHINESE TARIFF.

The *Times* correspondent at Shanghai telegraphs that the protocol of the Tariff was signed on Saturday by the British, the American, the German and the Japanese Commissioners unreservedly; and by the Austrian, the Belgian and the Dutch *ad referendum*.

The Chinese Commissioners were unable to sign without Imperial sanction.

HONOUR TO THE JAPANESE SQUADRON.

The Royal yacht, at the Review on Saturday, when passing the Japanese war-ships, went dead-slow as a mark of honour to our allies.

FRANCE AND THE CONVENT SCHOOLS.

SERIOUS RIOTS.

London, August 18.

Thousands of persons resisted the closing of the Convent schools in three towns of the Department of Finisterre. The troops were compelled to break the doors and expel the garrisons of peasantry, who sang hymns and threw filth on the besiegers.

[NOTE.—Cablegrams in the American papers gave hints of the storm gathering in Northern France and Brittany especially. The Prime Minister, M. Combes, has declared that the Breton peasants have been influenced by the old Monarchical party to take this stand against the Government and that their agitation is not likely to influence the Government policy.—Ed. J. M.]

THE CORONATION NAVAL MANŒUVRES.

Bad weather has compelled the abandonment of evolutions contemplated at the close of the Coronation festivities, and the fleet has steamed to sea.

THE BOER GENERALS.

The Boer Generals have gone to The Hague, but will return to London soon.

THE SHAH.

The Shah has arrived in London, where he was received by the Prince of Wales.

THE STEEL MAGNATE BREAKS DOWN.

Mr. Charles M. Schwab, President of the American Steel Trust, has retired, broken in health.

[NOTE.—The first intimation of Mr. Schwab's illness is contained in a telegram from Atlantic City, New Jersey, on July 26, which said that he was taken suddenly ill that evening while driving on the speedway. He was taken home at once and his doctor said that the case was one of overworked nerves. The physician gave out the following statement at midnight:—"Mr. Schwab is suffering from severe nervous prostration. It was brought about by the continual nervous and mental strain he has been under for the past month. Mr. Schwab's condition is not serious. He must have absolute rest and quiet for the next week, when he will be as well as ever."]

THE FINISTERRE TROUBLE.

London, August 20.

Twenty-seven casualties occurred during the military enforcement of the closing of the schools at Finisterre.

THE BOER GENERALS.

The Boer Generals received great ovations on their arrival at Rotterdam and The Hague.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRANCE AND SIAM.

Saigon, August 15.

The French Minister in Siam, M. Klobukowski, when on his way to France on leave, declared at Marseilles that the relations between France and Siam are not in any way broken, and that if some difficulties had presented themselves in the negotiation of certain matters, they were not at all insuperable.

Negotiations are about to be opened with Siam to arrange existing difficulties. To prove its desire for conciliation the Siamese Government has asked the French Government to nominate an official who will occupy an important position in Bangkok.

NEWS FROM FRANCE.

Saigon, August 18.

There has taken place at Besancon a brilliant inauguration of monuments raised to Victor Hugo and Pasteur. Speeches were delivered by the Ministers of Commerce and of Agriculture.

The British naval review was very brilliant. The King was much cheered. The Boer Generals paid him a visit.

(RECEIVED AT THE WAR DEPARTMENT IN TOKYO.)

FLOODS AND DISTURBANCES IN FORMOSA.

Taipeh, August 14.

The rivers in the south of Formosa being in flood and communications being interrupted, a body of insurgents surrounded and attacked a Japanese camp to the south of Nanko. They were driven off, and they then took up a position in a forest on a steep hill where the ground is unfavourable for dislodging them. The two bodies remain facing each other.

The insurgents have made several attacks upon the rear of the Japanese position, cutting the telegraphs and destroying baggage waggons. One soldier of the Land Transport Corps and 19 natives were wounded. A squadron of cavalry and a company of artillery with 4 howitzers have been sent to the place.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

QUARANTINE IN KOREA.

Kunsan (Chollado), August 15.

The Korean Government has announced that all ships coming from Japanese or Liaotung ports shall undergo medical inspection from the 21st instant.

U.S. WHEAT CROP.

New York, July 15.

The wheat crop this year in the United States is expected to be exceptionally good, and Indian corn also according to recent investigations, will give a splendid yield.

CHOLERA IN KOREA.

Fusan, August 18.

(From the Japanese Consul.)

News has been received of an outbreak of cholera among Japanese fishermen at Ching-hai (in Kyongsan-do). Four men have died and four are suffering. Steps have been taken to segregate them, and a doctor has been despatched to the place.

CORONATION CELEBRATION AT WEI-HAI-WEI.

A report from the Japanese Consul at Chefoo shows that there were 18 men-of-war at Wei-hai-wei on the 9th instant, namely, 4 line-of-battle ships, 6 cruisers, 4 gun-boats, 3 torpedo-destroyers and 1 Chinese vessel. All dressed ship in the morning and fired a royal salute at noon. In the evening there were grand illuminations. There was to have been a ball on board the British flag-ship and a review of the Chinese Regiment had also been contemplated, but these projects had to be abandoned owing to inclement weather.

THE CHINESE TARIFF.

The Commissioners of the Foreign Powers have signed the Tariff Convention in Shanghai but the Chinese Commissioners have not yet attached their signatures.

QUARANTINE IN KOREA.

The Korean Government, after consultation with the Foreign Consuls at Chemulpo and with the Commissioner of Customs, have declared that all vessels coming from Japanese ports or from Liaotung will be subjected to five days quarantine.

(FROM THE "JAPAN HERALD.")

THE MOJI COLLISION.

Kobe, August 14.

Re yesterday's telegram describing the collision in Moji harbour between the *Pingsuey* and *Benworlich*, it transpires that one vessel was the *Benlarig* and not the *Benworlich*. The *Benlarig* was only slightly damaged and left on Thursday for Hongkong with a full cargo of coal.

AMERICA AND THE WEST INDIES.

London, Aug. 14.

The New York *Sun* reports that the United States Government is considering the advisability of annexing Hayti and San Domingo.

CHOLERA IN MANCHURIA.

An Odessa telegram reports that cholera of a virulent type is widespread in Manchuria.

Over a considerable section, the men on the railway are deserting their posts, and the Chinese are dying like flies in the neighbourhood of Harbin, where a whole village has been desolated.

THE NAVAL REVIEW.

London, August 16.

The Mayor of Portsmouth has entertained Baron Hayashi, the Japanese Minister, at a dinner at the Town Hall. Commoner Lucas, in proposing the Minister's health, said he thought the naval review a fitting occasion to celebrate the alliance. Viscount Hayashi's reply was much applauded. The Bishop of Winchester said the alliance would contribute largely to the peace of the world.

THE BOER GENERALS.

Generals De Wet, Botha and Delarey have arrived at Southampton where they were welcomed by Lord Roberts, Lord Kitchener, and Mr. Chamberlain. They were enthusiastically cheered. They were unable to accept the invitation to the review or the audience with the King.

London, August 19.

It is explained that the Boer Generals declined to accept the invitation to the naval review and audience with the King on Saturday owing to their attire, which was unsuitable for a ceremonious visit. They were extremely pleased with their visit to the King on Sunday.

The Generals arrived in Holland to-day, the authorities warmly welcoming them.

CHOLERA IN CHINA.

It is announced that traffic on the Chinese Eastern Railway has been suspended owing to cholera.

(FROM THE "JIJI SHIMPO.")

SOUTH AMERICA.

London, August 14.

The rebel army in Venezuela has captured Barcelona after five days' fighting. The city was looted, and the Consulates of the Powers suffered damage.

CORONATION REVIEW.

The review of the Indian and other Colonial troops has been held. The King addressed the troops and presented them with decorations.

BOER GENERALS.

Generals De Wet, Delarey and Botha are due in Southampton on the 16th inst.

SOUTH AMERICAN TROUBLES.

London, August 15.

A report from Barcelona (Venezuela) at 7.15 p.m. says that the rebel army has already taken possession of that place and Cabello. The Government officials have been made prisoners. The rumour that Great Britain has given recognition to Matos (the rebel) Government has been officially contradicted.

COTTON IN INDIA.

In consequence of the unfavourable monsoon the cotton crop in India will show a deficiency.

BOER GENERALS.

King Edward invited the Boer Generals Botha, Delarey and De Wet to witness the Naval Review.

FOG IN THE SOLENT.

Last night dense fog prevailed in the Solent.

ADMIRAL IJUIN.

Admiral Ijuin, Commander-in-Chief of the Japanese Coronation Squadron, was present at the reception of the King at Portsmouth.

GARDEN PARTY.

London, August 16.

The Mayor of Portsmouth gave a garden party in honour of the Commanders and officers of the war-ships assembled in the port. The function was attended by Viscount Hayashi, Admiral Ijuin and others, 2,000 in all. A dinner was given in the City Hall in the evening. The band of the Japanese cruiser *Asama* played selections at intervals. Viscount Hayashi, in response to the toast of his health, made a suitable reply and said that the principal object of the allied Powers (England and Japan) was to maintain the peace and promote the prosperity of the Far East.

THE JAPANESE CORONATION SQUADRON.

The *Asama* and *Takasago* occupy positions between Gosport and Ryde. The Naval Review is to take place at 2 p.m. The weather is fine with a slight breeze.

NAVAL REVIEW.

London, August 16.

The Naval Review has been attended with success. The British war-vessels consisted of 20 battleships, 24 cruisers, 15 gun-boats, 32 torpedo-boat destroyers and 10 training ships, commanded by six admirals. The vessels all belong to the home

fleet. The foreign war-ships represented on the occasion were four, including the Japanese Coronation Squadron, one Italian and one Portuguese war-vessel. The *Asama* has proved herself to be one of the best specimens of an armoured cruiser.

The scene was superb and impressive. The sea off Spithead and the neighbourhood was densely crowded with craft and spectators, the latter numbering over 250,000, and smokeless coal was used by the vessels carrying them.

The steamer *Saxon*, one of the Cape liners, with the Boer Generals on board, met the steamer *Nigeria* of the Elder-Dempster S.S. Company. On the latter were Lord Roberts, Lord Kitchener and Mr. Chamberlain, Secretary of State for the Colonies. The Boer Generals were taken on board the *Nigeria*, which afterwards proceeded for London.

The Royal procession was composed of six yachts. His Majesty's yacht slowly passed between the rows of war-ships, which were stationed in six lines, extending for a distance of four miles. Afterwards the Royal yacht cast anchor quite close to the *Asama* and by signal invited Admiral Ijuin and other officers on board the yacht. At 9.12 p.m. to-night over 100 war-ships will be illuminated.

The Royal salutes are expected to be fired at 11.30 p.m. Another review will also take place on Monday morning and be witnessed by the King.

THE BOER GENERALS.

London, August 18, 10 a.m.

The King and the Queen cordially received in audience the Boer Generals Botha, Delarey and De Wet yesterday on Their Majesties' yacht at Cowes. Lord Kitchener introduced them.

FOREIGN BLUEJACKETS ENTERTAINED.

The officers and crew of the English, Italian and Japanese warships 2,000 in number, were entertained at dinner by the Mayor of Portsmouth. A concert of sacred music was given in the afternoon.

THE SHAH OF PERSIA.

The Shah of Persia is expected to arrive in London at noon to-day.

NAVAL REVIEW.

August 18, 5.35 p.m.

A storm of rain and wind has swept over Portsmouth from the south-west. Seventy-six warships took part in the final operations of the review to the east of Ryde with brilliant success, stretching for a distance of twelve miles. Afterwards farewell salutes were exchanged and the whole of the fleet broke up returning to their respective stations.

THE CONCERT.

The concert of yesterday brought out in a practical fashion the existence of warm relations between the British and Japanese men-of-war's men.

THE SHAH.

The Shah has taken up his residence in Earl-borrow Palace (? Ellenborough House) as an Imperial guest. The Prince of Wales welcomed the distinguished visitor.

JAPANESE CORONATION SQUADRON.

London, August 19.

The *Asama* and *Takasago* started for Japan yesterday. Prior to their departure the King by signal bade farewell to Admiral Ijuin and his officers, thanking them for their presence at the Naval Review and wishing them a happy voyage.

NAVAL REVIEW.

The supplementary Naval Review yesterday was greatly spoiled in consequence of a storm of rain and wind.

DR. SCHENK.

Dr. Schenk is dead.

[NOTE.—The deceased was a famous professor in the University of Vienna and propounded the well-known Schenk's Theory regarding pre-natal influence on sex.]

CHINESE COURT.

A rumour emanating from St. Petersburg says that the Chinese Emperor will remove his capital to Paoting-fu in October on the ground that so long as foreign soldiers are stationed in the immediate neighbourhood of the Imperial Palace disturbances in Peking are unavoidable.

(FROM THE "DEUTSCHE JAPANPOST.")

NEWS FROM BERLIN.

Berlin, August 15.

The evacuation of Shanghai so far is only proposed by the British Government. From Berlin it is pointed out that the withdrawal of the troops can only take place after all of the principally interested four powers have come to an understanding.

The Kaiser attended the launching of the new N. D. L. str. *Kaiser Wilhelm II.*

The first reading of the tariff bill in the Reichstag committee has been concluded.

The rumour that the position of the new French Minister President Combes had become uncertain is groundless.

The German gunboat *Panther* has gone to Haiti.

The reported cession of the Portuguese colonies to Great Britain is without foundation, also the report that the United States and Germany, in view of the rebellion, intend to land troops in Venezuela for the protection of their interests.

THE KAISER AND THE BAVARIAN DIET.

Berlin, August 17.

The German Emperor had sent a telegram to the Bavarian Prince Regent Luitpold on account of the hostilities shown by the ecclesiastical party of the Bavarian Diet against certain works of art. The papers of the ecclesiastical party of the German Reichstag are now trying to describe this action of the Emperor as an attack on the Bavarian self-government rights, but are sharply repulsed in these attempts by the press of the other parties.

FRANCE AND GERMANY.

Berlin, August 19.

A speech made by General André, the French Minister of War, in which he declared that France will not abandon her hopes of revenge, has in no way influenced the progressively better relations between the Republic and Germany.

FRANCE AND SIAM.

The Russian press affirms that France may count upon Russia's support in her differences with Siam concerning the interpretation of the Franco-Siam treaty of 1893.

DELAGOA BAY.

The English Government declares that the rumour of the occupation of Delagoa Bay by Great Britain is unfounded.

THE LATE EMPRESS FRIEDRICH.

Berlin, August 21.

The German Emperor attended the unveiling of the monument erected by the city of Homburg, in honour of the late Empress Friedrich and referred to the memory of his mother in warm terms.

DEATH OF A GERMAN STATESMAN.

The Minister of War of Saxony, General Edler von der Planitz, is dead.

SWITZERLAND AND THE CATHOLICS.

The Swiss Bundesrath has forbidden the residence in Switzerland of the order of the Catholic congregation of women.

A CHINESE LEGATION AT BRUSSELS.

China will establish a legation at Brussels.

THE GERMAN BUDGET.

The deficit in the 1901 budget of the Empire amounts to 48½ millions marks.

(FROM THE "N.-C. DAILY NEWS.")

NOT IN THE CABINET.

London, August 9.

The following are not in the Cabinet:—The Earl of Dndley, Lord Lieutenant of Ireland; the Earl of Hardwicke, Under Secretary of the War Office; Lord Windsor, President of Works and Public Buildings Department; Sir William Hood Walrond, Chancellor of the Duchy of Lancaster; and Earl Percy, Under Secretary of the India Office.

A NEW POSTMASTER-GENERAL.

The Hon. Austen Chamberlain, Financial Secretary to the Treasury, has been promoted Postmaster-General, vice the Marquess of Londonderry.

OBITUARY.

London, August 10.

Hunter Bey died of Blackwater fever contracted at Bahr-el-Gazel.

THE CELEBRATIONS AT TIENTSIN.

Tientsin, August 9.

The Haikuangsu bell was rung for the first time in honour of the Coronation. The Military Parade was abandoned owing to the condition of the ground after heavy rain.

THE NEW TREATY.

Merchants here applaud General Sharrett's attitude as regards the New Treaty.

THE NEW GOVERNOR OF SHANTUNG,

Chinanfu, August 9.

The new Governor, Chou Fu, arrived here yesterday, and took over the seals of office to-day.

CORONATION DAY.

Salvoes of 41 guns from the Tower, and of 21 guns from Hyde Park awoke London at sunrise, when the weather was promising.

THE DEATH OF A BOER GENERAL.

The *Petit Bleu* of Brussels announces that General Lucas Meyer died suddenly, of heart disease.

THE POPULAR REJOICINGS.

London, August 11.

Bands of youths and girls, singing popular airs, paraded the streets, but the demeanour of the crowd generally was admirable.

THE PROMISED WAR COMMISSION.

London, August 8.

The members of the war commission to inquire into the whole conduct of the South African war, are the Earl of Elgin and Kincardine, the Earl of Essex, Admiral Sir John Hopkins, Sir John Jackson, Sir John Edge and Sir Henry Wylie Norman.

THE SIBERIAN RAILWAY.

London, August 11.

Regular service trains from Europe by the Siberian Railway are now established, the journey from Paris to Peking occupying twenty-two days.

A PACIFIC CABLE.

London, August 11.

President Roosevelt has granted the application of the Commercial Pacific Cable Company, subject to approval of Congress, to lay a proposed cable from San Francisco to China, with landings at Hawaii, Guam, and the Philippine Islands.

THE REBELLION IN VENEZUELA.

London, August 13.

In Venezuela the insurgents have captured and sacked the town of Barcelona after six days' fighting, during which eight Generals, twenty-three Colonels and 167 men were killed on both sides. The American, Italian and Dutch Consulates were looted.

ANOTHER OUTRAGE IN RUSSIA.

An outrage was perpetrated at Kharkov yesterday, four shots being fired at the Governor, Prince Obolenski, wounding him in the neck. The culprit was arrested.

COLONIAL NAVAL CONTRIBUTIONS.

London, Aug. 14.

In addition to the Naval Contributions mentioned yesterday to which the Conference of Colonial Premiers agreed, Australia will contribute £200,000 per annum and New Zealand £40,000, while special arrangements will be made by Canada.

EXPORTS.

RAW SILK.

There has been a large business during the week at top prices and the continually hardening exchange causes purchasers to lay down in consuming markets at increasing values. Buyers for Lyons have entered the market freely and at closing New York seems like coming in with equal vim. Arrivals from the country are plentiful and there is a good stock on offer. Sellers are current but only at top rates.

13.

BOVRIL ISN'T DEAR,

in fact, value for value, it is one of the cheapest drinks, and one of the most economical foods that can be obtained. A cup of hot Bovril costs less than a drink of whisky, and while giving a more genuine and lasting warmth than the latter, contains, in addition, the nutritive principles of beef worth many times its cost.

Old fashioned beef teas and meat extracts, whether known as such, or disguised under more pretentious modern names contain none of the NUTRITIVE properties of beef. Baron Liebig himself admitted this fact; there is not a doctor to-day disputes it. Used as a nourishment Meat Extract is probably the most expensive article one can buy. Bovril one of the cheapest.

BAD COMPLEXIONS

Dry Thin and Falling Hair
and Red Rough Hands
Prevented by

CUTICURA SOAP.

MILLIONS use CUTICURA SOAP exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations, inflammations, and chafings, or too free or offensive perspiration, in the form of washes, for ulcerative weaknesses, and for many sanative antiseptic purposes which readily suggest themselves to women, and especially to mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour, Consisting of CUTICURA SOAP, to cleanse the skin and scalp of eruptions and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. Sold throughout the world. Australian Depot: R. TOWNS & CO., Sydney, N.S.W. So. African Depot: LENNON LTD., Cape Town. "How to have Beautiful Skin, Hair, and Hands," free. POTTER CORP., Boston, U. S. A., Sole Props., CUTICURA REMEDIES.

YOKOHAMA: SATURDAY, AUGUST 30TH, 1902.

SUMMARY OF NEWS.

THE *Asama* and *Takasago* left Queenstown for Cardiff on August 23rd.

THE steamer *Wakamatsu Maru*, which stranded off Wonsan several days ago, has arrived safely at Moji on her way to Kobe.

MR. Y. UEDA, Mayor of Yokohama, is now lying in a grave condition at his residence, suffering from cancer in the stomach.

THE death is announced of Captain N. Shiga, Commander of the Japanese war-ship *Chihaya*, who passed away on August 20th in the Saseho Naval Hospital.

VISCOUNT WATANABE, ex-Minister of Finance, accompanied by Mr. Watanabe Senshu, left San Francisco for Yokohama on August 26th by the steamer *Korea*.

CONSIDERABLE damage was caused to the pier in Yokohama on August 24th when the N. Y. K. steamer *Kaga Maru*, in attempting to come alongside it, collided with the structure. The

damage was so severe that the Authorities had to hire divers to examine the extent of injury before the work of repair could be started.

WE notice that Mrs. Hugh Fraser, the relict of a former British Minister to Tokyo, has received a Civil List pension in recognition of her literary labours.

PRINCE MICHU, the first son of the Crown Prince, accompanied by Count and Countess Kawamura proceeded to Miyanoshta, Hakone, on August 26th and put up at the Fujiya Hotel.

A TELEGRAM from Vladivostock received by the Central Tea Guild of Tokyo announces that the import duty on tea has been altered to 25 roubles 50 copecks and that the new rate was enforced on August 23rd.

THE twenty-fifth anniversary of the Japan Red Cross Society, of which Prince Komatsu (senior) is President, will take place in Uyeno Park in October. The Empress will honour the occasion with her presence.

WE learn that there is no prospect of Kobe sending a team to meet Yokohama in water-polo and other aquatic sports. A letter has been received stating that a number of men have scratched their names.

THE Japanese training-ships *Hiyei* and *Kongo*, with over 150 cadets on board, returned to Yokosuka on August 25th after a cruise of 187 days. The vessels left Yokosuka for the southern Pacific on February 19th.

MR. J. MACANDREW, formerly of Jardine, Matheson and Co., and chairman of the Indo-China Steam Navigation Co., died on July 6 at Mill Hill at the age of 79. He was the chairman of the first Woosung Railway Co.

NEWS from Korea says that the First Bank's branch in Chemulpo started to issue five yen notes on August 20th. The demand for the notes was so keen that over yen 7,000 was issued from the bank during the same day.

A UNITED conference of members of the Chambers of Commerce of Osaka, Kyoto, Kobe, Nagoya and Tokyo will take place on September 5th in the hall of the Tokyo Chamber. No doubt the regulations recently issued for the Chambers of Commerce will be discussed on the occasion.

NEGOTIATIONS for organizing a tea trust are in progress in Nagasaki between the representatives of tea merchants from Fukuoka, Kumamoto and Nagasaki Prefecture. Their object is to export tea on a large scale. It is generally believed that the negotiations will be attended with success.

THE Captain of the war-ship *Kasagi*, which was dispatched to Nemuro several days ago, wires that the despatch-boat *Yaeyama* was expected to be floated at high tide of the morning of the 26th. More than two months have elapsed since the *Yaeyama* was blown on the rocks off Nemuro in a typhoon.

MR. K. MATSUI, First Secretary of the Japanese Legation in London, who acted as Chargé d'Affaires during the interval after the departure of Mr. T. Kato and previous to the arrival of Viscount Hayashi, having been recalled to Japan, left by the N.Y.K. steamer *Kamakura Maru*, on 18th July on his return home. Previous to coming to London Mr. Matsui was in Washington, where he also acted as Chargé. Mr. Matsui has a very fluent command of the English

language, and has made many friends during his four years' residence in England, who have bid him adieu with many regrets. He is to be succeeded as Secretary of the Japanese Legation in London by Mr. Nabeshima, at present at the Berlin Legation.

ANENT the Fifth Domestic Exhibition at Osaka, the Naval Authorities are going to send an exhibit of ammunition and arms. Commander Tokuda, of the Navy Department, visited the Osaka Municipal Office on August 21st in connection therewith and held a conference as to the matter of transportation.

HIS many friends in Nagasaki will join with us, says the *Nagasaki Press*, in offering congratulations to Mr. F. N. Dreesing, superintendent at this port of the Great Northern Telegraph Co., on the news that the Czar of Russia has made him a Chevalier of the Order of St. Stanislaus. This comes as a reward for the admirable work which Mr. Dreesing did in North China during the Boxer troubles.

A CHINESE Prince is now coming to Japan from Peking, arriving in Tokyo either on August 31st or September 1st. The Japanese Court has decided to receive the Chinese visitor as an Imperial guest and in consequence the Seiyoken in Uyeno Park will be set apart as his residence during his sojourn in Tokyo, the Shiba Detached Palace being now under repairs. His Highness is said to be the son and heir of Prince Ching.

AMONG some 375 Parliamentary members elected at the recent general election throughout the country are over 50 who passed under the name of Independents. Of these, 37 or 38 are genuine Independents and they propose to organize a club among themselves with a view to working in harmony in the forthcoming session of the Diet. Messrs. Oi Shintaro, Inouye Kakugoro, and Hitosugi Ei are reported to be the promoters of the plan.

IN view of the prevalence of cycling in Tokyo and elsewhere a bicycle school to be called the Jitensha Gakko will shortly be opened in Kawatamachi, Ushigome, Tokyo, by several influential persons interested in cycling. Count Ohara, a member of the House of Peers, has accepted the post of Principal of the new institution. Two courses are said to be provided, namely the ordinary and special: the former to be finished in a week and the latter in two weeks.

PROFESSOR HATTORI UNOKICHI, who recently returned home from Germany, has been appointed President of the Literary College in Peking University. He will leave Tokyo for his new post toward the end of August. It may be added that the professor went though the memorable siege of Peking in 1900 and afterwards went to Berlin for purposes of study, returning to Tokyo several weeks ago, bringing with him a scholastic title conferred upon him by a German College.

A RESIDENT of Osaka named Takahashi Kenji was fatally bitten by a shark in the sea off Maiko, on the Inland Sea, on August 24th. It appears that the unfortunate man was trying to swim across the Akashi straits from Awaji Island to Maiko when he was suddenly attacked by a shark which bit off the flesh of the man's hip and both his hands. The man expired when taken ashore. A member of the staff of the German Consulate in Kobe and a sailor belonging to a German war-ship, now in Kobe, happened to be on the spot and rendered every possible assistance in their power.

THE ELECTIONS.

Saturday, Aug. 23.

It may now be said that the result of the elections is definitely known. Miyazaki prefecture remain to be heard from, but its four seats are a foregone conclusion for the *Seiyu-kai*. Hence the figures stand thus:—

<i>Seiyu-kai</i>	192
Progressists	88
<i>Sanshi</i> Club	8
Niigata Progressists	8
Imperialists	20
Independent	59

375

This total is one short of the legal number because of the fact that the Moji election was declared invalid owing to the number of votes cast being one short of the legal minimum.

It appears that the relative strength of the various parties has not undergone any marked change, if the increased number of members be taken into account. The *Seiyu-kai*, having commanded 154 votes in a House of 300, have now 192 votes in a House of 375, which is not far from their proper proportion. The Progressists have done comparatively well, but in the Progressists' figures there are included two semi-independent sections, the *Sanshi* Club and the Niigata *Shinpo-to*. To speak with absolute accuracy, the Progressists have carried 88 constituencies against 72 previously commanded by them.

It is stated that the new system of elections has worked well in practice, but the statement seems to require some qualification, for side by side with it we read that the expenses of candidates were greatly increased owing to the necessity of appealing to a wider audience. So long as the rule of small constituencies obtained, a candidate's wants were satisfied with one office, and one set of canvassers. But since the election district extended to a whole prefecture he has had to multiply his centres of influence. The working of the new system in the matter of minorities has evidently been good. That is illustrated by the cases of the Imperialists and the Independents. They had 13 and 30 seats respectively, in the last Diet, whereas they now have 19 and 59—considerably more than their normal proportion of increase.

There is renewed trouble in Tosa political parties. The Hayashi section claim that the Kataoka section have not complied with the advice of Count Itagaki, and that they have elected candidates not suited to represent the prefecture, thus substituting sentiment for reason, which was exactly what Count Itagaki warned them against. On the other hand, the Hayashi section chose Mr. Kato Takaaki expressly to prove their adherence to the principle of reason.

Monday, Aug. 25.

Mr. Kato Takaaki has explained the reasons that made him hesitate to accept the honour offered by the electors of Kochi prefecture. In the first place, he considered that between a representative and his constituency there ought to be unity of political sentiment. But he himself had never made any declaration of politics, nor had he ever heard what politics were professed by the men that elected him. Each was practically unknown to the other. It was even possible to mention some points where divergence of views could scarcely be avoided. Thus if the Kochi agriculturists contended for the restoration of the land tax to its old figure of $2\frac{1}{2}$ per cent., he could

not agree with them, his conviction being that until some compensatory source of income was found, the tax should remain at $3\frac{1}{3}$. Further, although unwilling to mention names, he found it impossible to endorse the political opinions of Viscount Tani, who seemed to be a great influence in Tosa politics. He had the highest possible respect for the Viscount as a pure-hearted, courageous man, but he differed from him in politics. Then again there was a conservative party (*Shukin-ha*) in Tosa which wielded considerable power. He himself did not claim to be a member of the "High Collar Party," but neither was he a conservative in the sense of the *Shukin-ha's* platform. In fact, to ignorance of Tosa general politics he added dissent from certain known features of them, while they, on their side, must be quite unacquainted with his views.

To this the Tosa people replied that what they had observed of Mr. Kato's conduct and what they had heard of his utterances, gave them entire confidence in him. Should it prove that they had been mistaken, they would only have to regret their own want of judgment.

In the second place Mr. Kato objected that he was unassociated with any political party. He stood entirely independent, and could not look to have any following in the House. Therefore if his electors expected him to take a leading part, they would probably be disappointed.

To this the Tosa answer was that they had no objection whatever to an independent attitude. Mr. Kato would be absolutely free to act as he pleased.

In the third place, Mr. Kato considered that a member ought to have some care for the local interests of his constituency. But not only was he unacquainted with the political conditions existing in Tosa; he did not even know what were the customs of the inhabitants or what subjects specially affected their welfare. It would therefore be impossible for him to fulfil that part of a member's duty.

To this the Tosa politicians replied that they undertook not to trouble Mr. Kato with any local questions.

In the fourth place, Tosa, Mr. Kato said, is proverbially the scene of great activity among political parties. It was therefore possible that his election might give rise to disputes. In that event, he could not undertake to assume the responsibility of arranging these matters. He had not the qualities that enabled Count Itagaki to succeed in such a role, nor did he appreciate its necessity. His constituents, therefore, would be unable to look for his aid.

To this the answer was given that there was not the least probability of any dispute being caused by his election.

The result was that Mr. Kato consented. He enters Parliament under the unique circumstances of absolute freedom from pledges of any kind. There are few instances of such an election in the history of constitutional institutions. We can not but admire the action of the Tosa electors. They have given a fine example. If all the Japanese constituencies set themselves to choose distinguished men who had already given public proofs of ability and integrity instead of voting for those that constitute themselves guardians of parochial interests, win favour by questionable methods and enter the Diet with self-seeking aims, the House of Representatives would be a very different kind of assembly from what it is now.

There are differences of opinion about the result of the elections. We printed in our

last issue the figures accepted by several authorities. They showed the *Seiyu-kai* with a following of 192, and gave the Progressists 104, including the *Sanshi* Club and all affiliated elements. But the *Asahi Shimbun* now alleges that the *Seiyu-kai* have only 190, and that the Progressists, with the *Sanshi* Club, aggregate 112. We trust that the *Asahi* is correct, for if the Progressists can command 112 sure votes, they will rank as a strong opposition and can make the *Seiyu-kai* "sit up." Even in politics a monopoly is a bad thing for the people at large.

Wednesday, Aug. 27.

Tokyo newspapers fill a large part of their columns with this incident. Count Itagaki has addressed to the Tosa politicians a long statement of the negotiations between himself and Mr. Kato. It appears from this statement that Mr. Kato's replies to Count Itagaki's requests were given in writing. The Count was originally commissioned to seek Mr. Kato's consent to become a candidate. He accompanied the request with a condition that Mr. Kato should enter the *Seiyu-kai*. The reply was that this condition could not be complied with, and further that, as Mr. Kato had no knowledge of Tosa affairs, he could not properly represent Tosa interests in the Diet. Count Itagaki then withdrew the condition as to entering the *Seiyu-kai*, and added that Mr. Kato need have no apprehension about Tosa parochial affairs as, in case of difficulty, he, Count Itagaki, would give any information required. The latter assurance can scarcely have been called tactful. It elicited from Mr. Kato a renewal of his refusal, on the ground that without confidence in his own competence to discharge the proposed functions, he could not conscientiously undertake them, and further, that whatever assurances might be given to him beforehand, it would be only human nature that his constituents should expect him to look after their local interests. Count Itagaki accepted this refusal as final and communicated it to Messrs. Hayashi Yuzo and Kataoka Kenchi, the Tosa political leaders. They, accordingly, took no further step to bring Mr. Kato's name before the electorate. Presently, however, a local newspaper published an advertisement announcing that Mr. Kato was to be the Reform Section's candidate, and men began to canvass for him telling the electors that he would consent if elected. These things coming to the knowledge of Messrs. Kataoka and Hayashi, they again addressed Count Itagaki, and he once more approached Mr. Kato, who, however, replied that his attitude remained unchanged and that he had given no authority whatever to any one to put him forward as a candidate.

These are the facts upon which Count Itagaki bases his attack. We have greatly abbreviated his communication to the Tosa electors, but the gist is fairly set forth in our epitome. Count Itagaki's cardinal point is that the objection advanced by Mr. Kato at the outset possesses just as much validity to-day as it ever did. Therefore he accuses Mr. Kato of double dealing.

It will readily be supposed that there is something at the back of all this. Not on Mr. Kato's part, we imagine. His explanation will doubtless be published, and it will probably take the form indicated in our last issue, namely, that declining to become a candidate for election and accepting the result of election are two very different things. It is in Tosa politics that the *fons et origo mali* must be sought. Our readers remember, doubtless, that some time ago a dispute occurred in Tosa and that Count

Itagaki proceeded thither to effect an adjustment. He was supposed to have been successful. The arrangement made by him was that Messrs. Kusume and Tanaka, the leaders of the recalcitrant section, namely, the Reformers, should be expelled from the Tosa branch of the *Seiyukai*; that Messrs. Kataoka and Hayashi should be elected for the urban district of Kochi, and that four candidates named by them should be elected for the rural districts. But when Messrs. Kataoka and Hayashi proclaimed the names of their chosen candidates, the dispute broke out again. The Reformers declared that glaring partiality had been displayed in selecting three out of the four names. They not only refused to endorse the decision, but actually proceeded to elect the two expelled members, Messrs. Kusume and Tanaka, together with Mr. Kato. It will thus be seen that a powerful section of the Tosa electors have kicked over the traces and that, from Count Itagaki's point of view, Mr. Kato is likely to be the driver of the new team. Messrs. Kurume and Tanaka applied to have their names restored to the *Seiyukai's* roll, since they had been elected to represent Tosa, but the Standing Committee of the *Seiyukai* rejected the application, and the two men are consequently returned among the Independents. There is, further, a rumour that Mr. Oishi Masami, one of the Progressist leaders, has been interesting himself in the matter of Mr. Kato's election. Thus wheels are detected within wheels. Count Itagaki is angry. There is talk, indeed, of his wrath moving him to re-enter the political field. There is also talk of a serious split in the ranks of the *Seiyukai*, since the old Liberals will certainly support Count Itagaki, whereas many others will support Mr. Kato. Whatever be the issue of the incident, it is unfortunate.

Thursday, Aug. 28.

Mr. Kato is evidently determined not to enter into any public discussion with Count Itagaki. He says that the old statesman is angry and that to contradict him would be only to augment his wrath. Mr. Kato admits that Count Itagaki's tale of woe is substantially correct, but he claims—as indeed is abundantly apparent—that he steadily maintained his attitude of dissent throughout, and never changed it until the election had become an accomplished fact. Moreover, before giving his consent, he called on Count Itagaki to explain his position, whereupon the Count became angry and even abusive, which of course put a stop to further communication.

When all is said and done it is plain that whatever high qualities Count Itagaki possesses—and he certainly possesses many—fact is not among them. He wanted to take Mr. Kato under his patronage, which procedure displayed a decided lack of the sense of proportion.

Friday, Aug. 29.

The *Chiuo Shimbun* introduces the necessary element of ridicule into the Kato-Itagaki affair. It publishes a cartoon in which the Count takes the shape of an old lady and Mr. Kato that of a bride. The wrinkled dame is fiercely hammering with her pipe the bride, who seems to take the beating with absolute complacency. "You would not marry when I asked you to," cries the old woman, "and now you've gone and chosen a groom for yourself, you nasty, troublesome thing!" Where to the bride replies, "I did not like your groom, and I like mothers-in-law still less."

That exactly hits the situation. Mr. Kato

might be willing enough to sit for a constituency which elected him unsolicited and uncontrolled in any way. But when it came to being taken under the patronage of Count Itagaki and introduced as his protégé to the Kochi electors, the question assumed a different complexion. It is impossible to avoid the conclusion that Count Itagaki has placed himself in rather a laughable light. Mr. Kato does well to take no notice of a display of anger which ought to have been kept out of public sight.

There is a great deal of talk about the troubles in Tosa. The Standing Committee of the *Seiyukai* persists in its refusal to re-admit to the ranks of the Party Messrs. Kusume and Tanaka, who were expelled for insubordination. That appears to be quite right. Nothing has happened to change the situation from the *Seiyukai's* point of view. The electors have indeed endorsed the action of Messrs. Kusume and Tanaka by returning them to Parliament, but that fact rather accentuates than mitigates the original act of insubordination. We trust, however, that this is not to be followed by the formation of another cave in the already over-honey-combed edifice of the House of Representatives. The public is wearied to death with the meaningless squabbles of sections without intelligible platforms.

The Tokyo papers so far as they have spoken, support Mr. Kato. The *Chiuo Shimbun*, indeed, thinks that he did not treat Count Itagaki with full courtesy and, strange to say, discovers in this fact an evidence of his diplomatic training! But as to the rights and wrongs of the question the *Chiuo* is with Mr. Kato, and so are the *Niroku* and the *Nippon*. The *Jinmin* must be excepted. It has not spoken editorially, but in a paragraph it naturally supports its old friend Count Itagaki.

THE AUTUMN MANŒUVRES IN INDIA.

Major-General Fukushima has been invited by the British Government to be present at the autumn manœuvres in India, which are to be attended by Lord Kitchener. Experts in military matters will watch these manœuvres with much interest to see whether the lessons of South Africa have yet been utilized in the tactics of the Indian Army. Possibly there has not been time. We are informed by "those that know" that the tactics of continental European armies, German, French, Russian and Austro-Hungarian, still retain the features which were principally responsible for the early disasters that befell the English arms in South Africa. Japanese military tactics retain the same features, and it may confidently be said that if the troops of any of these nations were confronted by an army working on the lines indicated by Transvaal and Free-State experiences, they would suffer disastrous defeat. Lord Roberts and Lord Kitchener were the first to employ the new tactics. Not that they devised them, but that they may be said to have had the earliest opportunity of utilizing them. The immediate consequence was a complete change in the military situation and a succession of comparatively bloodless victories. It was in the nature of things that the British troops should be severely criticised at the outset by European writers who saw only results not causes. Moreover, there was surely much room for criticism. But the truth was not immediately discovered, and if now discovered by Continental European tacticians, has not yet been carried into practice.

COUNT MATSUKATA.

Count Matsukata took leave of Prince Komatsu on board the *Yakumo* when she entered Kobe, and subsequently landed independently. He was met on the hatoba by a large number of prominent business men, as well as by officials from Tokyo, and he was accompanied by a Russian Colonel whose name is so variously transliterated that we refrain from attempting to decipher it. The party took luncheon at the house of Mr. Matsukata Kojiro. Tokyo journals state that the Count looked well, and that he has not suffered at all from the fatigues of the journey.

Count Matsukata says that he made this trip with all the feelings of a pre-*Meiji* student, meeting everyone he could find and talking with every one about everything. He had an exceptionally long interview with the Emperor of Germany, who discoursed about Japanese finance, about Kiaochow, about gardening and various topics. *Naka naka sakan na kata de gozaru*, says Count Matsukata, and so indeed he well may say. At the British Court he had a singularly cordial reception, and he seems to have been much struck by the hospitality shown him by the Lord Mayor of London and by the bankers of the city. Oxford conferred on him an honorary degree. He declined it at first, pleading that he had no pretensions to scholarship of any kind, but the Oxford faculty replied that what they desired to distinguish was great achievements not great scholarship, and so the Count allowed his modesty to be overcome. Nothing struck him so much as the extraordinary prosperity of America and the bigness of everything there. Even Liverpool looked a small port compared with what he had seen in the States. One bank with a capital of 200 million dollars did a business of 4,000 millions, and there were banks which gave premia of 150,000 dollars to the drawer of the first prize among debenture-holders, and of 100,000 to the second prize. (We quote from the *Asahi Shimbun*, but we observe that the *Kokumin Shimbun* makes the Count speak of France, not America, and puts the above figures in francs.) Another thing that astonished the Count was the encouragement given to money-saving and the spirit of thrift that prevails in Europe. In all second-class and third-class railway carriages advertisements were to be seen urging people to save and offering facilities for doing so. Many persons spoke to the Count about the singular indifference to thrift shown by the Japanese. Count Matsukata expresses great admiration for the courtesy and urbanity of the Tsar. His Majesty's demeanour towards his Ministers seems to have impressed the Count greatly. Of Siberia's prospects he speaks in the highest terms. Even America struck him as inferior in that respect. He says that travelling by the Trans-Asian Railway is very comfortable, and that the trains go at a high speed. Mr. Carnegie told him that unless a man takes a pleasure in his work he can never do any good and that exercise is above all things essential. As a practical reminder of the latter precept the great capitalist sent Count Matsukata a present of a gymnastic machine. One comment of the Count's will not please Englishmen. He alleges that Hamburg's progress is much more striking than that of Liverpool.

HONGWAN-JI BELIEVERS COME TO BLOWS.

Saturday, Aug. 23.

Nothing remained for the Hongwan-ji disputants except to come to blows. That alone was needed to complete the disgrace that the whole story is bringing upon the great *Shin* sect of Buddhism. Accordingly, on the 20th instant a deputation consisting of over 200 persons proceeded to the temple and demanded an audience with Count Otani. They were told that the Lord Abbot was sick, but they announced their intention of remaining until an interview was granted, and with that object they seated themselves in the Daishin-in and produced dinner-boxes, the contents of which they began to discuss. Presently Mr. Atsumi, the Vicar, came out, and informed them that the Lord Abbot really was too sick to see them. What happened thereafter is somewhat uncertain. One account says that several of the deputation—which represented a new association called the *Aisan Yushi-kai* (Society of Lovers of the Temple)—sprang upon the Vicar, dragged him down and beat him. Another and more credible story is that Mr. Atsumi asked the deputation to appoint two or three delegates, as it would be hopeless to discuss with such a number as 200. This they did, and the discussion commenced. But at a certain stage Mr. Atsumi attempted to withdraw, whereupon the others caught hold of him, dragged him back, and proceeded to hammer reason into his head with their fists, a process which resulted in giving him a slight concussion of the brain. It is naturally predicted that this violent procedure will prove of much value to the Atsumi section and will correspondingly impair the reputation of the Ishikawa adherents.

Among the disciples of the *Shin* sect are many men of eminent piety and learning, as Mr. Nanjo Fumio, Mr. Kiosawa Mitsuyuki and others. It must be profoundly painful to these men to see their creed brought into such disrepute. They held a meeting in Kyoto on the 21st instant, and decided that, while approving of the constitutional reforms advocated by the *Aisan Yushi-kai*, all reforms on paper would be useless so long as the present rivalry continued between the Atsumi and the Ishikawa sections. No course was likely to be radically corrective unless these two men were removed from the scene. Therefore the "Scholars Section"—as Mr. Nanjo's followers are termed—proposed that the Vicarship should be given to some one wholly unconnected with either party.

The *fons et origo mali* in this business is that the Lord Abbot, Count Otani, is a man of most immoral habits. He distinguished himself so much by dissipation when on a visit to Paris that he drew upon his head a very stern rebuke from Prince Iwakura. His place of residence in Kyoto, Higashi Rokugo, is commonly spoken of as *fukumaden*, or *makutsu* (the palace of sleeping demons, or the den of demons), in allusion to the many fair enslavers it houses and to the evil carouses it witnesses. Yet there is no talk of deposing Count Otani. His office is hereditary. Whatever be the mental capacity of the Otani heir, he succeeds to the post of Lord Abbot. When, then, the Sect is cursed by the abbotship of a profligate, as is the case at present, no remedy offers except to segregate him; let him have his court and his revels apart, and contrive that his influence shall be excluded from the cabinet councils of the Sect. That is what the Scholars Party want to bring about now—the complete differentiation of court and

cabinet. Thus the situation is that there are three parties, two of them devoting their energies to displacing each other and the third seeking to oust both of them. We trust that the third will succeed. But since the Scholars Party are bent upon wholesome reform, why not aim their shaft at the abuse of parish sales also. With the history of the Church of England to look back upon, and its disposals of advowsons, we can not undertake to throw stones at the buying and selling of benefices in the Shingon sect. Nevertheless the thing is contrary to all ideas of clerical purity.

Monday, Aug. 25.

This affair goes from bad to worse. The prospect now is that the personal violence offered to Mr. Atsumi will provoke that leader's party into making disclosures fatal to several reputations. It is said that when the Atsumi board of management took over the accounts of the temple from the Ishikawa board, a deficit of nearly half a million *yen* was found. Any public investigation into the causes of this flagrant state of affairs, would have involved persons not connected with the Sect—evidently the reference here is to bribery and corruption on account of the Religions Bill—and consequently the matter was hushed up. But now that Mr. Atsumi is suffering from knobs on his head produced by the fists of Ishikawa assailants, his followers think that their mouths are unsealed. Meanwhile the Lord Abbot is said to have offered to dismiss his two mistresses if the *Shingon* believers will pay off the debts of the Temple. This we learn from the *Fiji Shimpō*. The fact is therefore credible. But, as our contemporary justly remarks, the effrontery of the offer is of a piece with the disgrace of the act. Count Otani, owing to his patent of nobility, is subject to the provisions of the Nobles Law. His name ought to be struck off the role of titled personages. Or, if that be thought too severe, he certainly should be removed from the headship of a sect which his association dishonours. There are few greater farces in modern history than the tenure of the post of Lord Abbot by a man leading such a life. One has to go back to the monasteries of mediæval Europe to find any parallel, and even then such shamelessness as Count Otani shows was exceedingly rare. The Home Department is said to have resolved that there shall be no official interference. Indeed one does not see what could be effected by official interference. The *Shin* Sect includes many pure-minded, able and learned men in its ranks. If they can not save the situation, officialdom would be powerless.

Mr. Atsumi's injuries will lay him up for a week. The list of wounds and bruises looks formidable, but their total effect does not inspire uneasiness. He and Mr. Ishikawa ought to step down. They are said to be very clever persons. All men who thus attain positions of prominence must be clever, for the matter of that. But these two vicars have risen to fame on the ruins of the cause they are bound to promote. Their intellect seems to work in the wrong direction.

THE TOKYO ARSENAL.

There are signs of disturbance in the Tokyo Arsenal. We alluded to this subject in a recent issue, but it was then believed that the trouble had been settled, the authorities having agreed to restore the men's pay to the original figure. The

account given at present is that a section of the men are seeking an increase and that a strike may take place. Their plea, doubtless, is the great appreciation of commodities.

It appears to be thought that the prospect of a fight between capital and labour is becoming imminent in Japan. The *Asahi Shimbun* thinks so, and thinks also that the thing is quite inevitable, and that the only sensible course is to devise means for depriving the conflict of unsightly features. At present, according to our contemporary's view, labourers are quite helpless. They have no unions nor any provision of money wherewith to support themselves if they go on strike. Thus the interval between them and capitalists is so wide that the latter have complete command of the situation. The remedy lies in the formation of unions, which will ultimately have the effect of placing the men in such a position as to win the respect of capitalists.

Underlying these remarks of the *Asahi* there is an obvious assumption that labourers in Japan are hardly treated at present. Is that so? The wages of labour have more than doubled in the last twenty-five years, and are still steadily going up. Without strikes and without any of the disturbances that often attend such phenomena in the West, the working man's position is improving in full proportion to any changes observable in his circumstances. Within the past twelve months there has been an upward movement in wages, and if foreign residents consider what monthly salary sufficed 20 years ago to obtain a tolerable Japanese translator and what monthly salary has to be paid now for the same article, he will agree with us that strikes and labour unions are not essential factors of adjustment as yet, at all events.

STREETS IN TOKYO.

A vernacular newspaper is much incensed against the Tokyo Municipality for deliberating about street-repairs instead of undertaking them. The Tokyo journal is quoted by an English local contemporary as affirming that "the repairs have never been done, the investigation in the matter having apparently absorbed all the energy of the authorities," and that "it will be of small comfort to the residents of Tokyo to learn that the Municipality has now declared that the work will be started in 1903 and spread over the following five years." That seems to us to be very unfair to the municipal authorities. As a matter of fact they have been carrying on costly and extensive works of road repair for several years. Their method has been condemned by some experts, on the ground that equally good results might be secured at a much smaller expense, and that the surface obtained has to be consolidated by traffic before it can be called satisfactory. Possibly such comments may be just, but there is no denying that grand roads have been the final outcome. Their durability remains to be proved, but even in that respect there is good promise, and as to their present quality, fault-finding would be surely captious. Altogether Tokyo has been immensely improved during the past few years. Widening, straightening and repairing have been effected in the case of so many streets that the aspect of the city is materially changed for the better.

CHINESE NEWS.

Saturday, Aug. 23.

It is reported from Tangku that on the 18th instant a collision occurred between a body of German troops and one of Japanese. The latter numbered 53, but the strength of the former is not mentioned. Neither are we told anything of the cause of the trouble. The fight is said to have lasted for 2 or 3 hours and the result was—no one injured! The public will be curious to learn something more about this remarkable contest.

On the following day another fracas occurred in a gin-shop between two Russian soldiers and some (?) Japanese. One of the Russians was severely wounded and one of the Japanese was arrested.

Monday, Aug. 25.

Later news shows that the fracas at Tangku was not between Japanese and Russian soldiers, as first reported, but between Japanese coolies and Russian police. The coolies, numbering eight, seem to have been under the influence of drink. Each side had two men injured.

The affair between Germans and Japanese is also explained. The story is that the officer commanding the Japanese garrison troops at Tangku, two officers of the Japanese navy and a gendarme were sitting in a restaurant when four German privates entered. The Japanese officers being in uniform the gendarme called upon the Germans to salute, but the latter declined, and in the altercation that ensued the Germans used beer bottles as weapons. The officer commanding the Japanese garrison force and the gendarme had their swords carried off, but it was apparently found impossible to identify any of the Germans.

News comes *via* Shanghai that there has been another murder of missionaries. The locality is Shinchau in Hunan, and the number of victims is two, apparently physicians, for the cause of their assassination is said to be a rumour that they were dispensing poisons. A clerk of the post office is reported to have been severely wounded at the same time. No further particulars are yet available.

Wednesday, Aug. 17.

The *Asahi Shimbun* publishes a telegram to the effect that Boxerdom has raised its head again on the north of Peking, in the Shung-i district. The number of insurgents appears to be small, but numerous fugitives are said to be flocking to Peking.

Mr. Nakajima, of the Dobun Shoin in Peking, came to Japan in company with Mr. Wu Ju-lung for the purpose of engaging Japanese to teach in China. He has procured eight, who leave Moji with him by the *Sagami Maru* on the 28th instant.

It is stated that the recent murder of the two English missionaries in Hunan was the result of evil rumours spread by a woman in connexion with the prevalence of cholera in the district. The British Consul at Hang-kow and a member of the China Inland Mission have started in the gunboat *Snipe* for the scene of the disaster. They will be joined by the Governor and the Taotai of Hunan. Three officials have already been dismissed in connexion with the affair.

The endlessly weary question of the intramural railways has a remarkable faculty of developing new features. Some time ago France was reported to have claimed

that unless she obtained a special guarantee about the building of the Tientsin-Paoting line, she could not consent to the restoration of the Shanhaikwan-Newchwang road. The construction of a line from Tientsin to Paoting would convert the Chili railways into a triangular system, Peking being the apex and Tientsin-Paoting the base. This difficulty has been settled, it is said, by a pledge from China that unless she builds the Tientsin-Paoting railway herself, the work will be entrusted to the Lu-Han Syndicate. But now another difficulty has arisen. It appears that Russia built a little bit of line, some 900 metres in length, from Shan-hai-kwan to a point in the Great Wall, the purpose of the construction being to aid in dealing with the Boxers. She regards this fragment of road as her own, her very own little offspring, and she wants to have it specially treated. So at least says the *Jiji Shimpō's* Peking correspondent. Where this 900-metre railway lies, we cannot clearly discover. The Shanhaikwan-Newchwang road already runs to the Great Wall, touching it at Ching-wan, and it has not been publicly stated that any additional branch was built within that interval. The story is difficult of credence.

One thing is certain, namely, that if China distrusted Western Powers as much as they distrust one another, business would move slowly. Another thing certain is that arrangements such as that said to have been made about the Tientsin-Paoting road must eminently conduce to prevent the building of railways altogether. For if China has to choose between one of three things, building a line off her own bat, entrusting the construction to a foreign Power or doing without the line altogether, she is very apt to choose the third.

Thursday, Aug. 28.

The *Asahi Shimbun* publishes a London telegram to the effect that the French Government is contemplating the establishment of a Far-Eastern naval station in Kwangchou Bay, and that the cost is estimated at 1¼ million pounds sterling. Kwangchou is at the northern extremity of the island of Hainan. The steam-ship route from Haiphong to Hongkong and Canton passes through the narrow strait separating Hainan from the mainland, so that a naval station at Kwangchou would effectually command the road. It seems natural enough that France should desire to safeguard her lines of communication, provided that China's rights and wishes are not consulted. But China has been reduced to the condition of a *corpus vile* for every nation to experiment on.

KOREA.

Tuesday, Aug. 26.

In connexion with the celebration of the 40th anniversary of his coronation the Emperor of Korea is said to have decided to introduce the brigade system in the army of his realm. That means, we presume, that a Korean *corps d'armée* will henceforth consist of a brigade, whereas hitherto the fighting unit has been a regiment. It is not a matter of great importance to the world what kind of military system Korea adopts. She does not get credit for being earnest about military matters, but if she is really developing self-defensive capacities, the fact is of much interest.

The Sōul-Fusan Railway Company has at length obtained possession of the area—2½ acres—required for building the Sōul

terminus of its road. This has been a long-delayed and troublesome matter, and the very scanty dimensions of the land indicate the difficulties that have been experienced. It is plain that within an area of only 2½ acres the Company can scarcely think of erecting workshops. All operations of repair and construction will probably have to be undertaken at Fusan. The land is outside the southern gate of the city.

Thursday, Aug. 28.

The *Chino Shimbun* says that one of Baron Shibusawa's main purposes in going abroad was to negotiate a loan for the Sōul-Fusan Railway, but it appears that the Baron has been unsuccessful, British capitalists not considering the security good enough. That result was to be feared. The Sōul-Fusan Railway, though it will probably prove a paying concern, presents peculiar political features not likely to be viewed with satisfaction by capitalists.

Mr. Kato Masuo's office in Korea has at length been definitely settled. He is appointed adviser to the Department of Agriculture, Commerce and Industry. It may be presumed that the post satisfies him. He will be brought into quite sufficiently close contact with the Government.

THE OSAKA GAS COMPANY.

Several of our local contemporaries have taken up the question of the Osaka Gas Company, and are agreed that it must be interpreted as a deliberate attempt on the part of the municipality of that city to discriminate against the foreign capitalist. The facts are easily stated. Originally the Gas Company was organized with a capital of 350,000 *yen*. Having worked successfully on that narrow basis, it desired to extend operations, for which purpose it increased its capital to some four million *yen*, making arrangements to obtain half of the amount from an American capitalist. At this point the municipality stepped in. It claimed that although the Company's charter had been granted originally without any provision for the payment of a tax to the city, that indulgence was based on the insignificant character of the Company's capital and the small extent of its field of operations, but that since a large extension of both was now contemplated, a condition should be imposed that, after paying a certain dividend to its shareholders, the Company must hand over to the city a fraction of any remaining profits. It may be mentioned, *en passant*, that such an arrangement is common in the Occident, and that it has been made in the case of all recently granted charters in Japan. Thus the Tokyo electric railway companies are required to hand over to the Municipality one-third of any net profit remaining after a dividend of 7 per cent. has been declared and after due amounts have been carried to reserves. The equity of the condition is evident, for if a municipality grants to a private company the privilege of carrying on a valuable enterprise which might reasonably be undertaken by the city itself, and which involves the use of the streets, it is plain that the citizens at large should not be deprived of all the resulting advantages: they may reasonably expect the Company to contribute something to the upkeep of the town. Nevertheless, the statement of this claim elicited from more than one foreign local journal vehement condemnation, and an emphatic declaration that the Osaka municipality was swayed by a desire to take money out of the foreigner's

pocket, and that had the company remained purely Japanese, no such demand would have been made. The publication of such suspicions seems to us very regrettable. They are obviously prompted by the very racial prejudice which they so readily detect in others. Tested by the now generally recognised rules of political economy, the demand made by the Osaka Municipality is altogether proper. But whether it has a legal right to make such a demand is another question. Apparently the Gas Company's original charter contains no such provision. On the other hand, we can scarcely conceive that the charter has an unlimited coefficient of elasticity. It must have been granted, in the first place, with reference to the gas supply of certain fixed districts, and the present large increase of capital doubtless means a corresponding extension of operating area. If it does mean that, then a reasonable conclusion is that the charter requires amendment, and in sanctioning a change, the Municipal Authorities would seem to be justified in imposing a new condition. If, however, the development of capital and the enlargement of scope do not involve any alteration of the charter, then the Municipality is not legally justified in the course it is adopting; though as to the Company's wisdom in defying public opinion and refusing to shoulder a strictly equitable obligation, there can not be any second opinion. Without legal right on its side the Municipality is powerless, and that legal right will be enforced by the Home Department if appealed to, no doubt can be entertained. Meanwhile such mischievous writing as that of the *Kobe Chronicle* on this subject can not be too strongly denounced. "Had the Gas Company," says our contemporary, "remained a Japanese undertaking entirely, nothing would have been heard of such a condition. * * * The attitude of the Osaka Municipality in this matter affords a vivid illustration of the difficulties and dangers which surround the introduction of foreign capital under present conditions." The truth is that were the municipality's condition imposed on the Company, the latter would be in exactly the same position as are other purely Japanese companies recently organized. It would appear that the Kobe journal, if only it can say something injurious to Japanese character and reputation, is quite indifferent about the mischief its writing may do to the development of the country and therefore to the interests of the foreign community.

FORMOSA.

The *Jiji Shimpō* has a telegram from Taipeh saying that on the 26th instant the stronghold of the rebel leader in the Nansho district was captured and destroyed by a Japanese punitive battalion. This stronghold appears to have been exceedingly difficult of access. It had never previously been approached by a hostile force. Surrounded by a dense forest, with every recess of which the insurgents were familiar, the trees so thick that objects could not be discerned at a distance greater than 20 or 30 metres, no method taught by the science of modern warfare could be employed for attacking the place. Nothing has yet been published as to the plan adopted by the Japanese soldiers, but they seem to have experienced great difficulty and to have been exposed to imminent peril. The *Jiji* says that the manœuvres practised will be published for future guidance. The casualties on the side of the assailants are not mentioned.

PRINCE KOMATSU.

Saturday, Aug. 23.

Prince Komatsu arrived on the 21st at Port Arthur, where the *Yakumo* and *Tokiwa* awaited him. His arrival was saluted by the Russian vessels as well as the Japanese. It is expected that Prince Cyril will meet him at Port Arthur, but as the Russian Prince did not leave Yokohama until the 21st we do not see how the two high personages can come together on the Liaotung peninsular. Probably Kobe will be the rendezvous.

Wednesday, Aug. 27.

His Imperial Highness Prince Komatsu landed Tuesday at Kobe where great preparations had been made to receive him. Count Matsukata, also, who accompanies the Prince, had a warm welcome.

Japanese newspapers state that another Russian Grand Duke is expected at the same time as Prince Komatsu, but we believe the rumours to be unfounded.

The *Jiji Shimpō* has a complimentary article about the Prince. It speaks in warm terms of the welcome given to His Imperial Highness in England and declares that the object of his travels has been amply achieved.

Thursday, Aug. 28.

Prince Komatsu had a warm reception at Kobe, a triumphal arch being erected on the hatoba, and the usual salutes being fired by ships of various nationalities, German, American, Russian and Japanese. The Prince went on to Kyoto the same afternoon, with the intention of passing two nights there. His Imperial Highness will rest at the Mishima detached palace also, so that his arrival in Tokyo will not take place until the 30th instant.

It appears that the Prince performed the journey from Moscow to Port Arthur in 15 days, never changing carriages once. Of course the railway authorities did their best to expedite matters, but the solid fact remains that the journey is possible in a fortnight. Thus at last we are within three weeks of London. With a holiday of three months one can now spend—or will very soon be able to spend—six weeks in England. We should all be extremely grateful to Russia.

Japanese papers say that the Prince and his party met with the utmost courtesy and helpfulness from all Russian officials *en route*. That goes without saying. No one can be more genial or obliging than a Russian. At Port Arthur, where the train arrived on the 21st instant, there is as yet no permanent railway station—only a hut and fence. The Prince was met by the commander of the Russian forces and by all the high officials, who accompanied him to the wharf where he embarked at once in the *Yakumo*. The following day His Imperial Highness entertained the chief Russian officials at luncheon, and that evening he set sail for Japan. The climatic conditions were most favourable and the whole trip seems to have been a great success.

MR. WU JU-LUNG.

Mr. Wu Ju-lung, after his residence of over two months in Tokyo and his careful examination of the educational system in this country, is represented as having expressed great satisfaction. He finds that Japanese students are really working in the path of progress, and he would desire to see precisely the same system introduced into

China. But China is not yet ready for it. She lacks the necessary materials. Mr. Wu's idea is, in the first place, to organise a normal school where teachers will be prepared. He has already in view some two hundred students possessing all the necessary qualifications for such a school, and he hopes to start it immediately on his return to China.

Of course there is nothing for it except to begin as Mr. Wu intends to begin. But there is one thing we should like to say to him. Our experience of Japanese students dates from the year 1867. They were grown-up students, it is true, but they were students none the less, and what we have to tell of them applies with equal accuracy to all the students subsequently known to us, be their years many or few. Those students of 1867 were absorbed by one idea: an idea that informed all their thoughts and influenced the whole tenor of their lives—the idea of helping their country to recover the ground she had lost by seclusion. They did not pause to rebel against the disfavour into which the ancient learning of their own nation had fallen. They saw only that a new learning presented itself—a learning capable of producing great results—and they set about acquiring that learning without a moment's delay because without it Japan must remain in the rear of the nations. Is there no way of arousing that spirit in China? Folks speak of Japanese statesmen and of the great things they have done for this empire. They could have accomplished little of a permanent or really far-reaching nature, without that admirable product of modern Japan, the indomitable, indefatigable student.

Mr. Wu has noticed a point which has long forced itself upon our own attention, the unsuitability of the Chinese system of morality for making a quick appeal to the hearts of the young. The Trimerical Classic, the Millenary Classic and the Canons of Filial Piety contain beautiful codes of ethics, but they are for matured intellects rather than for children. Something simpler and more direct is needed. In that respect Mr. Wu finds the Japanese system much to be preferred.

"THE JOURNAL OF THE AMERICAN ASIATIC ASSOCIATION."

In connexion with the recent recrudescence of the house-tax discussion there has been published an extract from the "The Journal of the American Asiatic Association." Reference is made in it to the *Japan Mail*. A deputation of United States residents of Yokohama who waited on the American Minister, quote His Excellency as stating that he had written to the editor of the *Mail* pointing out that a certain statement in our columns was "without foundation." That is not correct. In fact it is exceedingly incorrect. Had the Minister made any such emphatic denial, we should have noticed it publicly. His Excellency's suggested correction was by no means of so radical a character, and as our information, derived from sources independent of the United States Legation, deserved full credence and was believed by us to be substantially correct, we saw no occasion to publish any modification. The United States Government, having been subsequently approached by Lord Pauncefoot, was induced to express a hope that the scope of proposed arbitration would cover the whole question in dispute, but it nevertheless maintained its attitude of abstention from taking part in the arbitration.

We are not surprised that the members of the deputation should have been guilty of some inaccuracy as to the exact words of documents read to them by the United States Representative. For they were guilty of a much more flagrant lapse of memory. Forgetting, so soon as they crossed the threshold of the Legation, that the above communication was made in confidence and that its non-publication was distinctly stipulated, they proceeded at once to publish it *urbi et orbi*.

It is interesting to observe how the sense of logic of the members of the deputation plunged them into the very difficulty often pointed out by us to those who insist upon refusing to apply to the word "property" in the treaties the limitation prescribed by the treaties themselves. "The property-owners are convinced that they are entitled to exemption under the terms of the Treaty from any tax, impost, levy or condition whatsoever other than those which are required by the leases themselves," say the members of the deputation. Exactly. Without pausing to inquire how "property-ownership" can be derived from a "lease," we agree entirely that from the moment when the "property" mentioned in the treaty ceases to be, as there explicitly defined, the property held under the leases, and becomes property in its generic and unrestricted sense, from that moment the fine, wide, all-embracing proposition of the members of the deputation stands incontrovertible. If the "property" exempted from any payment except land-rent be not merely the land leased but other property also, then our incomes, our business, our carriages, our horses, our bicycles, and our jinrikisha are all legally exempt from taxation. It is splendid. Perhaps we may yet revert to the piping times of ante-revision.

ODDITIES OF ARGUMENT.

Some months ago, when the house-tax discussion was in full blast, we alluded to the reasonable contention that much importance attached to the intentions of the framers of the treaties. If they deliberately intended to exempt foreigners' houses from taxation, then, however misleading the actual wording of the treaty, there would be a case for exemption. We mentioned, at the same time, that the Japanese negotiators were known not to have entertained any such intention, and we added that almost equally conclusive knowledge might be derived from the form in which the celebrated clause was originally drafted by the British negotiators. That form was:—"When such incorporation takes place, the existing leases in perpetuity under which property is now held in the said settlements shall be confirmed, and no increase of rental nor any additional charges or other conditions whatsoever shall be imposed in respect of such property." No careful reader, it seems to us, can find in these words an intention to protect anything but the rental; in other words, the land. The rental mentioned in the leases, which rental is levied on the land only, was to remain unchanged, nor was the property—necessarily the land, since the rental is spoken of—to have any additional charges imposed on it. The *Kobe Chronicle*, at this eleventh hour of the day, has discovered the above form, but failing altogether—none so blind as those that will not see—to appreciate its significance, goes on to say, "what appears perfectly clear from the

Blue-book is that the Japanese Government or its plenipotentiary was perfectly aware that in exempting household property in the Settlements from any varying of the conditions, &c." "In exempting household property!" How sweetly the whole question is begged. There is not one solitary word in the Blue-book to show that "household property" was in the mind of the Japanese negotiator, and there are very plain words to show that it was not in the mind of the British negotiator. Yet the *Kobe* journal calmly talks of what the Japanese Plenipotentiary was aware of when he exempted household property!

That is not the only evidence furnished by the Blue-book as to the British negotiator's intentions. "In the course of the conversation that ensued," says the *Kobe Chronicle*, epitomizing the Blue-book, "Mr. Bertie pointed out it was important to distinguish the general land ownership question from the ownership of real property in the Settlements, and said that some effectual guarantee should be given against the disturbance of existing rights!" Here, again, we have Mr. Bertie speaking still more unequivocally of land and of land only. And there is yet plainer evidence:—

Mr. Bertie, acting for the British Foreign Office, asked in an interview which he and Mr. Gubbins had with Viscount Aoki on the 2nd April, 1894, "what Japan was prepared to give in return for the numerous and important concessions sought from Great Britain," and he further complained that "each successive stage of the long negotiations which had passed on the subject of Treaty Revision had been marked by the fact that Japan on each occasion asked for more and offered less," referring especially to the withdrawal from foreigners of the right to own real estate which had been conceded in previous negotiations.

Mr. Bertie then proposed the insertion of the above clause about rental, and eventually the Japanese Government's amendment was accepted, namely, the Article as it now stands. Thus we have proof almost as conclusive as proof could be that the one and only thing in the minds of the negotiators was land, and that the Article was framed solely with reference to land. "Hitherto," said Mr. Bertie in effect, "you have always been willing to grant to British subjects the privilege of owning land. You now withdraw that privilege. Give us, then, by way of partial equivalent, an engagement that our tenure of settlement lands will never be disturbed nor the charges on account of them increased." To which the Japanese Government consented.

The *Kobe Chronicle* sees the matter in quite a different light. It thinks that a much larger concession was made by Japan. It thinks that although Viscount Aoki spoke clearly of "the rights of the lease-holders being carefully defined by the title-deeds," which do not say a word about houses, he nevertheless intended to include houses when he drafted the article about "property held under the leases." And it thinks, further, that the British negotiators intended exemption from house tax to be an equivalent for the other concessions which Japan had once been, but was no longer, willing to make. If that were so—and certainly to imagine it in the face of the context quoted above requires extraordinary credulity—, if that were so, Mr. Bertie and the British negotiators must be accounted the most careless drafters of a treaty that ever existed. They would not take the trouble to put into unequivocal words even the one important concession gained by them, but were content to leave it in a form such that

the significance they meant it to carry can be read into it only by a stretch of the most benevolent imagination.

CHOLERA.

Monday, Aug. 25.

The following return of Cholera cases for the whole empire since the commencement of the epidemic, is officially published:—

	Patients.	Deaths.
Tokyo	5	4
Kyoto	14	2
Osaka	96	5
Hyogo	12	6
Nagasaki	90	31
Shimane	5	?
Okayama	1,268	783
Hiroshima	2	?
Yamaguchi	90	1
Wakayama	1	?
Tokushima	1	—
Kagawa.....	606	?
Yehime.....	39	?
Fukuoka	671	372
Oita	12	4
Saga	88	53
Kumamoto	12	4
Formosa	213	133

The totals are 3134 cases and 1395 deaths, but the latter figure is obviously partial.

Tuesday, Aug. 26.

Saseho has had 11 cases of cholera since the disease first made its appearance there. On the 24th instant there were two new patients.

Osaka reports 22 cases on the 24th, bringing the city's total to 254.

At Bakan (Shimonoseki) the epidemic seems to be specially virulent. There were 28 seizures on the 24th. Moji, on the opposite side of the strait, had twelve cases on the same day, and there are no signs of any diminution.

Owing to the occurrence of two fatal cases of cholera in Sasebo on August 23rd the Naval Authorities there prohibited the landing of crews from war-vessels stationed in that naval depot. A council of Commanders of warships was at once convened and it was resolved that all the vessels on the station should be removed to another port.

THE CHINESE STUDENTS.

Monday, Aug. 25.

The Chinese Minister has addressed an admonition to the students in Tokyo. It is a powerful and cleverly composed document. His Excellency points out that if students have any legitimate cause of complaint, the way to prefer it is to send a deputation duly charged to speak on behalf of the whole. When, instead of adopting that course, students flock to the Legation in large numbers on two consecutive days, behave with great rudeness, resort even to violence and refuse to leave the precincts, they place their case in a category entirely apart from reason and moderation. The Minister has never been careless of their interests. It was impossible for him to do more than he did. They had been asked to await the return of Major-General Fukushima, and they might have done so without any inconvenience. Their display of vehement impatience was doubtless due to the influence of prejudiced and passionate leaders. Indeed, the Minister, so far from treating them with callousness, was disposed to condone their offence. He actually intervened to prevent the expulsion of some of their number from the Seijo-Gakko, where their conduct in taking part in such a demonstration was strongly reprobated. China is in great trouble at present. She has need of

able men, and, appreciating her need, she is making efforts to educate her youths in a wider range of learning and experience. These lads who allowed themselves to be betrayed into unseemly demonstrations, are placing obstacles in the path of their country's salvation. They may imagine that they did a fine, manly thing in creating a disturbance and proclaiming their supposed grievances from the house-top. But that is not the view that responsible men in China will take. Their view will be that such undisciplined youths can not be trusted to live in a foreign country or to attend foreign schools, and the result will be a serious check to the policy of education abroad.

Friday, Aug. 29.

The troubles of the Chinese students have been settled by the intervention of the *To-a Dobun Kai*. What has been arranged is that the Chinese Minister's guarantee shall not be necessary any longer to secure admission to a public school not under the direct control of the Department of Education. The guarantee of the *Shina Kaikwan* will suffice. The *Shina Kaikwan* is a species of Chinese Club in the Kanda district of Tokyo. Among its members are men who have been sent hither from China to superintend the studies of the youths. The president of the Club, or the "chief manager" as he is called by Japanese papers, seems therefore, an altogether appropriate person to give the required guarantee. In the case of students already studying in Japanese schools, it is further provided that in order to pass from one school to another, the guarantee of the school where the youth has hitherto been studying shall suffice. The schools failing under this category are the *To-a Shogyo Gakko*, the *Kobun Shina*, and the *Seijo Gakko*.

"MANNERS MAKETH MAN."

It is a curious comment on the manners of the modern journalist that Lord Esher, late Secretary of His Majesty's Board of Works, found it advisable to post the following notice in Westminster Abbey in the places allotted to journalists admitted to witness the ceremonies of the Coronation:—

REMEMBER

The sacred building in which you work.
That the Abbey is the heritage of every one of you as Englishmen.
Therefore you are earnestly asked to be reverent in your demeanour and careful of the fabric and monuments.
If there is any one of you to whom these considerations do not appeal please respect the feelings of your companions.

It is not so many years back that journalists wore worthily the proud title of "gentlemen of the press." With the inseting of the new current of cheap journalism, however, a new set of workers seems to have been attracted to the calling who pride themselves on being "pressmen." With the change of name has come a change of manners and the change is not for the best evidently.

THE BUDGET.

Viscount Yoshikawa is represented by the *Chuo Shinbun* as explaining that the Budget for next year is now under serious consideration. As to the financial arrangements for 1903-4, there is, of course, no difficulty. But provision for future extraordinary outlays is another question. Among those outlays the third programme of naval expansion takes a leading place.

The Ministers are pretty well agreed as to the necessity of the step, but they doubt whether circumstances will permit immediate action.

A rumour has been recently circulated to the effect that the Cabinet has decided to ask the Diet's permission for extending to foreigners the privilege of owning land. Viscount Yoshikawa denies that. What the Cabinet has discussed and decided is merely the immediately pressing question of the hypothecation of railways as security for foreign loans.

NOTES ON CURRENT EVENTS.

We read in the *Chiugai Shogyo* that importations of iron ore from the Taiya Mine have been suspended. There is an accumulation of twenty thousand tons already at the Wakamatsu Foundry, and such an amount would suffice—it is stated though we find difficulty in believing it—for a year's working of the Foundry, even if the smelting furnaces were in full operation. But the smelting furnaces have to be suspended, and further arrivals of Chinese ore must therefore be stopped, which means that the two cargo steamers *Wakamatsu Maru* and *Taiya Maru*, will have to be laid up or employed for some other purpose. The only ore received for the present will be that from Kamaishi. It is a pity that this Wakamatsu Foundry can not quietly take a back seat. The less the public hears of it at present the better.

Professor Hattori Unokichi has accepted the post of principal teacher in the Peking College and will start with his family on the 30th instant. Professor Hattori is the adopted son of the celebrated Chinese Scholar, the late Mr. Shimada Chorei. He was studying in Peking at the time of the Boxer outbreak, and he went through the siege.

Hokkaido reports that on the 9th instant the climate developed October-like cold. Snow fell on Shiribeshi mountain, and there were evidences of frost in the low lands. It was just then that we folks in Yokohama and Tokyo were also beginning to wonder at the arrival of an untimely autumn. Now, however, we are sweltering in heat. It reminds one of the desert traveller in "Magnell's Questions"—one moment perishing of thirst, the next in danger of drowning.

Prince Cyril, before leaving Japan, sent handsome presents to the station masters at Shimbashi and Yokohama—a pair of massive gold sleeve-links to the former and a diamond breast-pin to the latter.

News telegraphed to the *Hochi Shinbun* is to the effect that the mountain Rijiri—commonly called *Kitami no Fuji*—has erupted 5 or 6 large blocks of lava and that the whole of Rijiri Island was shaken by an earthquake. The inhabitants are much alarmed.

It is announced from London that, according to the Japanese Representative in Washington, Japan has not the least intention of asserting any claim to Midway Island or Wake Island. Except for purposes of cablegraphy America also is probably quite as indifferent about the fate of these islands, one of which seems to be a kind of harlequin land, which has a trick of disappearing when least expected to do so.

The weather is creating much conjecture. There is a line of high barometer from Echigo to Sendai, and an area of depression

from Kamchatka to Formosa. Such a state of affairs is often seen at the time when winter passes into spring but at this season it is very unusual. Wise people say that until we have a big atmospheric disturbance, there can be no really fine weather. Under any circumstances there is little expectation of a spell of genuine summer heat. Autumn, these prophets say, is steadily setting in.

As to the rice-crop, the experts of the Agricultural Experimental Station in Tokyo say that there is no great cause for alarm. There may be a total deficit of 15 per cent., as compared with an average crop, but that would mean only some 5 millions of *koku*. This consolatory forecast does not appear to be generally endorsed.

Of the two torpedo-layers which ran ashore recently at Naka-no-minato one was floated off successfully on the 24th instant and proved to be little injured. The other, it is expected, will be floated very shortly.

THE BOOKSHELF.

Ars Vivendi: by ARTHUR LOVELL. London, Arthur Lovell; Yokohama, Kelly & Walsh, Limited. Fourth edition, price *yen* 1.50.

It is not surprising that this, the first of the four works constituting the *Ars Vivendi* Series, should have run into a fourth edition. Five chapters have been added, the nature of which will be sufficiently indicated if we name them: "Breathing," "Physical Culture," "Transference of Nerve-energy and Suggestion," "Vril and Individual Influence," "Symbology of the Developed Man and the Coming Race." We are tempted to quote from the introduction the following:—

Health is not a matter of chance but a question of understanding of the law. And in this lies the safety of the individual. * * * Living is an art that must be learnt and practised. It is the art of arts. A fine life is a much better object to contemplate than a fine picture or a fine statue. It requires infinitely greater skill to live properly than to draw properly. And yet how few have ever given this a single thought! With no more back-bone than the jellyfish, human beings float on the tide of circumstances never dreaming that, as Goethe said, "In this sea of time the rudder is given into the hands of man in his frail skiff, not that he may be at the mercy of the waves, but that he may follow the dictates of a will directed by intelligence." The immense majority not only start life with wrong ideas, but go to their graves intellectually blind and deaf, bungling hopelessly, blaming everybody and everything but the right ones, not even suspecting that they have only themselves to find fault with. * * * In every instance of ill-health—accidents, of course, being out of the question—the individual himself is chiefly, if not entirely, to blame.

For the author's methods of leading the individual from a condition of weakness, pain and ill-health, to a state of bodily and mental strength, we must refer our readers to his book, with this comment that while there is much in it with which it will not be easy for some people to agree, there is a great deal of valuable and instructive information.

LAWN TENNIS.

In the final game for the Tennis Singles of the Y. C. and A. C., played in lovely weather on Wednesday, the play was not of a very high order and H. R. Barnard won rather easily from Sidney Wheeler, the score reading 6-2, 7-5, 6-4. Neither player was up to "standard," but the best man won.

Mrs. David Jackson, in a graceful speech, presented the cup to the winner, who, after replying, called for three cheers for Mr. and Mrs. Jackson, which were enthusiastically given.

The Doubles Handicap is well under way, several games having already been played.

COUNT ITAGAKI AND MR. KATO TAKAOKI.

THE calm that has long prevailed in the political world has been disturbed by Count ITAGAKI. He has addressed to Mr. KATO TAKAOKI a very strongly worded letter, denouncing his acceptance of the Kochi electors' invitation, and declaring that his, Count ITAGAKI's, moral responsibility to the public compels him to openly condemn such a proceeding. The letter commences by saying that whereas Mr. KATO positively refused to become a candidate for election when approached by Count ITAGAKI, and whereas the reason assigned by him for refusing holds good to-day just as it held then, he has nevertheless accepted the result of the election. Mr. KATO, says the Count, declared originally that no member of the House of Representatives could be said to discharge his functions properly unless he considered the local interests of his constituency, and consequently, since he had no knowledge whatever of Tosa and its affairs, he considered himself lacking in an essential qualification. Therefore he had no choice but to decline. Nothing has changed since that time, according to Count ITAGAKI's view, except that Mr. KATO has been duly elected. The fact of his election does not remove the disqualification which made him refuse to be a candidate. Thus the Count openly denounces him.

It is evident that Count ITAGAKI is exceedingly angry, so angry that his reason has become temporarily clouded. The simple facts of the case, as viewed by outsiders, are that whereas Mr. Kato could not undertake to represent Kochi if his return involved attention to parochial interests of which he had no knowledge whatever, there was nothing to prevent his accepting a seat offered to him with explicit disavowal of all such obligations. It was not for him to say originally: "I have no local qualifications, but if you choose to elect me as I stand, I will be your member." Such a form of speech would have embodied a covert appeal for election. His plain straightforward course was to decline to be a candidate since he lacked some of the ordinary essentials for candidature. But to decline the acceptance of a seat offered to him by a majority of an electorate, the offer being explicitly accompanied by absolution from all parochial responsibilities—that is a wholly different affair. We ourselves think, and have always said, that Mr. KATO would have better consulted his own interests had he stood aside altogether from such a political welter as Tosa politics are at present. But as to his having acted inconsistently, or as to his conduct having in any way justified the charge of insincerity preferred by Count ITAGAKI, we do not think that any impartial observer can endorse such views.

It is Count ITAGAKI himself that we find enigmatical. Reports agree that his original proposal to Mr. KATO was accompanied by conditions requiring Mr. KATO definitely to join the ranks of the *Seiyun-kai* and to be-

come a member of the Kochi Committee. By whom was Count ITAGAKI commissioned to make this proposal? Presumably by the electors of Kochi. When, then, he received Mr. KATO's refusal, it can not be doubted that he informed the Kochi electors of the fact. He himself believed the refusal to be definite and irrevocable. He says so. Therefore he must have so informed the electors. But, apparently, the electors paid no attention to him. Apparently they understood the distinction noted above—the distinction between agreeing to become a candidate with all the usual responsibilities, and agreeing to be an elected member explicitly absolved from such responsibilities—although Count ITAGAKI failed to see it. Then follows the question, if Count ITAGAKI was convinced, as he says he was, of the finality of Mr. Kato's refusal, why did he allow the Tosa electors to vote for Mr. KATO? There are folks who say that Mr. KATO, by not interfering to prevent the election, must be held to have tacitly consented to abide by its result. What do such persons say of Count ITAGAKI's having allowed the election to proceed? If he believed, as he declares he did, that the choice of Mr. KATO would be futile, why did he not prevent the Tosa franchise-holders from casting their votes into space? He is represented as saying that he does not pretend to have any connexion with the Reform Section in Tosa who elected Mr. KATO. Strange, surely, that the politicians he thus disavows should have defied him by electing the very man whom he himself had originally approved!

Much as we admire Count ITAGAKI's fine career, his brave efforts in what he regards as the cause of freedom, his life of unswerving integrity and his conspicuous ability, we can not choose but say that at this juncture he seems to have yielded to petulant jealousy. His real grievances appear to us to be that whereas Mr. KATO refused to be persuaded by Count Itagaki, he allowed himself to be persuaded by a body of electors, and whereas the Kochi constituency entrusted Count ITAGAKI with the task of finding a distinguished candidate for them, they ultimately voted in defiance of Count ITAGAKI's assurances. We frankly admit that those are two bitter pills, but the malady they indicate is not prevarication on the part of Mr. KATO; it is debility on the part of Count ITAGAKI's influence. "The slow sad years" bring evils but do not always bring resignation.

THE QUESTION OF JAPANESE EMIGRATION.

IT appears to us that some misapprehensions prevail with regard to Japanese emigrants. The *Japan Herald*, writing on this question, says:—"The Japanese emigrants have no idea of changing their nationality or adding to the wealth of the country to which they emigrate. In very few cases do they become absorbed into the people they live among, and although very often, it may be, their hopes of returning to

their own country are frustrated, yet the feeling that they are only sojourners in the land is always with them. The very fact tends to prevent the Japanese emigrant being held in high esteem." Now as to the general question of an emigrant's intention or hope when he leaves his native country, whatever that country be, we should imagine that out of a million emigrants there is not more than one, if even one, who does not look forward with fond anticipation to the day when he can bid adieu to the land of his exile and return once again to the fatherland. The Japanese emigrant is not singular in that respect. Even in the case of Englishmen going to Australia, which may justly be called a second England, being peopled by men of British birth and enjoying institutions and laws similar to those of England, the hope is to get back, some time or other, to the always loved island. Is there a solitary British subject in the whole breadth of China and Japan, is there a solitary British subject in any part of the world outside the British colonies, who would not sacrifice one half of his belonging for the sake of returning to live in England, if the remaining moiety sufficed to support him? Japanese subjects must be supposed to have the same sentiment, not more of it than Englishmen have but probably not less. Surely it is extremely misleading to talk of them as though the practical results of the feeling differentiated them from other peoples. The truth is, if the truth, as usual unpleasant, must be told, that this view expressed by our contemporary is purely subjective. It is merely a reflection of the Occidental's racial sense that no Japanese can become a veritable member of a Western community. The presence of that conviction on the part of the Occidental, not the absence of the desire on the part of the Japanese, is at the root of the trouble. So far as actual results are concerned, they do not indicate the spirit affirmed by the *Japan Herald*. The Japanese in Hawaii, the Japanese in Korea and the Japanese in Thursday Island may justly be said to have settled there as permanently as European or American immigrants would settle under similar circumstances. They would settle down similarly in South Africa or in South America. Superficially, the case of the Chinaman is different, for whereas the Japanese immigrant in a foreign country adopts the costume and fashions of his new home, and endeavours in every way to obliterate the differences between himself and the people among whom he lives, the Chinaman retains his peculiar costume, his striking coiffure and his "olo time" manners and customs. A recent author has declared that the retention of the *queue* by Chinese residents in the Straits Settlements shows how completely they have become reconciled to this "badge of servitude." It shows nothing of the kind. It shows simply that they hope to go home when they have made their pile.

To cut off the *queue* would be to ostracise themselves permanently from Chinese society, and the much abused Chinaman loves his own dear country and wants to live there just as much as do the leaders of the "foremost files of time." So long as China retains her eminently distinctive costume, *coiffure* and customs, her emigrants to foreign lands must always carry about with them plain evidence of their *animus revertendi*, but beneath the surface they are probably just the same as other emigrants. The Japanese, however, labour under no such disadvantage. When they settle in a Western country they quickly become absolutely indistinguishable from many elements of its permanent population. Our local contemporary's argument, if carried into practice, would mean that the Japanese should for all time abstain from emigration and remain enclosed within the narrow bounds of their islands. That is farcical.

THE POINT OF VIEW.

AN acquaintance of ours makes a point of never buying a book unless it is "slated" by the reviewers in the London weekly journals. It is a very workable theory to proceed upon, but we wonder what he would do if he had to make up his mind whether or not to add to his library Mr. CHARLES OMAN's new book, "Seven Roman Statesmen of the Later Republic" recently published by Mr. ARNOLD. This volume has had a very mixed reception in the English capital, ranging from a particularly warm welcome at the hands of the *Spectator's* reviewer to a complete damnation by a writer in the *Academy*. Says the *Spectator* :—

We welcome Mr. Oman's eloquent and lively book, not merely for its own merits, but because it carries us back to the good old days when heroes still kept a place in history. For many years we have heard so much of popular tendencies, racial characteristics, political developments, that it has seemed as if personality counted for nothing. But as Mr. Oman well says, "the blessed word 'evolution' will not account for everything," and though the anecdotic style of history may have had its faults, the impersonal style misses the truth altogether. For there can be no doubt that great men have profoundly changed the course of events, and however much the pedants may declaim against "the drum and trumpet," heroes are often better worth studying than peoples, not only from the point of view of romance, but from the point of view of justice. Mr. Oman has another rare and conspicuous merit. He is not a specialist. He does not shut up history in water-tight periods. He recognises that to-day may afford the best comment upon yesterday, and he makes the decline and fall of the Roman Republic all the clearer by modern illustration.

The *Academy* heads its review by the significant caption, "Book-making," and then proceeds as follows :—

There is no very obvious reason why this book should have been written. Mr. Oman tells us in his preface that it is "intended to show the importance of the personal element" in the "miserable days of storm and stress" with which it deals. Roman history, he says, has been treated "as a mere example of constitutional growth and degeneration, or as a mere bundle of interesting administrative and legal details," and of this mode of treatment he appears to regard Prof. Mommsen as a typical exponent. After such an exordium, the reader will probably expect to find in Mr. Oman's pages a series of "realizations" of the leading actors in the great drama which the last century of the Republic witnessed. If he does so, he will be lamentably disappointed. We were not aware that the personal element in this period had suffered undue neglect. But in any case,

Mr. Oman does not possess the qualifications necessary to reinstate it. He has simply given us a history which suffers about equally from its omissions and its repetitions. The book contains seven somewhat dull narratives, compiled from materials accessible in any text book, and interspersed with familiar anecdotes. Of vivid portraiture or keen analysis of character there is not a scrap. And as a general rule the author's judgments are astonishingly unilluminating.

In book reviewing, much allowance of course must be made for the individuality of the reviewer, his tastes, crochets and pet aversions. Still it seems rather remarkable that two men of more than average literary ability should have arrived at two such very divergent points of view regarding the work of a fellow-labourer in the literary field. Their concluding paragraphs are as strong in praise and rough in condemnation as their opening sentences, the *Spectator* finding "every page of his brilliant book worth reading," while it cannot "wish a young student better luck than to come across it before the austerity of the Germans has killed his interest in the history of Rowe;" while the *Academy* declares that "it is not creditable to Oxford that such a book as this should be written by a deputy-professor of the University."

"TREATY RIGHTS."

THERE has been quite an interesting episode in the house-tax controversy. A writer signing himself "Treaty Rights" has addressed to the *Japan Gazette* two letters of a remarkable character. We had hoped that more would be heard from him, but he seems to have laid aside his pen, which is regrettable. As to how much he has advanced the cause he champions there will be differences of opinion, but there can be no doubt about the pleasure he has given to the *Japan Gazette*. It is quite agreeable to see our contemporary so delighted. "We print this letter with peculiar satisfaction on account of its broad view," says our contemporary. "We have always been convinced that to call the broad and vital principle involved in this long-pending difference the 'House-tax' question is both belittling and misleading. * * * It will be some time and probably take more than one letter, even such as this broad-minded communication, to change the title of the discussion from that of 'The House-Tax Question' to its proper title—that of 'The Treaty Rights Question.'" "Captain CUTTLE," cried Mr. TOOTS, "you have a way of saying things that makes me feel a pleasant warmth down the small of my back." The *Gazette's* Captain CUTTLE has evidently had that effect upon his TOOTS, and we are reluctant to say a word that might disturb the magnetic eloquence of the one or the preening satisfaction of the other. In the course of this long controversy we have occasionally intervened, but we have nearly always confined ourselves to dealing with arguments advanced by the other side; arguments which often seemed to us extremely petty and confusing, since the sole and only point lying at the basis of the dis-

cussion is the meaning of one word in a short clause. But if these curious arguments betrayed a dearth of reasoning material on the side of the opponents of the house-tax, we did not imagine that the famine had gone so far as to make them clutch with eager delight at such a straw as this of the *Japan Gazette's*, the substitution of the term "Treaty Rights" for "House Tax."

Now let us see what "Treaty Rights" has to say, after his Herculean exploit of raising the heavy question out of the quagmire and placing it on a broad and lofty pinnacle. Let us see whether his arguments can be ranged on the same high eminence.

The treaty says that certain "property" shall be exempt from further taxes. "Treaty Rights" sets out by thrusting aside that provision. "It is clearly a misrepresentation of facts," he alleges, to say that only "property" is exempted by the treaties. What they exempt is "property owners." Having set out by repudiating the limitation explicitly formulated in the treaties, "Treaty Rights," whose self-chosen name begins now to look rather inappropriate, goes on to say that the exemptions contained in the title deeds are to be continued in perpetuity to holders of settlement property, and that one of those exemptions, as set forth in the lease, is the following :—

No tax shall be levied on *renters* in the foreign quarter for the keeping in thorough repair of Streets, Roads and Jetties, and the making of Sewers and Drains.

The italics are added by "Treaty Rights" himself to emphasise his point, which is thus stated, plus further italics :—

"It does not say that no tax shall be levied on *property* but on *Renters*, and *Renters* clearly means 'Leaseholders,' or, as more frequently termed 'Property-holders.'"

We can not but admire this saltant method of passing from the clear and limited to the vague and illimitable. Not words and their unvarnished significance concern "Treaty Rights." We frankly admit that his methods do raise things to a very lofty plane. But we would ask him a simple question. We would ask him to cease translating the definite terms of the treaty into the loose language of the Bund, and to tell us what is meant by "Renters" in the clause he quotes. "Renters" of what? "Renters" of houses? Will any one in any foreign settlement in Japan admit that he rents his house from the Japanese Government? Most assuredly not. Here we have a lease granting the perpetual use of a plot of land in consideration of a certain yearly rental. In this lease, reference is made to "renters." Here we have an Englishman who has persuaded himself, and who tries to persuade others, that the term "renter" in the land-lease means a holder of property in general, not merely a land-lessee. And here we have a newspaper throwing its cap into the air because the great question has now been "taken out of its low-lying, mist obscured level."

There is much more that is interesting and worthy of comment in "Treaty Rights" letters, and with his permission we shall add a few words in another article.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In the *Yomiuri Shimbun* appears a somewhat lengthy essay on "Kyôto and Tôkyô Paintings," delivered at the Tôkyô Bijutsu Gakkô by Dr. Otsuka Yasuji. We can do no more than note in order what seem to us to be the principal points touched on:—The class of painting produced is largely determined by the views of the judges appointed by the Tôkyô Bijutsuin no Tenrankai and the Kyôto Kôzokai. The first thing that strikes an observer in the pictures exhibited is their size, and the next the predominance of portraits. These characteristics may be said to mark the new school of painting. The pictures are large because artists find it more easy to show their powers in large paintings, and portraits are chosen because it is considered that in the human face thought and feeling are more suitably and powerfully expressed than by any other form. Ancient customs, with some great hero as a central figure, are favourite subjects. The prevailing tendency is to choose serious subjects such as death, the separation of friends and relations, or men engaged in some toilsome task. In many particulars the Tôkyô and Kyôto pictures resemble each other, but there are points of difference. For instance the subjects of the Tôkyô pictures are certainly more complex and ideal than those of Kyôto. The subjects chosen by the Kyôto exhibitors are mostly trite and simple. But the Tôkyô painters make a mistake in expending all their powers on the chief idea represented in the picture and neglecting all accessory parts. Taking the pictures as a whole, the Kyôto paintings are better executed than those of Tôkyô and the colouring is far better done. In art fine ideas alone are not enough; there must be perfect execution of even the minutest details. The Tôkyô artists seem to be under the impression that the principal merit of a picture is in the idea which it is intended to represent and that all that is merely accessory to that requires no special care in execution. In painting there are those who make colour the principal consideration and those who make outline the principal consideration. With the former the outline of a picture is subordinated to its colour. The artist aims at making the colouring reveal the form; with the latter the outline is the ruling feature of the picture. In the West drawings of the latter class are called maps, but not pictures. Japanese pictures are mostly of the map class; that is outline forms the basis of the picture. What are known as the Hashimoto style pictures are of this kind. In recent years these have become very unpopular and the tendency now is in the direction of making the colouring predominant.

In colouring there are three distinct methods; which we may designate (a) *kaku-ryû*; (b) *haku-ryû* and (c) *nuru-ryû*. In the first the hand plays the most prominent part; in the second the brush, and in the third the mixing of colours and pasting them on the canvas are everything. In imitation of the foreign style of painting this last method is growing increasingly popular, although there is no denying that as a nation we have excelled most in a skilful use of the *fude*, in bringing out in a striking manner the contrast between light and shade by delicate touches of the brush. The old Japanese method of sketching differs essentially from the methods followed in oil painting. The tendency with modern artists is to abandon the old style of painting altogether.

In the portrait painting of recent years done in Japan there are serious defects. Whether the artists have copied imperfect models or what has happened we cannot tell, but the types produced are most defective. In some instances the hands or the feet are wrongly represented; in others the faces given are most unnatural. In the attempt to represent mental traits on canvas both the Kyôto and Tôkyô exhibitors may be said to have signally failed. It is true that they have succeeded in representing some of the more ordinary and shallow emotions of men and women, but beyond this they have not gone. To sum up in a word the conclusion to which I have arrived, in ideas Tôkyô excels, but in execution

Kyôto excels. They have much to learn from each other.

* * *

The *Yomiuri Shimbun* celebrated the issue of its nine thousandth number on July 12th by the publication of a special edition of the paper consisting of 44 pages. Among the material that appeared we find "A History of Japanese Newspapers," from which we take the following statements:—For convenience sake the history of Japanese journalism may be divided into 5 periods. These we will take in order: (1) The infant stage of journalism. It is not quite clear when newspapers were first published in Japan.* In the Ansei period (1854-1860) the *Yomiuri Shimbun* was called the *Yobiuri Shimbun*† (the newspaper that is sold by shouting its name). A picture of the ruins caused by the great earthquake that occurred during that period realised a large sale. Compared with modern newspapers those published in early days recorded the most trifling affairs and were padded with popular songs and the tales known as *ukiyo-banashi*. Among the items of news published in the early numbers of the *Yobiuri Shimbun*, we find such statements as the following:—"Near the Tennô temple a dog was seen devouring a baby," and, "the wife of a certain eel-seller having proved unfaithful to her husband, the latter took a gimlet and bored a hole in his wife's eye."‡ As far as can be ascertained it would seem that the first real newspaper was published in 1864 (The *Yobiuri* of the Ansei period is evidently not considered to be entitled to the name of a newspaper). The son of a common sailor called Hiko-zô, of Himeji, in Haruma, drifted across the Pacific in a junk and landed in America, where he spent nearly 10 years. On his return to Japan, in conjunction with Kishida Ginkô, he started a paper that bore the simple title of *Shimbunshi*. The foreign news was supplied by Hiko and the Japanese by Kishida. In size it was about as big as one sheet of the paper known as *hanshi*. It sold at 32 *mon* a copy. But Kishida fell under the suspicion of the Government and had to flee to Shanghai. This involved the death of the paper.†† The next Japanese newspaper published was called the *Bankoku Shimbun*. An American gentleman called Perry (?) in conjunction with a Buddhist priest named Ajiki Zendô prepared the paper, which was published in *Kana*. This was followed by the *太政官日誌*, *Dajôkan Nisshi*, which was the father of the present *Kwampô* (*Official Gazette*). Mr. Kishida returned to Japan and started the *Moshiogusa*. All the above appeared at the beginning of the Meiji era. Next appeared the *Chûgwai Shimbun*, edited by Yamagawa Haruzô, and the *Kôko Nippô* (the father of the present *Nichi Nichi Shimbun*) edited by Fukuchi Genichirô. The printing was all by blocks and the get-up of the sheets of the roughest kind. About the year 1871 the fever for publishing newspapers abated and those previously issued were all discontinued.

(2) In 1872, on his return from Europe, whither he had gone as a member of Iwakura's Mission, Mr. Fukuchi Genichirô started the *Nichi Nichi Shimbun*. At the same time, urged on by Mr. Kishida, Mr. Hirano Tomiji (of the Tsukiji Type Foundry) commenced to manufacture

* By this remark it is evidently meant that it is not clear whether certain news sheets that were sold at the time of the famous vendetta of the 47 *rônin* and prior to that event are entitled to be called newspapers, as subsequently the *Yomiuri* gives an account of the publication of the first newspaper.—(WRITER OF SUMMARY.)

† In some respects the *Yomiuri's* account is confusing. It first states that the *Yomiuri* itself under another name existed in the Ansei period (1854-1860) and later on, it asserts that the first real newspaper was that published by Joseph Heko and Kishida Ginkô in 1864.—(WRITER OF SUMMARY.)

‡ Dealers in eels are in the habit of dividing an eel in two by inserting an awl in one of its eyes and then splitting it open. So the method of punishment chosen by the wronged husband is supposed to be amusing. Of its cruelty nothing is said.—(WRITER OF SUMMARY.)

†† Kishida is still living and in very affluent circumstances.—(WRITER OF SUMMARY.)

movable types. About this time Mr. Maejima Mitsu (now Baron) started the *Yûbin Hôchi Shimbun*, and subsequently the *公文通誌*, *Kôbun-tsûshi* appeared, followed by the *Chôya Shimbun*, and Mr. Black's *日新真事誌*, *Nishin Shinjishi*. Then came the *Yokohama Mainichi Shimbun* and Okamoto Takeo's *Akebono Shimbun*. The above all appeared between 1872 and 1877. The following was the situation of affairs at that time. Certain powerful members of the Government were in favour of sending an expedition against Korea. Over this question Saigô, Itagaki, Soejima, and Gotô left the Government, and a Cabinet was formed of which Iwakura, Okubô, Okuma and Itô were the leading spirits. Kido memorialised the throne praying for the granting of a constitution and the opening of a legislative assembly; Inoue and Shibusawa published their views on finance; Soejima and Itagaki theirs on the creation of a Diet. The *Nichi Nichi* at that time was supported by Jôno Kishida and Suematsu and figured as a "Government organ," advocating temperate and gradual reform. The *Hôchi*, supported by Okuma and Maejima and edited by Yano and Fujita was decidedly pro-Government. The principal Opposition and radical organs were the *Mainichi*, edited by Numa; the *Chôya*, by Narushima and Suehiro, and the *Akebono*, by Okamoto. A literary society called the 明六會 *Meirokukai*, of which Messrs. Fukuzawa Yukichi, Mori Arinori, Katô Hiroyuki, Nishi Shû, Nishimura Shigeki, Tsuda Shindô and Tsuda Sen were the leading members, published a magazine that discussed the burning questions of the day. Mr. Fukuzawa and Mr. (now Dr.) Katô were in opposition to each other, the former advocating immediate and radical reform, the latter gradual and moderate changes. There were several other magazines that were ably edited and widely read at the time; such were the *Kinji Hyôron*, the organ of Messrs. Hayashi Seimei and Komatsubara Eitarô, and the *Sômô* (草莽) *Zasshi*. Three noted members of the 共存同衆 *Kyôzon-dôshû*, Ouchi Seiran, Shimaji Mokurai and Ono Azusa, started the *Minkan Zasshi*, which for a long time was an earnest advocate of popular rights. The rebellion under Saigô served as a blow to the cause of popular rights. But in the year 1879 local government was established and local assemblies were created everywhere. The following year Messrs. Kôno Hironaka and Kataoka Kenkichi petitioned the Government for the opening of a national assembly, and subsequently Count Okuma fixed the year 1883 as the time at which constitutional government could with safety be inaugurated, but Itô and Inoue opposed the notion, and eventually the date for the opening of the Diet was fixed, and thus ended the second period of Japanese journalism.

(3) This was distinctively the political party era. It lasted from 1881 to 1886. The political parties and their leaders are too well known to need special notice here. Outside them all stood Mr. Fukuzawa Yukichi with his *Fiji Shimpô*.

(4) Period 4 may be described as the sociological era. Having grown wearied of political strife, the Japanese public showed signs of taking a keen interest in social questions and there was an attempt to introduce European customs *en masse*. The fancy ball given by Itô and supported by Inoue and other pro-Western statesmen was an indication of the length to which these notions had gone. But a reaction, led by Tani and voiced in the *Nippon* and other organs, soon set in. Even Hoshi Tôru wrote against the Occidentalising of Japan in his organ the *Kôron Shimpô* (*Public Opinion*) afterwards called the *Mezamashi Shimbun*. The Revision of the Treaties began to be earnestly discussed and Okuma's plan for bringing this about received the support of most of the leading newspapers. With the failure of that scheme period 4 ends.

(5) This era dates from the opening of the Diet in 1889. This event naturally affected journalism in various ways. The journals which appeared for the first time then were; the *Tôkyô Kôron*, the father of the *Asahi*, started by Murayama Ryôhei and edited by Suehiro; the *Shinonome Shimbun*, edited by Mukae; the

Kokumin, edited by Tokutomi; the *Chûô*, edited by Ooka Ikuzô; the *Yorozu Chôhō*, edited by Kuroiwa Shûroku, and the *Niroku Shimbun* edited by Akiyama Teisuke. Some of these still continue to be issued; others have succumbed. Among the small newspapers the *Yomiuri* makes a point of writing in an easy style to suit uneducated readers. The newspapers that while they lasted were written in similar style were the *Eiri Shimbun*, the *Iroha Shimbun*; the *Ukiyô Shimbun*, the *Kaika Shimbun* and the *Kaishin Shimbun*. These may all be said both in theory and practice to have been champions of the Gembun Itchi style of writing; but they have all disappeared and the *Yomiuri* only remains.

Though the *Yomiuri* calls itself a *Koshimbun* (one of the minor papers) as literature it ranks high. It is on the whole carefully edited and for years has collected and published literary matter of considerable value. Among the older papers its reputation has been well sustained for more than a quarter of a century.

* * *

The Imperial Education Society, of which Mr. Shinji is the President, has recently created a Fine Art department and purposes taking steps to develop a taste for art as a part of the general work of the Society. In May last a large social gathering in connection with this object was held in Tôkyô, at which addresses were delivered by Mr. Tsuji, Dr. Inoue Tetsujirô and others. A report of the meeting will be found in No. 260 of the *Kyôiku Kôhō*. The gist of what Mr. Tsuji said was that the attempts of the Department of Education and of the Department of Commerce and Agriculture to further the cause of art were quite inadequate, and that they needed to be supplemented by voluntary efforts such as those the Society proposed to make. Dr. Inoue Tetsujirô dwelt on the connection of art with the development of thought. The field of beauty was practically exhaustless; art was an attempt to represent the most exquisite colours and forms. Artists must have high ideals. Upon their ideals their pictures depend. An artist must have deep feelings and convictions. It was a fact that religion furnished some of the grandest ideas that had ever been embodied in pictures; Christianity in the West and Buddhism in the East. In Japan Buddhism may be said to have been the great art prompter. Ideas that are too subtle to be expressed in words can be represented on the canvas by a few master strokes. But in these days few people believe in the old religions. What is necessary is that new convictions should take the place of the old. For an artist to be without convictions is fatal to success, but there is no reason why men should not cultivate their religious or spiritual sense as much as ever, and this they will do if they are earnest men. Beauty must be loved for its own sake. There are some who study art only as a means of making a living, who paint what they think will sell. Such men can never become great artists. Of course artists must live and often they have to consider money, but nothing should tempt them to lose sight of their highest ideals. Their principal function is to treat ideal subjects in an ideal manner, and in order to do this they must take little heed of what the vulgar crowd says or thinks. There were some who delighted in drawing invidious distinctions between Occidental and Oriental art, but Dr. Inoue condemned the adoption of such a course. The objects of all true artists were very much the same, namely the representation of some phases of beauty. As to the methods adopted for such representation they differ according to taste and the technical training received by the artists. The creation of rival schools of art to waste time in running down each others' work was not the object of the department of art which had been added to the Society. They hoped to act on liberal principles and to encourage a love of beauty among all classes.

* * *

In No. 16 of the Transactions of the Nippon Bijutsu Kyôkai we find a report of an address delivered some weeks ago by Mr. Shiota Shin on the relation of fine art to technology or handicraft. Mr. Shiota has been away in Europe

for two years making various investigations. He visited the Paris and Glasgow Exhibitions and seems to have come back with the feeling that in Japan the relation of the artisan to the artist is not understood. The following is the substance of his speech before the Fine Art Society referred to above. There is a good deal of controversy among us as to whether such trifling articles as pins and buttons when carved by noted sculptors are to be considered specimens of fine art or as merely ordinary art such as is produced by the ordinary artisan. Take the cases of such well-known metal sculptors as Munô Shômin and Itô Katsumi: the various statues produced by these men are recognised as very high-class specimens of fine art, are their pins and buttons, for they carve these, to be so regarded? In Europe no such articles are found among fine art exhibits. It would not be true to say that great sculptors in Europe never carve small insignificant articles, for they do a great deal of this kind of work. They furnish models to the owners of factories, but when the articles in question are turned out by myriads the names of the authors of the original design do not appear. In Japan there is among artists a notion that to furnish models for the use of ordinary artisans is undignified and vulgar. An artist may produce pins or buttons, but they must all be prepared by his own hand (*Nihon de wa daika ga model no tame holte watasu wa haji to suru shûkwan ari. Sore de horu nara, hitotsu hitotsu jikô ga horu ga, bokei (model) to shite holte wa yaranai.* And among painters the same feeling prevails. They will paint pictures, or furnish drawings for screens or scrolls, but when asked to furnish a model for reproduction on fans, they demur. If they consent to furnish a design for a fan, every fan that has the design on it must be painted by their own hands. In foreign countries there is no feeling of this kind. Some of the greatest artists are perpetually supplying manufacturers with designs. It is true that they get well paid for their work, but it must not be overlooked that by acting as they do they are conferring an immense benefit on the world by supplying it with artistic designs in abundance. While furnishing these designs the artists are careful not to associate their names with the sale of the articles on which they are inscribed. So there is nothing whatever derogatory to the superior position occupied by the artist in the practice to which we have referred. Instead of spending much time in producing small articles for sale in the way now done, our Japanese artists would do well to put themselves into connection with the great manufacturing world and to agree to furnish them with as many models as they may require. They would thus open up for themselves a new sphere for the display of talent and ingenuity and would have the satisfaction of seeing their designs carried to the remotest corners of the globe to be admired by connoisseurs everywhere.

* * *

In the *Taiyô* appears a long lecture of Dr. Otsuka's on "The romantic and the present state of Japanese Literature," delivered at the Waseda Semmon Gakkô some little time ago. In a condensed form we reproduce Dr. Otsuka's interesting discussion. What is most observable in connection with recent literature is the immense popularity of the teaching of Nietzsche among a certain class of writers and the aversion shown to him and his teaching by others. It is maintained by some that it is only by adopting Nietzsche's views on morality, religion and philosophy that the imaginative faculties in writers can be fully developed. It is true that just at present those who figure as leaders in the movement towards romanticism are devout worshippers of Nietzsche, but it is of course an entire mistake to suppose that there is no other way of cultivating the romantic spirit but by sitting at the feet of Nietzsche. After giving an account of the origin of the word "romantic" and of the senses in which the word is understood in the principal countries of Europe, Dr. Otsuka goes on to say that the love of the ideal and the imaginative, though doubtless proceeding originally from the nature of the faculty with which man finds himself endowed, has always been increased and guided

by prevailing notions on religion, morality and politics. And if it be asked with what kind of religion and politics it has in the course of history been most associated, we are bound to say, observes Dr. Otsuka, that on the whole Roman Catholicism with its authority and dogma has had associated with it more of the Romantic than Protestantism with its comparative freedom of thought and belief. But in politics and morality the reverse has been the case. Subjection to authority of the slavish kind has been found to kill idealism and to render flights of the imagination next to impossible. It has been in countries where and at times when individualism and great freedom of thought on politics and human conduct have been allowed that the imaginative faculty has attained the highest state of development. The connection of the imagination with religion is very apparent. Religion depends principally on imagination and emotion. This is true of both Protestantism and Catholicism. For many centuries in various countries of Europe under the Roman Catholic rule romance and religion went hand in hand. When asked to explain how it was that certain Protestants were able to soar so high in the world of fancy, we reply that it was the political and moral freedom they enjoyed that made this possible. When we see then under what varied circumstances the imaginative faculty was highly developed in the West in days gone by we conclude that in order to further this development in Japan to-day it is not necessary that we should slavishly follow the teaching of Nietzsche or any other great writer. Already we have in the works of Rohan and Kyôka, in the *Yamato-uta*, and the writings of the literary school known as 明星, *Myôjô* the kind of thing we need in greater quantity.

There are those who object to more development of our imaginative faculty on the ground that the poet and the novelist are almost bound to be partial, one-sided, prejudiced, and to run to extremes, the very things which already we Japanese are too apt to do, observe these cavillers. This is only saying that there is no good without an accompanying evil. It is not at all necessary that the development of one faculty of the mind should prevent the exercise or suspend the controlling power of all the other faculties. Taking the whole course of our mind development in the *Meiji* era, it has mostly been calculated to convert us into shallow imitators of others. We have been borrowing to such an extent that it is hard to point to anything that originated from our own brains. The ideas which in the course of 30 years we have appropriated took centuries to develop in the Western world. In many cases we have in no sense mastered these ideas. Our knowledge is to a large extent superficial, and we show little sign of having grasped the true significance of the principles, theories and notions that we have professed to adopt. The consequence is that the Europeanised Japanese mind bears little fruit. What we want is more originality, and to obtain this the imaginative faculty must be better developed. A short time ago a certain foreigner remarked that though "there are fashions in Japan, there is no prevailing tendency of thought and no overpowering impulse." This is perfectly true. The meaning is that we are too indifferent as to what principles or theories we adopt. We lack true earnestness in thought. Under these circumstances to me it seems that controversy between the advocates of opposite principles is to be welcomed. Controversy in the world of thought proves to be the parent of all that is solid and lasting. If men's minds are so stagnant that they will not take the trouble to argue in favour of one set of principles or another, their condition is very hopeless. What we want to see in this country is the rallying of the leaders of thought around some definite principles. There is too much personality not only in our politics,

‡ It seems to us very difficult to follow Dr. Otsuka's argument here. He seems to hold that political bondage, severe moral restraint and the strictest authority were conducive to the development of the imagination in the Roman Catholic; but that such an environment would kill romance in the Protestant—a very fanciful theory surely.—(WRITER OF SUMMARY).

but in our literature and philosophy, *Nihon wa shugi ni kumi sezu, hito ni kumi suru to iu koto ga, ima no bungei sekai no heigai to natte oru.* "The Japanese practice of allying with men rather than with principles has become a great abuse in the literary world."

Under the titles of "Men of Merit among Party Clans," the *Taiyō* institutes a comparison between the present party competitors for supreme power and the old clan statesmen; in favour of the latter. The writer contends that the clan leaders while they held the reins of government in the turbulent years of the *Meiji* era did more real service to the country than has been accomplished by their would-be successors. The advice given in this article is that the elder statesmen who have been acting as party leaders should retire and make room for more active and more suitable men. While they remain the heads of parties, they impede reform in a variety of ways. Marquis Itō's management of the *Seiyūkai*, says the writer we quote, has been far from successful and he is certainly the greatest of the older statesmen who have tried their hands at party organisation and control. These men have the satisfaction of knowing that at a time when the men in power were nearly all opposed to the idea of allowing the people to share in the government of the country, they asserted popular rights till they were universally acknowledged. Let them retire on their laurels. In addition to that of Marquis Itō, the entire withdrawal from public life of Messrs. Hayashi Yūzo, Kataoka Kenkichi, Matsuda Masahisa and Kōno Hironaka is recommended. Of these politicians the following account is given:

(1) Mr. Hayashi is now 61 years of age. His most prosperous time was the year 1877, when he was in communication with Saigō and when in union with the late Viscount Mutsu he plotted the overthrow of the Government. Notwithstanding Mutsu's great ability he was no such schemer as Hayashi, and at that eventful period the latter was invariably consulted. In 1886 he was released from prison, and in conjunction with Count Itagaki founded the *Jiyū-tō*. For opposition to the Itō Cabinet he was subsequently banished from the capital. On the opening of the Diet he became one of the members for Kōchi, but since that time he has effected little of any value. Twice he has entered the Cabinet: once in 1898 and once in 1900. He is now the head of the Tosa section of the *Jiyū-tō*, but without any special influence. His retirement is to be desired.

(2) Mr. Kataoka is in his sixty-first year. In 1870 he was a Lieutenant-Colonel in the army. Had he remained in the Army he would probably have been a general by this time. He left it to engage in politics, but he is not suited for the rôle he chose, and, if we mistake not, would have done better to have become a Christian pastor from early days.

(3) Mr. Matsuda Masahisa is 58 years of age. His most prosperous days were those during which in conjunction with Marquis Saionji through the medium of the *Tōyō Jiyū Shimbun* he propagated French notions on popular rights. Twice he held office under Party Cabinets, but cannot be said to have achieved success on either occasion.

(4) Mr. Kōno Hironaka is now 55 years of age. His palmy days were prior to the opening of the Diet, when at the time of the noted Fukushima affair he became the centre of a very strong anti-despotism alliance. At that time his energy was something tremendous and for a while no man in the country was more popular among the go-ahead section of politicians. But of late years his very existence has been almost forgotten. There are other former political leaders who have had the good sense to retire from public life. Such are Messrs. Yano Fumio, formerly Minister in Peking, Oi Kentarō and Shimada Saburō. The last has severed his connection with the party to which he belonged and now devotes himself exclusively to journalism and other literary work.

The publication calling itself *Sanjū-roku Nen*

(36th Year of *Meiji*), to which we called attention in a former Summary, whose principal object it is to furnish information bearing on the Fifth Home Exhibition, to be held in Osaka next year, and which is edited by Mr. Tsuchiya, a former editor of the *Jiji Shimpō*, in its second and third numbers writes in the following strain on the expected foreign visitors of the Exhibition: Great efforts are being made by our Government to attract a large number of foreigners to our shores next year. Every year some five or six thousand foreign visitors come to these islands, but it is hoped that next year the figure may rise to 8,000 or even still higher. There is already a considerable amount of discussion as to the steps that ought to be taken to accommodate these visitors. Osaka is badly provided with hotels, the streets are mostly narrow and the first impression produced on a visitor to that city is anything but cheerful. But the foreigners who come will not be much affected by appearances. What they will want to know is how much solid progress has been made; how the money-making pursuits among us are faring. What have we to show them in the educational line, for instance? They will not be moved by our telling them that our text-books abound with excellent moral precepts and that our histories record the deeds of scores of moral heroes. It is in the new Japan that they take interest. It is the Japan of whom they have heard as the new competitor in the world's markets that they will wish to study. Are not our actual achievements in the industrial and commercial line very poor as compared with what other countries can show? We must confess that a recent perusal of a history of German commerce and industry has made us feel rather sad as to the prospects of our making anything like a creditable show next year. The trouble is that our educational system is an anachronism. While living in the thirty-fifth year of *Meiji* we are following a system of education that is designed to manufacture young men of the type that lived in the Kamakura and Ashikaga eras. Will this fact get to be known among our visitors next year? Have we anything to show that we are on the right track industrially and commercially?

YACHTING.

The 39-raters and cruisers went to Uraga on Saturday at 1.30 and 1 p.m. respectively to race for presented prizes. Four of the former started:—*Maid Marion*, *Spray*, *Aborigine* and *Mary* in a light south easterly breeze which later fell dead calm. We learn, however, that *Maid Marion* finished first within the time limit, that is at 19 minutes past 9, *Mary* next at 20 minutes to 10. Ten o'clock was the time limit.

All the cruisers, seven in number, started and they failed to finish though *Molly* in the leading position lay for a long time close to the goal.

The 21-raters went out to contest the 4th of July prize and finished in this order:—

	h.m.s.
<i>Pele</i>	6.00.30
<i>Edna</i>	6.38.00
<i>Stella</i>	—
<i>Yuguo</i>	6.37.10
<i>Vixen</i>	—
<i>Nandeska</i>	6.12.05
<i>S. deska</i>	6.06.00
<i>Bonito</i>	6.20.30
<i>Pinna</i>	6.20.20

The following, according to the light wind handicap applied, are the corrected times:—

	h.m.s.
<i>Pele</i>	6.00.30
<i>Edna</i>	6.38.00
<i>Yuguo</i>	6.29.10
<i>Nandeska</i>	6.04.05
<i>Sodesuka</i>	5.55.00
<i>Bonito</i>	6.09.30

Therefore the first prize falls to *Sodesuka*, the next to *Pele* and the third to *Nandeska*.

Of the 12-raters *Matatane* was the only one that finished.

CRICKET.

The match on Saturday afternoon was played under the new time rule, the idea being that the side which made the greatest number of runs within the time allotted—one hour and forty minutes—should be declared winners. The heat was very great but a breeze occasionally fluttered over the ground affording relief to the fielders, which was much appreciated. White's Eleven went to the wicket first and made a curious score, the first and second wickets falling for 26. The first to succumb was P. B. Clarke, who had made 13 runs, and he was dismissed with the first ball of Lammert's sixth over. Pollard then joined Firth, but the third delivery from Lammert dissolved the brief partnership and Firth retired, also with a score of 13. One long succession of men went in and came out, nine wickets falling for 66 runs. Then E. W. Kilby and P. Woodcock came together and made a splendid stand, the score gradually creeping up to 118, at which figure it stopped, Kilby being bowled by Brady. The side had gone in at 2.30 p.m., and it was now 4 p.m., ten minutes of the limit being unexpired. Score:—

MR. WHITE'S ELEVEN.

P. B. Clarke, b. Lammert.....	13
A. R. Firth, c. Brady, b. Lammert.....	13
F. Pollard, b. Lammert.....	0
J. S. Graham, b. Edwards.....	9
A. W. Read, b. Edwards.....	0
F. E. White, b. Edwards.....	19
A. Kingdon, b. Lammert.....	4
Rev. W. P. G. Field, b. Lammert.....	0
E. W. Kilby, b. Brady.....	29
P. Woodcock, c. Edwards, b. H. W. Kilby.....	14
A. Scott, b. Lammert.....	6
S. Bullen, not out.....	0
Extras.....	11
Total.....	118

BOWLING ANALYSIS.

	R.	B.	M.	W.
F. Lammert.....	65	90	2	6
F. H. Bugbird.....	6	36	3	0
E. B. S. Edwards.....	17	48	0	3
G. Philip.....	11	12	0	0
H. W. Kilby.....	2	4	—	1
G. G. Brady.....	6	12	0	1

Edwards bowled one wide and Philip one also.

Edward's team went to the wicket at 4.20 p.m. and though at first unfortunate had little difficulty in winning, despite the first five wickets falling for 19 runs. Bugbird and Strome stayed the rot, and the latter had only himself to blame in getting run out on a seventh ball bowled by P. B. Clarke. Still we all make errors in judgment at times. The only other pair to distinguish themselves were F. J. Abbott, who carried out his bat for 25, and H. W. Kilby, who made 28 before being caught by his brother off Kingdon. Score:—

MR. EDWARD'S ELEVEN.

G. Philip, b. White.....	8
G. Brady, st. Kilby, b. A. Kingdon.....	4
W. Graham, b. White.....	4

A Paris telegram of Aug. 7th said:—The *Matin*, referring this morning to the request made by the French Chargé d'Affaires at Bangkok, Siam, to be recalled, declares it to be due to the intrigues of the King of Siam to seek protection from Japan or entry into the Anglo-Japanese alliance, but that France has ample military forces in the Far East to make her rights respected. The *Matin* exonerates the Indian Government from any responsibility for the King of Siam's intrigues.

THE CHRISTIAN DAIMYO.

CHAPTER IV.

Murder of the Shogun.—Civil wars which followed it.—Yoshiaki, brother of Yoshiteru, takes refuge with Wada Koremasa.—Ota Nobunaga comes to his assistance and has him made Shogun.—The Jesuits, banished from Kyoto, are reinstated.—The legend of the "Eirokuji."—Disgrace and rehabilitation of Wada.—Conduct of Wada during the wars that Nobunaga had to wage after the nomination of Yoshiaki.—Death of Wada.

While the Jesuits thus laboured to renew the religious side of Japan, the murder of the Shogun, Yoshiteru, came to quickly change the politics of the country and to inaugurate a series of events, the most tragic in its history. Here are, in a few words, the causes which provoked this catastrophe.

Miyoshi Chokei, the Prime Minister or, in other words, the absolute master of the Shogun, died in 1564. Before closing his eyes he confided his adopted son Yoshitsugu, a youth without any will of his own, to his vassal Matsunaga Hisahide. The latter with tears in his eyes, as custom required in such circumstances, swore to attend to the interests of his pupil.⁽³¹⁾ But he soon forgot his engagements and as, some time before, Miyoshi Chokei had betrayed his master Hosokawa Harumoto in order to usurp his place, Matsunaga betrayed his pupil Miyoshi Yoshitsugu and arrogated to himself all his rights. It goes without saying that he commenced by claiming the post of Prime Minister, and as the Shogun protested against this abuse, Matsunaga attacked him in his palace. Yoshiteru defended himself with the courage of despair but wounded by several arrows in the head and by the thrust of a lance in the stomach⁽³²⁾, he fell dead. His women and children were all massacred, with the exception of two girls who escaped, thanks to a Christian *samurai* (June, 1565).

From this moment Matsunaga ruled as master, and Yoshitsugu soon found that he was treated with as little regard as if he had been Matsunaga's vassal. A division was not long in taking place and towards the end of the same year Yoshitsugu and Matsunaga came to blows near Sakai. It would be wearisome to enumerate all the battles that the two adversaries fought during the space of two years and in which they were alternately conquerors and conquered.

A single fact worthy of remark was the extraordinary manner in which the Christian *samurai* knew how to distinguish their religious duties from their political obligations. Whilst the two armies were encamped in front of Sakai the solemnity of Christmas approached (1565). Father Froez, happening to be at that time in this town, invited the Christian *samurai* from both camps to come and celebrate the birth of the Saviour in the Church of Sakai. Forgetting for the moment that they were enemies, the *samurai* accepted the invitation of Father Froez and at nightfall on the 24th of December they repaired to the assembly of the faithful of Sakai. The latter received the warriors in the best manner possible and served themselves the usual fraternal agapes, after the midnight mass. At early dawn on the 25th of December the Christian *samurai* departed. In taking leave of each other they mutually asked pardon for being obliged to kill each other in the coming encounter⁽³³⁾.

In 1567, Yoshitsugu finding that too many uncles and relatives imposed on him their way of thinking, passed over to the camp of Matsunaga and the civil war continued between the Miyoshi

family on one side, and Matsunaga and Yoshitsugu on the other. These latter were generally victorious. It was then that Matsunaga named as Shogun, Yoshihide, nephew of Yoshiteru (1568).

Yoshihide, who was scarcely three years old, had been in the province of Awa (Shikoku) at the time of his uncle's death and Matsunaga had caused him to be brought to Kyoto to make of him a Shogun whom he could manipulate at his pleasure. By doing so he believed himself sufficiently safe from those who accused him of wishing to usurp the Shogunate. On the other hand he attached to him the bonzes by exiling the Christian preachers from the capital.

While these troubles desolated Kyoto and the neighbouring provinces, a personage, insignificant in himself, hatched a plot which was not only to punish the murderers of Yoshiteru but to overthrow the Shogunate itself. This personage was Yoshiaki, younger brother of the unfortunate Yoshiteru.

From an early age Yoshiaki had been destined for a monastic life, as was customary then for cadets of great families. Owing to his being a brother of the Shogun he was placed in the largest monastery of Nara, a monastery known as Ichijo-in, and became the chief of it. On hearing of the death of his brother he believed that he was called on to continue the dynasty of the Ashikaga and, forestalling the arrival of the emissaries of Matsunaga, he fled from his monastery and took refuge in the citadel of Yajima (Omi) where Wada Koremasa then resided. The latter, a devoted servant of the Shogun, received the fugitive with all the honour due to his rank and promised to assist him in the vindication of his rights. As Wada could not undertake single-handed this difficult task, he went to invoke the help of several *daimyo*, while Yoshiaki remained more than a year concealed in the citadel of Yajima.⁽³⁴⁾ Wada first approached Sasaki Yoshikata, *daimyo* of Mitsukuri (Omi), then Asakura Yoshikage, *daimyo* of Kitanosho (Echizen), but without result; the first refused categorically and the second advised him to patiently await better times. Everywhere denied help, Wada turned towards Ota Nobunaga, *daimyo* of Gifu (Mino), and this *daimyo* consented to put himself at the head of the enterprise. It was not until that time that Yoshiaki quitted Yajima to go to Gifu.

Nobunaga was at this time 36 years of age. Of slim figure and very thin, he was of a delicate constitution. His warlike temper found a strong stimulant in a limitless ambition. Although fond of having his own way, he willingly listened to the counsels of his suite, but took care to pay no attention to them when they happened to be in opposition to his manner of seeing. Intrepid even to imprudence he feared no man; incredulous and a sceptic he despised the gods and vowed implacable hate to all their ministers.

His preparations made, Nobunaga left Gifu at the head of 50,000 men⁽³⁵⁾. After having defeated Sasaki who tried to bar his way, he marched upon Kyoto and made himself master of it without striking a blow (October, 1568). Then Yoshihide, the child-Shogun, having died in the meantime, Nobunaga proclaimed Yoshiaki Shogun.

Unexpectedly enough, on the arrival of Nobunaga the two murderers of Yoshiteru submitted to the conqueror, and the latter, always magnanimous towards those who recognized his authority, contented himself with banishing them from the town of Kyoto and sending them back to their provinces. After this reasonably pacific conquest, Nobunaga undertook the reconstruction of the Shogun's residence, burnt down at the time of the assassination of Yoshiteru. Meanwhile Yoshiaki remained in one of the largest temples of the town and Nobunaga in another. Nobunaga personally superintended the construction of the new palace. He was to be seen every day, walking among the workmen, clothed in a tiger's skin,

⁽³⁴⁾ In the letters of the Jesuits this citadel bears the name of Koka, from its being situated in the district of that name.

⁽³⁵⁾ Once for all, the stupendous ciphers indicating the forces of the different armies, spoken of in Japanese histories, must be accepted with the greatest reserve.

and encouraging them in their work. He encountered no great difficulty in finding the necessary materials: the numerous temples of the city furnished him with inexhaustible supplies. From these temples he carried off everything of which he stood in need,—stone, wood and sliding doors. As to the pecuniary expenses required for this enterprise, Nobunaga obliged the rich monasteries of Osaka and Sakai to meet them. As soon as the palace, otherwise called the citadel of Nijo, was finished Nobunaga installed Yoshiaki with a very strong guard and returned to Gifu. Kinoshita Hideyoshi, a vassal of Nobunaga's, was charged with the task of guarding the citadel, whilst Wada Koremasa, in recompense for the signal services he had rendered to the cause of the Shogun, was named Governor of the city of Kyoto.

It was owing to Wada that the Jesuits succeeded in entering the capital, whence they had been banished since the death of Yoshiteru. Even their church had been taken from them and the Christians had had to meet in a private house. Wada, filled with zeal for the new religion which he already regarded as his own, invited Father Froez, then at Sakai, to repair to Kyoto, where he presented him to Nobunaga. The latter condescended to welcome the foreign preacher, not that the Christian doctrine made the slightest impression on this man completely indifferent to things supernatural, but that he knew this foreigner to be exposed to all sorts of annoyance from the bonzes for whom he felt an invincible aversion. He was therefore enchanted to find an opportunity of killing two birds with one stone, of protecting the helpless and of annoying the bonzes. Father Froez immediately obtained permission to remain in Kyoto and to re-occupy the church, till that time inhabited by a party of *samurai*. Wada was directed to write out this authorization and he took good care to insert in it several privileges such as exemption from taxes, which all the temples enjoyed, and even a dispensation from lodging *samurai*, an affliction which the temples had to put up with, every time an assemblage of warriors in the city required it. Finally a paragraph menaced with severe penalties all those who should molest the foreigner in the exercise of his ministry. Nobunaga signed all this and even refused to accept the 10 gold pieces which this authorization cost. Thus the future promised to be happy, all the more so that the Shogun Yoshiaki welcomed the religious with the same kindness as Nobunaga. But thanks to the prejudices of the people, the presence of a single foreigner in Kyoto was near causing revolution.

The Emperor Okimachi, a fervent Buddhist, was nothing more than a docile instrument in the hands of the bonzes. From the time of Father Vilela's arrival in Kyoto the bonzes had already induced the Emperor to use all his influence to get the foreign preacher banished from the Holy City. And as in religious matters, custom had preserved a certain prerogative for the imperial decision, Father Vilela had for the moment to quit Kyoto (1560) in spite of the protection of the Shogun and of Miyoshi Chokei. This is why the authorization that Nobunaga had just granted Father Froez, without even consulting the Emperor was regarded as a crime of *lèse-majesté*. A *Kuge* was deputed to see Nobunaga and warn him of the grave omission of which he had just been guilty. The deputy explained that since the commencement of the world the imperial word had made law in all religious matters and that a doctrine disapproved of by it ought to be rejected with horror. He then explained that the foreign doctrine with its one God, placed higher than the Japanese divinities, was absolutely incompatible with the traditions of the country. The *Kuge* finally expressed his anxiety with reference to this foreigner left completely free in Kyoto. Nobunaga, throwing a look of contempt at the *Kuge*, informed him that so long as Nobunaga watched over the country a solitary foreigner would not possess himself of it. He even added that it was precisely because he saw in this foreigner a man helpless and without support, that he would protect him against all his opponents. The *Kuge* went away to bring to the Palace the news of his fail-

(31) *Miyoshi ki*

(32) The Nihon Gwaishi vol. IX., page 11, accuses Ikeda Tango-no-kami of having given this lance thrust and declares that in punishment for this crime he became blind and had to drag out a miserable existence as a mendicant in the streets of Kyoto. It is probably in his quality of Christian that Ikeda was more severely chastised than even the authors of the murder. Happily for him, however, not having taken part in this murder, he neither became blind nor a mendicant. During the 30 years which followed this event the annals of the Jesuits show him to have been a very influential personage and their powerful protector.—Hay, p. 193, 223, 486.

(33) *Cartas de Japão*, page 538.

ure. Then, say the Japanese historians, the Emperor Okimachi, surrendering to the entreaties of Nobunaga, accorded full liberty to the foreigner. This rather naïve conclusion may, in the eyes of some modern historians, serve as a palliative to safeguard the imperial dignity, but its lack of logic does not escape any body. Nobunaga was not a man to entreat any one, not even the Emperor, to approve of his point of view; and the present instance was not exceptional. The best proof of it is that Wada, more and more attacked on the question of the foreigner, stoutly declared that he would remain in Kyoto despite the prohibition of the Emperor, and that the will of Nobunaga alone was law. As a matter of course the Shogun Yoshiaki approved of all the actions of Nobunaga and that despite the Mikado and the bonzes whose opposition grew more and more determined.

Another error generally prevalent in this connection is the famous legend of the "Eiroku-ji," temple of the Eiroku era. In the 11th year of the Eiroku era (1568), says the history of Japan (34), a foreign preacher of the name of Urukan (Organtino) arrived at Nagasaki. Nobunaga having heard tell of him, ordered him to be brought to Kyoto the same year. It was at Azuchi that he received him and questioned him on his doctrine. Nobunaga, attracted by Urukan and by his doctrine, permitted him to preach in spite of the protests of the bonze Bunkyo-in whose advice he had asked. Nobunaga then gave this foreigner a large piece of land situated in Kyoto itself, and had constructed there at his own expense a temple surpassing in magnificence every other temple in the capital. The edifice being finished towards the end of 1568, Nobunaga gave it the name of "Eiroku-ji," temple of the Eiroku era. Now to call a temple by the name of the era during which it has been built was a privilege reserved to some great Buddhist temples. The whole city rose, therefore, and 300 armed bonzes descended from Hiei-zan and, presenting themselves before the Emperor Okimachi, induced him to annul this last act. The Emperor did what the bonzes demanded and Nobunaga, changing his mind, called the temple of the foreigners by the contemptuous name of "Namban-ji," temple of the Southern barbarians.

It is really impossible to perpetrate more anachronisms and errors in so few words, and if we are to judge Japanese history by this specimen, then it must be confessed that Japanese history merits very little confidence. For as a matter of fact, Father Organtino did not arrive in Japan till 1570, when the Genki era had already come (37). It was not until the end of that year that at Kyoto he was presented to Nobunaga (38). The latter certainly took a liking for this Italian so amiable, so learned, and of conduct so different from that of the bonzes, but he never gave him any land at Kyoto, nor had a temple constructed there at his own expense, nor bestowed a name on the Christian Church. But what is more important, the Jesuits themselves did not construct a church at Kyoto either during the Eiroku era, or even during the era which followed, the Genki. It was not till the 4th year of Tensho (1576), that they erected a building worthy of the name of church. Before this time they had to content themselves with a little oratory in a common Japanese house which certainly could never have been the subject of this alleged quarrel between Nobunaga and the enemies of the new religion, but which the latter had from the commencement called by the name of Namban-ji. This example, like several others, shows that the complaisant historians who flourished under the Tokugawa regime, did not even recoil from the improbable when it was a question of throwing discredit on the religious and on Nobunaga, their protector.

To return to Wada, his zeal for the Christian religion and at the same time his disinterestedness were without doubt admirable, but his impetuous temperament made him go too far. Although only a catechumen, he could see no religion but the Christian religion, and all those

who did not appreciate it like himself seemed to him to be malefactors. This unfortunate trait in his character was near compromising everything. Two young pagan *samurai* had, either through thoughtlessness or derision, torn a medal from a Christian woman while she was at prayer, and this in the very residence of Wada. This act so shocked the latter that, in spite of the intercession of the Christians and the insistence of Father Froez himself, he caused the principal author of the act to be beheaded and the one whom he judged less guilty to be banished from his presence. Upon this Wada's enemies could no longer contain themselves. Already, some time before, when the terrible governor had threatened to destroy all the quarter in which the foreigner resided, if ever an attempt was made on that foreigner's life, the latent wrath of the people had almost burst forth. But this last occurrence was the spark in the powder magazine. The bonze Nichijo Shonin (39) a great favourite at the imperial court, proceeded immediately to Gifu and, with much exaggeration of course, denounced Wada for sacrificing the public safety to the foreign religion.

Nobunaga, although excessively distrustful, allowed himself to be circumvented by the clever Nichijo Shonin and, suspecting Wada of having exceeded his instructions, promised to dismiss him. The latter, then ill at Takatsuki, got wind of the danger which threatened him and proposed to go and justify himself before Nobunaga, when a messenger arrived to announce to him his disgrace, in other words he was relieved of his functions as Governor of Kyoto and his lands of Yajima went to swell the possessions of Nobunaga. Wada bowed to this decision, had his hair and beard cut, dressed himself in garments of a recluse from worldly things, as a disgraced person ought to do; then, followed by 200 of his *samurai* of Yajima, he retired to Takatsuki.

One can imagine the joy that this news caused among the adversaries of the foreign religion, and at the same time of the grief it provoked among the Christians. Already they foreboded a future of the gloomiest when a sudden and unexpected change raised up their drooping spirits. Nobunaga having in the meantime arrived in Kyoto, expressed to the great astonishment of all his desire to see Wada. This desire was equivalent to the return of Wada to favour and the friends of the latter hastened to apprise him of it and to recall him to Kyoto. When Nobunaga saw Wada dressed as a disgraced person and humbly prostrate at his feet, he experienced remorse for having treated with such a want of consideration the warrior whose devotion and loyalty to himself were known. He at once ordered his own dress to be brought in and he clothed him with his own hands. He confided to him anew the functions of Governor of Kyoto and to show the whole city that Wada had regained his favour he traversed in his company several of the most crowded streets. The lands of Yajima were not however returned to him, but in compensation Nobunaga increased his revenues from Takatsuki by 40,000 *koku*. On the other hand all the resentment of Nobunaga fell on the bonze Nichijo, whom he would even have put to death if the Mikado had not interceded in his favour.

A short time after Nobunaga had reason to congratulate himself on having restored his confidence to Wada. For it was thanks to him that Nobunaga escaped from an ambushade that the bonzes of Hiei-zan and the *daimyo* Sasaki and Asakura had prepared for him towards the end of the year 1570. Nobunaga, accompanied by Wada and a rather feeble guard had just left Kyoto for Azuchi and as soon as he arrived at Otsu the conspirators, lined along the road, issued all at once from their concealment and fell on Nobunaga and his followers. The struggle was terrible. After a combat lasting several hours several thousands of the conspirators were strewn along the road while the survivors sought refuge in the fortified monasteries of Hiei-zan. Wada was covered with wounds, and Nobunaga, who had

seen with what courage he fought, declared to him that it was owing to his bravery that the enemy had been routed. He then presented him with his own sword as a reward for his devotion. Wada accepted this mark of esteem but he asked permission to retire to Takatsuki to attend to his wounds.

During the long days of his convalescence Wada had himself instructed in the Christian religion. Brother Lawrence remained constantly with him, dispelling the few doubts that still remained to him. Already the fervent catechumen had fixed the day of his baptism, but evil chance decided it otherwise. Ikeda Katsumasa, *daimyo* of Ikeda (Settsu), and a neighbour of Wada's, angry because Wada had recently constructed two little castles within the limits of their possessions, had suddenly invaded Wada's territory and besieged the castle of Umazuka, which had been confided to Dario Takayama. The latter had several times repelled the enemy but food failing he dispatched a messenger to Wada begging him to run to his succour. At this moment Wada was assisting at a sermon in the church of Takatsuki. On receiving the pressing message of his brother, he set out immediately with only two hundred *samurai*, five hundred others being told to follow under his son. Ikeda learning of Wada's arrival, went to meet him and prepared an ambushade for him. The rest may be guessed. Wada and his two hundred *samurai* were surrounded at the very moment that they least expected it and put to rout. Wada, scarcely yet convalescent, fell beneath a heap of the enemy's corpses. He was in his 41st year. His son, as incapable as his father had been valiant, only came up to undergo a lamentable defeat. Besides, the courage of the *samurai* had disappeared with the death of Wada: all took to flight and the son was barely able to save himself by taking refuge in the castle of Takatsuki. (40)

STUDENT VOLUNTEER CONFERENCE AT KARUIZAWA.

The Student Volunteer Movement for Foreign Missions began sixteen years ago in the United States of America, and had as its object the supply of a sufficient number of well-equipped men and women for the various mission boards and societies, and the development of intelligent interest and activity in foreign missions in the Churches at home. Since the organization of the movement, thousands of students have volunteered for foreign missionary work, and up to the beginning of the present year one thousand nine hundred and fifty-three (1,953) of these volunteers sailed for their foreign fields of labour. At present, about one hundred and ten (110) of these are engaged in missionary work in Japan.

During the great Missionary Conference in Tokyo in the fall of 1900, about sixty of these workers met, and effected a loose organization, in order to keep in touch with each other, and maintain the Student Volunteer spirit among the workers in the field. Last summer, a meeting was held one afternoon at Karuizawa, several measures were briefly discussed, and the Prayer-Card was arranged for.

This summer, on August 8th and 10th, a really important conference of this Student Volunteer League was held in Karuizawa. In spite of the rainy weather the meetings were well attended, and the feeling was general that the conference had been one of unusual profit. One gentleman, who lives six hundred and fifty miles from Karuizawa, said it was worth a special trip from his home here.

The general subject under consideration was "The part of volunteers in securing educated Japanese for the ministry and other Christian callings," and this general subject was divided into five parts:

1. The extent and character of the need.
2. Past and present efforts to meet the need.
3. Main difficulties and objections: External and Internal.
4. How best to meet the difficulties and objections

(40) *Maffeus*, p. 140.

(34) *Kirishitan raicho jitsuroku*.

(37) *Brise aus Japan*, vol. 2 p. 16.

(38) *Brise aus Japan*, vol. 2 p. 120.

(39) Owing to the fault of the copyists he is generally known under the name of Nikiso Sumi.

5. Our special responsibility as volunteers, and how we can discharge it.

The principal speakers were Rev. J. L. Dearing, D.D., of Yokohama, Rev. D. Norman, of Tokyo, Rev. T. H. Haden, of Kobe, Rev. A. D. Hail, D.D., of Osaka, Rev. Charles Bishop, of Tokyo, Rev. Dr. Schneder, Sendai, Rev. C. B. Tenney, of Kobe, and Mrs. Van Petten, of Yokohama—the last representing the question of women workers. Rev. Mr. Knipp, of Tokyo, led the sunrise prayer service on Sunday morning. Dr. Schneder could not be present, but sent a carefully prepared paper. The leading speakers were limited to fifteen minutes each, and were followed by many others in general discussion.

All were agreed that the supply of efficient workers, both men and women, was far short of the need, and that while much had been done to provide good workers, the need was still very great. Workers of a certain sort could be had, but really good ones were coming in very slowly.

Some of the main difficulties and objections most emphasized were:—(1) Money. (2) The great activity in commerce and related employments. (3) Restlessness and discontent among those already in the ministry. (4) "Do more good as a Christian teacher or Christian business man." (5) Failure to feel sense of duty in regard to the ministry. (6) Undervaluing the ministry in its use to the nation.

The following were some of the main remedies suggested:—(1) Salaries should be somewhat higher. (2) Every effort should be made to maintain cordial relations between Foreign and Japanese workers. (3) The Christian ministry should be held up to Japanese young men as the highest of callings—God calls men directly to the ministry. (4) The Japanese must learn the lesson of real self-sacrifice. (5) Prayer that God sends out labourers into his harvest. (6) Calling the attention of promising young men to the claims of the Christian ministry upon them, and wisely helping those that are considering the ministry as their life-work to a proper decision.

It was probably the conviction of most of those in attendance that when the Missionaries and Japanese workers really pray and properly work for the needed labourers, God will thrust them forth, and many of the difficulties that seem almost insurmountable now will find an easy solution.

All are greatly indebted to Messrs. Fisher and Helm, and the other members of the Executive Committee of the Student Volunteer League of Japan, for bringing about a conference that should be so fruitful of good, and it is to be sincerely desired that all who were present and caught the spirit of the occasion will communicate this spirit as far as possible to their friends the Missionaries and the Japanese Workers.

THOS. H. HADEN.

DEATH OF MR. T. H. BOX.

We regret to record the death of Mr. Thos. Holyoake Box, which occurred suddenly from heat apoplexy at Foochow, on Thursday, we believe. Mr. Box had been for many years a resident of Yokohama and was well known in business and journalistic circles here, having been at different times connected with various firms as accountant or assistant, while in his capacity of stenographer he rendered valuable assistance on more than one occasion to the local press. In addition to this journalistic work Mr. Box was a valued correspondent to some commercial journals in America and England, and also gained the distinction a few years ago of winning the second out of three prizes offered for the best essay on Bimetallism and Monometallism in the Far East. Mr. Box had been engaged during the past year or so in the compilation of a succinct and useful exchange table, and it was business in connection with this work which took him to Hongkong and the Southern ports last autumn. He leaves a wife and young family, for whom sincere sympathy will be felt by the community.

The Japanese war-ship *Naniwa*, with a number of graduates from the Naval Engineering College, returned to Yokosuka on August 27th after a training cruise in Chinese waters.

LAW CASES.

HIOKI v. SPECIE BANK.

In the Yokohama Chiho Saibansho on Saturday morning, before Judge Kato, was resumed the hearing of the suit brought by Mr. S. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., against the Yokohama Specie Bank, claiming yen 15,871.74. The plaintiff appeared in person and the defendants were represented by Mr. S. Takahashi.

The plaintiff stated that prior to the foreign firm being declared bankrupt, Mr. Pigott had not been authorized to direct the firm's business, for he was only an employee, but after the firm was declared bankrupt he was entrusted with the business of adjusting the accounts. The firm was dissolved on February 17th this year.

Mr. Takahashi asked the Court to examine Mr. Pigott as a witness in consideration of the fact that he had represented the bankrupt firm after it was declared bankrupt.

The Judge—When did Mr. Harris entrust Mr. Pigott with the task of adjusting the accounts of the bankrupt firm?

The plaintiff—On Feb. 17th this year when Mr. Harris left Yokohama for home he ordered Mr. Pigott to adjust the accounts remaining unsettled.

Continuing, the plaintiff said the plaintiff was justified in claiming the sum representing 780 boxes of tea, which had been exported to New York through the medium of the Specie Bank.

Producing some letters exchanged between the Specie Bank and Mr. Harris the plaintiff said that a sum of yen 40,000 was deposited by the bankrupt firm with the Bank was quite clear from these letters.

Mr. Takahashi said that in compliance with the firm's request the Bank granted a loan of yen 5,000, which sum the firm was in urgent need of to pay to the Formosan Government on certain business, and besides this loan the firm owed over yen 37,000 to the Bank. Moreover, to the great surprise of the Bank, the latter was asked by the firm to purchase 780 boxes of tea above referred to. The Bank, however, acceded to the request. As a draft representing 780 boxes was presented to the Bank the latter regarded the same as a guarantee for the money with which the tea was purchased and exported on behalf of the bankrupt firm. Under the circumstances, the plaintiff's case should be dismissed.

The Court announced that judgment would be given on August 28th.

Judgment was delivered in the Yokohama Chiho Saibansho on Thursday morning, by Judge Kato, in the case brought by Mr. S. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., Yokohama, against the Yokohama Specie Bank, claiming yen 15,871.74.

The defendants were ordered to pay the plaintiff the sum claimed and interest at six per cent. from February 8th this year until the execution of judgment, costs of the case to be borne by the defendants.

Particulars of the case appeared in the *Japan Mail* of August 25th.

THE JOVANSSEN CASE.

Mr. R. G. Hopkins is still detained in the Negishi Prison, pending the conclusion of the preliminary examinations in the case brought against him and Mrs. Jovanssen charging them with adultery. Efforts have been made to have him released on bail, but the bail in his case is said to be yen 7,000.

Mr. R. G. Hopkins is still detained in the Negishi Prison, pending the conclusion of the preliminary examination.

HIOKI v. SAMUEL SAMUEL & CO.

A suit has been filed in the Yokohama Chiho Saibansho by Mr. S. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heimann & Co., No. 35, Yokohama, against Messrs. Samuel Samuel & Co., No. 27, Yokohama, claiming from the latter recovery of yen 226,250 which had been supplied by the bank-

rupt firm to the defendants in connection with transactions of camphor monopoly business between the Formosan Government and the defendants. The action will come up for hearing on September 6th.

On Thursday, in the Kobe Ku Saibansho, before Judge Hayakawa, Mr. H. Julien, butcher and ships' provisioner, Sakaye-machi, Kobe, was charged with an infraction of the Customs Law, reports the *Chronicle*. It was stated for the prosecution that the defendant had boarded the German ship *Wega* on June 20th last without obtaining the permission of the Customs authorities. Defendant admitted that he had done so but did not remember the date. He was fined yen 10.

Mr. George Meyer, an employé of Messrs. Dick, Bruhn & Co., was similarly charged in the Kobe Ku Saibansho. Defendant also boarded the *Wega*. He did not appear in answer to the summons, and judgment was given in default, a fine of yen 10 being imposed.

Mr. Ono Yoshio, a clerk in the employment of the Yokosuka Naval Yard, has been taken into custody by the Yokosuka Police on a charge of having taken photographs of that place. It appears that on the morning of August 18th he was taking photographs of neighbouring scenes from the fence of his own house when he was seen by a policeman. In the Police Station he explained that he took the photographs for pleasure only. All the negatives were seized and sent to the Yokosuka Admiralty, where a court-martial will shortly be held in connection therewith.

Legal proceedings are about to be instituted in the Yokohama Chiho Saibansho by the Yokohama branch of the Russo-Chinese Bank against the Yokohama Sanshi (Silk) Bank, claiming recovery of money advanced to the latter. With reference to the above, a Japanese paper says that the General Manager of the Bank's branches in Japan, having recently returned to Yokohama, visited Mr. T. Yamaki, the President of the Sanshi Ginko, several days ago with the intention of conducting negotiations relative to the out-standing loan, but Mr. Yamaki refused an interview on the plea of being seriously indisposed. Thereupon the General Manager of the Yokohama Russo-Chinese Bank determined to bring the matter before the Court despite the request of Mr. Yamaki and others who subsequently approached him, asking for further time. It is scarcely necessary to state that the Sanshi Bank is heavily indebted not only to the Russo-Chinese Bank but to various Japanese banks such as the Nippon Ginko, the Teiyu, the Teisho, etc.

LITERARY GOSSIP.

The *Edinburgh Review*, which has had a remarkable career and still holds a leading place in the periodical literature of Great Britain, has just concluded the hundredth year of its publication.

Colonel Harvey, the new editor of *Harper's Weekly*, is convinced that "within the life period of the majority of those who will read these lines, America will dominate the world in literature, art, science, finance, commerce and Christianity." Truly a large order, but who shall say that it is not possible of achievement.

The papers at home are full of praise of the new volumes of the *Encyclopædia Britannica*. It is therefore interesting to learn, from the general preface to the supplement, the statistical facts in the evolution of this great work from its three-volume Edinburgh embryo of 1768 to its present august dimensions. In 1771 these original three volumes contained 2,670 pages and 160 copper plates. From this small beginning the *Encyclopædia Britannica* has increased, in size as well as in importance, until the present edition, when completed by the new volumes, will include more than 28,000 pages and more than 12,000 plates, maps, and other illustrations. The evolution, during the one hundred and thirty-four intervening years, was gradual. The second edition, containing 8,595 pages, was completed in 1784; the third,

14,579 pages, in 1797; the fourth, 16,033 pages, in 1810; the fifth, 16,017 pages, in 1817; the supplement to the fifth edition, 4,933 pages, in 1820; the sixth edition, 16,017 pages, in 1823; the seventh, 17,011 pages, in 1842; the eighth, 17,957 pages, in 1861. The first volume of the ninth edition was published in 1875, and the last, making a total of 21,572 pages, in 1889.

Mrs. Elizabeth Waterhouse has published through Messrs. Methuen a dainty work entitled a "Little Book of Life and Death." It is an anthology from writers of all the ages dealing with the great themes of life. We transcribe two brief passages. The first is taken from the works of that noble physician of Norwich, Sir Thomas Browne:—

Be able to be alone. Lose not the advantage of Solitude, and the Society of thyself, nor be only content, but delight to be alone and single with Omnipresency. He who is thus prepared, the Day is not uneasy nor the Night black unto him. Darkness may bound his Eyes, not his Imagination. In his Bed he may lie, like Pompey and his Sons, in all quarters of the Earth, may speculate on the Universe, and enjoy the whole World in the Hermitage of himself. Thus the old ascetic Christians found a paradise in a Desert, and with little converse on Earth held a conversation in Heaven; thus they astronomized in Caves, and, though they beheld not the Stars, had the Glory of Heaven before them.

Such a passage only the supreme English master of tranquil and meditative rhetoric could have written. Yet not unworthy to stand beside it is this of the imperial Roman, Marcus Aurelius, on the same theme:—

They seek for themselves private resting-places, as country villages, the sea-shore, mountains; yea, thou thyself art wont to long much after such places. But all this (thou must know) proceeds from simplicity in the highest degree. At what time soever thou wilt, it is in thy power to retire any whither to be more at rest, and freer from all business, than in his own soul. He especially who is beforehand provided of such things within, which whensoever he doth withdraw himself to look in, may presently afford him perfect ease and tranquillity.

His Majesty King Edward VII. seems to have been a rather dull boy at his books, judging from the various "lives," which the recent Coronation brought forth from the publishers rooms. His father desired to make of him an ideal prince, but public opinion of the day seemed to think that the educational scheme followed erred rather too much on the side of the ideal. This sentiment is reflected in *Punch's* poem, entitled "A Prince at High Pressure":—

Thou dear little Wales, sure the saddest of tales
Is the tale of the studies with which they are cram-
ming thee:

In thy tuckers and bibs, handed over to Gibbs,
Who for eight years with solid instruction is
cramming thee.

There was also an anonymous pamphlet issued which may have had some influence in its suggested counsel of perfection. Whether for Prince or pauper the advice was good and is well worth quoting: "Let our Prince love our beautiful poets, but let him never be set to make a verse; let him be taught to admire the wonders of painting and sculpture, but let him never assume the palette or chisel; let him be led to understand the mechanical arts, but let him never touch tool or lathe; let him be familiar with science from conversation; but let him have no laboratory, no pet museum or collection." This gratuitous advice was not followed, but the fact remains patent to all that "dear little Wales" was rushed through Cambridge and Oxford; he visited Glasgow "where two days would suffice: one day devoted to iron (industry) and the other spent in cotton." He was then hustled through Canada, America, Europe, and Palestine, learning all the while. In his spare time he devoted himself to State functions. It is not the fault of his preceptors that King Edward has turned out the most tactful, humane, and considerate gentleman in all his wide dominions.

AMERICAN TOPICS.

The Paris correspondent of the London *Observer* says that "in engineering circles in Paris it is reported that the frequent visits recently paid to Dover by J. Pierpont Morgan were made with the object of testing the capabilities of the new harbour improvements, with a view of making Dover a port of call for the Atlantic shipping combine's liners."

A sensation was caused in Boston art circles in July by the announcement that a genuine Rembrandt has been discovered in the Boston Museum of Fine Arts. While cleaning the pictures in the gallery of the museum, John Briggs Potter, an artist, uncovered the signature of Rembrandt and the date of 1692 on a picture called "The Shower of Gold," the authorship of which had long been in doubt. Experts after a careful examination decided that there was not the slightest doubt that the picture was a genuine Rembrandt. It is the property of the estate of Francis Brooks and was purchased by his father from a dealer in Paris many years ago.

There are 659 mineral springs in the United States, producing 55,777,188 gallons of water, valued at \$7,586,962. Massachusetts has the largest number of springs, New York coming second. Michigan's springs, however, produced water worth \$1,195,614, against \$1,189,413 for New York and \$391,958 for Massachusetts. In spite of the increased home production, the importation of mineral waters in the year 1901 shows a slight increase. The quantity imported was 2,567,323 gallons, valued at \$744,392, an increase in quantity over the previous year of 82,281 gallons and an increase in value of \$56,518. The number of gallons imported has not varied greatly in the last six years, although for four years the value has slightly increased. No record of the exports of domestic natural mineral waters seems to have been kept by the Treasury Department since 1883.

The remarkable effects upon the agricultural industry in the United States produced by the use of machinery are dwelt upon in a recent census bulletin. The writer asserts that the cost of producing a bushel of wheat has fallen in sixty-six years from 17¾ cents to 3 1-3, chiefly through this agency. He might have added with great pertinence that this extraordinary result was largely brought about by the diversification of American industries. Had the United States remained a strictly agricultural country, a destiny which the Cobdenites insisted it was best fitted for, no such results as the writer of the census bulletin dilates upon could be achieved. The numerous labour-saving machines responsible for the great reduction in the cost of production are mostly American inventions, and nine out of every ten of them were supplied simply because American mechanics could study the necessities of American farmers at short range. Had the States not developed mechanical ingenuity they would still be producing farm products in the slow, laborious and expensive manner now in vogue in Europe.

This is midsummer, remarked *Bradstreets* on July 26th, but it is midsummer in a congressional year, and therefore there is activity which some may regard as unseasonable among statesmen, and there is much talk about what will be the issue or issues in the coming congressional campaign. There will doubtless be discussion pro and con upon several questions, and some time ago it looked as though affairs in the Philippines would furnish the principal issue in the contest. There has been a change in the situation, however, and it may be set down among the high probabilities that the well-worn subject of the trusts will be put to the front. This seems to be the purpose of the opposition, as indicated in recent statements of leading members of that party. Mr. Livingston, of Georgia, the ranking minority member of the House Committee on Appropriations, declared, in an interview at Washington early in the week, that he regarded the financial question as practically settled, and he gave prominence to the questions of trusts and

the tariff as furnishing the staple of the Democratic arguments at this time.

President Schwab, who has retired from the Presidency of the Steel Trust, shattered in health, had many troubles to contend with during the last month of office. Foremost among these was the semi-official announcement that a decision of the New Jersey Court of Errors and Appeals in the case involving the injunction against the United States Steel Corporation's proposed bond issue and preferred-stock conversion plan would probably not be rendered until September. In fact, the proceedings in the supplementary suits commenced by the people who are combatting the steel corporation in regard to the matter have also been adjourned until September. The prospect of a longer delay than had been anticipated in the final determination of this important matter had an unfavorable effect on the position of the Steel stocks in the market. At the same time, says *Bradstreets*, there have been rumours that the management of the corporation may decide upon another line of action. It is alleged that, in view of the unexpectedly large earnings of the constituent companies, it is becoming possible for the corporation to provide funds for improvements and other purposes from current revenue, and that consequently the bond issue plan may be modified in a radical way.

The details of the American immigration statistics for the last fiscal year, which are just made public by the U. S. Bureau of Immigration, show that Italy continues to lead all other countries in the number of emigrants it sends to America. The arrivals in the last fiscal year, including those who came in cabins and from Canada, exceeded those of any year the history of the country. Nearly one-third of the whole number came from Italy, and Austria-Hungary ranks next. The details and comparison with the previous year are as follow:

	Arrivals.	Increases.
Austria-Hungary.....	171,989	58,599
German Empire	28,304	6,653
Italy, including Sicily and Sar-		
dinia	178,375	42,379
Norway	17,484	5,236
Russian Empire and Finland..	107,347	22,090
Sweden.....	30,894	7,563
England	13,575	1,361
Ireland	29,138	—
Great Britain	46,036	1,913
Scotland	2,560	490
Wales	763	62

Of the total increase of 167,930 passengers over the previous fiscal year, Italy and Austria-Hungary furnish more than 100,000. The Russians and Finns are next in the increase. The total immigration from Asia was 22,271, an increase of 8,678. Japan furnished all of this increase. Africa and the remainder of the world contribute comparatively small numbers.

NEWS OF THE WEEK.

The regular general meeting of shareholders of the Yokohama Specie Bank will take place on September 10th at 2 o'clock.

Prof. J. M. Dixon, well-known to many readers of the *Japan Mail*, has lately become editor of a Methodist paper in St. Louis.

A bill for the amendment of the Criminal Code and the Code of Criminal Procedure will be submitted to the House of Peers in the next 17th session of the Diet, full arrangements having been made on the part of the Government.

Movements have been started among charitable persons of Saitama Prefecture and other places for the purpose of rendering assistance to many female operatives employed in sericulture and other occupations of the kind in that prefecture.

At the request of the Karuizawa Entertainments' Committee, Mr. Walter Dening delivered on August 23rd a lecture on "The Japanese Language." We hope to have the pleasure of printing it in these columns, the audience having proffered a request to that effect to the lecturer.

Owing to the death from dysentery of Major

Imamura, Commander-in-Chief of the Japanese troops in Shanghai, Captain Imamura Shinroku of the General Staff Office has been appointed in succession to the late Major. The Captain is said to be well versed in Chinese affairs.

A kerosene company called the Taka Sekiyu Kabushiki Kaisha of Koshi district, Echigo, province, is reported to have struck oil on August 20th at a depth of 1,056 feet on the company's property. Over 30 *koku* of oil is said to be produced in 24 hours.

The Kobe Rowing and Athletic Club has accepted a challenge from the Yokohama Amateur Rowing Club to send representatives for a water polo match, and two swimming matches of 100 yards and a quarter of a mile. The date will be fixed later.

It is reported that there has been a considerable catch of bonito in the waters off Shima and Ise provinces, where such a catch as the present has never been known during the past fifty years. Such an unprecedented haul is believed to have been caused by the recent submarine volcanic eruption in the southern Pacific.

Mr. Matsu-ura Gohei, of Shizuoka, in compliance with the request of the Central Tea Guild, will start for the United States for the purpose of inspecting the condition of tea business there, leaving Yokohama on September 5th. He is a Parliamentary member representing Shizuoka Prefecture.

Speaking through the columns of the *Asahi Shimbun*, Mr. Tamaki Hanyemon, the lessee of Tori-shima, where the terrible volcanic eruption took place recently, is reported to have spoken as follows:—No sooner had the news of the catastrophe reached him than he hastened back to Tokyo from the Loochoos, where he was on business when the disaster occurred.

According to official inquiries made on August 21st the total number of cases and deaths from cholera throughout the country was 3,134 and 1,395 respectively, from the outbreak up to the present. Districts affected include Tokyo, Osaka, Kyoto, Formosa, Hyogo, Nagasaki and 12 other Prefectures in western Japan.

The steamer *No. 12 Kannon Maru* (280 tons) which left Yokohama early on August 19th for Handa, Owari Province, put back to Yokohama the following day in consequence of rough weather and the high seas prevailing off Izu peninsula. The vessel again left the port for her destination on the morning of the 21st. She is laden with 3,940 tons of miscellaneous goods.

Seeing that the quotations for rice are steadily rising in Japan owing to the recent unfavourable weather, both home and foreign merchants interested in the cereal have begun to import foreign rice in considerable quantities. Among them, according to the *Asahi Shimbun*, are Messrs. Jardine, Matheson & Co. who are importing a large quantity of Saigon and Rangoon rice.

A thief who had twice entered the German Legation in Tokyo has been arrested by the Kojimachi Police. He is named Misaki Sankuro, 24 years old, and is a native of Niigata Prefecture. It appears that some time in April he entered the Legation and stole five *yen* in cash and some clothing, and on the night of August 8th he returned and carried off the German Minister's overcoat.

The Department of Communications has decided that the charges for press messages, including foreign papers published in Japan, between this and other countries and in the interior of Japan shall be lowered, and that a more efficacious method be introduced for the speedy transmission of press messages. A bill to the above effect will be submitted to the next session of the Imperial Diet.

Under the auspices of Mr. R. Imanishi of Osaka an emigration company will be established there in the near future for the purpose of sending emigrants to the Pacific coast of North

America. The scheme is strongly supported by Messrs. Toyama Shuzo, Inouye Yasutaro and other leading citizens of Osaka, who have consented to render substantial assistance. The chief feature of the proposed company is said to be that the emigrants are all dealt with on a charity basis.

The Japanese torpedo-boat destroyer *Asashiro*, built in England for the Japanese Navy, left Gibraltar on August 26th for Japan via Malta and Suez.

Thursday, August 28th, being the birthday of the King of Korea, the occasion was duly celebrated at the Korean Legation in Tokyo. The usual diplomatic formalities were exchanged.

Mr. K. Inouye, Japanese Minister to Germany, who left Berlin some time ago for home on leave of absence, is expected to arrive at Yokohama about August 30th by the German steamer *Prinzess Irene*.

The Crown Princess and her infant, Prince Atsu-no-miya, left Shimbashi for Hayama on the morning of August 27th via Yokohama Station, where a large number of officials and other citizens had assembled to welcome Her Highness. The Imperial party arrived at Hayama shortly before 9 o'clock.

Negotiations for amalgamation are in progress among influential shareholders of the Yokohama Rice and Stock Exchange and of the Yokohama Silk and Four Staples Exchange with a view to furthering their business interests. The matter will be definitely arranged at no distant date. A Japanese paper says that recent failure in business has caused the shareholders of the two establishments to resort to amalgamation.

The work of raising torpedo-laying boats Nos. 183 and 193, which were blown ashore at the entrance of Ominato harbour, Hitachi province, on August 21st, is now going on under the direction of Captain S. Taguchi, who was dispatched thither from Yokosuka for the purpose. It is stated that though No. 193 boat may be floated in about ten days there is no prospect of raising the other. The latter appears to have broken her back.

In obedience to the order of the Kaiser an official from the German Consulate-General at Yokohama proceeded to the Kanagawa Prefectural Office on August 26th and handed Mr. Sufu the Third Class Order of the Red Cross in recognition of services rendered by the Governor toward the German soldiers and sailors who were conveyed to Japan for medical treatment during the Boxer uprising in 1900. Mr. Sufu was Governor of Hyogo Prefecture at that time.

The Emperor of Germany has been pleased to confer the Third Class Order of the Red Cross upon Mr. T. Tokonami, Secretary of the Tokyo Municipal Office, in recognition of services rendered by him toward German sailors and soldiers, either wounded or invalid, who were conveyed to Japan for treatment during the Boxer trouble in 1900. The decoration was handed to Mr. Tokonami on August 26th by H. E. Graf von Arco-Valley, German Minister in Tokyo, who visited the Secretary at his office for the purpose.

Prince Cyril of Russia, who left Yokohama on August 22nd for Kobe, arrived at the latter port in the *Admiral Nakhimoff* on the afternoon of the 23rd. The Prince, accompanied by his staff, landed about 7.30 p.m. the same evening and put up at the Oriental Hotel. The band of the *Nakhimoff* played the Japanese National Anthem (*Kimigayo*) in honour of the Japanese warship *Akashi*, which afterwards responded. In Kobe, there are now stationed, besides the above ships, one Russian, one Italian, two American, three German, and two Japanese war-vessels.

Already reported in these columns, the Yokohama City Authorities will issue early next month a second notice to foreign owners of property in Yokohama requesting them to pay the house tax for the first half of the present year, and in the

event of the order not being acquiesced in a second distraining will be resorted to. The first notice of warning was distributed among foreigners on August 7th, asking them to pay the tax not later than September 5th.

The Yokohama representative of Messrs. Babcock & Wilcox, Ltd. (Mr. B. A. Munster) informs us that after a very lengthy investigation into the use of that firm's boilers in Rolling Mills and Iron and Steel Works a deputation of Japanese engineers, sent over for the purpose by the Imperial Japanese Navy, have placed with them the order for the boilers for the new Arsenal and Steel Works. The first order is for 12 boilers of 4,394 square feet of heating surface each.

The following note is from the *Hongkong Daily Press*:—"We regret to record the death on Saturday of Mr. Ronald Maitland Hutton Potts, the youngest member of the family so well known out here. He died in the Peak Hospital. Mr. Ronald Potts, when he left England, joined the Constabulary in South Africa and, we believe, won a medal in one of the native wars there. Leaving Africa before the Boer War just terminated was even anticipated, Mr. Potts has been a familiar and popular figure in the Colony for some time past. Numerous friends accompanied his funeral down to the Happy Valley."

At a meeting of members of the Yokohama (Japanese) Chamber of Commerce held on August 25th the following subjects were discussed:—(1) Whether or not the Chamber of Commerce he kept open as heretofore despite the provisions of the law recently issued for the Chambers of Commerce throughout the country; (2) matters relating to the abolition of *hikin* and the increase of Customs duty; (3) matters relating to the invitation sent from the International Marine Affairs Association, Paris, to join the union. As to the first item, it was resolved to present it at the next general meeting of members of the Chamber for further consideration, to hear the opinion of the proper Authorities as to the second subject, and with regard to the third problem to ask for full particulars relative to the business of the Association.

CORRESPONDENCE.

"KOBE BEEF."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I desire to draw your attention and that of the public through the medium of your journal, to a subject that appears to have been hitherto strangely ignored or over-looked.

I refer to the manner in which beasts from Kobe are brought to Yokohama for conversion into meat, and I am sure when the facts I shall relate are placed before your and your readers' notice, public opinion will be so strong on the subject that the executive of the Nippon Yusen Kaisha will be compelled to have different arrangements from those at present in use for the conveyance of animals they transport as live freight.

It is on the vessels known as cargo boats, or those trading from Kobe to Otaru, that the live stock to be converted into "Kobe Beef" on arriving here, is transported.

There are no partitions on the lower deck appropriated to these animals, but they are simply tethered side by side in rows by the nose-ring, and also by a halter, about a foot long, attached to their horns, so that the beasts must necessarily stand for a period of a day and two nights, which even under the most favourable conditions of a fine passage is hard enough for the poor brutes, considering that they get neither food nor water during all that time, following immediately after the long train journey from their native pastures, as they are brought direct from the railway to the ship.

But it is during rough passages—which we all know are the rule not the exception, between Kobe and Yokohama—that the hitherto untold agonies of these poor creatures are suffered to an extent that could never be even imagined unless described.

In the first place, when the vessel begins to roll, having no foothold from the decks being made wet and slippery by natural causes, the nose-ring is soon torn out, and in many cases the horns also, or else badly broken. Then in really bad weather, follow scenes which eye-witnesses declare are so sickening that even strong men, inured to such sights, turn faint and cannot look at them.

Legs broken, eyes gouged out by horns, bodies ripped open and entrails hanging out, are no exaggerated nor uncommon occurrences, and the writer was credibly informed that on one occasion of extra bad weather, not a beast was left alive out of a whole shipment, but lay mangled and dead as described above, on a deck all awash with their blood. In reply to a query as to what became of the carcasses, it was said they were "believed" to have gone to the butchers to be sold as meat. This may or may not have been the case, but the mere contemplation of such a possibility entering the mind when a noble sirloin or juicy steak is placed before one is not calculated to improve the appetite, neither can the flesh of animals so bruised, gashed, and tortured in their last moments, be wholesome human food.

Putting, however, the consequences to ourselves out of the question, common humanity demands more consideration for the poor beasts whose ultimate end is to minister to our appetites and nourishment, whose agonizing mute appeals we never hear, and should never know but for a disclosure like the present; and it is in the hope that such a noble up-to-date company as the Nippon Yusen Kaisha, so well known to be foremost in all arrangements for the comfort and well-being of its human freights, will see fit to reduce to a minimum the sufferings of the poor beasts committed to their charge, that the above facts have been given by

Yours, etc.,

HUMANITARIAN.

August 20th, 1902.

THE WORD PROTESTANT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Next to books of devotion there is no reading that delights my soul more than the *Mir*. Religion being the deepest thing in man's heart is the most interesting. "The Christian Daimyo" satisfies a want long-felt by many souls in all countries who are deeply interested in the conversion of Japan. Your servant would be most proud and happy to know the author, and sit at his feet to study more fully from the authorities that he cites. He humbly hopes that when the work comes out in book form the following sentence may be omitted, viz., *Weekly Mail* August 16th, 1902, p. 181, 3rd column, one-third of the way down—"The Protestant Mission of America cannot forget that it has spent several millions of dollars in instructing poor students who apostatize generally as soon as they have no more need of foreigners."

What the writer means to convey is the idea that there is a general tendency to apostasy among the students of a certain class of Mission Schools. Is not the writer drawing upon his imagination for his facts? A long list of names eminent in Japanese Christianity at the present time could be given to prove that the educational influence of the schools supported from America has been successful beyond the wildest dreams of the donors, or even of the teachers under whose influence the funds were supplied. The leaders of the best thought of Japan today are the product directly or indirectly of Christian educators and their imitators. The Americans have furnished ideas for the entire educational system of the Empire. "The Protestant Mission of America cannot forget, &c." Of course it cannot forget, nor can it remember, because it has no existence whatever except in the imagination of the writer of "The Christian Daimyo."

I can assert without the slightest fear of successful contradiction that there is no school in Japan that can be called with complete truth Protestant, and for the very simple and sufficient reason that there is there nothing to protest against.

The lives of holy fathers, brothers, and sisters working night and day for the conversion of lost souls gives no room for protest. We are more at one than we may imagine. I myself have heard people say under the influence of early foreign education, "The Romans are no better than the Buddhists" and have afterwards known those same people to send their children to Roman Schools, for the reason that there were no others. And the children of Protestant missionaries can get in Roman schools in this empire, a safer education than they can get in the home lands; as has been proved again and again by actual experiment. Let us be very careful about the use of adjectives. The word Protestant is absolutely unknown in the Japanese language; let us not plant it there. Even schismatics and heretics can be made useful. What is true lives because it is positive and what is false dies because it is negative, and therefore unproductive.

The Holy Saint Monica prayed for her son, a sinner, for thirty-five years, and saw him become first a heretical believer and later the greatest of the Doctors of the Church of that time. Ulfilas, an Arian bishop, converted the tribes of what is now Holy Orthodox Russia. I could give the name of a certain heretic whose tracts in the language of this empire are read by the thousand. Why? Because

they contain nothing but the Creed, the Lord's Prayer and the Ten Commandments.

I have in mind at this moment a certain city under the invocation of Saint Francis of Assisi, and a certain church dedicated to the Holy Mother of God; where there is a stained glass window containing a picture of Saint Francis Xavier dying in a hut; I have knelt before it in prayer often; but to the best of my knowledge and belief the only people who are really in earnest for the conversion of the souls of Japanese and Chinese in that city are Protestant women, and the ones who actually live among them within a few hundred feet of that very church are members of the Salvation Army. I so say from my heart, "Hurrah for the Hallelujah Lassies!" But even they cannot escape from the Holy Catholic Church. They have it on the wall of their preaching room in the Apostles Creed.

(聖公會)

FOREIGN TRADE OF YOKOHAMA.

The following extracts are taken from Mr. Consul Bonar's report on the trade of Yokohama for 1901:—

The total value of the foreign trade of Yokohama for the year 1901 amounted to £22,698,322, of which £13,661,047 represented exports and £9,037,275 represented imports, leaving a balance in favour of exports of £4,623,772. This result is an encouraging one to the country, and is very different from that of the previous year, when imports were in excess of exports by £1,393,443. At the same time the position as regards volume of trade and excess of exports is more satisfactory than that of any former year, and bears ample testimony to the growing importance of the port. Yokohama being the chief outlet for the export of Japan's principal products, it is naturally expected that the trade of this port should invariably show a surplus, and although this has not proved the case every year, the net result for the past five years shows a balance in favour of the port of £3,472,348.

METALS.—A feature of the year has been a large increase in the import of German bars, against a decrease in Belgian and British manufactures.

Owing probably to the curtailment of Government extensions the imports of *Rails* have fallen from 27,000 tons in 1900 to 16,000 tons in 1901. It was anticipated that the Government foundry would supply all future requirements, but some further orders have nevertheless, been placed in Europe. The time must, however, surely come very soon, when the foundry will be properly at work. In is an enterprise upon which over £2,000,000 have been spent, and it is not likely to be abandoned.

Figures show a large decrease both proportionately and absolutely in the British shares of bars and sheets. British manufacturers appear to be unable to compete with either Belgian or German makers for the great bulk of the trade which requires a cheap article yet of fairly good quality. It is true that a British maker can sometimes be found who will compete as regards price, but in no case does he seem to be able to give as good quality at this same price. Until the present year British makers supplied most of the the heavy plates, but these are now coming from Germany in increasing quantities. There is still a good business in special brands of iron manufactures with the United Kingdom on the part of the larger buyers, such as the Government Departments and principal industrial companies, but as far as the ordinary merchant trade is concerned there is no doubt that British manufactures are gradually being beaten.

COTTON YARNS.—After a period of what might almost be called uninterrupted stagnation throughout the greater part of 1900, the closing month of that year seemed to give promise of better things for the gassed yarn trade in 1901. Stocks had been gradually reduced to a moderate compass, and Japanese dealers had become accustomed to the high level of prices reached 12 months before, and up-country consumers appeared to be acting with more confidence, and altogether it seemed as if brighter days were ahead. This feeling of confidence was, however, very short lived, and the year closed with Manchester quotations about £6 10s. per bale below the opening ones in January, against £7 10s. to £8 as the lowest point and after a year exceeding even 1900 in its unprecedented depression and unparalleled losses to importers. In trying to account for this fall in cotton must be held to be the primary cause, but the absence of demand from Japan was also an important factor not to be overlooked, because a reason has to be found for this absence of demand for imported yarns. Nor is it far to seek. Bad trade and dear money no doubt contributed, but the real reason for the depression in imported gassed yarns lies in the fact that Japan herself is now producing probably more than half her total consumption. It is not easy to get reliable

figures, but such estimates as are obtainable place the production of gassed yarns throughout Japan at 15,000 to 20,000 bales of 400 lbs. a year, whereas the total shipments from the United Kingdom to Japan for the year 1901 of yarns of all kinds was only about 18,000 bales. Prominence is given in this report to gassed yarns because they represent the bulk of the yarn trade between the United Kingdom and Japan. A diminishing quantity of 2/42s. and 2/32s. continue to be taken, also a few 16 24s. good water twist, for the spinning of which the Japan mills do not seem yet to have adapted themselves.

SHIRTINGS.—Business in grey shirtings showed a marked falling-off in 1901 as compared with the previous year, both in imports and deliveries. The figures for white shirtings are also very low compared with 1900. Deliveries exceeded imports by nearly 30,000 pieces.

SUGAR.—Towards the end of the year 1900 rumours became current as to the proposed imposition by the Japanese Government of a heavy consumption tax on sugar, and speculation on this and the date of its operation was the prevailing feature of the market during the opening months of the year. After lengthy debate in the Diet the Bill was passed March 1st, the date of its operation being October 1st, thus opening the door to the importation of continental beet sugars, and consequent loss of revenue to this country. Demand soon disappeared, and for the remainder of the year stagnation prevailed in the market, which became overloaded with supplies, the situation being aggravated by the delay of buyers clearing under their contracts. While speculation lasted there was a moderate advance in prices, but any important rise was always held in check from fear of the influence of beets, and with heavy accumulated stock of these sugars at the end of the year, prices showed in the end very little improvement on those of January, notwithstanding the imposition in the meantime of the consumption tax ranging from 2s. 0½d. to 5s. 8½d. per picul. The imports of Java sugar during the past year amounted to 186,500 bags and of Cantons to 194,000 bags.

KEROSENE.—Prices for American oil have ranged between 5s. 3d. and 5s. 6d., whilst Russian has been steady at from 4s. 11d. to 5s. 2d. The quality of the Borneo and Palembang oils imported during the year has shown a decided improvement on that of former years.

EXPORTS, RAW SILK.—This year has been noticeable for lack of spirit. Neither reellers nor manufacturers have been able to make satisfactory profits, for the former have been tempted by the higher cost of silk to hold for higher sale prices, while it has been the special policy of manufacturers to buy only from day to day to supply their absolute wants. This has necessitated the exporter taking the risk and shipping on speculation, and with steadily advancing values the result has left most of the profit in his hands. Production in Japan is steadily increasing. The farmers recognise that it is a cultivation suited to their surroundings. The work that it entails mostly falls to the women and children of the family, and comes at a period when there is but little work in the fields. As, however, the growth of the mulberry tree is slow, the growth is not and cannot be rapid. To-day the estimate of the year's export is from 65,000 to 70,000 bales, whilst in 1863-65 it was only from 16,000 to 20,000 bales. With regard to the quality of the silk produced there are unfortunately many grounds for complaint, chiefly from want of care in the reeling, the good profits realised in the early part of the year making the reellers work night and day to secure the high prices. There is also a want of uniformity in the quality, owing to the reellers not always using the same class of cocoons. The number of filatures producing an extra high-class silk is increasing.

The export of waste silk during the year was 43,494 piculs.

SILK PIECE-GOODS.—Although the trade in silk piece-goods shows a marked improvement, it cannot be regarded as entirely satisfactory. The number of pieces exported shows a noteworthy increase over all previous years, and the gross value of the same shows a "record," but during the latter half of the year the market has experienced a distinct downward movement, and conditions in general have not been conducive to a profitable development of the industry.

COTTON CREPE.—Almost all the cotton crepe brought to Yokohama for exportation is from the Ashikaga and Sano districts of Shimozuke province. The demand for the fabric is rapidly increasing, not only in Southern China, but also in the South Sea and the Hawaiian Islands. The result is that those in other business have begun to undertake the production of this article with the special object of exporting it. It is, therefore, expected that there will be an increase in the production of the goods in question.

TEA.—The tea season opened at the end of April with but little animation, and although the demand increased as prices steadied, the competition for early teas, which in former years was always a

marked feature of the trade, was anything but brisk, and the inquiry continued slack until the end of July. The fact cannot be denied that the Japan tea trade is gradually contracting in volume, the annual export to the United States and Canada having fallen off by some 10,000,000 lbs. during the last 10 years. The competition from India and Ceylon teas has not proved as dangerous as was expected last year. The efforts made by these growers have not met with much success in the United States, and it is now doubtful if they will ever make any serious inroads into the trade. In Canada, however, the Japan tea trade is certainly suffering from the competition of these teas, and it is probable that, except in the lower grades of Japanese, used chiefly for mixing purposes, the Ceylon product will eventually supplant the Japanese growths. The total export from Yokohama in 1901 was 24,577,524 lbs.

SHIPPING.—The shipping that entered the Port of Yokohama from abroad again shows an increase, being 823 vessels and 2,032,445 tons, as against 773 vessels and 1,872,557 tons for 1900. British shipping shows an increase of two vessels and 26,282 tons. An increase is also noticeable in the case of all other nationalities, the more especially in that of Japanese foreign going vessels which number 268 as against 227 for the previous year. The most noteworthy feature of the shipping of the past year has been the extension of the British India Steamship Company's service to Japan. For some time past this company has been running boats between the Indian ports and Manila, and about 12 months ago a regular three-weekly service was extended to Japan; 14 boats belonging to this company have entered this port during the year.

GENERAL.

The work of *Harbour Reclamation* is advancing rapidly, many hundred men being at present employed, but the undertaking is so great that it is unlikely to be completed before 1905. The wharfage when complete will berth at one time 13 steamers of the largest size, and cargo will be housed a few feet from the ship's side. Other improvements will be a new floating landing stage in front of the inspector's office, which should be completed during 1902, and a pipe service for supplying steamers with waterworks water. This latter improvement will cost £2,800, and vessels which formerly had to pay 5s. 4d. per 1,000 gallons will soon be able to obtain the same quantity for 1s.

A scheme is on foot for laying a *Railway* between Yokohama and Hachioji, the centre of the silk industry, and the communication between that town and this port is now being carried on by means of horses and wagons to the great inconvenience of the merchants concerned. The scheme was originally formulated by the Government but abandoned by them, and an application for permission to construct a railway between the two places under the name of the Yokohama Joint Stock Company has now been made by a syndicate numbering about 40 members. The company is backed by a capital of £200,000. The line will be laid from Kanagawa to Hachioji via Haramachida, a distance of about 25 miles.

The development of the *Echigo Oil Industry* is proceeding apace. According to a report in a vernacular paper, the oil in Amase and Kamada, hitherto the largest oil-producing district in Echigo, shows signs of failing, and attention has been attracted towards the Kitano district, where the wells owned by the Nagaoka Industrial Company have been yielding a large amount of oil since last autumn. Two of the wells, it is said, yield 1,600 gallons a day. The oil is carried by means of pipes to Takada Station on the Shinyetsu Railway, a distance of 10 miles.

The Standard Oil Company (an American company) is about to start operations in the Umayu district, the plant having now arrived. The company applied in February for permission to lay down pipes from the oil-fields to the company's oil refinery at Naoyetsu, a distance of 10 miles.

The Nippon Kerosene Company is making trial borings in the Kitano district, and the Zowo Kerosene Company in the Nashihira district. The Iwai Company, of Osaka, which has a capital of £2,000, is making borings at Kokaya. In addition to these, the Koshiyama Kerosene Company, the Toa Kerosene Company, and a capitalist of Tokyo have bought several leases, and will be starting operations shortly.

The International Oil Company (a juridical person under Japanese law, consisting of foreigners and Japanese), of Echigo, has placed on the market the oil refined by the company. As to quotations, the Naoyetsu delivery is quoted at 4s. 2d. per box, and it can be put on the Yokohama and Tokyo markets at about 4s. 11d. per box. The oil is clear and transparent, the flashing point being 110 degrees. At present the company has a stock of 45,500 boxes in Echigo.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The ordinary half-yearly meeting of the shareholders in the above Corporation was held on Aug. 16th in the City Hall, Hongkong, for the purpose of receiving the 74th report of the Court of Directors. The Hon. R. Shewan, chairman, presided, and there were also present Hon. C. W. Dickson, Messrs. A. Haupt, E. Goetz, D. M. Moses, A. J. Raymond, N. A. Siebs, H. Schubart, H. W. Slade, H. E. Tomkins (directors), J. R. M. Smith (chief manager), and a large number of shareholders.

The Chief Manager having read the notice calling the meeting.

The Chairman read the report already published, after which he said—Gentlemen. It is again our good fortune to come before you with the excellent report which I have just read, and I hope you will approve of the way in which we propose to divide the profits, viz.:—A dividend of £1 10s per share, place 5 lacs to silver reserve fund and write 2 lacs off premises account leaving \$1,437,740.88 to be carried forward. I may point out that at the present low rate of 1/8½ it takes about \$110,000 more to pay the dividend of £1 10s. to-day than it did six months ago. The above appropriation to the silver reserve fund will bring it up to \$4,750,000, which with the capital and sterling reserve fund give you a total of about 25 millions of dollars, exclusive of the amount carried forward, nearly another million and a half. This is a strong position to be in, gentlemen, and has been attained simply by our adherence to the policy of paying moderate dividends and building up our reserves with the balance of our profits, a policy I am sure you now fully approve, for without ample funds at its disposal no bank can work successfully. "Bank premises" is a non-interest bearing account, and in pursuance of our settled policy to keep such accounts at a nominal figure we propose to write 2 lacs off this account, which will then stand at \$680,358.58 as against \$730,205.35 in the last report. While on this subject I may tell you that we recently acquired a property adjoining our offices at Yokohama, and we have also arranged for the purchase from the Straits Government of a desirable site in Penang where suitable premises of our own have been much needed. Besides this we have found it necessary lately to make alterations and extensions at several other branches to meet increasing business, a very healthy sign, I think. Comparing the accounts with last half-year, the figures in this report show an increase under almost every heading, which is satisfactory evidence of the steady growth in the volume of our business. Our note circulation continues to expand; it has increased by \$1,616,904 and is now \$4,623,665 in excess of the \$10,000,000 authorised against securities deposited in London with the Crown Agents for the Colonies. This excess of \$4,623,665, I may remind you, is secured dollar for dollar by the deposit of silver coin with the Hongkong Government under special ordinance. Taking current accounts and fixed deposits together, gold deposits show little change, but silver deposits have increased \$5,717,000, and bills payable are \$10,000,000 higher. On the other side there is an increase in "bills discounted, loans and credits" of \$14,000,000, and in "bills receivable" of 3½ million dollars, while we have \$3,000,000 more in cash (including coin deposited with the Government for extra circulation) and bullion. The sterling note reserve investments are almost the same as on 31st December last, and our holdings of Indian Government rupee-paper are a little larger. "Consols, colonial and other securities" show an increase of \$1,736,003, and this is chiefly due to a temporary increase of our holdings of Consols pending the exchange of old stock for new issue. All these securities stand in our books at considerably under present prices. The half-year under review has not been one of the easiest. A further serious fall occurred in silver, and this with the still slightly unsettled condition of affairs in the North of China had a depressing effect on imports: it says much for the general soundness of the trade that it has come so well through the difficulties it had to contend with. There has also been some over-speculation in the local share markets but this caused us no uneasiness, as our share advances are restricted to very safe limits; in fact, we have been wonderfully free from losses. Any probable losses or doubtful accounts have nevertheless all been provided for, your Chief Manager having only completed a tour of inspection just before being appointed to his new post. A new Anglo-Chinese Commercial Treaty drafted by Sir James Mackay, the Special Commissioner sent out from home, has been under negotiation for some time past, and is reported to be now on the eve of completion; and although few old China hands can altogether believe in the sudden disappearance of that "old man of the mountain," I think still the main principle of the new treaty, so far as we know it, is good; it is a bold attempt to do away with an imposition of which merchants in China have always complained. I fully recognise the immense

difficulties to be overcome, but I think there is a good chance of success if only Ministers and especially Consuls will be but firm in protecting the merchant in the exercise of his rights under the new Treaty and in insisting upon the Chinese strictly fulfilling their treaty engagements. In any case, I think the mission of Sir James Mackay will be productive of much good, and I hope that it may mean that a new era is now dawning for us and with its hands free in South Africa our Government at home intends to study things Chinese a little more closely and take a keener interest in our trade out here. This Colony of Hongkong, so minute on the map that I can understand why people at home think so little of it, is nevertheless, measured commercially, one of the largest and most important of King Edward's possessions. It has developed hugely in the last few years, so that this building which not long ago was right on the water's edge is now well inland, with Government offices and stately buildings erected and being erected between it and the sea. Soon we shall have an electric tramway through the city, and I look forward to the day when not only will it be running round the whole island but when there will be another through Kowloon and the New Territory, with a railway from there to Canton to connect with the grand trunk line about to be laid from Canton to Hankow and thence to Peking. It is possible that I believe in the future of this Colony more than many people do, but the most pessimistic must admit that for places so situated as Hongkong and Shanghai there must come great expansion of business when the enormous national resources of China begin to be properly developed by foreign capital. The Philippines, too, will soon settle down to business under a stable government, and although I think they may be making a mistake over there in excluding a race of traders and workers such as the Chinese from their territory, still they are doing no more than our own people have done in Australia, and I hope that in spite of this policy trade between China and the Philippines will soon show signs of development. Taking then, gentlemen, all these factors into consideration, we cannot, I think, but look forward to the future cheerfully and hopefully. As I anticipated when I met you this time last year, the payment of the indemnity to the Powers has pressed hardly on China's finances, but she has immense powers of recuperation, and I do not believe will be crushed or even permanently injured by the payment of so large a sum. At our last meeting I informed you that at the proper time your directors would see that the services of our late Chief Manager, Sir Thomas Jackson, on whom I am pleased to say His Majesty has since conferred the honour of a baronetcy, were duly and fittingly acknowledged. This we have done by the grant to him of an honorarium of \$100,000 (say about £8,500) and the appointment to the chairmanship of the London Committee, where I am sure they will be glad to have the benefit of his great experience and knowledge of the affairs of the Bank. In addition to this we propose to erect, as some acknowledgment of the great services he has rendered to the Bank, a statue of Sir Thomas on a suitable site in the vicinity of the Bank premises, and I feel certain that every shareholder present will approve of such a permanent memorial in our midst of our old friend T. J. (Applause.) Mr. J. R. M. Smith took charge as Chief Manager, and your directors have every confidence that the interests of the Bank are perfectly safe in his hands. Finally I am glad to say that we have already begun the second half of the year well. (Applause.)

Questions were invited but none was asked.

The Chairman then formally moved the adoption of the report and accounts.

Mr. Victor Deacon seconded. In doing so he said—Mr. Chairman and gentlemen, the pleasant task has fallen to me to second the adoption of the report and accounts, which the chairman has so eloquently put before you. It is a very pleasant task indeed, I need scarcely say, and I think that, without any great exaggeration, I, speaking for the shareholders here, may assure the directors that, so long as they put such pleasant accounts before us so long will we very gratefully second and adopt them. Gentlemen, for long past now have we been accustomed to receive these very satisfactory reports and to take into our pockets these very satisfactory dividends, so much so that, as it appears to me, if, in the future, we have worse reports put before us, it would be really an infringement of our rights and a breach of duty on the part of the directors—(laughter). But, be that as it may, I only hope that my successor, whoever he may be in years to come, will always have such a pleasant duty as I have to perform this morning (applause). But, gentlemen, let us not forget that these reports are the result of a great deal of forethought, of care, and of very good management in the past. We must not forget that we have been so very fortunate as to have in the past a good Court of Directors, a very good Chief Manager, and last, but by no means

least, a very good staff, and that all these things combined have conducted to the report placed before you and which it is our pleasant duty to receive to-day. The reports speak for themselves, the accounts speak for themselves, but there are two points which I think I might venture to touch upon, for they seem to me, Mr. Chairman so essentially satisfactory. As we all know for years past the policy of the Board has been not to pay us extravagant dividends, but, as the Chairman very truly said, good and satisfactory dividends, whilst placing apart to the reserve fund such sums as have from time to time been thought necessary. Gentlemen, that policy is one which I think we must all most cordially endorse. It seems to me that it has resulted—indeed it has resulted in the magnificent sum which stands to-day to our credit in reserve. It is true, as the chairman has pointed out, that without money the Bank would be practically nothing, and we can all congratulate the Board on the position in which we find ourselves to-day in this respect. The other point which seems to me essentially satisfactory is that there are no losses to speak of in the report before us. If in past years these have hampered us, or if in past years they have irritated and annoyed us, to-day nothing of the sort is here. There are no losses whatever to report, which seems to me a most satisfactory state of affairs. Our Chairman has alluded to “that old man of the mountain, likin.” Well, gentleman, I am sure we cordially endorse what he has said and we hope that it may be possible to find some *modus vivendi* whereby this most iniquitous tax will be removed from our merchandise and whereby, at the same time, the Chinese Government may get what they ought to get in reason and in fairness. It is, as we all of us can see, a difficult thing to manage, because the Chinese have a way at times of saying, “Yes, we will abolish this” and “Yes, we will abolish that”; but unfortunately for those who are dealing with them, the same thing crops up frequently under another name and under another aspect. I only hope that that will not be the case here. If any of you are hypercritical people, you may ask what have I, as a lawyer, got to do with *likin*? Gentlemen, there is more in it than, perhaps, you think, but, when I explain to you that whatever appreciably affects my clients tends to appreciably affect me, perhaps you may be able to guess (laughter). Our Chairman, gentlemen, has touched upon the Electric Tramway. That is a thing which, for over twenty years now, very nearly twenty years, has been before the Colony in some shape or other. We all know it is a mere truism to say that improved communications are beneficial, and, certainly, if the forecast of the Chairman is at all approximate, then we should get, in due course when the tramway is laid, great benefits in every way every day. I for one am a believer in it, and I think that most of us are, and if in the future it is still extended, as the Chairman hints, to Kowloon and Canton with the adjacent railways, great benefits must come to Hongkong. Gentlemen, one point in the Chairman's speech I have not touched upon yet—our old friend Sir Thomas Jackson (applause). We have known him, many of us, for many years; we have known his sterling worth, and we have known how he has given the best half of his life, one might say, to this institution—the Hongkong Bank. We all know how he has worked for it, how he has brought it from what it was to the magnificent edifices and institution which it is to-day, and it is pleasing to think not only that we ask him to accept from the Board, as no doubt you all would ask him, the honorarium which is mentioned in the report, but it is pleasing also to remember that we shall have something tangible of him to look at, in the shape of a statue, which it is proposed to put up (applause), not that we want that to remind us of Sir Thomas Jackson—I venture to think that, when this Colony is years and years and years and years older, yet, the name and memory of Sir Thomas Jackson will be green to us all, and it is my privilege at least to think that the great man as he was in finance will continue to hold a lead on the business that has developed under him. I cannot but think that he will be remembered at least as much for his great big charitable heart. That was a thing, gentlemen, which endeared him to everybody. If anybody was in distress or want, whose hand was ever ready to help? Sir Thomas Jackson's—and we all of us wish, I am sure, that good health and long life will be granted him to enjoy the rest in the old country which he has so nobly learned.—(Applause.) Gentlemen, although the old pilot has left us and this argosy will have to sail her way under a new hand and under new directions there is a good old quotation, and some of the old quotations are good—I am sure that some of us will say the old exchange quotations were much better quotations than they are to-day (laughter)—there is a good old quotation which I will remind you of and that is that “there are as good fish in the sea as ever came out of it.” Gentlemen, a new pilot has taken charge, and under him let us re-echo the Board's wish, sentiment and belief that he will conduct the ship in which we all are share-

holders to success and plenty as it has been conducted in the past.—(Applause.)

The report and accounts were adopted unanimously.

THE CORONATION.

Papers to hand by the *Kinshu Maru* contain accounts of the Coronation. We extract the following, dated London, August 9th:

King Edward and Queen Alexandra were crowned in Westminster Abbey shortly after noon to-day. Though the ceremony was bereft of the elaborateness and pageantry originally intended, it lacked little in the way of spectacular perfection. The whole ceremonial was of a magnificently decorated character and presented a constantly changing panorama, around the two central figures enthroned in their robes of velvet, ermine and cloth of gold, amidst the distinguished assemblage of participants, the fulfilment of whose various roles necessitated constant movement. Each stage of the ceremony, with its old world usages, furnished its quota of interest, while the interior of the noble church, filled as it was with officials in various capacities, with princes, diplomats, officers in gold laced uniforms, with heralds, pursuivants and other officers of state in mediæval costumes, with peers and peeresses in rich robes, with Oriental potentates in many hued raiment, with men of all types and all shades of complexion from distant points of the newly crowned monarch's Empire, with its dazzling display of jewels and wealth of colour, presented a picture which in its combined brilliancy and its distinction has seldom been excelled.

As the hour appointed for the departure of the Royal procession approached, the excitement about Buckingham Palace was most marked.

Punctual to the time the advance guard of the Royal cavalcade issued from the archway, the horses of the troopers curvetting nervously as they faced the wall of humanity that cheered their coming. Shortly afterwards came the Prince and Princess of Wales' procession, and finally within a few minutes Their Majesties' state coach appeared at the gateway, and the King and Queen smiled and bowed in response to a mighty roar of cheers that dwarfed all previous welcomes. The scene in the vicinity was remarkable. On the roof of the Palace were perched a number of fashionably dressed ladies, members of the household, and their cheers with the fluttering of their handkerchiefs as the King and Queen entered the Royal coach gave the signal for the deafening plaudits of the populace which greeted Their Majesties as they emerged from the gates.

The ovation was taken up by the crowds which thronged the Mall, and was repeatedly acknowledged by the occupants of the state coach.

It was a continued triumph and reached its climax on the arrival at the Abbey, where there was a scene of unparalleled enthusiasm, which did not cease until Their Majesties disappeared in the Annex.

An accident to Lord Pelham-Clinton, one of the grooms in waiting, created considerable excitement in the Mall. In a closed carriage he was passing York Steps, when his conveyance collided with another Royal carriage going at high speed in an opposite direction. The horses fell and there appeared to be a bad mix-up. The police extricated the teams with some difficulty, and Lord Pelham-Clinton, who was only slightly hurt, proceeded.

Lord Kitchener, Admiral Seymour and General Gaselee as they sat together, in the procession, came in for much attention, but all seemed to pay little attention to the people along the route. Lord Kitchener, in resplendent full-dress uniform of a general, also looked unfamiliar, and many present did not recognize him. The Indians were undoubtedly the most picturesque feature of the procession, while the state coach of the King, drawn by the Hanoverian horses, which figured in all of the late Queen Victoria's processions, seemed much more like fairy-land than usual. The progress of the naval cortege was marked by no special incident, with the exception of the accident to Lord Edward Pelham-Clinton.

The doors of Westminster Abbey were scarcely opened, and the gold sticks and ushers had barely found their sections, before the seats began to fill. Peers and Peeresses swept up the nave, their scarlet and ermine making vivid contrasts with the deep blue of the carpet. As they arrived before the thrones, they separated, the peers going to the right and the peeresses to the left.

Even when practically empty the Abbey presented an interesting picturesque effect, the oddest feature of which consisted in every seat being practically covered by the large white official programme, in the centre of which was placed a small deep red book of service. The entire scheme of decoration had been carried out harmoniously, and even the stands did not seem out of place. A particularly beautiful effect was presented by the King's and

Queen's box comprising half a dozen rows of chairs in white satin, relieved only by the crimson of the seats. Beyond the structural decorations for the seating of the spectators, there was little attempt at any display, and the old grey arches lent their stately perspective to the scene, untouched by flags or any gleam of colour. The various chairs to be used by the King and Queen in the service, attracted special attention, but what inevitably caught the eye was the glittering array of gold plate, brought from various Royal depositories, ranged along the chancel and behind the altar. Amidst these surroundings, the Earl Marshal, the Duke of Norfolk, resplendent in white knee breeches and heavily embroidered coat, hurried to and fro, directing the final touches.

The street barriers were closed at 10 o'clock. The Prime Minister, Mr. Balfour, and Lord Rosebery were caught outside. They were obliged to alight from their carriages and walk to the Abbey. At 10 o'clock the King's nurses who attended him during his late illness drove up to the Abbey in a Royal carriage as guests of His Majesty. They received an ovation from the crowd. The children of the Prince and Princess of Wales reached the Abbey at 20 minutes past ten, and were wildly cheered by the enthusiastic throng.

By this time all the interior of the Abbey presented a blaze of colour. Along the nave, which was lined by Grenadiers, every chair was taken up by high officials, by the army and navy, and others in equally handsome equipment. On top of the arch separating the nave from the chancel sat a surplined orchestra. In stalls were the ambassadors and many officials.

During the long wait, Mr. Abbey, the artist who was commissioned to paint the coronation scene in the Abbey, and who wore court uniform, took careful note of the surroundings of the historic picture ordered by the King. The peeresses took advantage of the long interval to stroll up and down, but the peers quietly awaited the arrival of the sovereign, their ermine capes presenting a solid mass of white.

The ceremonies commenced with the confessional of the regalia. The procession of clergy with the regalia then proceeded from the altar to the annex, all present standing up and the choir singing, “O God, Our Help in Ages Past.” Preceding the regalia came the boys of Westminster Abbey, followed by the children of the Chapel Royal and the choir in royal uniforms.

The head of the procession reached the Abbey at 10.50 a.m. The bells were pealed and the hands played “God Save the King.” Ten minutes later the Prince and Princess of Wales arrived. The Royal Princesses, gorgeously dressed, entered the Royal box of the Abbey at 11.10 a.m.

The Prince of Wales took his place in the Abbey, in a chair directly in front of the peers at 11.15 a.m. The children of the Prince and Princess of Wales in white sailor suits, who were the first occupants of the Royal box, immediately after they were seated, buried their heads in the huge red programmes.

When the Prince of Wales was seated he placed his coronet at his feet. His robes were almost identical with those of the peers. The Princess was the cynosure of all the women in the Abbey.

The Duke of Connaught took his place beside the Prince of Wales in the Abbey, as the procession entered, bowing as he passed the Prince. The Archbishop of Canterbury took his seat in front of the coronation chair and then Baron Halsbury, the Lord High Chancellor, seated himself by his side. Several minutes elapsed, however, before the King and Queen came in sight of those gathered about the throne. Suddenly “Vivat Alexandra!” was shouted by the boys of Westminster Abbey, and the Queen walking slowly to the left of the throne, gained her chair and knelt at the silken Prie Dieu, her magnificent train of cloth of gold being lifted out of her way by six scarlet pages. Two or three minutes later came the hoarse cry from the Westminster boys of “Vivat Rex Edward!” with blasts from the trumpets. Yet there was another wait. What has become of the King? was asked by the people who were shut off from sight of the nave. The Queen waited patiently, the organ ceased and then resumed; there was another fanfare of trumpets and a chorus of “Vivats,” and King Edward appeared and walked to his chair in front of the throne, bowing to the Queen as he passed, and then then knelt down in prayer. After removing his cap, His Majesty stood up, and the Archbishop of Canterbury, in a trembling voice, read the recognition, beginning, “Sirs, I here present unto you King Edward the undoubted King of the realm.”

There was a hoarse shout and the blending of the choir, and the people, men and women, crying “God save the King!”

Several times that was repeated, and the Abbey rang with loud fanfares. Again the King and Queen knelt and the Archbishop of Canterbury walked to the altar and commenced the communion.

While the Gospel was being read the King stood erect, supported on each side by the Bishops in their heavily embroidered capes. During the singing of

the Creed, all the members of the Royal family turned eastward. Both King Edward and Queen Alexandra followed the service carefully, frequently looking at the copies of the service they held in their hands.

The administration of the oath followed. Standing before the King's chair, the Archbishop said:—"Sir, is Your Majesty willing to take the oath?"

The King answered in firm, strong tones:—"I am willing," etc., his replies being plainly heard high up in the triforium near the roof.

Then the inkstand was brought and the King signed the oath. He did not advance to the altar, but sat in the chair he had occupied since the service began. While the choir sang "Come, Holy Ghost, Our Souls Inspire," the King remained seated, and the Queen stood up.

After the Archbishop's anointing prayer, the gold canopy was brought over the King's chair and His Majesty divested himself of his outer robe and walked to the ancient chair.

The anointing ceremony was scarcely seen owing to the canopy. The spectators were just able to discern the Archbishop's motions.

The actual coronation of the King took place at 12.36 p.m.

The news of the crowning was announced by an official outside the Abbey. It was repeated by signal through London, and was received with cheers, which spread throughout the stands and crowds far up the streets, as the bells pealed joyfully.

The Queen was crowned at 12.56 p.m.

THE KING AND QUEEN AND THE EMPIRE.

If the Coronation of an English King had no other claim on our interest, it would have that of rarity. For it is one of the rarest of public spectacles in our islands. The last hundred and fifty years have seen but four Monarchs crowned at Westminster. To go back to a fifth crowning we have to retrace the years to the earlier decades of the eighteenth century, to the days of Walpole, Swift and Bolingbroke. The gap seems immense between us and George the Second. Even Thackeray hardly makes that testy little potentate, with his prominent eye-balls, heavy lower lip and copious guttural expletives, a living figure to us. England has changed since Laurence Eusden, post laureate, desiring to praise the George above-mentioned, penned the delicious couplet:—

Thy virtues shine particularly nice

Ungloomed by a confinity to vice.

Mr. Alfred Austin may not always succeed in pleasing the critics, but he does not write like that.

THE SYMBOL OF THE EMPIRE'S UNITY.

Yet though no Englishman with a grain of sense, or a glimmering of humour, would now-a-days address his Sovereign in the strain of Eusden's bathos, this is not a time when the language of respect to the Crown is out of fashion. On the contrary, the Sovereign power and influence are acknowledged on all sides with an emphasis which would have surprised some who thought themselves prophets 30 years ago. Responsible statesmen speak of the Throne in words which carry a weight which the silly adulation of bygone days never did. We turn to the Liberal leaders of our generation, and find that Mr. Gladstone said of the Monarch and his ministers "He is fixed; they are fugitive. He may therefore be a weighty factor." Lord Rosebery has reminded us that "enormous power may be exercised personally by the Sovereign." It is not surprising to hear Mr. Balfour hail the Crown as the "living symbol of the unity of the Empire," for Mr. Balfour leads the Conservatives in the House of Commons, and less could hardly be expected of a Conservative leader.

One of several reasons for the altered attitude of a whole school of Progressive politicians towards the Crown, is that the Sovereign is no longer a mere ruler over Great Britain and Ireland. He is Emperor of India, and much more. For he is King of nearly eleven millions of free and civilised white people who dwell outside the confines of the United Kingdom. These millions are not a negligible quantity. They are one-fifth of the white men of the Empire. Few as they seem amongst the Brown, Black, and Yellow myriads who are the mass of the King's subjects, they have to be reckoned with politically. They are likely to become Imperial partners: Asiatics and Africans are not. Educated, free, sprung from ruling and fighting races of Western Europe,—British, Irish, French, Dutch—these Whites beyond the seas require a rallying point of their own. They cannot find this in the British Prime Minister in office for the time being at Westminster. He but represents a party dominant for the moment in three kingdoms. Looking from over seas the Greater Britons find their centre in the old Throne with its permanence, historical dignity, and secular prestige. In that they see something which, so long as the Sovereign has wisdom, cannot be made the football of factions.

THE POPULARITY OF THE CROWN.

The revived popularity of the Crown, which is one of the most singular and, to many, unlooked for features of public life to-day, is a phenomenon of the last 30 years. It would be idle to pretend that George the Fourth or William the Fourth were generally beloved. The sagacity and good faith of the Prince Consort, now generally admitted, did not save him during his lifetime from caricature, suspicion and dislike. The seclusion of her late Majesty during the years immediately following his loss was understood and respected, but did not for the moment strengthen Royalty. In the sixties the belief that the days of the Crown were numbered was shared by many in the middle classes whose children would find it unpleasant to recall their fathers' opinions to-day. The writer of this article remembers listening about 35 years ago to a conversation of a group of prominent colonists—merchants and professional men—in a distant part of the Empire. They were English-born, loyal, and by no means Radical in their learnings, sober, solid citizens, with a share of this world's goods. Yet their sincere view was that the Monarchy was doomed, and, in particular, that public opinion would not tolerate the ascent of his present Majesty. They did not like the outlook; they had little doubt of the truth of the forecast. In thinking as they did they only voiced the apprehensions of tens of thousands.

Yet King Edward is firmly seated on the Throne amid universal friendly acquiescence, and is to be crowned amid general rejoicings and merrymaking. By consent of all he is as nearly as possible a King without personal enemies. So few are his domestic foes that the lusty prayer of his loyal subjects, "confound their politics, frustrate their knavish tricks" has almost ceased to have any special meaning. Even the Anarchist terror which haunts the Republics as well as Kingdoms over so much of the civilised earth seems to pass our realm by. The King is popular; and the Queen evokes that spirit of chivalry which, despite Burke's noble cry, is not yet fled from Europe. It is not necessary in a brief article of this sort to search at all deeply into the causes of the renaissance of cordial feeling towards the Crown and the Monarch, which has been mainly a growth of the last three decades. We need not pause to weigh or balance or examine. The strong common-sense, devotion to duty, the sex and pathetic widow-hood of Queen Victoria; the scare given to the middle classes by socialism of the revolutionary kind; the unhappy evidence afforded in France and America that discontent, corruption and distress may exist under Republics, the growth of the Empire, bringing with it the need for a stable central figure,—all these influences, and others, have contributed to bring about the result. Yet all these causes might have been at work and yet we might not have a popular King and Queen—a King whom the fiercest Republican cannot hate, a Queen whose gentle charm calls up the enthusiasm of all sorts and conditions of men. In looking at political and social agencies it would be foolish and ungracious to pass over the personal factor. It counts for very much.

PERSONAL CHARACTERISTICS.

To begin with externals: His Majesty looks every inch a King, and Britons like that. On the Queen's refined grace and beauty it would be clumsy and fatuous for my pen to dwell. The ceremonial functions of Royalty may or may not deserve some of the cheap sarcasms levelled at them. But they have to be performed. The nation as a whole desires a certain amount of public pomp and splendour. That being so, it is of real importance that the chief parts in its ceremonies should be fittingly sustained. The Empire is fortunate in having a King whose bearing unites geniality with dignity, and a Queen whose sweetness is fascination. It has been said, and sometimes not too good-naturedly, that the King enjoys overmuch the outward shows of Court life, that he takes a positive pleasure in routine, glitter and display. It is true, doubtless, that His Majesty has preserved, through a fairly long life, with wonderful freshness, a very healthy power of enjoying himself. No one who knows him has ever hinted that he grew up devoid of ambition, intelligence, or a natural interest in great questions. Forced by rigid custom to devote much of his time and energies to ceremonial State drill he has probably, like all healthy minds, set himself to do his business well and to extract what interest and pleasure he can therefrom. It is but reasonable, not to say charitable, to assume, that all his constitutional good spirits and *bonhomie* are often enough required to mask weariness and to carry him through the hard work and deadlly tedium of the daily round of a Monarch's duties.

Such more solid qualities as Constitutional etiquette has allowed King Edward to shew when Prince of Wales, are precisely those likely to commend him to a people which still prides itself on possessing ballast, practical capacity and self-control. But Englishmen

do not love melodramatic fidgetiness in their rulers. They prefer a King to say too little rather than too much; sufficient that what he says should be clear, terse, and to the point. These qualities King Edward's speeches have, and in the conduct of business, as in public speaking his characteristics are masculine—, shrewdness, executive capacity, and a dry contempt for extravagance. Nor, because, in his acts and sayings there is a refreshing absence of the hysterical, is there any evidence that he lacks human sympathy. The marked and persistent interest which he has taken in such social questions as the Housing of the Poor and the prevention of suffering and disease seem to negative this. They are evidence that should not be disregarded. A King whose experience of life has bestowed knowledge upon him without impairing his natural buoyancy, who unites to stateliness of demeanour, sound business capabilities and a kind heart, is so very far superior to a multitude of the crowned heads of history that one need not look beyond the personal factor to comprehend the welcome his people have given him, and the heartiness of the festivities which acclaim his Coronation. Looking beyond his personality, we see him happy in his Consort, thrice happy in the memory of his revered Mother, and fortunate in a son and daughter esteemed throughout the Empire. His Majesty is indeed the Head of a Royal Family of which his realms have good reason to be proud. Some of those who hope,—as we all hope,—that mere social duties and ceremonial functions may not be allowed to draw too heavily on his time and energies, fear that the exorbitant claims of such matters may leave him too little reserve force for great affairs. To those who are thus apprehensive it may be pointed out that the King and Queen do not stand alone. They have near them those well qualified to share some part of their splendid but weighty social burden. By the brilliant success of their journey round the Empire, the Prince and Princess of Wales have proved—if proof were wanted—their ability to sustain their parts, and to gain the confidence of popular leaders and the general liking of not uncritical crowds,—crowds of a dozen different creeds and colours. The speech on the Colonies which the Prince delivered at the Guildhall on his return would have been ranked as apposite and thoughtful if it had come from the mouth of an adroit statesman. On this occasion His Royal Highness was one of four distinguished speakers. The other three were Lord Rosebery, Lord Salisbury and Mr. Chamberlain. And if, as a listener, I may express an opinion, I would say that the Prince's speech was the best and the best delivered of the four. The Prince and Princess are no longer Royal Personages merely; they are factors in public life. His Majesty, in his earlier years, has known what it is to have information refused to him, and to fret under a sense of exclusion from State affairs, and a feeling of enforced impotence. As much, at any rate, has been openly said by writers who have had opportunities of knowing the truth. It is not to be thought, therefore, that the same mistake will be made in the case of the Heir-Apparent now. The Prince and Princess of Wales are the best, the only possible understudies for the parts of King and Queen. The Emperors who had to try to uphold the unwieldy mass of the Roman Empire best lightened their task when they joined colleagues to themselves. It is open to His Majesty, in an informal way, to lighten the pressure which the functions, occasions and Court routine of our Empire put upon its Sovereign.

THE KING'S CONSTITUTIONAL INFLUENCE.

It is obvious that the Head of this Empire has very great opportunities for usefulness. Whatever might have been thought a generation ago, hardly anyone now affects to think the Sovereign a pageant or phantom because he is a constitutional and not an absolute ruler. True he can do nothing by force; but, within reason, he can do almost anything by persuasion. Laws he may not make; law-makers, however, he may influence and persuade. He is entitled to see and hear, to know everything, to be interested in everything. The boldest of Ministers owes him deference, and will please him if he can. Seldom have the times been so propitious for a tactful ruler desirous to do good in his day by fair means. A masterful popular leader with the Democracy at his back might reduce a British Sovereign to a nullity. It is hardly needful to point out that in England and Scotland no such leader exists. Mr. Chamberlain, perhaps the most successful fighting politician before the public, is fighting under the Conservative banner. There is no great demagogue to gather the people behind him as O'Connell and Parnell gathered the Irish, or as Gladstone gathered the English, Scottish, and Welsh. A tactless, meddlesome King might indeed call forth such a champion, but England has no such King, and no expectation of any such. Meanwhile the field is clear for constitutional influence from high quarters,

if exerted in the cause of social benevolence and Imperial unity. Our race seems destined to try the extraordinary experiment of governing by some Federation, however loose, an Empire so scattered that hardly anyone can repeat even the names on the long list of its territories, and so populous that fifty millions of Whites only form its central core. What part is the Sovereign to play in fostering the spirit required to grapple with this gigantic task? Unless history's lessons have been written and read wrongly, the several portions of the Empire must either be drawn closer together or begin to fall asunder. They cannot for very long remain as they are. Standing at the parting of the ways, which road does our race mean to take?

THE EMPIRE OF THE DAY.

It may be doubted whether any Heir has ever come to so splendid a heritage as King Edward's. Except in India, the British Dominions beyond the Sea, as his Mother inherited them, were but the shadow of what they now are. Even India, when Lord Auckland went there to share its control with John Company, was but a straggling, patchy, half-organized domain if compared with the immense and compact territory over which Lord Curzon is set. Outside Hindostan, Burmah was not ours, nor the Malay peninsula. Singapore was a fourth-rate port; Borneo was a nest of pirates. In West Africa we held a few fever-smitten coastal posts, in Eastern Africa nothing, and in South Africa only a fringe from which the discontented Dutch farmers were trekking to the interior. Cyprus belonged to the Turks, and years were still to elapse before the author of "Eothen" dared to predict in a famous passage the day when the Englishman should come and bear sway on the banks of the Nile. In Canada when Queen Victoria was crowned the handful of colonists were on the eve of rebellion. Australia scarcely contained 100,000 settlers, and was but just ceasing to be a prison-house governed by military gaolers. New Zealand was a group of cannibal islands, with a sinister reputation for murder and incessant tribal warfare; merchant captains approached its shores with dread. Amongst the islands of Polynesia the British flag flew nowhere at all. It takes much toiling amongst maps and statistics to realise how great have been the additions to the Empire in a single reign. It seems the language of sheer boasting to say that if King Edward only ruled over the numbers and territory which have been added to the population and area of the Empire since the last Coronation he would own an inheritance sufficient to place him amongst the greater kings of the earth. Yet it is true; so mighty has been the Imperial growth both in numbers and extent of the last 60 years! Moreover, certain black blots notwithstanding, the growth has not been of mere size or population. Humanity is the better for the expansion. And, while the wilderness has been reclaimed and the East pacified, the Empire has continued to make progress at the centre as well as on the circumference. Amazing as the work done on the borders has been, and is, the story of the Mother Country during the last to generations has been more astonishing still. Britain continues to rival her daughters in growth, sometimes outstrips them, and, while usually their teacher, occasionally shows herself young enough to be willing to learn from them. While the Old Country—as colonists call it when they do not simply speak of it as Home,—is full of vitality, there need be little fear of any weakening of the centripetal force of Empire. At the same time it must be borne in mind that the outburst of loyalty and affection which has lately led the self-governing colonies to send the flower of their youth to South Africa was not the outcome of chance. It was the result of 60 years of just and fair treatment from the Mother Country—treatment based on principles first laid down in Lord Durham's famous Canadian report. The South African War has evoked loyalty to the Mother Country, but did not create it. The sentiment existed long ago. It was the flower of justice and freedom. Vast as the inheritance is to which King Edward has succeeded, great as is the Crown which he now puts on, the most splendid jewels in it are the loyalty at home and affection and contentment abroad which have sprung from English equity and fair dealing. If the omens for the reign are favourable, as they are,—it is because the Empire as a whole trusts to these as the unalterable principles of the King and people of the British Islands. Sometimes, it may be, erring from these, the Monarch and nation will never deliberately abandon them, and in this lies the secret of Empire.—*Exchange.*

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE BOER GENERALS.

London, August 20.

The Boer generals visited Mr. Kruger at Utrecht and then returned to the Hague.

They have abandoned their tour in Holland and Belgium returning to London instead, where they will confer with the Colonial Office before lecturing in the United Kingdom.

THE KING'S SURGEON.

Sir Frederick Treves, Sergeant-Surgeon to the King, bade farewell to His Majesty after eight weeks constant attendance. Sir Francis Laking, Physician in Ordinary, still remains in attendance.

MR. SCHWAB DENIES STORY OF RESIGNATION.

London, August 21.

Mr. Schwab, President of the Steel Trust, denies the report that he has resigned his position as president. He says he is going to Europe merely for a rest.

THE KING TO COAST GREAT BRITAIN.

The King starts to-day for a cruise in his yacht toward the West of England. It is understood that he intends to make a trip round Great Britain, and that the yacht will stay at anchor every night at various harbours along the route. His Majesty will finish his tour at Aberdeen, and proceed thence to Balmoral.

CONGRATULATORY ADDRESS.

The House has adopted without discussion the Address congratulating Their Majesties on their accession.

CRONJE RETURNS HOME.

London, August 22.

Cronje and his wife, together with a thousand Boers, have sailed from St. Helena for the Cape.

THE KING'S TOUR.

The King's yacht anchors at Falmouth to-night and will stay at Pembroke on Saturday night.

INTERNATIONAL AMENITIES.

The crews of the two Japanese warships *Asama* and *Takasago*, which came to celebrate the Coronation, are now being feted at Cork. Elaborate preparations for welcoming them at other harbours are being made.

POLITICS AT THE CAPE.

The members of the Cape Parliament have unanimously adopted a vote of no confidence in Sir Gordon Sprigg and have elected Doctor Smartt as leader.

INDIA'S HARVEST SAVED.

Rains in the western part of India have saved the crops; the fear of a famine is therefore removed.

THE QUEEN'S HEALTH.

London, August 23.

The *Daily News* says it is reported that the Queen is not in a very good state of health, her nerves having been unstrung by recent trying events. It is hoped that the cruise (round the British coasts with the King) will restore her.

CONSERVATIVE RE-ELECTION.

Mr. Henry Wm. Forster (Conservative) has been re-elected for Sevenoaks.

TWO BROTHERS KILLED.

The brothers Fearon, one a Hammersmith clergyman, and the other an inspector of factories (Mr. H. C. D. Fearon) have been killed by lightning at Welterhorn (?).

CAPE POLITICS.

August 24.

The Cape Assembly has read for the second time the parliamentary and financial indemnity bills.

Sir Gordon Sprigg said he believed martial law would be repealed a week hence.

JAPANESE IN CANADA.

The *Times*, of Ottawa, says that Baron Komura, Japanese Minister of Foreign Affairs, has sent to the Canadian Government a strong protest against the restrictive legislation enacted by British Columbia, which the Federal authorities will undoubtedly disallow.

MISSIONARIES MURDERED.

London, August 25.

Two missionaries, the Rev. Messrs. Buce and Lowis have been beaten to death at Chenchow in the province of Hunan. The affair has caused a feeling of uneasiness, but the remoteness of the district makes it difficult to obtain information.

[We give the names in the form in which they reach us by the telegraph. Possibly they ought to be Rev. J. C. Bruce, formerly officiating in Shantung, and Rev. B. G. Lewis, formerly at Kweichow.—Ed. J. M.]

RUSSIA AND AFGHANISTAN.

London, August 25.

An article in the *Novoe Vremya* asks if the time has not come when Russia is to have the right of penetrating within the borders of Afghanistan, of having a representative at Kabul and developing commercial relations. Such, it adds, are legitimate and indispensable conditions.

ROOSEVELT AND THE TRUSTS.

Speaking at Providence (New England) Mr. Roosevelt indicated fresh legislation as to trusts.

THE IMPERIAL TOUR.

London, August 26.

Their Majesties landed at Ramsey, in the Isle of Man, and had an enthusiastic reception. They visited the chief points of interest. This is the first time in history that a British monarch has visited the Isle of Man.

THE HUNAN MURDERS.

The murder of the missionaries in Hunan is the result of the cholera epidemic, for which foreigners are held responsible. It is not believed that there is any evidence of a renewed anti-foreign feeling.

CAPE POLITICS.

London, August 26.

It is announced that the Cape Ministry will ask the Governor to appoint a Colonial commission to enquire into the working of Martial Law.

The President of the Afrikander Bond has announced that he will not oppose the Bill, but will welcome an enquiry into the sufferings of people oppressed and illused under the British flag.

The Progressives are opposed to the enquiry on the ground that it will promote racial animosity.

RUSSIAN IMPORT DUTIES.

Russia has imposed an additional customs duty of three roubles per pound on certain teas imported into European Russia from the Far East.

GENERAL MILES TO VISIT THE PHILIPPINES.

London, August 27.

General Miles, the American Commander-in-Chief, is going to the Philippines on a visit of inspection.

PRESIDENT ROOSEVELT AND THE TRUSTS.

President Roosevelt's speech about the Trusts has created a sensation in America. He is denounced on the one hand as the destroyer of his party and hailed on the other as a great popular leader.

THE SITUATION AT THE CAPE.

London, August 27.

The English papers, Liberal and Conser-

vative alike, are much divided on the question of the political situation at the Cape. Some accuse the Progressives of fomenting racial animosity by showing their anxiety for the passing of the Treason Bill. Others similarly charge the Afrikaner Bond for their connection with the agitation for a Colonial Commission to enquire into the working of Martial Law. Other papers blame both parties impartially, but the first alarm is subsiding.

(RECEIVED AT THE LEGATION OF FRANCE.)

ARCHBISHOP FAVIER.

Saigon, August 27.

Archbishop Favier has had a stroke of apoplexy. His left side is paralyzed.
